4.211.1 Detailed Description

template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>class __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >

Node iterator.

Definition at line 136 of file bin_search_tree_/node_iterators.hpp.

4.211.2 Member Typedef Documentation

4.211.2.1 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >::const_reference

Iterator's __const reference type.

Definition at line 153 of file bin_search_tree_/node_iterators.hpp.

4.211.2.2 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef trivial_iterator_difference_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::difference_type `[inherited]`

Difference type.

Definition at line 71 of file bin_search_tree_/node_iterators.hpp.

4.211.2.3 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef trivial_iterator_tag __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::iterator_category `[inherited]`

Category.

Definition at line 68 of file bin_search_tree_/node_iterators.hpp.

4.211.2.4 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef _Alloc::template rebind<metadata_type>::other::const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference [inherited]

Const metadata reference type.

Definition at line 88 of file bin_search_tree_/node_iterators.hpp.

4.211.2.5 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Node::metadata_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::metadata_type [inherited]

Metadata type.

Definition at line 83 of file bin_search_tree_/node_iterators.hpp.

4.211.2.6 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >::reference

Iterator's reference type.

Definition at line 150 of file bin_search_tree_/node_iterators.hpp.

4.211.2.7 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >::value_type

Iterator's value type.

Definition at line 147 of file bin_search_tree_/node_iterators.hpp.

4.211.3 Member Function Documentation

4.211.3.1 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bin_search_tree_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_l_child ( ) const [inline]

Returns the node iterator associated with the left node.

Definition at line 167 of file bin_search_tree_/node_iterators.hpp.

4.211.3.2 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > metadata_const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_metadata ( ) const [inline], [inherited]

Metadata access.

Definition at line 102 of file bin_search_tree_/node_iterators.hpp.

4.211.3.3 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bin_search_tree_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_r_child ( ) const [inline]

Returns the node iterator associated with the right node.

Definition at line 175 of file bin_search_tree_/node_iterators.hpp.

4.211.3.4 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator!= (const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > & *other*) const `[inline]`, `[inherited]`

Compares (negatively) to a different iterator object.

Definition at line 122 of file bin_search_tree_/node_iterators.hpp.

4.211.3.5 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator* ( ) const `[inline]`

Access.

Definition at line 162 of file bin_search_tree_/node_iterators.hpp.

4.211.3.6 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator== (const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > & *other*) const `[inline]`, `[inherited]`

Compares to a different iterator object.

Definition at line 117 of file bin_search_tree_/node_iterators.hpp.

The documentation for this class was generated from the following file:

4.216.2 Member Typedef Documentation

4.216.2.1 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef _Alloc::template rebind<value_type>::other::const_pointer __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::const_pointer

Iterator's const pointer type.

Definition at line 77 of file binary_heap_/point_const_iterator.hpp.

4.216.2.2 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef _Alloc::template rebind<value_type>::other::const_reference __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::const_reference

Iterator's const reference type.

Definition at line 87 of file binary_heap_/point_const_iterator.hpp.

4.216.2.3 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef trivial_iterator_difference_type __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::difference_type

Difference type.

Definition at line 65 of file binary_heap_/point_const_iterator.hpp.

4.216.2.4 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef trivial_iterator_tag __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::iterator_category

Category.

Definition at line 62 of file binary_heap_/point_const_iterator.hpp.

4.216.2.5 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef _Alloc::template rebind<value_type>::other::pointer __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::pointer

Iterator's pointer type.

Definition at line 72 of file binary_heap_/point_const_iterator.hpp.

4.216.2.6 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef _Alloc::template rebind<value_type>::other::reference __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::reference

Iterator's reference type.

Definition at line 82 of file binary_heap_/point_const_iterator.hpp.

4.216.2.7 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > typedef Value_Type __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::value_type

Iterator's value type.

Definition at line 68 of file binary_heap_/point_const_iterator.hpp.

4.216.3 Constructor & Destructor Documentation

4.216.3.1 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::binary_heap_point_const_iterator_ ( ) [inline]

Default constructor.

Definition at line 95 of file binary_heap_/point_const_iterator.hpp.

4.216.3.2 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::binary_heap_point_const_iterator_ (const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & *other*) [inline]

Copy constructor.

Definition at line 99 of file binary_heap_/point_const_iterator.hpp.

4.216.4 Member Function Documentation

4.216.4.1 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > bool __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator!= (const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & *other*) const [inline]

Compares content (negatively) to a different iterator object.

Definition at line 126 of file binary_heap_/point_const_iterator.hpp.

4.216.4.2 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > const_reference __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator* ( ) const [inline]

Access.

Definition at line 113 of file binary_heap_/point_const_iterator.hpp.

4.216.4.3 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > const_pointer __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator-> ( ) const [inline]

Access.

Definition at line 105 of file binary_heap_/point_const_iterator.hpp.

4.216.4.4 template<typename Value_Type , typename Entry , bool Simple, typename _Alloc > bool __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator== (const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & *other*) const [inline]

Compares content to a different iterator object.

Definition at line 121 of file binary_heap_/point_const_iterator.hpp.

4.221.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>class __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >

A collision-chaining hash-based container.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor. Default is __gnu_cxx::hash.
Eq_Fn	Equal functor. Default std::equal_to<Key>
_Alloc	Allocator type.
Store_Hash	If key type stores extra metadata. Defaults to false.
Comb_Hash_Fn	Combining hash functor. If Hash_Fn is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::-Hash Policies.) Default direct_mask_range_hashing.
Resize_Policy	Resizes hash. Defaults to hash_standard_resize_policy, using hash_exponential_size_-policy and hash_load_check_resize_trigger.

Bases are: detail::hash_eq_fn, Resize_Policy, detail::ranged_hash_fn, detail::types_traits. (Optional: detail::debug_-map_base.)

Definition at line 139 of file cc_ht_map_.hpp.

4.221.2 Member Enumeration Documentation

4.221.2.1 template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy> anonymous enum

Value stores hash, true or false.

Definition at line 200 of file cc_ht_map_.hpp.

4.221.3 Member Function Documentation

4.221.3.1 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > bool __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::empty ( ) const [inline]

True if size() == 0.

Definition at line 52 of file cc_ht_map_.hpp.

4.221.3.2 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn ( )

Return current comb_hash_fn.

Definition at line 70 of file cc_ht_map_.hpp.

4.221.3.3 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > const Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn ( ) const

Return current const comb_hash_fn.

4.222.1 Detailed Description

template<typename Entry, typename _Alloc>class __gnu_pbds::detail::cond_dealtor< Entry, _Alloc >

Conditional deallocate constructor argument.

Conditional dey destructor, cc_hash.

Definition at line 50 of file cond_dealtor.hpp.

The documentation for this class was generated from the following files:

- cond_dealtor.hpp
- cond_key_dtor_entry_dealtor.hpp

4.223 __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, binary_heap_tag, null_type > Struct Template Reference

Public Types

- typedef binary_heap< _VTp,
  Cmp_Fn, _Alloc > type

4.223.1 Detailed Description

template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, binary_heap_tag, null_type >

Specialization for binary_heap.

Definition at line 95 of file priority_queue_base_dispatch.hpp.

4.223.2 Member Typedef Documentation

4.223.2.1 template<typename _VTp , typename Cmp_Fn , typename _Alloc > typedef binary_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, binary_heap_tag, null_type >::type

Dispatched type.

Definition at line 99 of file priority_queue_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- priority_queue_base_dispatch.hpp

4.224 __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, binomial_heap_tag, null_type > Struct Template Reference

Public Types

- typedef binomial_heap< _VTp,
  Cmp_Fn, _Alloc > type

4.224.1 Detailed Description

template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, binomial_heap_tag, null_type >

Specialization for binomial_heap.

Definition at line 77 of file priority_queue_base_dispatch.hpp.

4.224.2 Member Typedef Documentation

4.224.2.1 template<typename _VTp , typename Cmp_Fn , typename _Alloc > typedef binomial_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, binomial_heap_tag, null_type >::type

Dispatched type.

Definition at line 81 of file priority_queue_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- priority_queue_base_dispatch.hpp

4.225 __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, pairing_heap_tag, null_type > Struct Template Reference

Public Types

- typedef pairing_heap< _VTp,
  Cmp_Fn, _Alloc > type

4.225.1 Detailed Description

template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, pairing_heap_tag, null_type >

Specialization for pairing_heap.

Definition at line 68 of file priority_queue_base_dispatch.hpp.

4.225.2 Member Typedef Documentation

4.225.2.1 template<typename _VTp , typename Cmp_Fn , typename _Alloc > typedef pairing_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, pairing_heap_tag, null_type >::type

Dispatched type.

Definition at line 72 of file priority_queue_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- priority_queue_base_dispatch.hpp

4.226 __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, rc_binomial_heap_tag, null_type > Struct Template Reference

Public Types

- typedef rc_binomial_heap< _VTp,
  Cmp_Fn, _Alloc > type

4.226.1 Detailed Description

template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, rc_binomial_heap_tag, null_type >

Specialization for rc_binary_heap.

Definition at line 86 of file priority_queue_base_dispatch.hpp.

4.226.2 Member Typedef Documentation

4.226.2.1 template<typename _VTp , typename Cmp_Fn , typename _Alloc > typedef rc_binomial_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, rc_binomial_heap_tag, null_type >::type

Dispatched type.

Definition at line 90 of file priority_queue_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- priority_queue_base_dispatch.hpp

4.227 __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, thin_heap_tag, null_type > Struct Template Reference

Public Types

- typedef thin_heap< _VTp,
  Cmp_Fn, _Alloc > type

4.227.1 Detailed Description

template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, thin_heap_tag, null_type >

Specialization for thin_heap.

Definition at line 104 of file priority_queue_base_dispatch.hpp.

4.227.2 Member Typedef Documentation

4.227.2.1 template<typename _VTp , typename Cmp_Fn , typename _Alloc > typedef thin_heap<_VTp, Cmp_Fn, _Alloc> __gnu_pbds::detail::container_base_dispatch< _VTp, Cmp_Fn, _Alloc, thin_heap_tag, null_type >::type

Dispatched type.

Definition at line 108 of file priority_queue_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- priority_queue_base_dispatch.hpp

4.228 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, cc_hash_tag, Policy_Tl > Struct Template Reference

Public Types

- typedef cc_ht_map< Key, Mapped,
  at0t, at1t, _Alloc,
  at3t::value, at4t, at2t > type

4.228.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, cc_hash_tag, Policy_Tl >

Specialization colision-chaining hash map.

Definition at line 258 of file container_base_dispatch.hpp.

4.228.2 Member Typedef Documentation

4.228.2.1 template<typename Key , typename Mapped , typename _Alloc , typename Policy_Tl > typedef cc_ht_map<Key, Mapped, at0t, at1t, _Alloc, at3t::value, at4t, at2t> __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, cc_hash_tag, Policy_Tl >::type

Dispatched type.

Definition at line 275 of file container_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

4.229 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, gp_hash_tag, Policy_Tl > Struct Template Reference

Public Types

- typedef gp_ht_map< Key, Mapped,
  at0t, at1t, _Alloc,
  at3t::value, at4t, at5t, at2t > type

4.229.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, gp_hash_tag, Policy_Tl >

Specialization general-probe hash map.

Definition at line 303 of file container_base_dispatch.hpp.

4.229.2 Member Typedef Documentation

4.229.2.1 template<typename Key , typename Mapped , typename _Alloc , typename Policy_Tl > typedef gp_ht_map<Key, Mapped, at0t, at1t, _Alloc, at3t::value, at4t, at5t, at2t> __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, gp_hash_tag, Policy_Tl >::type

Dispatched type.

Definition at line 322 of file container_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

4.230 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, list_update_tag, Policy_Tl > Struct Template Reference

Public Types

- typedef lu_map< Key, Mapped, at0t, _Alloc, at1t > type

4.230.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, list_update_tag, Policy_Tl >

Specialization for list-update map.

Definition at line 107 of file container_base_dispatch.hpp.

4.230.2 Member Typedef Documentation

4.230.2.1 template<typename Key , typename Mapped , typename _Alloc , typename Policy_Tl > typedef lu_map<Key, Mapped, at0t, _Alloc, at1t> __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, list_update_tag, Policy_Tl >::type

Dispatched type.

Definition at line 118 of file container_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

4.231 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, ov_tree_tag, Policy_Tl > Struct Template Reference

Public Types

- typedef ov_tree_map< Key, Mapped, at0t, at1t, _Alloc > type

4.231.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, ov_tree_tag, Policy_Tl >

Specialization ordered-vector tree map.

Definition at line 227 of file container_base_dispatch.hpp.

4.231.2 Member Typedef Documentation

4.231.2.1 template< typename Key , typename Mapped , typename _Alloc , typename Policy_Tl > typedef ov_tree_map<Key, Mapped, at0t, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, ov_tree_tag, Policy_Tl >::type

Dispatched type.

Definition at line 237 of file container_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

4.232 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, pat_trie_tag, Policy_Tl > Struct Template Reference

Public Types

- typedef pat_trie_map< Key,
  Mapped, at1t, _Alloc > **type**

4.232.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, pat_trie_tag, Policy_Tl >

Specialization for PATRICIA trie map.

Definition at line 139 of file container_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

4.233 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, rb_tree_tag, Policy_Tl > Struct Template Reference

Public Types

- typedef rb_tree_map< Key,
  Mapped, at0t, at1t, _Alloc > type

4.233.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, rb_tree_tag, Policy_Tl >

Specialization for R-B tree map.

Definition at line 165 of file container_base_dispatch.hpp.

4.233.2 Member Typedef Documentation

4.233.2.1 template<typename Key , typename Mapped , typename _Alloc , typename Policy_Tl > typedef **rb_tree_map**<Key, Mapped, at0t, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, **rb_tree_tag**, Policy_Tl >::**type**

Dispatched type.

Definition at line 175 of file container_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

4.234 __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, splay_tree_tag, Policy_Tl > Struct Template Reference

Public Types

- typedef splay_tree_map< Key,
  Mapped, at0t, at1t, _Alloc > type

4.234.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Policy_Tl>struct __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, splay_tree_tag, Policy_Tl >

Specialization splay tree map.

Definition at line 195 of file container_base_dispatch.hpp.

4.234.2 Member Typedef Documentation

4.234.2.1 template<typename Key , typename Mapped , typename _Alloc , typename Policy_Tl > typedef **splay_tree_map**<Key, Mapped, at0t, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, **splay_tree_tag**, Policy_Tl >::**type**

Dispatched type.

Definition at line 206 of file container_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

4.235 __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, cc_hash_tag, Policy_Tl > Struct Template Reference

Public Types

- typedef cc_ht_set< Key,
  null_type, at0t, at1t, _Alloc,
  at3t::value, at4t, at2t > type

4.235.1 Detailed Description

template<typename Key, typename _Alloc, typename Policy_Tl>struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, cc_hash_tag, Policy_Tl >

Specialization colision-chaining hash set.

Definition at line 280 of file container_base_dispatch.hpp.

4.235.2 Member Typedef Documentation

4.235.2.1 template<typename Key , typename _Alloc , typename Policy_Tl > typedef cc_ht_set<Key, null_type, at0t, at1t, _Alloc, at3t::value, at4t, at2t> __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, cc_hash_tag, Policy_Tl >::type

Dispatched type.

Definition at line 298 of file container_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

4.236 __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, gp_hash_tag, Policy_Tl > Struct Template Reference

Public Types

- typedef gp_ht_set< Key,
  null_type, at0t, at1t, _Alloc,
  at3t::value, at4t, at5t, at2t > type

4.236.1 Detailed Description

template<typename Key, typename _Alloc, typename Policy_Tl>struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, gp_hash_tag, Policy_Tl >

Specialization general-probe hash set.

Definition at line 327 of file container_base_dispatch.hpp.

4.236.2 Member Typedef Documentation

4.236.2.1 template<typename Key , typename _Alloc , typename Policy_Tl > typedef gp_ht_set<Key, null_type, at0t, at1t, _Alloc, at3t::value, at4t, at5t, at2t> __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, gp_hash_tag, Policy_Tl >::type

Dispatched type.

Definition at line 347 of file container_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

4.237 __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, list_update_tag, Policy_Tl > Struct Template Reference

Public Types

- typedef lu_set< Key, null_type,
  at0t, _Alloc, at1t > type

4.237.1 Detailed Description

template<typename Key, typename _Alloc, typename Policy_Tl>struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, list_update_tag, Policy_Tl >

Specialization for list-update set.

Definition at line 123 of file container_base_dispatch.hpp.

4.237.2 Member Typedef Documentation

4.237.2.1 template<typename Key , typename _Alloc , typename Policy_Tl > typedef lu_set<Key, null_type, at0t, _Alloc, at1t> __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, list_update_tag, Policy_Tl >::type

Dispatched type.

Definition at line 134 of file container_base_dispatch.hpp.

The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

4.238 __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, ov_tree_tag, Policy_Tl > Struct Template Reference

Public Types

- typedef ov_tree_set< Key,

- bool **operator()** (entry lhs, entry rhs) const

4.251.1 Detailed Description

template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::entry_cmp< _VTp, Cmp_Fn, _Alloc, false >::type

Compare plus entry.

Definition at line 71 of file entry_cmp.hpp.

The documentation for this struct was generated from the following file:

- entry_cmp.hpp

4.252 __gnu_pbds::detail::entry_cmp< _VTp, Cmp_Fn, _Alloc, true > Struct Template Reference

Public Types

- typedef Cmp_Fn type

4.252.1 Detailed Description

template<typename _VTp, typename Cmp_Fn, typename _Alloc>struct __gnu_pbds::detail::entry_cmp< _VTp, Cmp_Fn, _Alloc, true >

Specialization, true.

Definition at line 54 of file entry_cmp.hpp.

4.252.2 Member Typedef Documentation

4.252.2.1 template<typename _VTp , typename Cmp_Fn , typename _Alloc > typedef Cmp_Fn __gnu_pbds::detail::entry_cmp< _VTp, Cmp_Fn, _Alloc, true >::type

Compare.

Definition at line 57 of file entry_cmp.hpp.

The documentation for this struct was generated from the following file:

- entry_cmp.hpp

4.253 __gnu_pbds::detail::entry_pred< _VTp, Pred, _Alloc, false > Struct Template Reference

Public Types

- typedef
  __rebind_v::other::const_pointer **entry**

4.253.1 Detailed Description

template<typename _VTp, typename Pred, typename _Alloc>struct __gnu_pbds::detail::entry_pred< _VTp, Pred, _Alloc, false >

Specialization, false.

Definition at line 61 of file entry_pred.hpp.

The documentation for this struct was generated from the following file:

- entry_pred.hpp

4.254 __gnu_pbds::detail::entry_pred< _VTp, Pred, _Alloc, true > Struct Template Reference

Public Types

- typedef Pred **type**

4.254.1 Detailed Description

template<typename _VTp, typename Pred, typename _Alloc>struct __gnu_pbds::detail::entry_pred< _VTp, Pred, _Alloc, true >

Specialization, true.

Definition at line 54 of file entry_pred.hpp.

The documentation for this struct was generated from the following file:

- entry_pred.hpp

4.255 __gnu_pbds::detail::eq_by_less< Key, Cmp_Fn > Struct Template Reference

Inherits Cmp_Fn.

Public Member Functions

- bool **operator()** (const Key &r_lhs, const Key &r_rhs) const

4.255.1 Detailed Description

template<typename Key, class Cmp_Fn>struct __gnu_pbds::detail::eq_by_less< Key, Cmp_Fn >

Equivalence function.

Definition at line 56 of file eq_by_less.hpp.

The documentation for this struct was generated from the following file:

- eq_by_less.hpp

4.256 __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy > Class Template Reference

4.256.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Probe_Fn, typename Probe_Fn, typename Resize_Policy>class __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >

A general-probing hash-based container.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor. Default is __gnu_cxx::hash.
Eq_Fn	Equal functor. Default std::equal_to<Key>
_Alloc	Allocator type.
Store_Hash	If key type stores extra metadata. Defaults to false.
Comb_Probe_Fn	Combining probe functor. If Hash_Fn is not null_type, then this is the ranged-probe functor; otherwise, this is the range-hashing functor. XXX See Design::Hash-Based Containers::Hash Policies. Default direct_mask_range_hashing.
Probe_Fn	Probe functor. Defaults to linear_probe_fn, also quadratic_probe_fn.
Resize_Policy	Resizes hash. Defaults to hash_standard_resize_policy, using hash_exponential_size_policy and hash_load_check_resize_trigger.

Bases are: detail::hash_eq_fn, Resize_Policy, detail::ranged_probe_fn, detail::types_traits. (Optional: detail::debug_map_base.)

Definition at line 142 of file gp_ht_map_.hpp.

4.256.2 Member Enumeration Documentation

4.256.2.1 template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Probe_Fn, typename Probe_Fn, typename Resize_Policy> anonymous enum

Value stores hash, true or false.

Definition at line 208 of file gp_ht_map_.hpp.

4.256.3 Member Function Documentation

4.256.3.1 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > bool __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::empty ( ) const `[inline]`

True if size() == 0.

Definition at line 58 of file gp_ht_map_.hpp.

4.256.3.2 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > Comb_Probe_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_comb_probe_fn ( )

Return current comb_probe_fn.

Definition at line 82 of file gp_ht_map_.hpp.

4.256.3.3 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > const Comb_Probe_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_comb_probe_fn ( ) const

Return current const comb_probe_fn.

Definition at line 88 of file gp_ht_map_.hpp.

4.256.3.4 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > Eq_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_eq_fn ( )

Return current eq_fn.

Definition at line 58 of file gp_ht_map_.hpp.

4.256.3.5 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > const Eq_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_eq_fn ( ) const

Return current const eq_fn.

Definition at line 64 of file gp_ht_map_.hpp.

4.256.3.6 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > Hash_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_hash_fn ( )

Return current hash_fn.

Definition at line 46 of file gp_ht_map_.hpp.

4.256.3.7 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > const Hash_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_hash_fn ( ) const

Return current const hash_fn.

Definition at line 52 of file gp_ht_map_.hpp.

4.256.3.8 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > Probe_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_probe_fn ( )

Return current probe_fn.

Definition at line 70 of file gp_ht_map_.hpp.

4.256.3.9 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > const Probe_Fn & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_probe_fn ( ) const

Return current const probe_fn.

Definition at line 76 of file gp_ht_map_.hpp.

4.256.3.10 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > Resize_Policy & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_resize_policy ( )

Return current resize_policy.

Definition at line 94 of file gp_ht_map_.hpp.

4.256.3.11 template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy > const Resize_Policy & __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >::get_resize_policy ( ) const

Return current const resize_policy.

Definition at line 100 of file gp_ht_map_.hpp.

4.261.1 Detailed Description

template<typename Node, typename _Alloc>class __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >

Const point-type iterator.

Definition at line 60 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.261.2 Member Typedef Documentation

4.261.2.1 template<typename Node , typename _Alloc > typedef base_type::const_pointer __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::const_pointer

Iterator's const pointer type.

Definition at line 81 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.261.2.2 template<typename Node , typename _Alloc > typedef base_type::const_reference __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::const_reference

Iterator's const reference type.

Definition at line 87 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.261.2.3 template<typename Node , typename _Alloc > typedef _Alloc::difference_type __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::difference_type

Difference type.

Definition at line 72 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.261.2.4 template<typename Node , typename _Alloc > typedef std::forward_iterator_tag __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::iterator_category

Category.

Definition at line 69 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.261.2.5 template<typename Node , typename _Alloc > typedef base_type::pointer __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::pointer

Iterator's pointer type.

Definition at line 78 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.261.2.6 template<typename Node , typename _Alloc > typedef base_type::reference __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::reference

Iterator's reference type.

Definition at line 84 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.261.2.7 template<typename Node , typename _Alloc > typedef base_type::value_type __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::value_type

Iterator's value type.

Definition at line 75 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.261.3 Constructor & Destructor Documentation

4.261.3.1 template<typename Node , typename _Alloc > __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::left_child_next_sibling_heap_const_iterator_ ( ) [inline]

Default constructor.

Definition at line 96 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.261.3.2 template<typename Node , typename _Alloc > __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::left_child_next_sibling_heap_const_iterator_ (const left_child_next_sibling_heap_const_iterator_< Node, _Alloc > & *other*) [inline]

Copy constructor.

Definition at line 101 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.261.4 Member Function Documentation

4.261.4.1 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::operator!= (const left_child_next_sibling_heap_const_iterator_< Node, _Alloc > & *other*) const [inline]

Compares content (negatively) to a different iterator object.

Definition at line 111 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.261.4.2 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator!= (const left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & *other*) const [inline], [inherited]

Compares content (negatively) to a different iterator object.

Definition at line 137 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.261.4.3 template<typename Node , typename _Alloc > const_reference __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator* ( ) const [inline], [inherited]

Access.

Definition at line 124 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.261.4.4 template<typename Node , typename _Alloc > const_pointer __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator-> ( ) const [inline], [inherited]

Access.

Definition at line 116 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.261.4.5 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >::operator== (const left_child_next_sibling_heap_const_iterator_< Node, _Alloc > & *other*) const [inline]

Compares content to a different iterator object.

Definition at line 106 of file left_child_next_sibling_heap_/const_iterator.hpp.

4.261.4.6 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator== (const left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & *other*) const [inline], [inherited]

Compares content to a different iterator object.

Definition at line 132 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

The documentation for this class was generated from the following file:

4.263.1 Detailed Description

template<typename Node, typename _Alloc>class __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >

Const point-type iterator.

Definition at line 61 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.263.2 Member Typedef Documentation

4.263.2.1 template<typename Node , typename _Alloc > typedef _Alloc::template rebind< value_type>::other::const_pointer __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::const_pointer

Iterator's const pointer type.

Definition at line 86 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.263.2.2 template<typename Node , typename _Alloc > typedef _Alloc::template rebind< value_type>::other::const_reference __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::const_reference

Iterator's const reference type.

Definition at line 98 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.263.2.3 template<typename Node , typename _Alloc > typedef trivial_iterator_difference_type __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::difference_type

Difference type.

Definition at line 71 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.263.2.4 template<typename Node , typename _Alloc > typedef trivial_iterator_tag __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::iterator_category

Category.

Definition at line 68 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.263.2.5 template<typename Node , typename _Alloc > typedef _Alloc::template rebind< value_type>::other::pointer __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::pointer

Iterator's pointer type.

Definition at line 80 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.263.2.6 template<typename Node , typename _Alloc > typedef _Alloc::template rebind< value_type>::other::reference __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::reference

Iterator's reference type.

Definition at line 92 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.263.2.7 template<typename Node , typename _Alloc > typedef Node::value_type __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::value_type

Iterator's value type.

Definition at line 74 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.263.3 Constructor & Destructor Documentation

4.263.3.1 template<typename Node , typename _Alloc > __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::left_child_next_sibling_heap_node_point_const_iterator_ ( ) `[inline]`

Default constructor.

Definition at line 106 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.263.3.2 template<typename Node , typename _Alloc > __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::left_child_next_sibling_heap_node_point_const_iterator_ (const left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & *other*) `[inline]`

Copy constructor.

Definition at line 111 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.263.4 Member Function Documentation

4.263.4.1 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator!= (const left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & *other*) const `[inline]`

Compares content (negatively) to a different iterator object.

Definition at line 137 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.263.4.2 template<typename Node , typename _Alloc > const_reference __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator* ( ) const [inline]

Access.

Definition at line 124 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.263.4.3 template<typename Node , typename _Alloc > const_pointer __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator-> ( ) const [inline]

Access.

Definition at line 116 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

4.263.4.4 template<typename Node , typename _Alloc > bool __gnu_pbds::detail::left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc >::operator== (const left_child_next_sibling_heap_node_point_const_iterator_< Node, _Alloc > & *other*) const [inline]

Compares content to a different iterator object.

Definition at line 132 of file left_child_next_sibling_heap_/point_const_iterator.hpp.

The documentation for this class was generated from the following file:

- left_child_next_sibling_heap_/point_const_iterator.hpp

4.264 __gnu_pbds::detail::lu_counter_metadata< Size_Type > Class Template Reference

Public Types

- typedef Size_Type **size_type**

Friends

- class **lu_counter_policy_base**< **size_type** >

4.264.1 Detailed Description

template<typename Size_Type = std::size_t>class __gnu_pbds::detail::lu_counter_metadata< Size_Type >

A list-update metadata type that moves elements to the front of the list based on the counter algorithm.

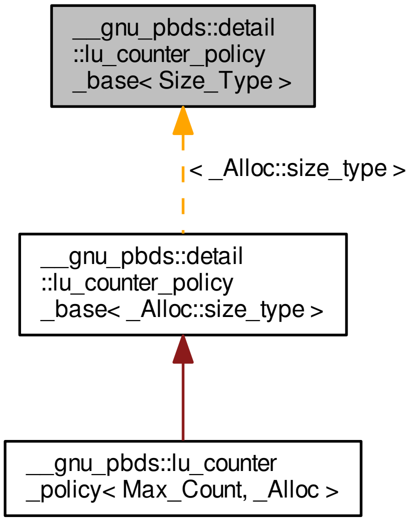
Definition at line 51 of file lu_counter_metadata.hpp.

The documentation for this class was generated from the following file:

- lu_counter_metadata.hpp

4.265 __gnu_pbds::detail::lu_counter_policy_base< Size_Type > Class Template Reference

Inheritance diagram for __gnu_pbds::detail::lu_counter_policy_base< Size_Type >:



Protected Types

- typedef Size_Type **size_type**

Protected Member Functions

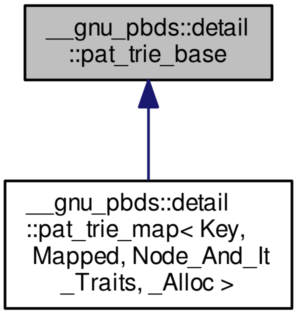
4.276 __gnu_pbds::detail::pat_trie_base Struct Reference

Inheritance diagram for __gnu_pbds::detail::pat_trie_base:



Classes

- class _CIter

  Const iterator.
- struct _Head

  Head node for PATRICIA tree.
- struct _Inode

  Internal node type, PATRICIA tree.
- class _Iter

  Iterator.
- struct _Leaf

  Leaf node for PATRICIA tree.
- struct _Metadata

  Metadata base primary template.
- struct _Metadata< null_type, _Alloc >

  Specialization for null metadata.
- struct _Node_base

  Node base.
- class _Node_citer

  Node const iterator.
- class _Node_iter

  Node iterator.

Public Types

- enum node_type { **i_node**, **leaf_node**, **head_node** }

4.276.1 Detailed Description

Base type for PATRICIA trees.

Definition at line 51 of file pat_trie_base.hpp.

4.276.2 Member Enumeration Documentation

4.276.2.1 enum __gnu_pbds::detail::pat_trie_base::node_type

Three types of nodes.

i_node is used by _Inode, leaf_node by _Leaf, and head_node by _Head.

Definition at line 58 of file pat_trie_base.hpp.

The documentation for this struct was generated from the following file:

- pat_trie_base.hpp

4.287.1 Detailed Description

template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename Iterator, typename _Alloc>class __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >

Node const iterator.

Definition at line 814 of file pat_trie_base.hpp.

4.287.2 Member Typedef Documentation

4.287.2.1 template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > typedef _Alloc::template rebind<metadata_type> __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::__rebind_m

Const metadata reference type.

Definition at line 869 of file pat_trie_base.hpp.

4.287.2.2 template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > typedef Node::metadata_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::metadata_type

Metadata type.

Definition at line 866 of file pat_trie_base.hpp.

4.287.3 Member Function Documentation

4.287.3.1 template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > _Node_citer __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::get_child (size_type *i*) const [inline]

Returns a __const node __iterator to the corresponding node's i-th child.

Definition at line 911 of file pat_trie_base.hpp.

References std::advance().

4.287.3.2 template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > metadata_const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::get_metadata ( ) const [inline]

Metadata access.

Definition at line 894 of file pat_trie_base.hpp.

4.287.3.3 template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::num_children ( ) const [inline]

Returns the number of children in the corresponding node.

Definition at line 899 of file pat_trie_base.hpp.

References std::distance().

Referenced by __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator*(), and __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator*().

4.289.1 Detailed Description

template<typename Key, typename Mapped, typename Node_And_It_Traits, typename _Alloc>class __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >

PATRICIA trie.

This implementation loosely borrows ideas from: 1) Fast Mergeable Integer Maps, Okasaki, Gill 1998 2) Ptset: Sets of integers implemented as Patricia trees, Jean-Christophe Filliatr, 2000.

Definition at line 101 of file pat_trie_.hpp.

4.289.2 Member Enumeration Documentation

4.289.2.1 enum __gnu_pbds::detail::pat_trie_base::node_type [inherited]

Three types of nodes.

i_node is used by _Inode, leaf_node by _Leaf, and head_node by _Head.

Definition at line 58 of file pat_trie_base.hpp.

4.289.3 Member Function Documentation

4.289.3.1 template<typename Key , typename Mapped , typename Node_And_It_Traits , typename _Alloc > pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_begin ( ) const [inline]

Returns a const node_iterator corresponding to the node at the root of the tree.

Definition at line 101 of file pat_trie_.hpp.

4.289.3.2 template<typename Key , typename Mapped , typename Node_And_It_Traits , typename _Alloc > pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_begin ( ) [inline]

Returns a node_iterator corresponding to the node at the root of the tree.

Definition at line 107 of file pat_trie_.hpp.

4.289.3.3 template<typename Key , typename Mapped , typename Node_And_It_Traits , typename _Alloc > pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_end ( ) const [inline]

Returns a const node_iterator corresponding to a node just after a leaf of the tree.

Definition at line 113 of file pat_trie_.hpp.

4.289.3.4 template<typename Key , typename Mapped , typename Node_And_It_Traits , typename _Alloc > pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >::node_end ( ) [inline]

Returns a node_iterator corresponding to a node just after a leaf of the tree.

Definition at line 119 of file pat_trie_.hpp.

4.298.1 Detailed Description

template<typename Key, typename Mapped, typename Cmp_Fn, typename Node_And_It_Traits, typename _Alloc>class __gnu_pbds::detail::rb_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >

Red-Black tree.

This implementation uses an idea from the SGI STL (using a *header* node which is needed for efficient iteration).

Definition at line 84 of file rb_tree_.hpp.

4.298.2 Member Function Documentation

4.298.2.1 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( ) const `[inline]`, `[inherited]`

Returns a const node_iterator corresponding to the node at the root of the tree.

Definition at line 109 of file bin_search_tree_.hpp.

4.298.2.2 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( ) `[inline]`, `[inherited]`

Returns a node_iterator corresponding to the node at the root of the tree.

Definition at line 117 of file bin_search_tree_.hpp.

4.298.2.3 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( ) const `[inline]`, `[inherited]`

Returns a const node_iterator corresponding to a node just after a leaf of the tree.

Definition at line 125 of file bin_search_tree_.hpp.

4.298.2.4 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( ) `[inline]`, `[inherited]`

Returns a node_iterator corresponding to a node just after a leaf of the tree.

Definition at line 133 of file bin_search_tree_.hpp.

4.303.1 Detailed Description

template<typename Key, typename Mapped, typename Cmp_Fn, typename Node_And_It_Traits, typename _Alloc>class __gnu_pbds::detail::splay_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >

Splay tree.

Definition at line 107 of file splay_tree_.hpp.

4.303.2 Member Function Documentation

4.303.2.1 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( ) const `[inline]`, `[inherited]`

Returns a const node_iterator corresponding to the node at the root of the tree.

Definition at line 109 of file bin_search_tree_.hpp.

4.303.2.2 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_begin ( ) `[inline]`, `[inherited]`

Returns a node_iterator corresponding to the node at the root of the tree.

Definition at line 117 of file bin_search_tree_.hpp.

4.303.2.3 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_const_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( ) const `[inline]`, `[inherited]`

Returns a const node_iterator corresponding to a node just after a leaf of the tree.

Definition at line 125 of file bin_search_tree_.hpp.

4.303.2.4 template<typename Key , typename Mapped , typename Cmp_Fn , typename Node_And_It_Traits , typename _Alloc > bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_iterator __gnu_pbds::detail::bin_search_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::node_end ( ) `[inline]`, `[inherited]`

Returns a node_iterator corresponding to a node just after a leaf of the tree.

Definition at line 133 of file bin_search_tree_.hpp.

4.304.1 Detailed Description

template<typename Value_Type, class Metadata, typename _Alloc>struct __gnu_pbds::detail::splay_tree_node_< Value_Type, Metadata, _Alloc >

Node for splay tree.

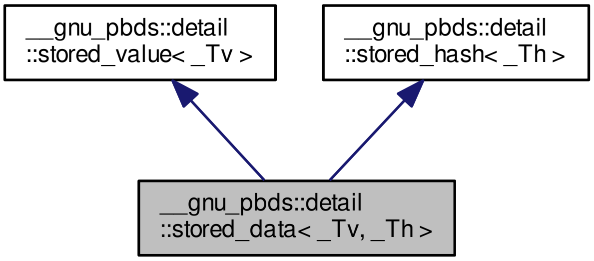
Definition at line 50 of file splay_tree_/node.hpp.

The documentation for this struct was generated from the following file:

- splay_tree_/node.hpp

4.305 __gnu_pbds::detail::stored_data< _Tv, _Th > Struct Template Reference

Inheritance diagram for __gnu_pbds::detail::stored_data< _Tv, _Th >:



Public Types

- typedef _Th **hash_type**
- typedef _Tv **value_type**

Public Attributes

- hash_type **m_hash**
- value_type **m_value**

4.305.1 Detailed Description

template<typename _Tv, typename _Th>struct __gnu_pbds::detail::stored_data< _Tv, _Th >

Primary template for representation of stored data. Two types of data can be stored: value and hash.

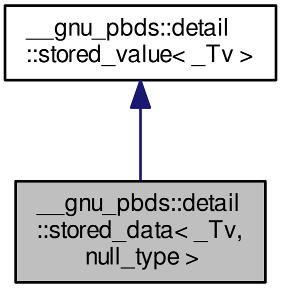
Definition at line 95 of file types_traits.hpp.

The documentation for this struct was generated from the following file:

- types_traits.hpp

4.306 __gnu_pbds::detail::stored_data< _Tv, null_type > Struct Template Reference

Inheritance diagram for __gnu_pbds::detail::stored_data< _Tv, null_type >:



Public Types

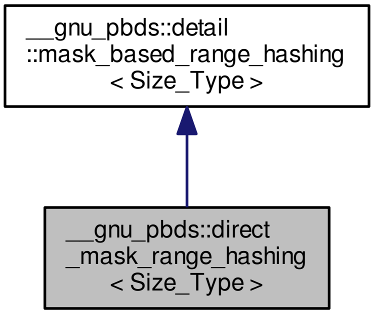
4.332 __gnu_pbds::direct_mask_range_hashing< Size_Type > Class Template Reference

Inheritance diagram for __gnu_pbds::direct_mask_range_hashing< Size_Type >:



Public Types

- typedef Size_Type **size_type**

Public Member Functions

- void **swap** (direct_mask_range_hashing< Size_Type > &other)

Protected Member Functions

- void **notify_resized** (size_type size)
- size_type operator() (size_type hash) const
- size_type **range_hash** (size_type hash) const
- void **swap** (mask_based_range_hashing &other)

4.332.1 Detailed Description

template<typename Size_Type = std::size_t>class __gnu_pbds::direct_mask_range_hashing< Size_Type >

A mask range-hashing class (uses a bitmask).

Definition at line 109 of file hash_policy.hpp.

4.332.2 Member Function Documentation

4.332.2.1 template<typename Size_Type > direct_mask_range_hashing< Size_Type >::size_type __gnu_pbds::direct_mask_range_hashing< Size_Type >::operator() (size_type *hash*) const [inline], [protected]

Transforms the __hash value hash into a ranged-hash value (using a bit-mask).

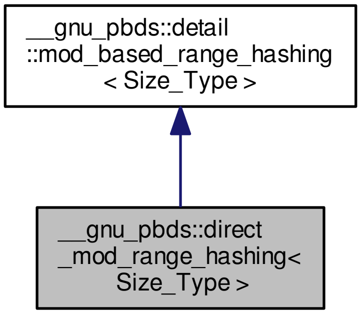
Definition at line 57 of file hash_policy.hpp.

The documentation for this class was generated from the following files:

- hash_policy.hpp
- direct_mask_range_hashing_imp.hpp

4.333 __gnu_pbds::direct_mod_range_hashing< Size_Type > Class Template Reference

Inheritance diagram for __gnu_pbds::direct_mod_range_hashing< Size_Type >:



Public Types

- typedef Size_Type **size_type**

Public Member Functions

- void **swap** (direct_mod_range_hashing< Size_Type > &other)

Protected Member Functions

- void **notify_resized** (size_type size)
- size_type operator() (size_type hash) const
- size_type **range_hash** (size_type s) const
- void **swap** (mod_based_range_hashing &other)

4.333.1 Detailed Description

template<typename Size_Type = std::size_t>class __gnu_pbds::direct_mod_range_hashing< Size_Type >

A mod range-hashing class (uses the modulo function).

Definition at line 141 of file hash_policy.hpp.

4.333.2 Member Function Documentation

4.333.2.1 template<typename Size_Type > direct_mod_range_hashing< Size_Type >::size_type __gnu_pbds::direct_mod_range_hashing< Size_Type >::operator() (size_type *hash*) const `[inline]`, `[protected]`

Transforms the __hash value hash into a ranged-hash value (using a modulo operation).

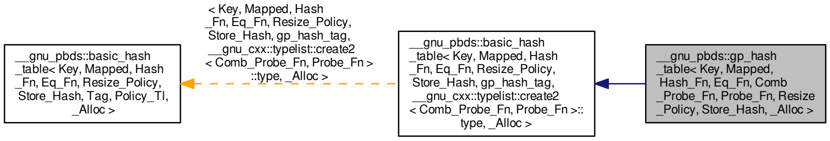
Definition at line 57 of file hash_policy.hpp.

The documentation for this class was generated from the following files:

- hash_policy.hpp
- direct_mod_range_hashing_imp.hpp

4.334 __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc > Class Template Reference

Inheritance diagram for __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >:



Public Types

- typedef Comb_Probe_Fn **comb_probe_fn**

4.334.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>class __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >

A general-probing hash-based associative container.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor.
Eq_Fn	Equal functor.
Comb_Probe_Fn	Combining probe functor. If Hash_Fn is not null_type, then this is the ranged-probe functor; otherwise, this is the range-hashing functor. XXX See Design::Hash-Based Containers::Hash Policies.
Probe_Fn	Probe functor.
Resize_Policy	Resizes hash.
Store_Hash	Indicates whether the hash value will be stored along with each key. If Hash_Fn is null_type, then the container will not compile if this value is true
_Alloc	Allocator type.

Base tag choices are: gp_hash_tag.

Base is basic_hash_table.

Definition at line 368 of file assoc_container.hpp.

4.334.2 Constructor & Destructor Documentation

4.334.2.1 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >::gp_hash_table ( ) `[inline]`

Default constructor.

Definition at line 382 of file assoc_container.hpp.

4.334.2.2 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >::gp_hash_table (const hash_fn & *h*) `[inline]`

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object.

Definition at line 386 of file assoc_container.hpp.

4.334.2.3 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >::gp_hash_table (const hash_fn & *h*, const eq_fn & *e*) `[inline]`

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, and r_eq_fn will be copied by the eq_fn object of the container object.

Definition at line 393 of file assoc_container.hpp.

4.334.2.4 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >::gp_hash_table (const hash_fn & *h*, const eq_fn & *e*, const comb_probe_fn & *cp*) `[inline]`

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, and r_comb_probe_fn will be copied by the comb_probe_fn object of the container object.

Definition at line 401 of file assoc_container.hpp.

4.334.2.5 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >::gp_hash_table (const hash_fn & *h,* const eq_fn & *e,* const comb_probe_fn & *cp,* const probe_fn & *p*) `[inline]`

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, r_comb_probe_fn will be copied by the comb_probe_fn object of the container object, and r_probe_fn will be copied by the probe_fn object of the container object.

Definition at line 410 of file assoc_container.hpp.

4.334.2.6 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >::gp_hash_table (const hash_fn & *h,* const eq_fn & *e,* const comb_probe_fn & *cp,* const probe_fn & *p,* const resize_policy & *rp*) `[inline]`

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, r_comb_probe_fn will be copied by the comb_probe_fn object of the container object, r_probe_fn will be copied by the probe_fn object of the container object, and r_resize_policy will be copied by the Resize_Policy object of the container object.

Definition at line 422 of file assoc_container.hpp.

4.334.2.7 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >::gp_hash_table (It *first,* It *last*) `[inline]`

Constructor taking __iterators to a range of value_types. The value_types between first_it and last_it will be inserted into the container object.

Definition at line 430 of file assoc_container.hpp.

4.334.2.8 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >::gp_hash_table (It *first,* It *last,* const hash_fn & *h*) `[inline]`

Constructor taking __iterators to a range of value_types and some policy objects. The value_types between first_it and last_it will be inserted into the container object. r_hash_fn will be copied by the hash_fn object of the container object.

Definition at line 438 of file assoc_container.hpp.

4.337.1 Detailed Description

template<bool External_Load_Access = false, typename Size_Type = std::size_t>class __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >

A resize trigger policy based on a load check. It keeps the load factor between some load factors load_min and load_max.

Definition at line 175 of file hash_policy.hpp.

4.337.2 Member Enumeration Documentation

4.337.2.1 template<bool External_Load_Access = false, typename Size_Type = std::size_t> anonymous enum

Enumerator:

external_load_access Specifies whether the load factor can be accessed externally. The two options have different trade-offs in terms of flexibility, genericity, and encapsulation.

Definition at line 180 of file hash_policy.hpp.

4.337.3 Constructor & Destructor Documentation

4.337.3.1 template<bool External_Load_Access, typename Size_Type > __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::hash_load_check_resize_trigger (float *load_min* = `0.125`, float *load_max* = `0.5`)

Default constructor, or constructor taking load_min and load_max load factors between which this policy will keep the actual load.

Definition at line 47 of file hash_policy.hpp.

4.337.4 Member Function Documentation

4.337.4.1 template<bool External_Load_Access, typename Size_Type > std::pair< float, float > __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::get_loads ( ) const [inline]

Returns a pair of the minimal and maximal loads, respectively.

Definition at line 236 of file hash_policy.hpp.

4.337.4.2 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::notify_cleared ( ) [protected]

Notifies the table was cleared.

Definition at line 206 of file hash_policy.hpp.

4.337.4.3 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::notify_inserted (size_type *num_entries*) [inline], [protected]

Notifies an element was inserted. The total number of entries in the table is num_entries.

Definition at line 109 of file hash_policy.hpp.

4.337.4.4 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::notify_resized (size_type *new_size*) [protected]

Notifies the table was resized as a result of this object's signifying that a resize is needed.

Definition at line 151 of file hash_policy.hpp.

4.337.4.5 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::set_loads (std::pair< float, float > *load_pair*)

Sets the loads through a pair of the minimal and maximal loads, respectively.

Definition at line 245 of file hash_policy.hpp.

The documentation for this class was generated from the following files:

- hash_policy.hpp
- hash_load_check_resize_trigger_imp.hpp

4.338 __gnu_pbds::hash_prime_size_policy Class Reference

Public Types

- typedef std::size_t size_type

Public Member Functions

- hash_prime_size_policy (size_type start_size=8)
- void **swap** (hash_prime_size_policy &other)

Protected Member Functions

- size_type **get_nearest_larger_size** (size_type size) const
- size_type **get_nearest_smaller_size** (size_type size) const

4.338.1 Detailed Description

A size policy whose sequence of sizes form a nearly-exponential sequence of primes.

Definition at line 450 of file hash_policy.hpp.

4.338.2 Member Typedef Documentation

4.338.2.1 typedef std::size_t __gnu_pbds::hash_prime_size_policy::size_type

Size type.

Definition at line 454 of file hash_policy.hpp.

4.338.3 Constructor & Destructor Documentation

4.338.3.1 __gnu_pbds::hash_prime_size_policy::hash_prime_size_policy (size_type *start_size* = 8) [inline]

Default constructor, or onstructor taking a start_size The policy will use the sequence of sizes approximately start_size, start_size$*$ 2, start_size$*$ 2^2, ...

Definition at line 127 of file hash_policy.hpp.

The documentation for this class was generated from the following files:

- hash_policy.hpp
- hash_prime_size_policy_imp.hpp

4.339 __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type > Class Template Reference

Inherits Size_Policy, and Trigger_Policy.

Public Types

- enum { **external_size_access** }
- typedef Size_Policy **size_policy**
- typedef Size_Type **size_type**
- typedef Trigger_Policy **trigger_policy**

Public Member Functions

4.339.1 Detailed Description

template<typename Size_Policy = hash_exponential_size_policy<>, typename Trigger_Policy = hash_load_check_resize_trigger<>, bool External_Size_Access = false, typename Size_Type = std::size_t>class __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >

A resize policy which delegates operations to size and trigger policies.

Definition at line 489 of file hash_policy.hpp.

4.339.2 Constructor & Destructor Documentation

4.339.2.1 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::hash_standard_resize_policy ( )

Default constructor.

Definition at line 44 of file hash_policy.hpp.

4.339.2.2 template<typename Size_Policy, typename Trigger_Policy , bool External_Size_Access, typename Size_Type > __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::hash_standard_resize_policy (const Size_Policy & *r_size_policy*)

constructor taking some policies r_size_policy will be copied by the Size_Policy object of this object.

Definition at line 50 of file hash_policy.hpp.

4.339.2.3 template<typename Size_Policy, typename Trigger_Policy, bool External_Size_Access, typename Size_Type > __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::hash_standard_resize_policy (const Size_Policy & *r_size_policy,* const Trigger_Policy & *r_trigger_policy*)

constructor taking some policies. r_size_policy will be copied by the Size_Policy object of this object. r_trigger_policy will be copied by the Trigger_Policy object of this object.

Definition at line 56 of file hash_policy.hpp.

4.339.3 Member Function Documentation

4.339.3.1 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::size_type __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_actual_size ( ) const `[inline]`

Returns the actual size of the container.

Definition at line 177 of file hash_policy.hpp.

4.339.3.2 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::size_type __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_new_size (size_type *size,* size_type *num_used_e*) const `[protected]`

Queries what the new size should be, when the container is resized naturally. The current __size of the container is size, and the number of used entries within the container is num_used_e.

Definition at line 158 of file hash_policy.hpp.

4.339.3.3 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > Size_Policy & __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_size_policy ( )

Access to the Size_Policy object used.

Definition at line 242 of file hash_policy.hpp.

4.339.3.4 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > const Size_Policy & __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_size_policy ( ) const

Const access to the Size_Policy object used.

Definition at line 248 of file hash_policy.hpp.

4.339.3.5 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > Trigger_Policy & __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_trigger_policy ( )

Access to the Trigger_Policy object used.

Definition at line 230 of file hash_policy.hpp.

4.339.3.6 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > const Trigger_Policy & __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::get_trigger_policy ( ) const

Access to the Trigger_Policy object used.

Definition at line 236 of file hash_policy.hpp.

4.339.3.7 template<typename Size_Policy , typename Trigger_Policy , bool External_Size_Access, typename Size_Type > void __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::resize (size_type *suggested_new_size*)

Resizes the container to suggested_new_size, a suggested size (the actual size will be determined by the Size_Policy object).

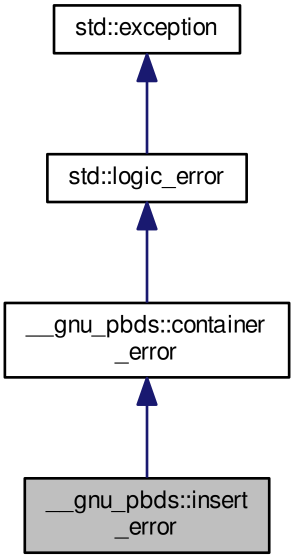
Definition at line 186 of file hash_policy.hpp.

The documentation for this class was generated from the following files:

- hash_policy.hpp
- hash_standard_resize_policy_imp.hpp

4.340 __gnu_pbds::insert_error Struct Reference

Inheritance diagram for __gnu_pbds::insert_error:



Public Member Functions

- virtual const char ∗ what () const noexcept

4.340.1 Detailed Description

An entry cannot be inserted into a container object for logical reasons (not, e.g., if memory is unabvailable, in which case the allocator_type's exception will be thrown).

Definition at line 66 of file exception.hpp.

4.340.2 Member Function Documentation

4.340.2.1 virtual const char∗ std::logic_error::what ( ) const [virtual], [noexcept], [inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.

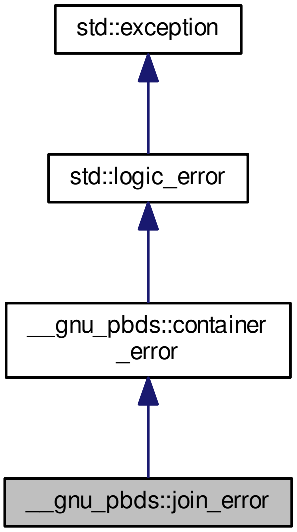
Reimplemented in std::future_error.

The documentation for this struct was generated from the following file:

- exception.hpp

4.341 __gnu_pbds::join_error Struct Reference

Inheritance diagram for __gnu_pbds::join_error:



Public Member Functions

- virtual const char ∗ what () const noexcept

4.341.1 Detailed Description

A join cannot be performed logical reasons (i.e., the ranges of the two container objects being joined overlaps.

Definition at line 70 of file exception.hpp.

4.341.2 Member Function Documentation

4.341.2.1 virtual const char∗ std::logic_error::what ( ) const [virtual], [noexcept], [inherited]

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.

Reimplemented in std::future_error.

The documentation for this struct was generated from the following file:

- exception.hpp

4.342 __gnu_pbds::linear_probe_fn< Size_Type > Class Template Reference

Public Types

- typedef Size_Type **size_type**

Public Member Functions

- void **swap** (linear_probe_fn< Size_Type > &other)

Protected Member Functions

- size_type operator() (size_type i) const

4.342.1 Detailed Description

template<typename Size_Type = std::size_t>class __gnu_pbds::linear_probe_fn< Size_Type >

A probe sequence policy using fixed increments.

Definition at line 61 of file hash_policy.hpp.

4.342.2 Member Function Documentation

4.342.2.1 template<typename Size_Type > linear_probe_fn< Size_Type >::size_type __gnu_pbds::linear_probe_fn< Size_Type >::operator() (size_type *i*) const [inline], [protected]

Returns the i-th offset from the hash value.

Definition at line 51 of file hash_policy.hpp.

The documentation for this class was generated from the following files:

- hash_policy.hpp

- linear_probe_fn_imp.hpp

4.343 __gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, _Alloc > Class Template Reference

Inherits type< Key, Mapped, _Alloc, list_update_tag, __gnu_cxx::typelist::create2< Eq_Fn, Update_Policy >::type >.

Public Types

- typedef list_update_tag **container_category**
- typedef Eq_Fn **eq_fn**
- typedef Update_Policy **update_policy**

Public Member Functions

- template<typename It >
  list_update (It first, It last)
- **list_update** (const list_update &other)
- list_update & **operator=** (const list_update &other)
- void **swap** (list_update &other)

4.343.1 Detailed Description

template<typename Key, typename Mapped, class Eq_Fn = typename detail::default_eq_fn<Key>::type, class Update_Policy = detail::default_update_policy::type, class _Alloc = std::allocator<char>>class __gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, _Alloc >

A list-update based associative container.

Template Parameters

Key	Key type.
Mapped	Map type.
Eq_Fn	Equal functor.
Update_Policy	Update policy, determines when an element will be moved to the front of the list.
_Alloc	Allocator type.

Base is detail::lu_map.

Definition at line 815 of file assoc_container.hpp.

4.343.2 Constructor & Destructor Documentation

4.343.2.1 template<typename Key , typename Mapped , class Eq_Fn = typename detail::default_eq_fn<Key>::type, class Update_Policy = detail::default_update_policy::type, class _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, _Alloc >::list_update (It *first*, It *last*) `[inline]`

Constructor taking __iterators to a range of value_types. The value_types between first_it and last_it will be inserted into the container object.

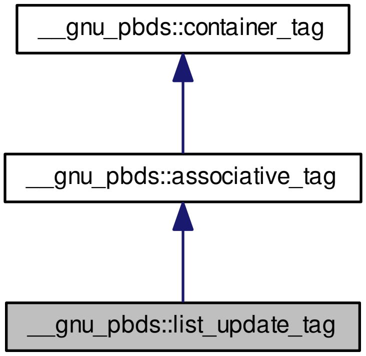
Definition at line 831 of file assoc_container.hpp.

The documentation for this class was generated from the following file:

- assoc_container.hpp

4.344 __gnu_pbds::list_update_tag Struct Reference

Inheritance diagram for __gnu_pbds::list_update_tag:



4.344.1 Detailed Description

List-update.

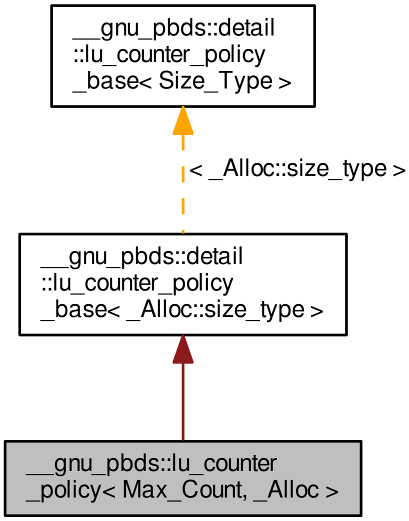
Definition at line 168 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.345 __gnu_pbds::lu_counter_policy< Max_Count, _Alloc > Class Template Reference

Inheritance diagram for __gnu_pbds::lu_counter_policy< Max_Count, _Alloc >:



Public Types

- enum { max_count }
- typedef _Alloc **allocator_type**
- typedef __rebind_m::other::reference metadata_reference
- typedef detail::lu_counter_metadata < size_type > metadata_type
- typedef allocator_type::size_type **size_type**

Public Member Functions

- metadata_type operator() () const
- bool operator() (metadata_reference r_data) const

Private Member Functions

- lu_counter_metadata< size_type > **operator()** (size_type max_size) const
- bool **operator()** (Metadata_Reference r_data, size_type m_max_count) const

4.345.1 Detailed Description

template<std::size_t Max_Count = 5, typename _Alloc = std::allocator<char>>class __gnu_pbds::lu_counter_policy< Max_Count, _Alloc >

A list-update policy that moves elements to the front of the list based on the counter algorithm.

Definition at line 92 of file list_update_policy.hpp.

4.345.2 Member Typedef Documentation

4.345.2.1 template<std::size_t Max_Count = 5, typename _Alloc = std::allocator<char>> typedef __rebind_m::other::reference __gnu_pbds::lu_counter_policy< Max_Count, _Alloc >::metadata_reference

Reference to metadata on which this functor operates.

Definition at line 115 of file list_update_policy.hpp.

4.345.2.2 template<std::size_t Max_Count = 5, typename _Alloc = std::allocator<char>> typedef detail::lu_counter_metadata<size_type> __gnu_pbds::lu_counter_policy< Max_Count, _Alloc >::metadata_type

Metadata on which this functor operates.

Definition at line 107 of file list_update_policy.hpp.

4.345.3 Member Enumeration Documentation

4.345.3.1 template<std::size_t Max_Count = 5, typename _Alloc = std::allocator<char>> anonymous enum

Enumerator:

max_count When some element is accessed this number of times, it will be moved to the front of the list.

Definition at line 99 of file list_update_policy.hpp.

4.345.4 Member Function Documentation

4.345.4.1 template<std::size_t Max_Count = 5, typename _Alloc = std::allocator<char>> metadata_type __gnu_pbds::lu_counter_policy< Max_Count, _Alloc >::operator() ( ) const [inline]

Creates a metadata object.

Definition at line 119 of file list_update_policy.hpp.

References __gnu_pbds::lu_counter_policy< Max_Count, _Alloc >::max_count.

4.345.4.2 template<std::size_t Max_Count = 5, typename _Alloc = std::allocator<char>> bool __gnu_pbds::lu_counter_policy< Max_Count, _Alloc >::operator() (metadata_reference *r_data*) const [inline]

Decides whether a metadata object should be moved to the front of the list.

Definition at line 125 of file list_update_policy.hpp.

References __gnu_pbds::lu_counter_policy< Max_Count, _Alloc >::max_count.

The documentation for this class was generated from the following file:

- list_update_policy.hpp

4.346 __gnu_pbds::lu_move_to_front_policy< _Alloc > Class Template Reference

Public Types

- typedef _Alloc **allocator_type**
- typedef
  __rebind_m::other::reference metadata_reference
- typedef null_type metadata_type

Public Member Functions

- metadata_type operator() () const
- bool operator() (metadata_reference r_metadata) const

4.346.1 Detailed Description

template<typename _Alloc = std::allocator<char>>class __gnu_pbds::lu_move_to_front_policy< _Alloc >

A list-update policy that unconditionally moves elements to the front of the list. A null type means that each link in a list-based container does not actually need metadata.

Definition at line 57 of file list_update_policy.hpp.

4.346.2 Member Typedef Documentation

4.346.2.1 template<typename _Alloc = std::allocator<char>> typedef __rebind_m::other::reference __gnu_pbds::lu_move_to_front_policy< _Alloc >::metadata_reference

Reference to metadata on which this functor operates.

Definition at line 70 of file list_update_policy.hpp.

4.346.2.2 template<typename _Alloc = std::allocator<char>> typedef null_type __gnu_pbds::lu_move_to_front_policy< _Alloc >::metadata_type

Metadata on which this functor operates.

Definition at line 63 of file list_update_policy.hpp.

4.346.3 Member Function Documentation

4.346.3.1 template<typename _Alloc = std::allocator<char>> metadata_type __gnu_pbds::lu_move_to_front_policy< _Alloc >::operator() ( ) const `[inline]`

Creates a metadata object.

Definition at line 74 of file list_update_policy.hpp.

4.346.3.2 template<typename _Alloc = std::allocator<char>> bool __gnu_pbds::lu_move_to_front_policy< _Alloc >::operator() (metadata_reference *r_metadata*) const [inline]

Decides whether a metadata object should be moved to the front of the list.

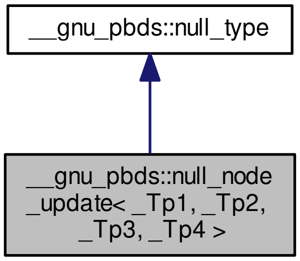
Definition at line 80 of file list_update_policy.hpp.

The documentation for this class was generated from the following file:

- list_update_policy.hpp

4.347 __gnu_pbds::null_node_update< _Tp1, _Tp2, _Tp3, _Tp4 > Struct Template Reference

Inheritance diagram for __gnu_pbds::null_node_update< _Tp1, _Tp2, _Tp3, _Tp4 >:



4.347.1 Detailed Description

template<typename _Tp1, typename _Tp2, typename _Tp3, typename _Tp4>struct __gnu_pbds::null_node_update< _Tp1, _Tp2, _Tp3, _Tp4 >

A null node updator, indicating that no node updates are required.

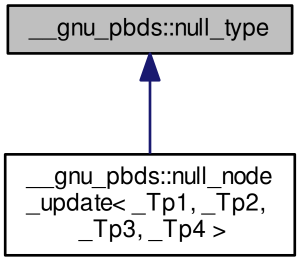
Definition at line 214 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.348 __gnu_pbds::null_type Struct Reference

Inheritance diagram for __gnu_pbds::null_type:



4.348.1 Detailed Description

Represents no type, or absence of type, for template tricks.

In a mapped-policy, indicates that an associative container is a set.

In a list-update policy, indicates that each link does not need metadata.

In a hash policy, indicates that the combining hash function is actually a ranged hash function.

In a probe policy, indicates that the combining probe function is actually a ranged probe function.

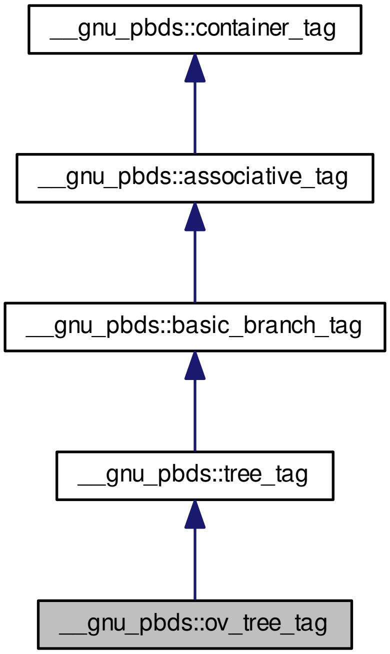
Definition at line 210 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.349 __gnu_pbds::ov_tree_tag Struct Reference

Inheritance diagram for __gnu_pbds::ov_tree_tag:



4.349.1 Detailed Description

Ordered-vector tree.

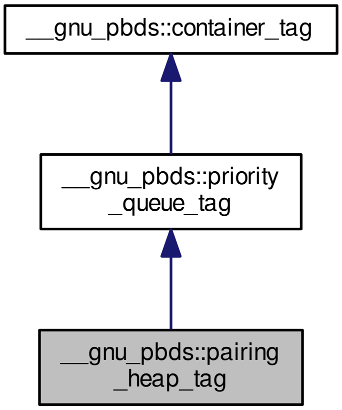
Definition at line 159 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.350 __gnu_pbds::pairing_heap_tag Struct Reference

Inheritance diagram for __gnu_pbds::pairing_heap_tag:



4.350.1 Detailed Description

Pairing-heap.

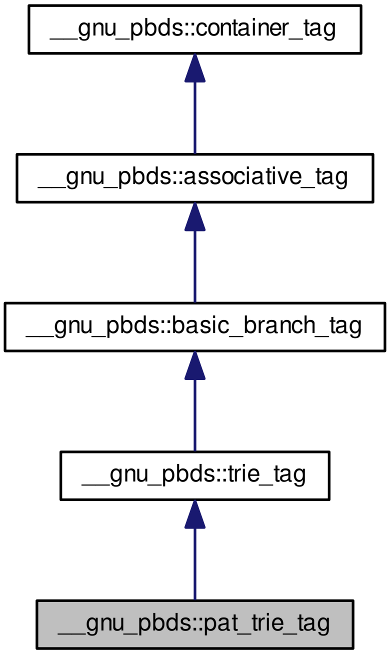
Definition at line 174 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.351 __gnu_pbds::pat_trie_tag Struct Reference

Inheritance diagram for __gnu_pbds::pat_trie_tag:



4.351.1 Detailed Description

PATRICIA trie.

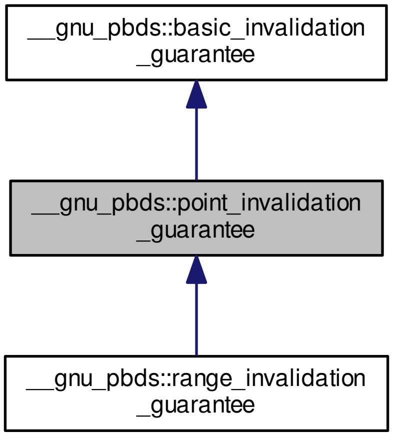
Definition at line 165 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.352 __gnu_pbds::point_invalidation_guarantee Struct Reference

Inheritance diagram for __gnu_pbds::point_invalidation_guarantee:



4.352.1 Detailed Description

Signifies an invalidation guarantee that includes all those of its base, and additionally, that any point-type iterator, pointer, or reference to a container object's mapped value type is valid as long as its corresponding entry has not be erased, regardless of modifications to the container object.

Definition at line 103 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.353 __gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc > Class Template Reference

Inherits type< _Tv, Cmp_Fn, _Alloc, Tag >.

Public Types

- **priority_queue** (const priority_queue &other)
- priority_queue & **operator=** (const priority_queue &other)
- void **swap** (priority_queue &other)

4.353.1 Detailed Description

template<typename _Tv, typename Cmp_Fn = std::less<_Tv>, typename Tag = pairing_heap_tag, typename _Alloc = std::allocator<char>>class __gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >

A priority queue composed of one specific heap policy.

Template Parameters

_Tv	Value type.
Cmp_Fn	Comparison functor.
Tag	Instantiating data structure type, see container_tag.
_Alloc	Allocator type.

Base is dispatched at compile time via Tag, from the following choices: binary_heap_tag, binomial_heap_tag, pairing_heap_tag, rc_binomial_heap_tag, thin_heap_tag

Base choices are: detail::binary_heap, detail::binomial_heap, detail::pairing_heap, detail::rc_binomial_heap, detail::thin_heap.

Definition at line 83 of file priority_queue.hpp.

The documentation for this class was generated from the following file:

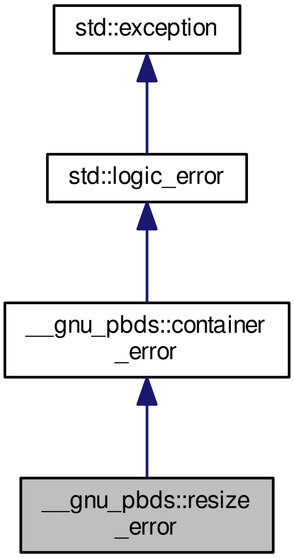
4.359 __gnu_pbds::resize_error Struct Reference

Inheritance diagram for __gnu_pbds::resize_error:



Public Member Functions

- virtual const char ∗ what () const noexcept

4.359.1 Detailed Description

A container cannot be resized.

Definition at line 73 of file exception.hpp.

4.359.2 Member Function Documentation

4.359.2.1 virtual const char∗ std::logic_error::what ( ) const `[virtual]`, `[noexcept]`, `[inherited]`

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.

Reimplemented in std::future_error.

The documentation for this struct was generated from the following file:

- exception.hpp

4.360 __gnu_pbds::sample_probe_fn Class Reference

Public Types

- typedef std::size_t **size_type**

Public Member Functions

- sample_probe_fn ()
- sample_probe_fn (const sample_probe_fn &)
- void swap (sample_probe_fn &)

Protected Member Functions

- size_type operator() (key_const_reference r_key, size_type i) const

4.360.1 Detailed Description

A sample probe policy.

Definition at line 47 of file sample_probe_fn.hpp.

4.360.2 Constructor & Destructor Documentation

4.360.2.1 __gnu_pbds::sample_probe_fn::sample_probe_fn ( )

Default constructor.

4.360.2.2 __gnu_pbds::sample_probe_fn::sample_probe_fn (const **sample_probe_fn** &)

Copy constructor.

4.360.3 Member Function Documentation

4.360.3.1 size_type __gnu_pbds::sample_probe_fn::operator() (key_const_reference *r_key*, size_type *i*) const `[inline]`, `[protected]`

Returns the i-th offset from the hash value of some key r_key.

4.360.3.2 void __gnu_pbds::sample_probe_fn::swap (**sample_probe_fn** &) `[inline]`

Swaps content.

The documentation for this class was generated from the following file:

- sample_probe_fn.hpp

4.361 __gnu_pbds::sample_range_hashing Class Reference

Public Types

- typedef std::size_t size_type

Public Member Functions

- sample_range_hashing ()
- sample_range_hashing (const sample_range_hashing &other)
- void swap (sample_range_hashing &other)

Protected Member Functions

- void notify_resized (size_type)
- size_type operator() (size_type) const

4.361.1 Detailed Description

A sample range-hashing functor.

Definition at line 47 of file sample_range_hashing.hpp.

4.361.2 Member Typedef Documentation

4.361.2.1 typedef std::size_t **__gnu_pbds::sample_range_hashing::size_type**

Size type.

Definition at line 51 of file sample_range_hashing.hpp.

4.361.3 Constructor & Destructor Documentation

4.361.3.1 __gnu_pbds::sample_range_hashing::sample_range_hashing ( )

Default constructor.

4.361.3.2 __gnu_pbds::sample_range_hashing::sample_range_hashing (const **sample_range_hashing** & *other*)

Copy constructor.

4.361.4 Member Function Documentation

4.361.4.1 void __gnu_pbds::sample_range_hashing::notify_resized (**size_type**) `[protected]`

Notifies the policy object that the container's size has changed to argument's size.

4.361.4.2 **size_type** __gnu_pbds::sample_range_hashing::operator() (**size_type**) const `[inline]`, `[protected]`

Transforms the __hash value hash into a ranged-hash value.

4.361.4.3 void __gnu_pbds::sample_range_hashing::swap (**sample_range_hashing** & *other*) `[inline]`

Swaps content.

The documentation for this class was generated from the following file:

- sample_range_hashing.hpp

4.362 __gnu_pbds::sample_ranged_hash_fn Class Reference

Public Types

- typedef std::size_t **size_type**

Public Member Functions

- sample_ranged_hash_fn ()
- sample_ranged_hash_fn (const sample_ranged_hash_fn &)
- void swap (sample_ranged_hash_fn &)

Protected Member Functions

- void notify_resized (size_type)
- size_type operator() (key_const_reference) const

4.362.1 Detailed Description

A sample ranged-hash functor.

Definition at line 47 of file sample_ranged_hash_fn.hpp.

4.362.2 Constructor & Destructor Documentation

4.362.2.1 __gnu_pbds::sample_ranged_hash_fn::sample_ranged_hash_fn ( )

Default constructor.

4.362.2.2 __gnu_pbds::sample_ranged_hash_fn::sample_ranged_hash_fn (const sample_ranged_hash_fn &)

Copy constructor.

4.362.3 Member Function Documentation

4.362.3.1 void __gnu_pbds::sample_ranged_hash_fn::notify_resized (size_type) [protected]

Notifies the policy object that the container's __size has changed to size.

4.362.3.2 size_type __gnu_pbds::sample_ranged_hash_fn::operator() (key_const_reference) const [inline], [protected]

Transforms key_const_reference into a position within the table.

4.362.3.3 void __gnu_pbds::sample_ranged_hash_fn::swap (sample_ranged_hash_fn &) [inline]

Swaps content.

The documentation for this class was generated from the following file:

- sample_ranged_hash_fn.hpp

4.363 __gnu_pbds::sample_ranged_probe_fn Class Reference

Public Types

- typedef std::size_t **size_type**

Public Member Functions

- **sample_ranged_probe_fn** (const sample_ranged_probe_fn &)
- void **swap** (sample_ranged_probe_fn &)

Protected Member Functions

- void **notify_resized** (size_type)
- size_type **operator()** (key_const_reference, std::size_t, size_type) const

4.363.1 Detailed Description

A sample ranged-probe functor.

Definition at line 47 of file sample_ranged_probe_fn.hpp.

The documentation for this class was generated from the following file:

- sample_ranged_probe_fn.hpp

4.364 __gnu_pbds::sample_resize_policy Class Reference

Public Types

- typedef std::size_t size_type

Public Member Functions

- sample_resize_policy ()
- sample_range_hashing (const sample_resize_policy &other)

4.364.1 Detailed Description

A sample resize policy.

Definition at line 47 of file sample_resize_policy.hpp.

4.364.2 Member Typedef Documentation

4.364.2.1 typedef std::size_t __gnu_pbds::sample_resize_policy::size_type

Size type.

Definition at line 51 of file sample_resize_policy.hpp.

4.364.3 Constructor & Destructor Documentation

4.364.3.1 __gnu_pbds::sample_resize_policy::sample_resize_policy ( )

Default constructor.

4.364.4 Member Function Documentation

4.364.4.1 size_type __gnu_pbds::sample_resize_policy::get_new_size (size_type *size*, size_type *num_used_e*) const `[protected]`

Queries what the new size should be.

4.364.4.2 bool __gnu_pbds::sample_resize_policy::is_resize_needed ( ) const `[inline]`, `[protected]`

Queries whether a resize is needed.

4.364.4.3 void __gnu_pbds::sample_resize_policy::notify_cleared ( ) `[protected]`

Notifies the table was cleared.

4.364.4.4 void __gnu_pbds::sample_resize_policy::notify_erase_search_collision ( ) `[inline]`, `[protected]`

Notifies a search encountered a collision.

4.364.4.5 void __gnu_pbds::sample_resize_policy::notify_erase_search_end ( ) `[inline]`, `[protected]`

Notifies a search ended.

4.364.4.6 void __gnu_pbds::sample_resize_policy::notify_erase_search_start ( ) `[inline]`, `[protected]`

Notifies a search started.

4.364.4.7 void __gnu_pbds::sample_resize_policy::notify_erased (**size_type** *num_e*) [inline], [protected]

Notifies an element was erased.

4.364.4.8 void __gnu_pbds::sample_resize_policy::notify_find_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

4.364.4.9 void __gnu_pbds::sample_resize_policy::notify_find_search_end ( ) [inline], [protected]

Notifies a search ended.

4.364.4.10 void __gnu_pbds::sample_resize_policy::notify_find_search_start ( ) [inline], [protected]

Notifies a search started.

4.364.4.11 void __gnu_pbds::sample_resize_policy::notify_insert_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

4.364.4.12 void __gnu_pbds::sample_resize_policy::notify_insert_search_end ( ) [inline], [protected]

Notifies a search ended.

4.364.4.13 void __gnu_pbds::sample_resize_policy::notify_insert_search_start ( ) [inline], [protected]

Notifies a search started.

4.364.4.14 void __gnu_pbds::sample_resize_policy::notify_inserted (**size_type** *num_e*) [inline], [protected]

Notifies an element was inserted.

4.364.4.15 void __gnu_pbds::sample_resize_policy::notify_resized (**size_type** *new_size*) [protected]

Notifies the table was resized to new_size.

4.364.4.16 __gnu_pbds::sample_resize_policy::sample_range_hashing (const **sample_resize_policy** & *other*)

Copy constructor.

4.364.4.17 void __gnu_pbds::sample_resize_policy::swap (**sample_resize_policy** & *other*) [inline]

Swaps content.

The documentation for this class was generated from the following file:

- sample_resize_policy.hpp

4.365 __gnu_pbds::sample_resize_trigger Class Reference

Public Types

- typedef std::size_t size_type

Public Member Functions

- sample_resize_trigger ()

- void notify_resized (size_type new_size)

4.365.1 Detailed Description

A sample resize trigger policy.

Definition at line 47 of file sample_resize_trigger.hpp.

4.365.2 Member Typedef Documentation

4.365.2.1 typedef std::size_t __gnu_pbds::sample_resize_trigger::size_type

Size type.

Definition at line 51 of file sample_resize_trigger.hpp.

4.365.3 Constructor & Destructor Documentation

4.365.3.1 __gnu_pbds::sample_resize_trigger::sample_resize_trigger ( )

Default constructor.

4.365.4 Member Function Documentation

4.365.4.1 bool __gnu_pbds::sample_resize_trigger::is_grow_needed (size_type *size,* size_type *num_entries*) const [inline], [protected]

Queries whether a grow is needed.

4.365.4.2 bool __gnu_pbds::sample_resize_trigger::is_resize_needed ( ) const [inline], [protected]

Queries whether a resize is needed.

4.365.4.3 void __gnu_pbds::sample_resize_trigger::notify_cleared ( ) [protected]

Notifies the table was cleared.

4.365.4.4 void __gnu_pbds::sample_resize_trigger::notify_erase_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

4.365.4.5 void __gnu_pbds::sample_resize_trigger::notify_erase_search_end ( ) [inline], [protected]

Notifies a search ended.

4.365.4.6 void __gnu_pbds::sample_resize_trigger::notify_erase_search_start ( ) [inline], [protected]

Notifies a search started.

4.365.4.7 void __gnu_pbds::sample_resize_trigger::notify_erased (size_type *num_entries*) [inline], [protected]

Notifies an element was erased.

4.365.4.8 void __gnu_pbds::sample_resize_trigger::notify_externally_resized (size_type *new_size*) [protected]

Notifies the table was resized externally.

4.365.4.9 void __gnu_pbds::sample_resize_trigger::notify_find_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

4.365.4.10 void __gnu_pbds::sample_resize_trigger::notify_find_search_end ( ) [inline], [protected]

Notifies a search ended.

4.365.4.11 void __gnu_pbds::sample_resize_trigger::notify_find_search_start ( ) [inline], [protected]

Notifies a search started.

4.365.4.12 void __gnu_pbds::sample_resize_trigger::notify_insert_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

4.365.4.13 void __gnu_pbds::sample_resize_trigger::notify_insert_search_end ( ) [inline], [protected]

Notifies a search ended.

4.365.4.14 void __gnu_pbds::sample_resize_trigger::notify_insert_search_start ( ) [inline], [protected]

Notifies a search started.

4.365.4.15 void __gnu_pbds::sample_resize_trigger::notify_inserted (size_type *num_entries*) [inline], [protected]

Notifies an element was inserted. the total number of entries in the table is num_entries.

4.365.4.16 void __gnu_pbds::sample_resize_trigger::notify_resized (**size_type** *new_size*) [protected]

Notifies the table was resized as a result of this object's signifying that a resize is needed.

4.365.4.17 __gnu_pbds::sample_resize_trigger::sample_range_hashing (const **sample_resize_trigger** &)

Copy constructor.

4.365.4.18 void __gnu_pbds::sample_resize_trigger::swap (**sample_resize_trigger** &) [inline]

Swaps content.

The documentation for this class was generated from the following file:

- size_type get_nearest_smaller_size (size_type size) const

4.366.1 Detailed Description

A sample size policy.

Definition at line 47 of file sample_size_policy.hpp.

4.366.2 Member Typedef Documentation

4.366.2.1 typedef std::size_t __gnu_pbds::sample_size_policy::size_type

Size type.

Definition at line 51 of file sample_size_policy.hpp.

4.366.3 Constructor & Destructor Documentation

4.366.3.1 __gnu_pbds::sample_size_policy::sample_size_policy ( )

Default constructor.

4.366.4 Member Function Documentation

4.366.4.1 size_type __gnu_pbds::sample_size_policy::get_nearest_larger_size (size_type *size*) const [inline], [protected]

Given a __size size, returns a __size that is larger.

4.366.4.2 size_type __gnu_pbds::sample_size_policy::get_nearest_smaller_size (size_type *size*) const [inline], [protected]

Given a __size size, returns a __size that is smaller.

4.366.4.3 __gnu_pbds::sample_size_policy::sample_range_hashing (const sample_size_policy &)

Copy constructor.

4.366.4.4 void __gnu_pbds::sample_size_policy::swap (sample_size_policy & *other*) [inline]

Swaps content.

The documentation for this class was generated from the following file:

- sample_size_policy.hpp

4.367 __gnu_pbds::sample_tree_node_update< Const_Node_Iter, Node_Iter, Cmp_Fn, _Alloc > Class Template Reference

4.367.1 Detailed Description

template<typename Const_Node_Iter, typename Node_Iter, typename Cmp_Fn, typename _Alloc>class __gnu_pbds::sample_tree_node_update< Const_Node_Iter, Node_Iter, Cmp_Fn, _Alloc >

A sample node updator.

Definition at line 49 of file sample_tree_node_update.hpp.

The documentation for this class was generated from the following file:

- sample_tree_node_update.hpp

4.368 __gnu_pbds::sample_trie_access_traits Struct Reference

Public Types

- enum { **max_size** }
- typedef _Alloc::template rebind< key_type > **__rebind_k**
- typedef std::string::const_iterator **const_iterator**
- typedef char e_type
- typedef __rebind_k::other::const_reference **key_const_reference**
- typedef std::string **key_type**
- typedef std::size_t **size_type**

Static Public Member Functions

- static const_iterator begin (key_const_reference)
- static size_type e_pos (e_type)
- static const_iterator end (key_const_reference)

4.368.1 Detailed Description

A sample trie element access traits.

Definition at line 47 of file sample_trie_access_traits.hpp.

4.368.2 Member Typedef Documentation

4.368.2.1 typedef char __gnu_pbds::sample_trie_access_traits::e_type

Element type.

Definition at line 57 of file sample_trie_access_traits.hpp.

4.368.3 Member Function Documentation

4.368.3.1 static const_iterator __gnu_pbds::sample_trie_access_traits::begin (key_const_reference) [inline], [static]

Returns a const_iterator to the first element of r_key.

4.368.3.2 static size_type __gnu_pbds::sample_trie_access_traits::e_pos (e_type) [inline], [static]

Maps an element to a position.

4.368.3.3 static const_iterator __gnu_pbds::sample_trie_access_traits::end (key_const_reference) [inline], [static]

Returns a const_iterator to the after-last element of r_key.

The documentation for this struct was generated from the following file:

- sample_trie_access_traits.hpp

4.369 __gnu_pbds::sample_trie_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc > Class Template Reference

Public Types

- typedef std::size_t **metadata_type**

Protected Member Functions

- sample_trie_node_update ()
- void operator() (node_iterator, node_const_iterator) const

4.369.1 Detailed Description

template<typename Node_CItr, typename Node_Itr, typename _ATraits, typename _Alloc>class __gnu_pbds::sample_trie_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >

A sample node updator.

Definition at line 49 of file sample_trie_node_update.hpp.

4.369.2 Constructor & Destructor Documentation

4.369.2.1 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > __gnu_pbds::sample_trie_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::sample_trie_node_update ( ) `[protected]`

Default constructor.

4.369.3 Member Function Documentation

4.369.3.1 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > void __gnu_pbds::sample_trie_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::operator() (node_iterator , node_const_iterator) const `[inline]`, `[protected]`

Updates the rank of a node through a node_iterator node_it; end_nd_it is the end node iterator.

The documentation for this class was generated from the following file:

- sample_trie_node_update.hpp

4.370 __gnu_pbds::sample_update_policy Struct Reference

Public Member Functions

- sample_update_policy ()
- sample_update_policy (const sample_update_policy &)
- void swap (sample_update_policy &other)

Protected Types

- typedef some_metadata_type metadata_type

Protected Member Functions

- metadata_type operator() () const
- bool operator() (metadata_reference) const

4.370.1 Detailed Description

A sample list-update policy.

Definition at line 47 of file sample_update_policy.hpp.

4.370.2 Member Typedef Documentation

4.370.2.1 typedef some_metadata_type **__gnu_pbds::sample_update_policy::metadata_type** [protected]

Metadata on which this functor operates.

Definition at line 61 of file sample_update_policy.hpp.

4.370.3 Constructor & Destructor Documentation

4.370.3.1 __gnu_pbds::sample_update_policy::sample_update_policy ( )

Default constructor.

4.370.3.2 __gnu_pbds::sample_update_policy::sample_update_policy (const **sample_update_policy** &)

Copy constructor.

4.370.4 Member Function Documentation

4.370.4.1 **metadata_type** __gnu_pbds::sample_update_policy::operator() ( ) const [protected]

Creates a metadata object.

4.370.4.2 bool __gnu_pbds::sample_update_policy::operator() (metadata_reference) const [protected]

Decides whether a metadata object should be moved to the front of the list. A list-update based containers object will call this method to decide whether to move a node to the front of the list. The method shoule return true if the node should be moved to the front of the list.

4.370.4.3 void __gnu_pbds::sample_update_policy::swap (**sample_update_policy** & *other*) [inline]

Swaps content.

  tree (It first, It last)
- template< typename It >
  tree (It first, It last, const cmp_fn &c)
- **tree** (const tree &other)
- tree & **operator=** (const tree &other)
- void **swap** (tree &other)

4.375.1 Detailed Description

template< typename Key, typename Mapped, typename Cmp_Fn = std::less< Key >, typename Tag = rb_tree_tag, template< typename Node_CItr, typename Node_Itr, typename Cmp_Fn_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator< char > >class __gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, _Alloc >

A tree-based container.

Template Parameters

Key	Key type.
Mapped	Map type.
Cmp_Fn	Comparison functor.
Tag	Instantiating data structure type, see container_tag.
Node_Update	Updates tree internal-nodes, restores invariants when invalidated. XXX See design::tree-based-containersnode invariants.
_Alloc	Allocator type.

Base tag choices are: ov_tree_tag, rb_tree_tag, splay_tree_tag.

Base is basic_branch.

Definition at line 635 of file assoc_container.hpp.

4.375.2 Member Typedef Documentation

4.375.2.1 template< typename Key , typename Mapped , typename Cmp_Fn = std::less< Key >, typename Tag = rb_tree_tag, template< typename Node_CItr, typename Node_Itr, typename Cmp_Fn_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator< char > > typedef Cmp_Fn __gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, _Alloc >::cmp_fn

Comparison functor type.

Definition at line 642 of file assoc_container.hpp.

4.375.3 Constructor & Destructor Documentation

4.375.3.1 template<typename Key , typename Mapped , typename Cmp_Fn = std::less<Key>, typename Tag = rb_tree_tag, template< typename Node_CItr, typename Node_Itr, typename Cmp_Fn_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> __gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, _Alloc >::tree (const cmp_fn & *c*) [inline]

Constructor taking some policy objects. r_cmp_fn will be copied by the Cmp_Fn object of the container object.

Definition at line 648 of file assoc_container.hpp.

4.375.3.2 template<typename Key , typename Mapped , typename Cmp_Fn = std::less<Key>, typename Tag = rb_tree_tag, template< typename Node_CItr, typename Node_Itr, typename Cmp_Fn_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, _Alloc >::tree (It *first*, It *last*) [inline]

Constructor taking __iterators to a range of value_types. The value_types between first_it and last_it will be inserted into the container object.

Definition at line 655 of file assoc_container.hpp.

4.375.3.3 template<typename Key , typename Mapped , typename Cmp_Fn = std::less<Key>, typename Tag = rb_tree_tag, template< typename Node_CItr, typename Node_Itr, typename Cmp_Fn_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, _Alloc >::tree (It *first*, It *last*, const cmp_fn & *c*) [inline]

Constructor taking __iterators to a range of value_types and some policy objects The value_types between first_it and last_it will be inserted into the container object. r_cmp_fn will be copied by the cmp_fn object of the container object.

Definition at line 663 of file assoc_container.hpp.

The documentation for this class was generated from the following file:

template<typename Node_CItr, typename Node_Itr, typename Cmp_Fn, typename _Alloc>class __gnu_pbds::tree_order_statistics_node_update< Node_CItr, Node_Itr, Cmp_Fn, _Alloc >

Functor updating ranks of entrees.

Definition at line 64 of file tree_policy.hpp.

4.376.2 Member Function Documentation

4.376.2.1 template<typename Node_CItr , typename Node_Itr , typename Cmp_Fn , typename _Alloc > tree_order_statistics_node_update< Node_CItr, Node_Itr, Cmp_Fn, _Alloc >::const_iterator __gnu_pbds::tree_order_statistics_node_update< Node_CItr, Node_Itr, Cmp_Fn, _Alloc >::find_by_order (size_type *order*) const `[inline]`

Finds an entry by __order. Returns a const_iterator to the entry with the __order order, or a const_iterator to the container object's end if order is at least the size of the container object.

Definition at line 72 of file tree_policy.hpp.

4.376.2.2 template<typename Node_CItr , typename Node_Itr , typename Cmp_Fn , typename _Alloc > tree_order_statistics_node_update< Node_CItr, Node_Itr, Cmp_Fn, _Alloc >::iterator __gnu_pbds::tree_order_statistics_node_update< Node_CItr, Node_Itr, Cmp_Fn, _Alloc >::find_by_order (size_type *order*) `[inline]`

Finds an entry by __order. Returns an iterator to the entry with the __order order, or an iterator to the container object's end if order is at least the size of the container object.

Definition at line 45 of file tree_policy.hpp.

4.376.2.3 template<typename Node_CItr , typename Node_Itr , typename Cmp_Fn , typename _Alloc > void __gnu_pbds::tree_order_statistics_node_update< Node_CItr, Node_Itr, Cmp_Fn, _Alloc >::operator() (node_iterator *node_it,* node_const_iterator *end_nd_it*) const `[inline]`, `[protected]`

Updates the rank of a node through a node_iterator node_it; end_nd_it is the end node iterator.

Definition at line 108 of file tree_policy.hpp.

4.376.2.4 template<typename Node_CItr , typename Node_Itr , typename Cmp_Fn , typename _Alloc > tree_order_statistics_node_update< Node_CItr, Node_Itr, Cmp_Fn, _Alloc >::size_type __gnu_pbds::tree_order_statistics_node_update< Node_CItr, Node_Itr, Cmp_Fn, _Alloc >::order_of_key (key_const_reference *r_key*) const `[inline]`

Returns the order of a key within a sequence. For exapmle, if r_key is the smallest key, this method will return 0; if r_key is a key between the smallest and next key, this method will return 1; if r_key is a key larger than the largest key, this method will return the size of r_c.

- void **swap** (trie &other)

4.378.1 Detailed Description

template<typename Key, typename Mapped, typename _ATraits = typename detail::default_trie_access_traits<Key>::type, typename Tag = pat_trie_tag, template< typename Node_CItr, typename Node_Itr, typename _ATraits_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>>class __gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >

A trie-based container.

Template Parameters

Key	Key type.
Mapped	Map type.
_ATraits	Element access traits.
Tag	Instantiating data structure type, see container_tag.
Node_Update	Updates trie internal-nodes, restores invariants when invalidated. XXX See design::tree-based-containersnode invariants.
_Alloc	Allocator type.

Base tag choice is pat_trie_tag.

Base is basic_branch.

Definition at line 731 of file assoc_container.hpp.

4.378.2 Member Typedef Documentation

4.378.2.1 template<typename Key , typename Mapped , typename _ATraits = typename detail::default_trie_access_traits<-Key>::type, typename Tag = pat_trie_tag, template< typename Node_CItr, typename Node_Itr, typename _ATraits_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> typedef _ATraits __gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >::access_traits

Element access traits type.

Definition at line 738 of file assoc_container.hpp.

4.378.3 Constructor & Destructor Documentation

4.378.3.1 template<typename Key , typename Mapped , typename _ATraits = typename detail::default_trie_access_traits<Key>::type, typename Tag = pat_trie_tag, template< typename Node_CItr, typename Node_Itr, typename _ATraits_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> __gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >::trie (const access_traits & *t*) `[inline]`

Constructor taking some policy objects. r_access_traits will be copied by the _ATraits object of the container object.

Definition at line 744 of file assoc_container.hpp.

4.378.3.2 template<typename Key , typename Mapped , typename _ATraits = typename detail::default_trie_access_traits<Key>::type, typename Tag = pat_trie_tag, template< typename Node_CItr, typename Node_Itr, typename _ATraits_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >::trie (It *first*, It *last*) `[inline]`

Constructor taking __iterators to a range of value_types. The value_types between first_it and last_it will be inserted into the container object.

Definition at line 751 of file assoc_container.hpp.

4.378.3.3 template<typename Key , typename Mapped , typename _ATraits = typename detail::default_trie_access_traits<Key>::type, typename Tag = pat_trie_tag, template< typename Node_CItr, typename Node_Itr, typename _ATraits_, typename _Alloc_ > class Node_Update = null_node_update, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >::trie (It *first*, It *last*, const access_traits & *t*) `[inline]`

Constructor taking __iterators to a range of value_types and some policy objects. The value_types between first_it and last_it will be inserted into the container object.

Definition at line 758 of file assoc_container.hpp.

4.380.1 Detailed Description

template<typename Node_CItr, typename Node_Itr, typename _ATraits, typename _Alloc>class __gnu_pbds::trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >

A node updator that allows tries to be searched for the range of values that match a certain prefix.

Definition at line 155 of file trie_policy.hpp.

4.380.2 Member Typedef Documentation

4.380.2.1 template<typename Node_CItr, typename Node_Itr, typename _ATraits, typename _Alloc> typedef access_traits::const_iterator **__gnu_pbds::trie_prefix_search_node_update**< Node_CItr, Node_Itr, _ATraits, _Alloc >**::a_const_iterator**

Const element iterator.

Definition at line 168 of file trie_policy.hpp.

4.380.2.2 template<typename Node_CItr, typename Node_Itr, typename _ATraits, typename _Alloc> typedef _ATraits **__gnu_pbds::trie_prefix_search_node_update**< Node_CItr, Node_Itr, _ATraits, _Alloc >**::access_traits**

Element access traits.

Definition at line 165 of file trie_policy.hpp.

4.380.2.3 template<typename Node_CItr, typename Node_Itr, typename _ATraits, typename _Alloc> typedef _Alloc **__gnu_pbds::trie_prefix_search_node_update**< Node_CItr, Node_Itr, _ATraits, _Alloc >**::allocator_type**

_Alloc type.

Definition at line 171 of file trie_policy.hpp.

4.380.2.4 template<typename Node_CItr, typename Node_Itr, typename _ATraits, typename _Alloc> typedef allocator_type::size_type **__gnu_pbds::trie_prefix_search_node_update**< Node_CItr, Node_Itr, _ATraits, _Alloc >**::size_type**

Size type.

Definition at line 174 of file trie_policy.hpp.

4.380.3 Member Function Documentation

4.380.3.1 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > void **__gnu_pbds::trie_prefix_search_node_update**< Node_CItr, Node_Itr, _ATraits, _Alloc >::operator() (node_iterator *node_it,* node_const_iterator *end_nd_it*) const `[inline]`, `[protected]`

Called to update a node's metadata.

Definition at line 139 of file trie_policy.hpp.

4.380.3.2 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > **std::pair**< typename **trie_prefix_search_node_update**< Node_CItr, Node_Itr, _ATraits, _Alloc >::const_iterator, typename **trie_prefix_search_node_update**< Node_CItr, Node_Itr, _ATraits, _Alloc >::const_iterator > **__gnu_pbds::trie_prefix_search_node_update**< Node_CItr, Node_Itr, _ATraits, _Alloc >::prefix_range (key_const_reference *r_key*) const

Finds the const iterator range corresponding to all values whose prefixes match r_key.

Definition at line 47 of file trie_policy.hpp.

4.380.3.3 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > **std::pair**< typename **trie_prefix_search_node_update**< Node_CItr, Node_Itr, _ATraits, _Alloc >::iterator, typename **trie_prefix_search_node_update**< Node_CItr, Node_Itr, _ATraits, _Alloc >::iterator > **__gnu_pbds::trie_prefix_search_node_update**< Node_CItr, Node_Itr, _ATraits, _Alloc >::prefix_range (key_const_reference *r_key*)

Finds the iterator range corresponding to all values whose prefixes match r_key.

Definition at line 58 of file trie_policy.hpp.

4.380.3.4 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > std::pair< typename trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::const_iterator, typename trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::const_iterator > __gnu_pbds::trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::prefix_range (a_const_iterator *b,* a_const_iterator *e*) const

Finds the const iterator range corresponding to all values whose prefixes match [b, e).

Definition at line 69 of file trie_policy.hpp.

4.380.3.5 template<typename Node_CItr , typename Node_Itr , typename _ATraits , typename _Alloc > std::pair< typename trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::iterator, typename trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::iterator > __gnu_pbds::trie_prefix_search_node_update< Node_CItr, Node_Itr, _ATraits, _Alloc >::prefix_range (a_const_iterator *b,* a_const_iterator *e*)

Finds the iterator range corresponding to all values whose prefixes match [b, e).

Definition at line 84 of file trie_policy.hpp.

4.404.1 Detailed Description

Representation of a warning.

Definition at line 73 of file profiler_trace.h.

The documentation for this struct was generated from the following file:

- profiler_trace.h

4.405 __pool< _Thread > Class Template Reference

4.405.1 Detailed Description

template<bool _Thread>class __pool< _Thread >

Data describing the underlying memory pool, parameterized on threading support.

Definition at line 192 of file mt_allocator.h.

The documentation for this class was generated from the following file:

- mt_allocator.h

4.406 __reflection_typelist< _Elements > Struct Template Reference

4.406.1 Detailed Description

template<typename... _Elements>struct __reflection_typelist< _Elements >

See N2965: Type traits and base classes by Michael Spertus Simple typelist. Compile-time list of types.

Definition at line 56 of file tr2/type_traits.

The documentation for this struct was generated from the following file:

- tr2/type_traits

4.407 _Bind< _Signature > Struct Template Reference

4.407.1 Detailed Description

template<typename _Signature>struct _Bind< _Signature >

Type of the function object returned from bind().

Definition at line 1277 of file functional.

The documentation for this struct was generated from the following file:

- functional

4.408 _Bind_result< _Result, _Signature > Struct Template Reference

4.408.1 Detailed Description

template<typename _Result, typename _Signature>struct _Bind_result< _Result, _Signature >

Type of the function object returned from bind<R>().

Definition at line 1403 of file functional.

The documentation for this struct was generated from the following file:

- functional

4.409 _Equal_helper< _Key, _Value, _ExtractKey, _Equal, _HashCodeType, __cache_hash_code > Struct Template Reference

4.409.1 Detailed Description

template<typename _Key, typename _Value, typename _ExtractKey, typename _Equal, typename _HashCodeType, bool __cache_hash_code>struct _Equal_helper< _Key, _Value, _ExtractKey, _Equal, _HashCodeType, __cache_hash_code >

Primary class template _Equal_helper.

Definition at line 1156 of file hashtable_policy.h.

The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.410 _Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys > Struct Template Reference

4.410.1 Detailed Description

template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2, typename _Hash, typename _RehashPolicy, typename _Traits, bool _Unique_keys = _Traits::__unique_keys::value>struct _Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys >

Primary class template _Equality.

This is for implementing equality comparison for unordered containers, per N3068, by John Lakos and Pablo Halpern. Algorithmically, we follow closely the reference implementations therein.

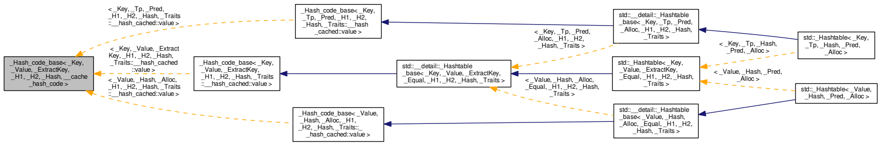
Definition at line 1559 of file hashtable_policy.h.

The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.411 _Hash_code_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code > Struct Template Reference

Inheritance diagram for _Hash_code_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >:



4.411.1 Detailed Description

template< typename _Key, typename _Value, typename _ExtractKey, typename _H1, typename _H2, typename _Hash, bool __cache_hash_code > struct _Hash_code_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >

Primary class template _Hash_code_base.

Encapsulates two policy issues that aren't quite orthogonal. (1) the difference between using a ranged hash function and using the combination of a hash function and a range-hashing function. In the former case we don't have such things as hash codes, so we have a dummy type as placeholder. (2) Whether or not we cache hash codes. Caching hash codes is meaningless if we have a ranged hash function.

We also put the key extraction objects here, for convenience. Each specialization derives from one or more of the template parameters to benefit from Ebo. This is important as this type is inherited in some cases by the _Local_iterator_base type used to implement local_iterator and const_local_iterator. As with any iterator type we prefer to make it as small as possible.

Primary template is unused except as a hook for specializations.

Definition at line 907 of file hashtable_policy.h.

The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.412 _Hash_node< _Value, _Cache_hash_code > Struct Template Reference

4.412.1 Detailed Description

template< typename _Value, bool _Cache_hash_code > struct _Hash_node< _Value, _Cache_hash_code >

Primary template struct _Hash_node.

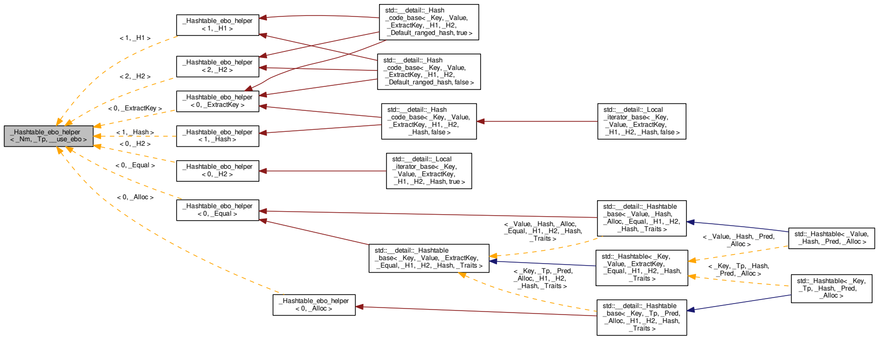
Definition at line 162 of file hashtable_policy.h.

The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.413 _Hashtable_ebo_helper< _Nm, _Tp, __use_ebo > Struct Template Reference

Inheritance diagram for _Hashtable_ebo_helper< _Nm, _Tp, __use_ebo >:



4.413.1 Detailed Description

template<int _Nm, typename _Tp, bool __use_ebo = !__is_final(_Tp) && __is_empty(_Tp)>struct _Hashtable_ebo_helper< _Nm, _Tp, __use_ebo >

Primary class template _Hashtable_ebo_helper.

Helper class using EBO when it is not forbidden, type is not final, and when it worth it, type is empty.

Definition at line 831 of file hashtable_policy.h.

The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.414 _Insert< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Constant_iterators, _Unique_keys > Struct Template Reference

4.414.1 Detailed Description

template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2, typename _Hash, typename _RehashPolicy, typename _Traits, bool _Constant_iterators = _Traits::__constant_iterators::value, bool _Unique_keys = _Traits::__unique_keys::value>struct _Insert< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Constant_iterators, _Unique_keys >

Primary class template _Insert.

Select insert member functions appropriate to _Hashtable policy choices.

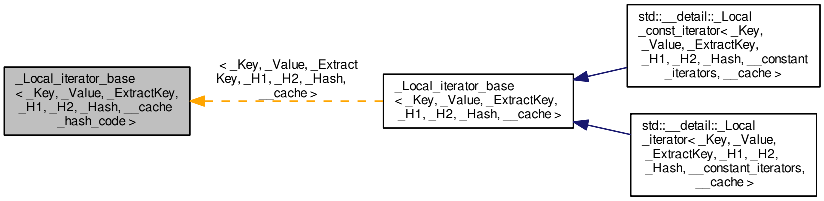
Definition at line 661 of file hashtable_policy.h.

The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.415 _Local_iterator_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code > Struct Template Reference

Inheritance diagram for _Local_iterator_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >:



4.415.1 Detailed Description

template<typename _Key, typename _Value, typename _ExtractKey, typename _H1, typename _H2, typename _Hash, bool __cache_hash_code>struct _Local_iterator_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >

Primary class template _Local_iterator_base.

Base class for local iterators, used to iterate within a bucket but not between buckets.

Definition at line 882 of file hashtable_policy.h.

The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.416 _Mu< _Arg, _IsBindExp, _IsPlaceholder > Class Template Reference

4.416.1 Detailed Description

template<typename _Arg, bool _IsBindExp = is_bind_expression<_Arg>::value, bool _IsPlaceholder = (is_placeholder<_Arg>::value > 0)>class _Mu< _Arg, _IsBindExp, _IsPlaceholder >

Maps an argument to bind() into an actual argument to the bound function object [TR1 3.6.3/5]. Only the first parameter should be specified: the rest are used to determine among the various implementations. Note that, although this class is a function object, it isn't entirely normal because it takes only two parameters regardless of the number of parameters passed to the bind expression. The first parameter is the bound argument and the second parameter is a tuple containing references to the rest of the arguments.

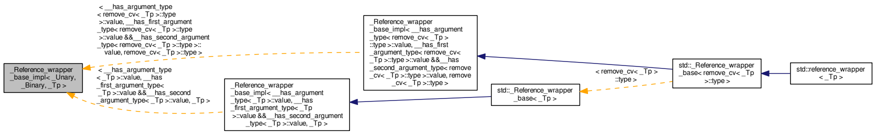
Definition at line 1103 of file functional.

The documentation for this class was generated from the following file:

- functional

4.417 _Reference_wrapper_base_impl< _Unary, _Binary, _Tp > Struct Template Reference

Inheritance diagram for _Reference_wrapper_base_impl< _Unary, _Binary, _Tp >:



4.417.1 Detailed Description

template<bool _Unary, bool _Binary, typename _Tp>struct _Reference_wrapper_base_impl< _Unary, _Binary, _Tp >

Knowing which of unary_function and binary_function _Tp derives from, derives from the same and ensures that reference_wrapper will have a weak result type. See cases below.

Definition at line 269 of file functional.

The documentation for this struct was generated from the following file:

- functional

4.418 _Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits > Struct Template Reference

4.418.1 Detailed Description

template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2, typename _Hash, typename _RehashPolicy, typename _Traits>struct _Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits >

Primary class template _Rehash_base.

Give hashtable the max_load_factor functions and reserve iff the rehash policy is _Prime_rehash_policy.

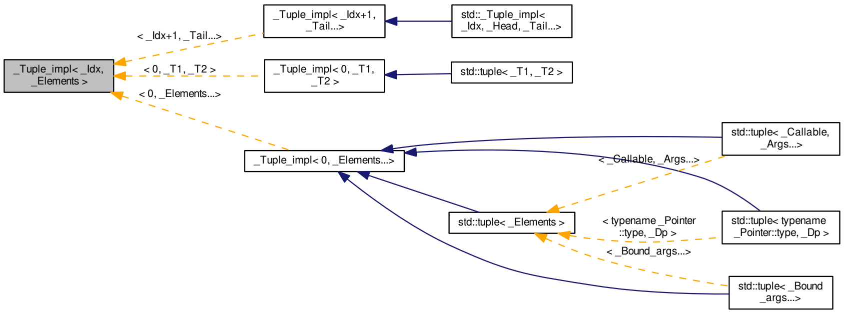
Definition at line 788 of file hashtable_policy.h.

The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.419 _Tuple_impl< _Idx, _Elements > Struct Template Reference

Inheritance diagram for _Tuple_impl< _Idx, _Elements >:



4.419.1 Detailed Description

template<std::size_t _Idx, typename... _Elements>struct _Tuple_impl< _Idx, _Elements >

Contains the actual implementation of the `tuple` template, stored as a recursive inheritance hierarchy from the first element (most derived class) to the last (least derived class). The `Idx` parameter gives the 0-based index of the element stored at this point in the hierarchy; we use it to implement a constant-time get() operation.

Definition at line 184 of file tuple.

The documentation for this struct was generated from the following file:

- tuple

4.420 common_type< _Tp > Struct Template Reference

Inherited by std::common_type< _Tp, _Up, _Vp...>.

4.420.1 Detailed Description

template<typename... _Tp>struct common_type< _Tp >

common_type

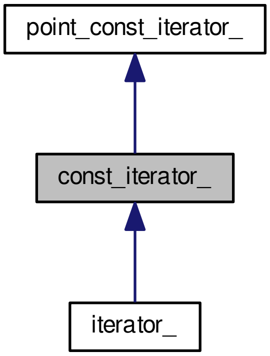
Definition at line 1790 of file type_traits.

The documentation for this struct was generated from the following file:

- type_traits

4.421 const_iterator_ Class Reference

Inheritance diagram for const_iterator_:



Public Types

4.421.1 Detailed Description

Const range-type iterator.

Definition at line 43 of file unordered_iterator/const_iterator.hpp.

4.421.2 Member Typedef Documentation

4.421.2.1 typedef const_pointer_ const_iterator_::const_pointer

Iterator's const pointer type.

Definition at line 60 of file unordered_iterator/const_iterator.hpp.

4.421.2.2 typedef const_reference_ const_iterator_::const_reference

Iterator's const reference type.

Definition at line 66 of file unordered_iterator/const_iterator.hpp.

4.421.2.3 typedef _Alloc::difference_type const_iterator_::difference_type

Difference type.

Definition at line 51 of file unordered_iterator/const_iterator.hpp.

4.421.2.4 typedef std::forward_iterator_tag const_iterator_::iterator_category

Category.

Definition at line 48 of file unordered_iterator/const_iterator.hpp.

4.421.2.5 typedef pointer_ const_iterator_::pointer

Iterator's pointer type.

Definition at line 57 of file unordered_iterator/const_iterator.hpp.

4.421.2.6 typedef reference_ const_iterator_::reference

Iterator's reference type.

Definition at line 63 of file unordered_iterator/const_iterator.hpp.

4.421.2.7 typedef value_type_ const_iterator_::value_type

Iterator's value type.

Definition at line 54 of file unordered_iterator/const_iterator.hpp.

4.421.3 Constructor & Destructor Documentation

4.421.3.1 const_iterator_::const_iterator_ ( ) [inline]

Default constructor.

Definition at line 69 of file unordered_iterator/const_iterator.hpp.

4.421.3.2 const_iterator_::const_iterator_ (const_pointer_ *p_value*, PB_DS_GEN_POS *pos*, const PB_DS_CLASS_C_DEC ∗ *p_tbl*) [inline], [protected]

Constructor used by the table to initiate the generalized pointer and position (e.g., this is called from within a find() of a table.

Definition at line 97 of file unordered_iterator/const_iterator.hpp.

4.421.4 Member Function Documentation

4.421.4.1 bool point_const_iterator_::operator!= (const point_iterator_ & *other*) const [inline], [inherited]

Compares content (negatively) to a different iterator object.

Definition at line 118 of file unordered_iterator/point_const_iterator.hpp.

4.421.4.2 bool point_const_iterator_::operator!= (const point_const_iterator_ & *other*) const [inline], [inherited]

Compares content (negatively) to a different iterator object.

Definition at line 123 of file unordered_iterator/point_const_iterator.hpp.

4.421.4.3 const_reference point_const_iterator_::operator∗ ( ) const [inline], [inherited]

Access.

Definition at line 100 of file unordered_iterator/point_const_iterator.hpp.

4.421.4.4 const_iterator_& const_iterator_::operator++ ( ) [inline]

Increments.

Definition at line 74 of file unordered_iterator/const_iterator.hpp.

References m_p_tbl.

4.421.4.5 const_iterator_ const_iterator_::operator++ (int) [inline]

Increments.

Definition at line 82 of file unordered_iterator/const_iterator.hpp.

References m_p_tbl.

4.421.4.6 const_pointer point_const_iterator_::operator-> ( ) const [inline], [inherited]

Access.

Definition at line 92 of file unordered_iterator/point_const_iterator.hpp.

4.421.4.7 bool point_const_iterator_::operator== (const point_iterator_ & *other*) const [inline], [inherited]

Compares content to a different iterator object.

Definition at line 108 of file unordered_iterator/point_const_iterator.hpp.

4.421.4.8 bool point_const_iterator_::operator== (const point_const_iterator_ & *other*) const [inline], [inherited]

Compares content to a different iterator object.

Definition at line 113 of file unordered_iterator/point_const_iterator.hpp.

4.421.5 Member Data Documentation

4.421.5.1 const PB_DS_CLASS_C_DEC∗ const_iterator_::m_p_tbl [protected]

Pointer to the table object which created the iterator (used for incrementing its position.

Definition at line 106 of file unordered_iterator/const_iterator.hpp.

Referenced by operator++(), and iterator_::operator++().

The documentation for this class was generated from the following file:

- unordered_iterator/const_iterator.hpp

4.422 container_base_dispatch< Key, Mapped, _Alloc, Tag, Policy_Tl > Struct Template Reference

4.422.1 Detailed Description

template<typename Key, typename Mapped, typename _Alloc, typename Tag, typename Policy_Tl = null_type>struct container_base_dispatch< Key, Mapped, _Alloc, Tag, Policy_Tl >

Dispatch mechanism, primary template for associative types.

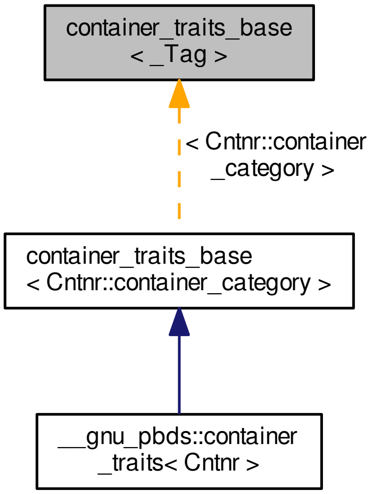
Definition at line 449 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.423 container_traits_base< _Tag > Struct Template Reference

Inheritance diagram for container_traits_base< _Tag >:



4.423.1 Detailed Description

template<typename _Tag>struct container_traits_base< _Tag >

Primary template, container traits base.

Definition at line 220 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.424 default_trie_access_traits< Key > Struct Template Reference

4.424.1 Detailed Description

template<typename Key>struct default_trie_access_traits< Key >

Primary template, default_trie_access_traits.

Definition at line 135 of file standard_policies.hpp.

The documentation for this struct was generated from the following file:

- standard_policies.hpp

4.425 entry_cmp< _VTp, Cmp_Fn, _Alloc, No_Throw > Struct Template Reference

4.425.1 Detailed Description

template<typename _VTp, typename Cmp_Fn, typename _Alloc, bool No_Throw>struct entry_cmp< _VTp, Cmp_Fn, _Alloc, No_Throw >

Entry compare, primary template.

Definition at line 50 of file entry_cmp.hpp.

The documentation for this struct was generated from the following file:

- entry_cmp.hpp

4.426 entry_pred< _VTp, Pred, _Alloc, No_Throw > Struct Template Reference

4.426.1 Detailed Description

template<typename _VTp, typename Pred, typename _Alloc, bool No_Throw>struct entry_pred< _VTp, Pred, _Alloc, No_Throw >

Entry predicate primary class template.

Definition at line 50 of file entry_pred.hpp.

The documentation for this struct was generated from the following file:

- entry_pred.hpp

4.427 hash< _Tp > Struct Template Reference

4.427.1 Detailed Description

template<typename _Tp>struct hash< _Tp >

Primary class template hash.

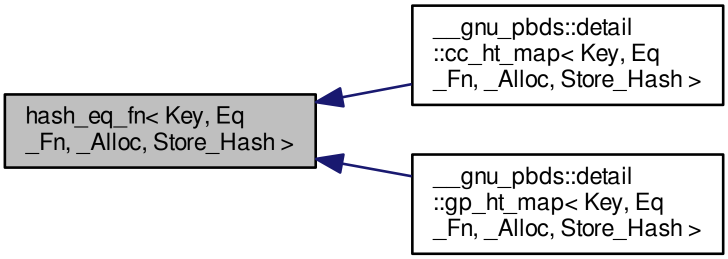
Definition at line 58 of file functional_hash.h.

The documentation for this struct was generated from the following file:

- functional_hash.h

4.428 hash_eq_fn< Key, Eq_Fn, _Alloc, Store_Hash > Struct Template Reference

Inheritance diagram for hash_eq_fn< Key, Eq_Fn, _Alloc, Store_Hash >:



4.428.1 Detailed Description

template<typename Key, typename Eq_Fn, typename _Alloc, bool Store_Hash>struct hash_eq_fn< Key, Eq_Fn, _Alloc, Store_Hash >

Primary template.

Definition at line 54 of file hash_eq_fn.hpp.

The documentation for this struct was generated from the following file:

- hash_eq_fn.hpp

4.429 hash_load_check_resize_trigger_size_base< Size_Type, Hold_Size > Class Template Reference

4.429.1 Detailed Description

template<typename Size_Type, bool Hold_Size>class hash_load_check_resize_trigger_size_base< Size_Type, Hold_Size >

Primary template.

Definition at line 50 of file hash_load_check_resize_trigger_size_base.hpp.

The documentation for this class was generated from the following file:

- hash_load_check_resize_trigger_size_base.hpp

4.430 iterator_ Class Reference

4.430.1 Detailed Description

Range-type iterator.

Definition at line 43 of file iterator.hpp.

4.430.2 Member Typedef Documentation

4.430.2.1 typedef const_pointer_ iterator_::const_pointer

Iterator's const pointer type.

Definition at line 60 of file iterator.hpp.

4.430.2.2 typedef const_reference_ iterator_::const_reference

Iterator's const reference type.

Definition at line 66 of file iterator.hpp.

4.430.2.3 typedef _Alloc::difference_type iterator_::difference_type

Difference type.

Definition at line 51 of file iterator.hpp.

4.430.2.4 typedef std::forward_iterator_tag iterator_::iterator_category

Category.

Definition at line 48 of file iterator.hpp.

4.430.2.5 typedef pointer_ iterator_::pointer

Iterator's pointer type.

Definition at line 57 of file iterator.hpp.

4.430.2.6 typedef reference_ iterator_::reference

Iterator's reference type.

Definition at line 63 of file iterator.hpp.

4.430.2.7 typedef value_type_ iterator_::value_type

Iterator's value type.

Definition at line 54 of file iterator.hpp.

4.430.3 Constructor & Destructor Documentation

4.430.3.1 iterator_::iterator_ ( ) [inline]

Default constructor.

Definition at line 70 of file iterator.hpp.

4.430.3.2 iterator_::iterator_ (pointer *p_value*, PB_DS_GEN_POS *pos*, PB_DS_CLASS_C_DEC * *p_tbl*) [inline], [protected]

Constructor used by the table to initiate the generalized pointer and position (e.g., this is called from within a find() of a table.

Definition at line 125 of file iterator.hpp.

4.430.4 Member Function Documentation

4.430.4.1 iterator_::operator const point_iterator_ ( ) const [inline]

Conversion to a point-type iterator.

Definition at line 80 of file iterator.hpp.

4.430.4.2 iterator_::operator point_iterator_ ( ) [inline]

Conversion to a point-type iterator.

Definition at line 75 of file iterator.hpp.

4.430.4.3 bool point_const_iterator_::operator!= (const point_iterator_ & *other*) const [inline], [inherited]

Compares content (negatively) to a different iterator object.

Definition at line 118 of file unordered_iterator/point_const_iterator.hpp.

4.430.4.4 bool point_const_iterator_::operator!= (const point_const_iterator_ & *other*) const [inline], [inherited]

Compares content (negatively) to a different iterator object.

Definition at line 123 of file unordered_iterator/point_const_iterator.hpp.

4.438.1 Detailed Description

template<typename _PTp>struct std::__atomic_base< _PTp * >

Partial specialization for pointer types.

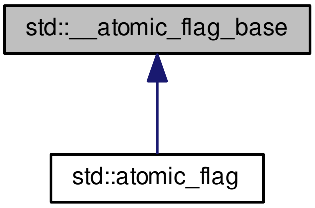
Definition at line 665 of file atomic_base.h.

The documentation for this struct was generated from the following file:

- atomic_base.h

4.439 std::__atomic_flag_base Struct Reference

Inheritance diagram for std::__atomic_flag_base:



Public Attributes

- __atomic_flag_data_type **_M_i**

4.439.1 Detailed Description

Base type for atomic_flag.

Base type is POD with data, allowing atomic_flag to derive from it and meet the standard layout type requirement. In addition to compatibilty with a C interface, this allows different implementations of atomic_flag to use the same atomic operation functions, via a standard conversion to the __atomic_flag_base argument.

Definition at line 261 of file atomic_base.h.

The documentation for this struct was generated from the following file:

- atomic_base.h

4.440.1 Detailed Description

template<typename _InternT, typename _ExternT, typename _StateT>class std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >

Common base for codecvt functions.

This template class provides implementations of the public functions that forward to the protected virtual functions.

This template also provides abstract stubs for the protected virtual functions.

Definition at line 68 of file codecvt.h.

4.440.2 Member Function Documentation

4.440.2.1 template<typename _InternT, typename _ExternT, typename _StateT> virtual result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::do_out (state_type & *__state,* const intern_type ∗ *__from,* const intern_type ∗ *__from_end,* const intern_type ∗& *__from_next,* extern_type ∗ *__to,* extern_type ∗ *__to_end,* extern_type ∗& *__to_next*) const `[protected]`, `[pure virtual]`

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See Also

out for more information.

Implemented in std::codecvt< wchar_t, char, mbstate_t >, std::codecvt< char, char, mbstate_t >, std::codecvt< _InternT, _ExternT, _StateT >, and std::codecvt< _InternT, _ExternT, encoding_state >.

Referenced by std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::out().

4.440.2.2 template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::in (state_type & *__state*, const extern_type * *__from*, const extern_type * *__from_end*, const extern_type *& *__from_next*, intern_type * *__to*, intern_type * *__to_end*, intern_type *& *__to_next*) const [inline]

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 196 of file codecvt.h.

4.440.2.3 template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out (state_type & *__state*, const intern_type * *__from*, const intern_type * *__from_end*, const intern_type *& *__from_next*, extern_type * *__to*, extern_type * *__to_end*, extern_type *& *__to_next*) const [inline]

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 116 of file codecvt.h.

4.440.2.4 template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::unshift (state_type & *__state,* extern_type ∗ *__to,* extern_type ∗ *__to_end,* extern_type ∗& *__to_next*) const [inline]

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 155 of file codecvt.h.

The documentation for this class was generated from the following file:

4.441.1 Detailed Description

template<typename _CharT>class std::__ctype_abstract_base< _CharT >

Common base for ctype facet.

This template class provides implementations of the public functions that forward to the protected virtual functions.

This template also provides abstract stubs for the protected virtual functions.

Definition at line 143 of file locale_facets.h.

4.441.2 Member Typedef Documentation

4.441.2.1 template<typename _CharT> typedef _CharT **std::__ctype_abstract_base< _CharT >::char_type**

Typedef for the template parameter.

Definition at line 148 of file locale_facets.h.

4.441.3 Member Function Documentation

4.441.3.1 template<typename _CharT> virtual bool **std::__ctype_abstract_base< _CharT >::do_is** (mask *__m*, **char_type** *__c*) const [protected], [pure virtual]

Test char_type classification.

This function finds a mask M for *c* and compares it to mask *m*.

do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__c	The char_type to find the mask of.
__m	The mask to compare against.

Returns

(M & __m) != 0.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

Referenced by std::__ctype_abstract_base< wchar_t >::is().

4.441.3.2 template<typename _CharT> virtual const **char_type*** **std::__ctype_abstract_base< _CharT >::do_is** (const **char_type** * *__lo*, const **char_type** * *__hi*, mask * *__vec*) const [protected], [pure virtual]

Return a mask array.

This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.

do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

4.441.3.3 template<typename _CharT> virtual char std::__ctype_abstract_base< _CharT >::do_narrow (char_type *__c*, char *__dfault*) const [protected], [pure virtual]

Narrow char_type to char.

This virtual function converts the argument to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead.

do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char_type to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

Referenced by std::__ctype_abstract_base< wchar_t >::narrow().

4.441.3.4 template<typename _CharT> virtual const char_type∗ std::__ctype_abstract_base< _CharT >::do_narrow (const char_type ∗ *__lo*, const char_type ∗ *__hi*, char *__dfault*, char ∗ *__to*) const [protected], [pure virtual]

Narrow char_type array to char.

This virtual function converts each char_type in the range [__lo,__hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, *__dfault* is used instead.

do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

4.441.3.5 template<typename _CharT> virtual const char_type∗ std::__ctype_abstract_base< _CharT >::do_scan_is (mask __m, const char_type ∗ __lo, const char_type ∗ __hi) const [protected], [pure virtual]

Find char_type matching mask.

This function searches for and returns the first char_type c in [__lo,__hi) for which is(__m,c) is true.

do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

__m	The mask to compare against.
__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

Pointer to a matching char_type if found, else *__hi*.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

Referenced by std::__ctype_abstract_base< wchar_t >::scan_is().

4.441.3.6 template<typename _CharT> virtual const char_type∗ std::__ctype_abstract_base< _CharT >::do_scan_not (mask __m, const char_type ∗ __lo, const char_type ∗ __hi) const [protected], [pure virtual]

Find char_type not matching mask.

This function searches for and returns a pointer to the first char_type c of [lo,hi) for which is(m,c) is false.

do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

__m	The mask to compare against.
__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

Pointer to a non-matching char_type if found, else *__hi*.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

Referenced by std::__ctype_abstract_base< wchar_t >::scan_not().

4.441.3.7 template<typename _CharT> virtual char_type std::__ctype_abstract_base< _CharT >::do_tolower (char_type __c) const [protected], [pure virtual]

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

__c	The char_type to convert.

Returns

The lowercase char_type if convertible, else *__c*.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

Referenced by std::__ctype_abstract_base< wchar_t >::tolower().

4.441.3.8 template<typename _CharT> virtual const **char_type**∗ **std::__ctype_abstract_base**< _CharT >::do_tolower (**char_type** ∗ *__lo,* const **char_type** ∗ *__hi*) const [protected], [pure virtual]

Convert array to lowercase.

This virtual function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched.

do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

4.441.3.9 template<typename _CharT> virtual **char_type std::__ctype_abstract_base**< _CharT >::do_toupper (**char_type** *__c*) const [protected], [pure virtual]

Convert to uppercase.

This virtual function converts the char_type argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

__c	The char_type to convert.

Returns

The uppercase char_type if convertible, else *__c*.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

Referenced by std::__ctype_abstract_base< wchar_t >::toupper().

4.441.3.10 template<typename _CharT> virtual const char_type* std::__ctype_abstract_base< _CharT >::do_toupper (char_type * *__lo,* const char_type * *__hi*) const [protected], [pure virtual]

Convert array to uppercase.

This virtual function converts each char_type in the range [__lo,__hi) to uppercase if possible. Other elements remain untouched.

do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

4.441.3.11 template<typename _CharT> virtual char_type std::__ctype_abstract_base< _CharT >::do_widen (char *__c*) const [protected], [pure virtual]

Widen char.

This virtual function converts the char to char_type using the simplest reasonable transformation.

do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char to convert.

Returns

The converted char_type

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

Referenced by std::__ctype_abstract_base< wchar_t >::widen().

4.441.3.12 template<typename _CharT> virtual const char* std::__ctype_abstract_base< _CharT >::do_widen (const char * *__lo,* const char * *__hi,* char_type * *__to*) const [protected], [pure virtual]

Widen char array.

This function converts each char in the input to char_type using the simplest reasonable transformation.

do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start range.
__hi	Pointer to end of range.
__to	Pointer to the destination array.

Returns

__hi.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

4.441.3.13 template<typename _CharT> bool **std::__ctype_abstract_base< _CharT >::is (mask *__m*, char_type *__c*) const** `[inline]`

Test char_type classification.

This function finds a mask M for *__c* and compares it to mask *__m*. It does so by returning the value of ctype<char_type>::do_is().

Parameters

__c	The char_type to compare the mask of.
__m	The mask to compare against.

Returns

(M & __m) != 0.

Definition at line 162 of file locale_facets.h.

Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.441.3.14 template<typename _CharT> const char_type∗ **std::__ctype_abstract_base< _CharT >::is (const char_type ∗ *__lo*, const char_type ∗ *__hi*, mask ∗ *__vec*) const** `[inline]`

Return a mask array.

This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of ctype<char_type>::do_is().

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Definition at line 179 of file locale_facets.h.

4.441.3.15 template<typename _CharT> char **std::__ctype_abstract_base< _CharT >::narrow (char_type *__c*, char *__dfault*) const** `[inline]`

Narrow char_type to char.

This function converts the char_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning ctype<char_type>::do_narrow(__c).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char_type to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Definition at line 324 of file locale_facets.h.

Referenced by std::time_put< _CharT, _OutIter >::put().

4.441.3.16 template<typename _CharT> const **char_type**∗ **std::__ctype_abstract_base**< _CharT >::narrow (const **char_type** ∗ *__lo,* const **char_type** ∗ *__hi,* char *__dfault,* char ∗ *__to*) const [inline]

Narrow array to char array.

This function converts each char_type in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char_type in the input that cannot be converted, *dfault* is used instead. It does so by returning ctype<char_type>::do_narrow(__lo, __hi, __dfault, __to).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 346 of file locale_facets.h.

4.441.3.17 template<typename _CharT> const **char_type**∗ **std::__ctype_abstract_base**< _CharT >::scan_is (mask *__m,* const **char_type** ∗ *__lo,* const **char_type** ∗ *__hi*) const [inline]

Find char_type matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true. It does so by returning ctype<char_type>::do_scan_is().

Parameters

__m	The mask to compare against.
__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

Pointer to matching char_type if found, else __*hi*.

Definition at line 195 of file locale_facets.h.

4.441.3.18 template<typename _CharT> const char_type* std::__ctype_abstract_base< _CharT >::scan_not (mask __*m*, const char_type * __*lo*, const char_type * __*hi*) const [inline]

Find char_type not matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is false. It does so by returning ctype<char_type>::do_scan_not().

Parameters

__*m*	The mask to compare against.
__*lo*	Pointer to first char in range.
__*hi*	Pointer to end of range.

Returns

Pointer to non-matching char if found, else __*hi*.

Definition at line 211 of file locale_facets.h.

4.441.3.19 template<typename _CharT> char_type std::__ctype_abstract_base< _CharT >::tolower (char_type __*c*) const [inline]

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_tolower(c).

Parameters

__*c*	The char_type to convert.

Returns

The lowercase char_type if convertible, else __*c*.

Definition at line 254 of file locale_facets.h.

4.441.3.20 template<typename _CharT> const char_type* std::__ctype_abstract_base< _CharT >::tolower (char_type * __*lo*, const char_type * __*hi*) const [inline]

Convert array to lowercase.

This function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_tolower(__lo, __hi).

Parameters

__*lo*	Pointer to start of range.
__*hi*	Pointer to end of range.

Returns

__hi.

Definition at line 269 of file locale_facets.h.

4.441.3.21 template<typename _CharT> char_type std::__ctype_abstract_base< _CharT >::toupper (char_type *__c*) const [inline]

Convert to uppercase.

This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_toupper().

Parameters

__c	The char_type to convert.

Returns

The uppercase char_type if convertible, else *__c*.

Definition at line 225 of file locale_facets.h.

4.441.3.22 template<typename _CharT> const char_type* std::__ctype_abstract_base< _CharT >::toupper (char_type * *__lo*, const char_type * *__hi*) const [inline]

Convert array to uppercase.

This function converts each char_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_toupper(lo, hi).

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

Definition at line 240 of file locale_facets.h.

4.441.3.23 template<typename _CharT> char_type std::__ctype_abstract_base< _CharT >::widen (char *__c*) const [inline]

Widen char to char_type.

This function converts the char argument to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char to convert.

Returns

The converted char_type.

Definition at line 286 of file locale_facets.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_put< _CharT, _OutIter >::do_put(), std::money_put< _CharT, _OutIter >::do_put(), std::tr2::operator<<(), and std::operator<<().

4.441.3.24 template<typename _CharT> const char* **std::__ctype_abstract_base< _CharT >::widen** (const char * *__lo,* const char * *__hi,* **char_type** * *__to*) const `[inline]`

Widen array to char_type.

This function converts each char in the input to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 305 of file locale_facets.h.

4.443.1 Detailed Description

template<typename _Tp, typename _Allocator = std::allocator<_Tp>>class std::__debug::deque< _Tp, _Allocator >

Class std::deque with safety/checking/debug instrumentation.

Definition at line 42 of file debug/deque.

4.443.2 Member Function Documentation

4.443.2.1 void __gnu_debug::_Safe_sequence_base::_M_attach (_Safe_iterator_base * __it, bool __constant) [inherited]

Attach an iterator to this sequence.

4.443.2.2 void __gnu_debug::_Safe_sequence_base::_M_attach_single (_Safe_iterator_base * __it, bool __constant) throw () [inherited]

Likewise but not thread safe.

4.443.2.3 void __gnu_debug::_Safe_sequence_base::_M_detach (_Safe_iterator_base * __it) [inherited]

Detach an iterator from this sequence

4.443.2.4 void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by __gnu_debug::_Safe_sequence_base::∼_Safe_sequence_base().

4.443.2.5 void __gnu_debug::_Safe_sequence_base::_M_detach_single (_Safe_iterator_base * __it) throw () [inherited]

Likewise but not thread safe.

4.443.2.6 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.443.2.7 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw () [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.443.2.8 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [inherited]

Invalidates all iterators.

Definition at line 233 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.443.2.9 void **__gnu_debug::_Safe_sequence**< **deque**< _Tp, _Allocator > >::_M_invalidate_if (_Predicate *__pred*) `[inherited]`

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.443.2.10 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) `[protected]`, `[inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.443.2.11 void __gnu_debug::_Safe_sequence_base::_M_swap (**_Safe_sequence_base** & *__x*) `[protected]`, `[inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.443.2.12 void **__gnu_debug::_Safe_sequence**< **deque**< _Tp, _Allocator > >::_M_transfer_from_if (**_Safe_sequence**< **deque**< _Tp, _Allocator > > & *__from*, _Predicate *__pred*) `[inherited]`

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.443.3 Member Data Documentation

4.443.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators `[inherited]`

The list of constant iterators that reference this container.

Definition at line 184 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.443.3.2 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators `[inherited]`

The list of mutable iterators that reference this container.

Definition at line 181 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.443.3.3 unsigned int __gnu_debug::_Safe_sequence_base::_M_version `[mutable]`, `[inherited]`

The container version number. This number may never be 0.

Definition at line 187 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all(), and __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.444.1 Detailed Description

template<typename _Tp, typename _Alloc = std::allocator<_Tp>>class std::__debug::forward_list< _Tp, _Alloc >

Class std::forward_list with safety/checking/debug instrumentation.

Definition at line 44 of file debug/forward_list.

4.444.2 Member Function Documentation

4.444.2.1 void __gnu_debug::_Safe_sequence_base::_M_attach (_Safe_iterator_base ∗ *__it,* bool *__constant*) [inherited]

Attach an iterator to this sequence.

4.444.2.2 void __gnu_debug::_Safe_sequence_base::_M_attach_single (_Safe_iterator_base ∗ __it, bool __constant) throw () [inherited]

Likewise but not thread safe.

4.444.2.3 void __gnu_debug::_Safe_sequence_base::_M_detach (_Safe_iterator_base ∗ __it) [inherited]

Detach an iterator from this sequence

4.444.2.4 void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by __gnu_debug::_Safe_sequence_base::∼_Safe_sequence_base().

4.444.2.5 void __gnu_debug::_Safe_sequence_base::_M_detach_single (_Safe_iterator_base ∗ __it) throw () [inherited]

Likewise but not thread safe.

4.444.2.6 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.444.2.7 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw () [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.444.2.8 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [inherited]

Invalidates all iterators.

Definition at line 233 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.444.2.9 void __gnu_debug::_Safe_sequence< forward_list< _Tp, _Alloc > >::_M_invalidate_if (_Predicate __pred) [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.444.2.10 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.444.2.11 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.444.2.12 void __gnu_debug::_Safe_sequence< forward_list< _Tp, _Alloc > >::_M_transfer_from_if (_Safe_sequence< forward_list< _Tp, _Alloc > > & __from, _Predicate __pred) [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.444.3 Member Data Documentation

4.444.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 184 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.444.3.2 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 181 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.444.3.3 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 187 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all(), and __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.447.1 Detailed Description

template<typename _Key, typename _Tp, typename _Compare = std::less<_Key>, typename _Allocator = std::allocator<std::pair<const _Key, _Tp> >>class std::__debug::multimap< _Key, _Tp, _Compare, _Allocator >

Class std::multimap with safety/checking/debug instrumentation.

Definition at line 43 of file debug/multimap.h.

4.447.2 Member Function Documentation

4.447.2.1 void __gnu_debug::_Safe_sequence_base::_M_attach (**_Safe_iterator_base** ∗ *__it,* bool *__constant*) [inherited]

Attach an iterator to this sequence.

4.447.2.2 void __gnu_debug::_Safe_sequence_base::_M_attach_single (_Safe_iterator_base ∗ __it, bool __constant) throw () [inherited]

Likewise but not thread safe.

4.447.2.3 void __gnu_debug::_Safe_sequence_base::_M_detach (_Safe_iterator_base ∗ __it) [inherited]

Detach an iterator from this sequence

4.447.2.4 void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by __gnu_debug::_Safe_sequence_base::∼_Safe_sequence_base().

4.447.2.5 void __gnu_debug::_Safe_sequence_base::_M_detach_single (_Safe_iterator_base ∗ __it) throw () [inherited]

Likewise but not thread safe.

4.447.2.6 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.447.2.7 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw () [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.447.2.8 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [inherited]

Invalidates all iterators.

Definition at line 233 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.447.2.9 void __gnu_debug::_Safe_sequence< multimap< _Key, _Tp, _Compare, _Allocator > >::_M_invalidate_if (_Predicate __pred) [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.447.2.10 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.447.2.11 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.447.2.12 void __gnu_debug::_Safe_sequence< multimap< _Key, _Tp, _Compare, _Allocator > >::_M_transfer_from_if (_Safe_sequence< multimap< _Key, _Tp, _Compare, _Allocator > > & *__from,* _Predicate *__pred*) `[inherited]`

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.447.3 Member Data Documentation

4.447.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators `[inherited]`

The list of constant iterators that reference this container.

Definition at line 184 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.447.3.2 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators `[inherited]`

The list of mutable iterators that reference this container.

Definition at line 181 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.447.3.3 unsigned int __gnu_debug::_Safe_sequence_base::_M_version `[mutable]`, `[inherited]`

The container version number. This number may never be 0.

Definition at line 187 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all(), and __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.449.2.12 void **__gnu_debug::_Safe_sequence**< **set**< _Key, _Compare, _Allocator > >::_M_transfer_from_if (**_Safe_sequence**< **set**< _Key, _Compare, _Allocator > > & *__from*, _Predicate *__pred*) [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.449.3 Member Data Documentation

4.449.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators `[inherited]`

The list of constant iterators that reference this container.

Definition at line 184 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.449.3.2 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators `[inherited]`

The list of mutable iterators that reference this container.

Definition at line 181 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.449.3.3 unsigned int __gnu_debug::_Safe_sequence_base::_M_version `[mutable]`, `[inherited]`

The container version number. This number may never be 0.

Definition at line 187 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all(), and __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.450.1 Detailed Description

template<typename _Key, typename _Tp, typename _Hash = std::hash<_Key>, typename _Pred = std::equal_to<_Key>, typename _Alloc = std::allocator<_Key>>class std::__debug::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >

Class std::unordered_map with safety/checking/debug instrumentation.

Definition at line 50 of file debug/unordered_map.

4.450.2 Member Function Documentation

4.450.2.1 void __gnu_debug::_Safe_sequence_base::_M_attach (_Safe_iterator_base ∗ *__it,* bool *__constant*) [inherited]

Attach an iterator to this sequence.

4.450.2.2 void __gnu_debug::_Safe_unordered_container_base::_M_attach_local (_Safe_iterator_base ∗ *__it,* bool *__constant*) [inherited]

Attach an iterator to this container.

4.450.2.3 void __gnu_debug::_Safe_unordered_container_base::_M_attach_local_single (_Safe_iterator_base ∗ *__it,* bool *__constant*) throw () [inherited]

Likewise but not thread safe.

4.450.2.4 void __gnu_debug::_Safe_sequence_base::_M_attach_single (_Safe_iterator_base ∗ *__it,* bool *__constant*) throw () [inherited]

Likewise but not thread safe.

4.450.2.5 void __gnu_debug::_Safe_sequence_base::_M_detach (_Safe_iterator_base ∗ *__it*) [inherited]

Detach an iterator from this sequence

4.450.2.6 void __gnu_debug::_Safe_unordered_container_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

4.450.2.7 void __gnu_debug::_Safe_unordered_container_base::_M_detach_local (_Safe_iterator_base ∗ *__it*) [inherited]

Detach an iterator from this container

4.450.2.8 void __gnu_debug::_Safe_unordered_container_base::_M_detach_local_single (_Safe_iterator_base ∗ *__it*) throw () [inherited]

Likewise but not thread safe.

4.450.2.9 void __gnu_debug::_Safe_sequence_base::_M_detach_single (_Safe_iterator_base ∗ *__it*) throw () [inherited]

Likewise but not thread safe.

4.450.2.10 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.450.2.11 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw () [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.450.2.12 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [inherited]

Invalidates all iterators.

Definition at line 233 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.450.2.13 void __gnu_debug::_Safe_unordered_container< unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > >::_M_invalidate_if (_Predicate __pred) [inherited]

Invalidates all iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.450.2.14 void __gnu_debug::_Safe_unordered_container< unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc > >::_M_invalidate_local_if (_Predicate __pred) [inherited]

Invalidates all local iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal ilocal iterators nested in the safe ones.

4.450.2.15 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.450.2.16 void __gnu_debug::_Safe_unordered_container_base::_M_swap (_Safe_unordered_container_base & __x) [protected], [inherited]

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.450.2.17 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.450.3 Member Data Documentation

4.450.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 184 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.450.3.2 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_const_local_iterators [inherited]

The list of constant local iterators that reference this container.

Definition at line 131 of file safe_unordered_base.h.

4.450.3.3 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 181 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.450.3.4 _Safe_iterator_base∗ __gnu_debug::_Safe_unordered_container_base::_M_local_iterators [inherited]

The list of mutable local iterators that reference this container.

Definition at line 128 of file safe_unordered_base.h.

4.450.3.5 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 187 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all(), and __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.451.1 Detailed Description

template<typename _Key, typename _Tp, typename _Hash = std::hash<_Key>, typename _Pred = std::equal_to<_Key>, typename _Alloc = std::allocator<_Key>>class std::__debug::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >

Class std::unordered_multimap with safety/checking/debug instrumentation.

Definition at line 478 of file debug/unordered_map.

4.451.2 Member Function Documentation

4.451.2.1 void __gnu_debug::_Safe_sequence_base::_M_attach (_Safe_iterator_base * __it, bool __constant) [inherited]

Attach an iterator to this sequence.

4.451.2.2 void __gnu_debug::_Safe_unordered_container_base::_M_attach_local (_Safe_iterator_base ∗ __it, bool __constant) [inherited]

Attach an iterator to this container.

4.451.2.3 void __gnu_debug::_Safe_unordered_container_base::_M_attach_local_single (_Safe_iterator_base ∗ __it, bool __constant) throw () [inherited]

Likewise but not thread safe.

4.451.2.4 void __gnu_debug::_Safe_sequence_base::_M_attach_single (_Safe_iterator_base ∗ __it, bool __constant) throw () [inherited]

Likewise but not thread safe.

4.451.2.5 void __gnu_debug::_Safe_sequence_base::_M_detach (_Safe_iterator_base ∗ __it) [inherited]

Detach an iterator from this sequence

4.451.2.6 void __gnu_debug::_Safe_unordered_container_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

4.451.2.7 void __gnu_debug::_Safe_unordered_container_base::_M_detach_local (_Safe_iterator_base ∗ __it) [inherited]

Detach an iterator from this container

4.451.2.8 void __gnu_debug::_Safe_unordered_container_base::_M_detach_local_single (_Safe_iterator_base ∗ __it) throw () [inherited]

Likewise but not thread safe.

4.451.2.9 void __gnu_debug::_Safe_sequence_base::_M_detach_single (_Safe_iterator_base ∗ __it) throw () [inherited]

Likewise but not thread safe.

4.451.2.10 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.451.2.11 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw () [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.451.2.12 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [inherited]

Invalidates all iterators.

Definition at line 233 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.451.2.13 void __gnu_debug::_Safe_unordered_container< unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > >::_M_invalidate_if (_Predicate __pred) [inherited]

Invalidates all iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.451.2.14 void __gnu_debug::_Safe_unordered_container< unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc > >::_M_invalidate_local_if (_Predicate __pred) [inherited]

Invalidates all local iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal ilocal iterators nested in the safe ones.

4.451.2.15 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.451.2.16 void __gnu_debug::_Safe_unordered_container_base::_M_swap (_Safe_unordered_container_base & __x) [protected], [inherited]

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.451.2.17 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.451.3 Member Data Documentation

4.451.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 184 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.451.3.2 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_const_local_iterators [inherited]

The list of constant local iterators that reference this container.

Definition at line 131 of file safe_unordered_base.h.

4.451.3.3 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

4.452.1 Detailed Description

template<typename _Value, typename _Hash = std::hash<_Value>, typename _Pred = std::equal_to<_Value>, typename _Alloc = std::allocator<_Value>>class std::__debug::unordered_multiset< _Value, _Hash, _Pred, _Alloc >

Class std::unordered_multiset with safety/checking/debug instrumentation.

Definition at line 474 of file debug/unordered_set.

4.452.2 Member Function Documentation

4.452.2.1 void __gnu_debug::_Safe_sequence_base::_M_attach (_Safe_iterator_base ∗ __it, bool __constant) [inherited]

Attach an iterator to this sequence.

4.452.2.2 void __gnu_debug::_Safe_unordered_container_base::_M_attach_local (_Safe_iterator_base ∗ __it, bool __constant) [inherited]

Attach an iterator to this container.

4.452.2.3 void __gnu_debug::_Safe_unordered_container_base::_M_attach_local_single (_Safe_iterator_base ∗ *__it,* bool *__constant*) throw () [inherited]

Likewise but not thread safe.

4.452.2.4 void __gnu_debug::_Safe_sequence_base::_M_attach_single (_Safe_iterator_base ∗ *__it,* bool *__constant*) throw () [inherited]

Likewise but not thread safe.

4.452.2.5 void __gnu_debug::_Safe_sequence_base::_M_detach (_Safe_iterator_base ∗ *__it*) [inherited]

Detach an iterator from this sequence

4.452.2.6 void __gnu_debug::_Safe_unordered_container_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

4.452.2.7 void __gnu_debug::_Safe_unordered_container_base::_M_detach_local (_Safe_iterator_base ∗ *__it*) [inherited]

Detach an iterator from this container

4.452.2.8 void __gnu_debug::_Safe_unordered_container_base::_M_detach_local_single (_Safe_iterator_base ∗ *__it*) throw () [inherited]

Likewise but not thread safe.

4.452.2.9 void __gnu_debug::_Safe_sequence_base::_M_detach_single (_Safe_iterator_base ∗ *__it*) throw () [inherited]

Likewise but not thread safe.

4.452.2.10 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.452.2.11 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw () [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.452.2.12 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [inherited]

Invalidates all iterators.

Definition at line 233 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.452.2.13 void __gnu_debug::_Safe_unordered_container< unordered_multiset< _Value, _Hash, _Pred, _Alloc > >::_M_invalidate_if (_Predicate *__pred*) `[inherited]`

Invalidates all iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.452.2.14 void __gnu_debug::_Safe_unordered_container< unordered_multiset< _Value, _Hash, _Pred, _Alloc > >::_M_invalidate_local_if (_Predicate *__pred*) `[inherited]`

Invalidates all local iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal ilocal iterators nested in the safe ones.

4.452.2.15 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) `[protected]`, `[inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.452.2.16 void __gnu_debug::_Safe_unordered_container_base::_M_swap (_Safe_unordered_container_base & *__x*) `[protected]`, `[inherited]`

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.452.2.17 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & *__x*) `[protected]`, `[inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.452.3 Member Data Documentation

4.452.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators `[inherited]`

The list of constant iterators that reference this container.

Definition at line 184 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.452.3.2 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_const_local_iterators `[inherited]`

The list of constant local iterators that reference this container.

Definition at line 131 of file safe_unordered_base.h.

4.452.3.3 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators `[inherited]`

The list of mutable iterators that reference this container.

Definition at line 181 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.452.3.4 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_local_iterators `[inherited]`

The list of mutable local iterators that reference this container.

Definition at line 128 of file safe_unordered_base.h.

4.452.3.5 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 187 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all(), and __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.453.1 Detailed Description

template<typename _Value, typename _Hash = std::hash<_Value>, typename _Pred = std::equal_to<_Value>, typename _Alloc = std::allocator<_Value>>class std::__debug::unordered_set< _Value, _Hash, _Pred, _Alloc >

Class std::unordered_set with safety/checking/debug instrumentation.

Definition at line 50 of file debug/unordered_set.

4.453.2 Member Function Documentation

4.453.2.1 void __gnu_debug::_Safe_sequence_base::_M_attach (_Safe_iterator_base * __it, bool __constant) [inherited]

Attach an iterator to this sequence.

4.453.2.2 void __gnu_debug::_Safe_unordered_container_base::_M_attach_local (_Safe_iterator_base * __it, bool __constant) [inherited]

Attach an iterator to this container.

4.453.2.3 void __gnu_debug::_Safe_unordered_container_base::_M_attach_local_single (**_Safe_iterator_base** ∗ *__it,* bool *__constant*) throw () `[inherited]`

Likewise but not thread safe.

4.453.2.4 void __gnu_debug::_Safe_sequence_base::_M_attach_single (**_Safe_iterator_base** ∗ *__it,* bool *__constant*) throw () `[inherited]`

Likewise but not thread safe.

4.453.2.5 void __gnu_debug::_Safe_sequence_base::_M_detach (**_Safe_iterator_base** ∗ *__it*) `[inherited]`

Detach an iterator from this sequence

4.453.2.6 void __gnu_debug::_Safe_unordered_container_base::_M_detach_all ( ) `[protected]`, `[inherited]`

Detach all iterators, leaving them singular.

4.453.2.7 void __gnu_debug::_Safe_unordered_container_base::_M_detach_local (**_Safe_iterator_base** ∗ *__it*) `[inherited]`

Detach an iterator from this container

4.453.2.8 void __gnu_debug::_Safe_unordered_container_base::_M_detach_local_single (**_Safe_iterator_base** ∗ *__it*) throw () `[inherited]`

Likewise but not thread safe.

4.453.2.9 void __gnu_debug::_Safe_sequence_base::_M_detach_single (**_Safe_iterator_base** ∗ *__it*) throw () `[inherited]`

Likewise but not thread safe.

4.453.2.10 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) `[protected]`, `[inherited]`

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.453.2.11 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw () `[protected]`, `[inherited]`

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.453.2.12 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const `[inline]`, `[inherited]`

Invalidates all iterators.

Definition at line 233 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.453.2.13 void __gnu_debug::_Safe_unordered_container< unordered_set< _Value, _Hash, _Pred, _Alloc > >::_M_invalidate_if (_Predicate __pred) [inherited]

Invalidates all iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.453.2.14 void __gnu_debug::_Safe_unordered_container< unordered_set< _Value, _Hash, _Pred, _Alloc > >::_M_invalidate_local_if (_Predicate __pred) [inherited]

Invalidates all local iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal ilocal iterators nested in the safe ones.

4.453.2.15 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.453.2.16 void __gnu_debug::_Safe_unordered_container_base::_M_swap (_Safe_unordered_container_base & __x) [protected], [inherited]

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.453.2.17 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.453.3 Member Data Documentation

4.453.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 184 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.453.3.2 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_const_local_iterators [inherited]

The list of constant local iterators that reference this container.

Definition at line 131 of file safe_unordered_base.h.

4.453.3.3 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 181 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.453.3.4 _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_local_iterators [inherited]

The list of mutable local iterators that reference this container.

Definition at line 128 of file safe_unordered_base.h.

4.453.3.5 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 187 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all(), and __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.454.1 Detailed Description

template<typename _Tp, typename _Allocator = std::allocator<_Tp>>class std::__debug::vector< _Tp, _Allocator >

Class std::vector with safety/checking/debug instrumentation.

Definition at line 44 of file debug/vector.

4.454.2 Constructor & Destructor Documentation

4.454.2.1 template<typename _Tp, typename _Allocator = std::allocator<_Tp>> std::__debug::vector< _Tp, _Allocator >::vector (const _Base & *__x*) [inline]

Construction from a release-mode vector.

Definition at line 115 of file debug/vector.

4.454.3 Member Function Documentation

4.454.3.1 void __gnu_debug::_Safe_sequence_base::_M_attach (_Safe_iterator_base * *__it,* bool *__constant*) [inherited]

Attach an iterator to this sequence.

4.454.3.2 void __gnu_debug::_Safe_sequence_base::_M_attach_single (_Safe_iterator_base * *__it,* bool *__constant*) throw () [inherited]

Likewise but not thread safe.

4.454.3.3 void __gnu_debug::_Safe_sequence_base::_M_detach (_Safe_iterator_base * *__it*) [inherited]

Detach an iterator from this sequence

4.454.3.4 void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by __gnu_debug::_Safe_sequence_base::∼_Safe_sequence_base().

4.454.3.5 void __gnu_debug::_Safe_sequence_base::_M_detach_single (_Safe_iterator_base * *__it*) throw () [inherited]

Likewise but not thread safe.

4.454.3.6 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.454.3.7 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw () [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.454.3.8 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [inherited]

Invalidates all iterators.

Definition at line 233 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.454.3.9 void __gnu_debug::_Safe_sequence< vector< _Tp, _Allocator > >::_M_invalidate_if (_Predicate __pred) [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.454.3.10 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.454.3.11 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.454.3.12 void __gnu_debug::_Safe_sequence< vector< _Tp, _Allocator > >::_M_transfer_from_if (_Safe_sequence< vector< _Tp, _Allocator > > & __from, _Predicate __pred) [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.454.4 Member Data Documentation

4.454.4.1 _Safe_iterator_base∗ __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 184 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.454.4.2 _Safe_iterator_base∗ __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 181 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.454.4.3 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 187 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all(), and __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

- using **__hash_cached** = __bool_constant< _Cache_hash_code >
- using **__unique_keys** = __bool_constant< _Unique_keys >

4.476.1 Detailed Description

template<bool _Cache_hash_code, bool _Constant_iterators, bool _Unique_keys>struct std::__detail::_Hashtable_traits< _Cache_hash_code, _Constant_iterators, _Unique_keys >

struct _Hashtable_traits

Important traits for hash tables.

Template Parameters

_Cache_hash_code	Boolean value. True if the value of the hash function is stored along with the value. This is a time-space tradeoff. Storing it may improve lookup speed by reducing the number of times we need to call the _Equal function.
_Constant_iterators	Boolean value. True if iterator and const_iterator are both constant iterator types. This is true for unordered_set and unordered_multiset, false for unordered_map and unordered_multimap.
_Unique_keys	Boolean value. True if the return value of _Hashtable::count(k) is always at most one, false if it may be an arbitrary number. This is true for unordered_set and unordered_map, false for unordered_multiset and unordered_multimap.

Definition at line 131 of file hashtable_policy.h.

The documentation for this struct was generated from the following file:

Primary class template _Map_base.

If the hashtable has a value type of the form pair<T1, T2> and a key extraction policy (_ExtractKey) that returns the first part of the pair, the hashtable gets a mapped_type typedef. If it satisfies those criteria and also has unique keys, then it also gets an operator[].

4.490.1 Detailed Description

struct _Nfa

A collection of all states making up an NFA.

An NFA is a 4-tuple M = (K, S, s, F), where K is a finite set of states, S is the alphabet of the NFA, s is the initial state, F is a set of final (accepting) states.

This NFA class is templated on S, a type that will hold values of the underlying alphabet (without regard to semantics of that alphabet). The other elements of the tuple are generated during construction of the NFA and are available through accessor member functions.

Definition at line 269 of file regex_nfa.h.

4.490.2 Member Function Documentation

4.490.2.1 pointer std::vector< _State , std::allocator< _State > >::_M_allocate_and_copy (size_type *__n,* _ForwardIterator *__first,* _ForwardIterator *__last*) [inline], [protected], [inherited]

Memory expansion handler. Uses the member allocation function to obtain *n* bytes of memory, and then copies [first,last) into it.

Definition at line 1135 of file stl_vector.h.

4.490.2.2 void std::vector< _State , std::allocator< _State > >::_M_range_check (size_type *__n*) const [inline], [protected], [inherited]

Safety check used only from at().

Definition at line 791 of file stl_vector.h.

4.490.2.3 void std::vector< _State , std::allocator< _State > >::assign (size_type *__n,* const value_type & *__val*) [inline], [inherited]

Assigns a given value to a vector.

Parameters

__n	Number of elements to be assigned.
__val	Value to be assigned.

This function fills a vector with *__n* copies of the given value. Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 479 of file stl_vector.h.

4.490.2.4 void std::vector< _State , std::allocator< _State > >::assign (_InputIterator *__first,* _InputIterator *__last*) [inline], [inherited]

Assigns a range to a vector.

Parameters

__first	An input iterator.
__last	An input iterator.

This function fills a vector with copies of the elements in the range [__first,__last).

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 498 of file stl_vector.h.

4.490.2.5 void std::vector< _State , std::allocator< _State > >::assign (initializer_list< value_type > __l) [inline], [inherited]

Assigns an initializer list to a vector.

Parameters

__l	An initializer_list.

This function fills a vector with copies of the elements in the initializer list *__l*.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 524 of file stl_vector.h.

4.490.2.6 reference std::vector< _State , std::allocator< _State > >::at (size_type __n) [inline], [inherited]

Provides access to the data contained in the vector.

Parameters

__n	The index of the element for which data should be accessed.

Returns

Read/write reference to data.

Exceptions

std::out_of_range	If *__n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the vector. The function throws out_of_range if the check fails.

Definition at line 810 of file stl_vector.h.

4.490.2.7 const_reference std::vector< _State , std::allocator< _State > >::at (size_type __n) const [inline], [inherited]

Provides access to the data contained in the vector.

Parameters

__n	The index of the element for which data should be accessed.

Returns

Read-only (constant) reference to data.

Exceptions

std::out_of_range	If *__n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the vector. The function throws out_of_range if the check fails.

Definition at line 828 of file stl_vector.h.

4.490.2.8 reference **std::vector**< **_State** , **std::allocator**<**_State** > >::back ( ) `[inline]`, `[inherited]`

Returns a read/write reference to the data at the last element of the vector.

Definition at line 855 of file stl_vector.h.

4.490.2.9 const_reference **std::vector**< **_State** , **std::allocator**<**_State** > >::back ( ) const `[inline]`, `[inherited]`

Returns a read-only (constant) reference to the data at the last element of the vector.

Definition at line 863 of file stl_vector.h.

4.490.2.10 iterator **std::vector**< **_State** , **std::allocator**<**_State** > >::begin ( ) `[inline]`, `[noexcept]`, `[inherited]`

Returns a read/write iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 538 of file stl_vector.h.

4.490.2.11 const_iterator **std::vector**< **_State** , **std::allocator**<**_State** > >::begin ( ) const `[inline]`, `[noexcept]`, `[inherited]`

Returns a read-only (constant) iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 547 of file stl_vector.h.

4.490.2.12 size_type **std::vector**< **_State** , **std::allocator**<**_State** > >::capacity ( ) const `[inline]`, `[noexcept]`, `[inherited]`

Returns the total number of elements that the vector can hold before needing to allocate more memory.

Definition at line 725 of file stl_vector.h.

4.490.2.13 const_iterator **std::vector**< **_State** , **std::allocator**<**_State** > >::cbegin ( ) const `[inline]`, `[noexcept]`, `[inherited]`

Returns a read-only (constant) iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 611 of file stl_vector.h.

4.490.2.14 const_iterator std::vector< _State , std::allocator< _State > >::cend ( ) const [inline], [noexcept], [inherited]

Returns a read-only (constant) iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 620 of file stl_vector.h.

4.490.2.15 void std::vector< _State , std::allocator< _State > >::clear ( ) [inline], [noexcept], [inherited]

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1125 of file stl_vector.h.

4.490.2.16 const_reverse_iterator std::vector< _State , std::allocator< _State > >::crbegin ( ) const [inline], [noexcept], [inherited]

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 629 of file stl_vector.h.

4.490.2.17 const_reverse_iterator std::vector< _State , std::allocator< _State > >::crend ( ) const [inline], [noexcept], [inherited]

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 638 of file stl_vector.h.

4.490.2.18 _State ∗ std::vector< _State , std::allocator< _State > >::data ( ) [inline], [noexcept], [inherited]

Returns a pointer such that [data(), data() + size()) is a valid range. For a non-empty vector, data() == &front().

Definition at line 878 of file stl_vector.h.

4.490.2.19 iterator std::vector< _State , std::allocator< _State > >::emplace (iterator *__position*, _Args &&... *__args*) [inherited]

Inserts an object in vector before specified iterator.

Parameters

__position	An iterator into the vector.
__args	Arguments.

Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

4.490.2.20 bool std::vector< _State , std::allocator< _State > >::empty ( ) const [inline], [noexcept], [inherited]

Returns true if the vector is empty. (Thus begin() would equal end().)

Definition at line 734 of file stl_vector.h.

4.490.2.21 iterator std::vector< _State , std::allocator< _State > >::end ( ) [inline], [noexcept], [inherited]

Returns a read/write iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 556 of file stl_vector.h.

4.490.2.22 const_iterator std::vector< _State , std::allocator< _State > >::end ( ) const [inline], [noexcept], [inherited]

Returns a read-only (constant) iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 565 of file stl_vector.h.

4.490.2.23 iterator std::vector< _State , std::allocator< _State > >::erase (iterator *__position*) [inherited]

Remove element at given position.

Parameters

__position	Iterator pointing to element to be erased.

Returns

An iterator pointing to the next element (or end()).

This function will erase the element at the given position and thus shorten the vector by one.

Note This operation could be expensive and if it is frequently used the user should consider using std::list. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

4.490.2.24 iterator std::vector< _State , std::allocator< _State > >::erase (iterator *__first,* iterator *__last*) [inherited]

Remove a range of elements.

Parameters

__first	Iterator pointing to the first element to be erased.
__last	Iterator pointing to one past the last element to be erased.

Returns

An iterator pointing to the element pointed to by *__last* prior to erasing (or end()).

This function will erase the elements in the range [__first,__last) and shorten the vector accordingly.

Note This operation could be expensive and if it is frequently used the user should consider using std::list. The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

4.490.2.25 reference std::vector< _State , std::allocator< _State > >::front ( ) [inline], [inherited]

Returns a read/write reference to the data at the first element of the vector.

Definition at line 839 of file stl_vector.h.

4.490.2.26 const_reference std::vector< _State , std::allocator< _State > >::front ( ) const [inline], [inherited]

Returns a read-only (constant) reference to the data at the first element of the vector.

Definition at line 847 of file stl_vector.h.

4.490.2.27 iterator std::vector< _State , std::allocator< _State > >::insert (iterator *__position*, const value_type & *__x*) [inherited]

Inserts given value into vector before specified iterator.

Parameters

__position	An iterator into the vector.
__x	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

4.490.2.28 iterator std::vector< _State , std::allocator< _State > >::insert (iterator *__position*, value_type && *__x*) [inline], [inherited]

Inserts given rvalue into vector before specified iterator.

Parameters

__position	An iterator into the vector.
__x	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

Definition at line 988 of file stl_vector.h.

4.490.2.29 void **std::vector**< **_State , std::allocator**<**_State** > >::insert (iterator *__position,* **initializer_list**< value_type > *__l*) [inline], [inherited]

Inserts an initializer_list into the vector.

Parameters

__position	An iterator into the vector.
__l	An initializer_list.

This function will insert copies of the data in the initializer_list *l* into the vector before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

Definition at line 1005 of file stl_vector.h.

4.490.2.30 void **std::vector**< **_State , std::allocator**<**_State** > >::insert (iterator *__position,* size_type *__n,* const value_type & *__x*) [inline], [inherited]

Inserts a number of copies of given data into the vector.

Parameters

__position	An iterator into the vector.
__n	Number of elements to be inserted.
__x	Data to be inserted.

This function will insert a specified number of copies of the given data before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

Definition at line 1023 of file stl_vector.h.

4.490.2.31 void **std::vector**< **_State , std::allocator**<**_State** > >::insert (iterator *__position,* _InputIterator *__first,* _InputIterator *__last*) [inline], [inherited]

Inserts a range into the vector.

Parameters

__position	An iterator into the vector.
__first	An input iterator.
__last	An input iterator.

This function will insert copies of the data in the range [__first,__last) into the vector before the location specified by *pos*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

Definition at line 1044 of file stl_vector.h.

4.490.2.32 size_type **std::vector**< **_State , std::allocator**<**_State** > >::max_size ( ) const [inline], [noexcept], [inherited]

Returns the size() of the largest possible vector.

Definition at line 650 of file stl_vector.h.

4.490.2.33 reference **std::vector**< **_State** , **std::allocator**< **_State** > >::operator[] (size_type *__n*) [inline], [inherited]

Subscript access to the data contained in the vector.

Parameters

__n	The index of the element for which data should be accessed.

Returns

Read/write reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)

Definition at line 770 of file stl_vector.h.

4.490.2.34 const_reference **std::vector**< **_State** , **std::allocator**< **_State** > >::operator[] (size_type *__n*) const [inline], [inherited]

Subscript access to the data contained in the vector.

Parameters

__n	The index of the element for which data should be accessed.

Returns

Read-only (constant) reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)

Definition at line 785 of file stl_vector.h.

4.490.2.35 void **std::vector**< **_State** , **std::allocator**< **_State** > >::pop_back ( ) [inline], [inherited]

Removes last element.

This is a typical stack operation. It shrinks the vector by one.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before pop_back() is called.

Definition at line 937 of file stl_vector.h.

4.490.2.36 void **std::vector**< **_State** , **std::allocator**< **_State** > >::push_back (const value_type & *__x*) [inline], [inherited]

Add data to the end of the vector.

Parameters

__x	Data to be added.

This is a typical stack operation. The function creates an element at the end of the vector and assigns the given data to it. Due to the nature of a vector this operation can be done in constant time if the vector has preallocated space available.

Definition at line 901 of file stl_vector.h.

4.490.2.37 reverse_iterator std::vector< _State , std::allocator<_State > >::rbegin ( ) [inline], [noexcept], [inherited]

Returns a read/write reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 574 of file stl_vector.h.

4.490.2.38 const_reverse_iterator std::vector< _State , std::allocator<_State > >::rbegin ( ) const [inline], [noexcept], [inherited]

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 583 of file stl_vector.h.

4.490.2.39 reverse_iterator std::vector< _State , std::allocator<_State > >::rend ( ) [inline], [noexcept], [inherited]

Returns a read/write reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 592 of file stl_vector.h.

4.490.2.40 const_reverse_iterator std::vector< _State , std::allocator<_State > >::rend ( ) const [inline], [noexcept], [inherited]

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 601 of file stl_vector.h.

4.490.2.41 void std::vector< _State , std::allocator<_State > >::reserve (size_type *__n*) [inherited]

Attempt to preallocate enough memory for specified number of elements.

Parameters

__n	Number of elements required.

Exceptions

std::length_error	If *n* exceeds `max_size()`.

This function attempts to reserve enough memory for the vector to hold the specified number of elements. If the number requested is more than max_size(), length_error is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the number of elements that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of vector data.

4.490.2.42 void std::vector< _State , std::allocator<_State > >::resize (size_type *__new_size*) [inline], [inherited]

Resizes the vector to the specified number of elements.

Parameters

__new_size	Number of elements the vector should contain.

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise default constructed elements are appended.

Definition at line 664 of file stl_vector.h.

4.490.2.43 void **std::vector**< **_State , std::allocator**< **_State** > >::resize (size_type *__new_size,* const value_type & *__x*) [inline], [inherited]

Resizes the vector to the specified number of elements.

Parameters

__new_size	Number of elements the vector should contain.
__x	Data with which new elements should be populated.

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise the vector is extended and new elements are populated with given data.

Definition at line 684 of file stl_vector.h.

4.490.2.44 void **std::vector**< **_State , std::allocator**< **_State** > >::shrink_to_fit ( ) [inline], [inherited]

A non-binding request to reduce capacity() to size().

Definition at line 716 of file stl_vector.h.

4.490.2.45 size_type **std::vector**< **_State , std::allocator**< **_State** > >::size ( ) const [inline], [noexcept], [inherited]

Returns the number of elements in the vector.

Definition at line 645 of file stl_vector.h.

4.490.2.46 void **std::vector**< **_State , std::allocator**< **_State** > >::swap (**vector**< _State > & *__x*) [inline], [noexcept], [inherited]

Swaps data with another vector.

Parameters

__x	A vector of the same element and allocator types.

This exchanges the elements between two vectors in constant time. (Three pointers, so it should be quite fast.) Note that the global std::swap() function is specialized such that std::swap(v1,v2) will feed to this function.

Definition at line 1108 of file stl_vector.h.

4.499.1 Detailed Description

template<typename _InputIterator>class std::__detail::_Scanner< _InputIterator >

struct _Scanner. Scans an input range for regex tokens.

The _Scanner class interprets the regular expression pattern in the input range passed to its constructor as a sequence of parse tokens passed to the regular expression compiler. The sequence of tokens provided depends on the flag settings passed to the constructor: different regular expression grammars will interpret the same input pattern in syntactically different ways.

Definition at line 65 of file regex_compiler.h.

4.499.2 Member Enumeration Documentation

4.499.2.1 template<typename _InputIterator> enum std::__detail::_Scanner::_TokenT

Token types returned from the scanner.

Definition at line 75 of file regex_compiler.h.

The documentation for this class was generated from the following file:

- regex_compiler.h

4.500 std::__detail::_Scanner_base Struct Reference

Inheritance diagram for std::__detail::_Scanner_base:

- _OpcodeT **_M_opcode**
- unsigned int **_M_subexpr**
- _Tagger **_M_tagger**

4.504.1 Detailed Description

struct _State

An individual state in an NFA

In this case a "state" is an entry in the NFA definition coupled with its outgoing transition(s). All states have a single outgoing transition, except for accepting states (which have no outgoing transitions) and alt states, which have two outgoing transitions.

Definition at line 211 of file regex_nfa.h.

The documentation for this struct was generated from the following file:

- regex_nfa.h

4.506.1 Detailed Description

An opaque pointer to an arbitrary exception.

Definition at line 73 of file exception_ptr.h.

The documentation for this class was generated from the following file:

- exception_ptr.h

4.507 std::__has_iterator_category_helper< _Tp > Class Template Reference

Inherits std::__sfinae_types.

Static Public Attributes

- static constexpr bool **value**

Private Types

- typedef char **__one**

4.507.1 Detailed Description

template<typename _Tp>class std::__has_iterator_category_helper< _Tp >

Traits class for iterators.

This class does nothing but define nested typedefs. The general version simply *forwards* the nested typedefs from the Iterator argument. Specialized versions for pointers and pointers-to-const provide tighter, more correct semantics.

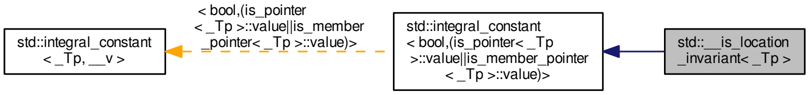
Definition at line 142 of file stl_iterator_base_types.h.

The documentation for this class was generated from the following file:

- stl_iterator_base_types.h

4.508 std::__is_location_invariant< _Tp > Struct Template Reference

Inheritance diagram for std::__is_location_invariant< _Tp >:



Public Types

- typedef integral_constant
  < bool, __v > **type**
- typedef bool **value_type**

Public Member Functions

- constexpr **operator value_type** ()

Static Public Attributes

- static constexpr bool **value**

4.508.1 Detailed Description

template<typename _Tp>struct std::__is_location_invariant< _Tp >

Trait identifying "location-invariant" types, meaning that the address of the object (or any of its members) will not escape. Also implies a trivial copy constructor and assignment operator.

Definition at line 1781 of file functional.

The documentation for this struct was generated from the following file:

- functional

- static constexpr bool tinyness_before
- static constexpr bool traps

4.509.1 Detailed Description

Part of std::numeric_limits.

The `static const` members are usable as integral constant expressions.

Note

This is a separate class for purposes of efficiency; you should only access these members as part of an instantiation of the std::numeric_limits class.

Definition at line 191 of file limits.

4.509.2 Member Data Documentation

4.509.2.1 constexpr int std::__numeric_limits_base::digits `[static]`

The number of `radix` digits that be represented without change: for integer types, the number of non-sign bits in the mantissa; for floating types, the number of `radix` digits in the mantissa.

Definition at line 200 of file limits.

4.509.2.2 constexpr int std::__numeric_limits_base::digits10 `[static]`

The number of base 10 digits that can be represented without change.

Definition at line 203 of file limits.

4.509.2.3 constexpr float_denorm_style std::__numeric_limits_base::has_denorm `[static]`

See std::float_denorm_style for more information.

Definition at line 255 of file limits.

4.509.2.4 constexpr bool std::__numeric_limits_base::has_denorm_loss [static]

True if loss of accuracy is detected as a denormalization loss, rather than as an inexact result.

Definition at line 259 of file limits.

4.509.2.5 constexpr bool std::__numeric_limits_base::has_infinity [static]

True if the type has a representation for positive infinity.

Definition at line 244 of file limits.

4.509.2.6 constexpr bool std::__numeric_limits_base::has_quiet_NaN [static]

True if the type has a representation for a quiet (non-signaling) Not a Number.

Definition at line 248 of file limits.

4.509.2.7 constexpr bool std::__numeric_limits_base::has_signaling_NaN [static]

True if the type has a representation for a signaling Not a Number.

Definition at line 252 of file limits.

4.509.2.8 constexpr bool std::__numeric_limits_base::is_bounded [static]

True if the set of values representable by the type is finite. All built-in types are bounded, this member would be false for arbitrary precision types.

Definition at line 268 of file limits.

4.509.2.9 constexpr bool std::__numeric_limits_base::is_exact [static]

True if the type uses an exact representation. All integer types are exact, but not all exact types are integer. For example, rational and fixed-exponent representations are exact but not integer.

Definition at line 220 of file limits.

4.509.2.10 constexpr bool std::__numeric_limits_base::is_iec559 [static]

True if-and-only-if the type adheres to the IEC 559 standard, also known as IEEE 754. (Only makes sense for floating point types.)

Definition at line 263 of file limits.

4.509.2.11 constexpr bool std::__numeric_limits_base::is_integer [static]

True if the type is integer.

Definition at line 215 of file limits.

4.509.2.12 constexpr bool std::__numeric_limits_base::is_modulo [static]

True if the type is *modulo*. A type is modulo if, for any operation involving +, -, or $*$ on values of that type whose result would fall outside the range [min(),max()], the value returned differs from the true value by an integer multiple of max() - min() + 1. On most machines, this is false for floating types, true for unsigned integers, and true for signed integers. See PR22200 about signed integers.

Definition at line 277 of file limits.

4.509.2.13 constexpr bool std::__numeric_limits_base::is_signed [static]

True if the type is signed.

Definition at line 212 of file limits.

4.509.2.14 constexpr bool std::__numeric_limits_base::is_specialized [static]

This will be true for all fundamental types (which have specializations), and false for everything else.

Definition at line 195 of file limits.

4.509.2.15 constexpr int std::__numeric_limits_base::max_digits10 [static]

The number of base 10 digits required to ensure that values which differ are always differentiated.

Definition at line 208 of file limits.

4.509.2.16 constexpr int std::__numeric_limits_base::max_exponent [static]

The maximum positive integer such that `radix` raised to the power of (one less than that integer) is a representable finite floating point number.

Definition at line 237 of file limits.

4.509.2.17 constexpr int std::__numeric_limits_base::max_exponent10 [static]

The maximum positive integer such that 10 raised to that power is in the range of representable finite floating point numbers.

Definition at line 241 of file limits.

4.509.2.18 constexpr int std::__numeric_limits_base::min_exponent [static]

The minimum negative integer such that `radix` raised to the power of (one less than that integer) is a normalized floating point number.

Definition at line 228 of file limits.

4.509.2.19 constexpr int std::__numeric_limits_base::min_exponent10 [static]

The minimum negative integer such that 10 raised to that power is in the range of normalized floating point numbers.

Definition at line 232 of file limits.

4.509.2.20 constexpr int std::__numeric_limits_base::radix [static]

For integer types, specifies the base of the representation. For floating types, specifies the base of the exponent representation.

Definition at line 224 of file limits.

4.509.2.21 constexpr float_round_style std::__numeric_limits_base::round_style [static]

See std::float_round_style for more information. This is only meaningful for floating types; integer types will all be round_toward_zero.

Definition at line 288 of file limits.

4.509.2.22 constexpr bool std::__numeric_limits_base::tinyness_before [static]

True if tininess is detected before rounding. (see IEC 559)

Definition at line 283 of file limits.

4.509.2.23 constexpr bool std::__numeric_limits_base::traps [static]

True if trapping is implemented for this type.

Definition at line 280 of file limits.

4.526.1 Detailed Description

template<typename _Tp, typename _Alloc>class std::_Deque_base< _Tp, _Alloc >

Deque base class. This class provides the unified face for deque's allocation. This class's constructor and destructor allocate and deallocate (but do not initialize) storage. This makes exception safety easier.

Nothing in this class ever constructs or destroys an actual Tp element. (Deque handles that itself.) Only/All memory management is performed here.

Definition at line 439 of file stl_deque.h.

4.526.2 Member Function Documentation

4.526.2.1 template<typename _Tp , typename _Alloc > void std::_Deque_base< _Tp, _Alloc >::_M_initialize_map (size_t *__num_elements*) `[protected]`

Layout storage.

Parameters

__num_elements	The count of T's for which to allocate space at first.

Returns

Nothing.

The initial underlying memory layout is a bit complicated...

Definition at line 582 of file stl_deque.h.

References std::max().

4.527.1 Detailed Description

template<typename _Tp, typename _Ref, typename _Ptr>struct std::_Deque_iterator< _Tp, _Ref, _Ptr >

A deque::iterator.

Quite a bit of intelligence here. Much of the functionality of deque is actually passed off to this class. A deque holds two of these internally, marking its valid range. Access to elements is done as offsets of either of those two, relying on operator overloading in this class.

All the functions are op overloads except for _M_set_node.

Definition at line 106 of file stl_deque.h.

4.527.2 Member Function Documentation

4.527.2.1 template<typename _Tp, typename _Ref, typename _Ptr> void std::_Deque_iterator< _Tp, _Ref, _Ptr >::_M_set_node (_Map_pointer *__new_node*) [inline]

Prepares to traverse new_node. Sets everything except _M_cur, which should therefore be set by the caller immediately afterwards, based on _M_first and _M_last.

Definition at line 234 of file stl_deque.h.

The documentation for this struct was generated from the following file:

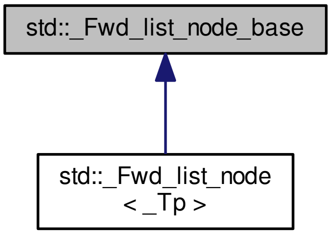
4.535 std::_Fwd_list_node_base Struct Reference

Inheritance diagram for std::_Fwd_list_node_base:



Public Member Functions

- void **_M_reverse_after** () noexcept
- _Fwd_list_node_base ∗ **_M_transfer_after** (_Fwd_list_node_base ∗__begin, _Fwd_list_node_base ∗__end)

Public Attributes

- _Fwd_list_node_base ∗ **_M_next**

4.535.1 Detailed Description

A helper basic node class for forward_list. This is just a linked list with nothing inside it. There are purely list shuffling utility methods here.

Definition at line 49 of file forward_list.h.

The documentation for this struct was generated from the following file:

- forward_list.h

4.536.1 Detailed Description

template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2, typename _Hash, typename _RehashPolicy, typename _Traits>class std::_Hashtable< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits >

Primary class template _Hashtable.

Template Parameters

_Value	CopyConstructible type.
_Key	CopyConstructible type.
_Alloc	An allocator type ([lib.allocator.requirements]) whose _Alloc::value_type is _Value. As a conforming extension, we allow for _Alloc::value_type != _Value.
_ExtractKey	Function object that takes an object of type _Value and returns a value of type _Key.
_Equal	Function object that takes two objects of type k and returns a bool-like value that is true if the two objects are considered equal.
_H1	The hash function. A unary function object with argument type _Key and result type size_t. Return values should be distributed over the entire range [0, numeric_limits<size_t>:max()].
_H2	The range-hashing function (in the terminology of Tavori and Dreizin). A binary function object whose argument types and result type are all size_t. Given arguments r and N, the return value is in the range [0, N).

_Hash	The ranged hash function (Tavori and Dreizin). A binary function whose argument types are _Key and size_t and whose result type is size_t. Given arguments k and N, the return value is in the range [0, N). Default: hash(k, N) = h2(h1(k), N). If _Hash is anything other than the default, _H1 and _H2 are ignored.
_RehashPolicy	Policy class with three members, all of which govern the bucket count. _M_next_bkt(n) returns a bucket count no smaller than n. _M_bkt_for_elements(n) returns a bucket count appropriate for an element count of n. _M_need_rehash(n_bkt, n_elt, n_ins) determines whether, if the current bucket count is n_bkt and the current element count is n_elt, we need to increase the bucket count. If so, returns make_pair(true, n), where n is the new bucket count. If not, returns make_pair(false, <anything>)
_Traits	Compile-time class with three boolean std::integral_constant members: __cache_hash_code, __constant_iterators, __unique_keys.

Each _Hashtable data structure has:

- _Bucket[] _M_buckets
- _Hash_node_base _M_bbegin
- size_type _M_bucket_count
- size_type _M_element_count

with _Bucket being _Hash_node∗ and _Hash_node containing:

- _Hash_node∗ _M_next
- Tp _M_value
- size_t _M_hash_code if cache_hash_code is true

In terms of Standard containers the hashtable is like the aggregation of:

- std::forward_list<_Node> containing the elements
- std::vector<std::forward_list<_Node>::iterator> representing the buckets

The non-empty buckets contain the node before the first node in the bucket. This design makes it possible to implement something like a std::forward_list::insert_after on container insertion and std::forward_list::erase_after on container erase calls. _M_before_begin is equivalent to std::forward_list::before_begin. Empty buckets contain nullptr. Note that one of the non-empty buckets contains &_M_before_begin which is not a dereferenceable node so the node pointer in a bucket shall never be dereferenced, only its next node can be.

Walking through a bucket's nodes requires a check on the hash code to see if each node is still in the bucket. Such a design assumes a quite efficient hash functor and is one of the reasons it is highly advisable to set __cache_hash_code to true.

The container iterators are simply built from nodes. This way incrementing the iterator is perfectly efficient independent of how many empty buckets there are in the container.

On insert we compute the element's hash code and use it to find the bucket index. If the element must be inserted in an empty bucket we add it at the beginning of the singly linked list and make the bucket point to _M_before_begin. The bucket that used to point to _M_before_begin, if any, is updated to point to its new before begin node.

On erase, the simple iterator design requires using the hash functor to get the index of the bucket to update. For this reason, when __cache_hash_code is set to false the hash functor must not throw and this is enforced by a static assertion.

Functionality is implemented by decomposition into base classes, where the derived _Hashtable class is used in _Map-_base, _Insert, _Rehash_base, and _Equality base classes to access the "this" pointer. _Hashtable_base is used in the base classes as a non-recursive, fully-completed-type so that detailed nested type information, such as iterator type and node type, can be used. This is similar to the "Curiously Recurring Template Pattern" (CRTP) technique, but uses a reconstructed, not explicitly passed, template pattern.

Base class templates are:

- __detail::_Hashtable_base
- __detail::_Map_base
- __detail::_Insert
- __detail::_Rehash_base
- __detail::_Equality

Definition at line 174 of file bits/hashtable.h.

4.550.1 Detailed Description

template<typename _Res, typename _Class, typename... _ArgTypes>class std::_Mem_fn< _Res(_Class::∗)(_ArgTypes...)>

Implementation of `mem_fn` for member function pointers.

Definition at line 541 of file functional.

The documentation for this class was generated from the following file:

- functional

4.551 std::_Mu< _Arg, false, false > Class Template Reference

Public Member Functions

- template<typename _CVArg , typename _Tuple >
  _CVArg && **operator()** (_CVArg &&__arg, _Tuple &) const volatile

4.551.1 Detailed Description

template<typename _Arg>class std::_Mu< _Arg, false, false >

If the argument is just a value, returns a reference to that value. The cv-qualifiers on the reference are the same as the cv-qualifiers on the _Mu object. [TR1 3.6.3/5 bullet 4]

Definition at line 1199 of file functional.

The documentation for this class was generated from the following file:

- functional

4.552 std::_Mu< _Arg, false, true > Class Template Reference

Public Member Functions

- template<typename _Tuple >
  result< _Mu(_Arg, _Tuple)>::type **operator()** (const volatile _Arg &, _Tuple &__tuple) const volatile

4.552.1 Detailed Description

template<typename _Arg>class std::_Mu< _Arg, false, true >

If the argument is a placeholder for the Nth argument, returns a reference to the Nth argument to the bind function object. [TR1 3.6.3/5 bullet 3]

Definition at line 1165 of file functional.

The documentation for this class was generated from the following file:

- functional

4.553 std::_Mu< _Arg, true, false > Class Template Reference

Public Member Functions

- template<typename _CVArg , typename... _Args>
  auto **operator()** (_CVArg &__arg, tuple< _Args...> &__tuple) const volatile-> decltype(__arg(declval< _Args >()...))

4.553.1 Detailed Description

template<typename _Arg>class std::_Mu< _Arg, true, false >

If the argument is a bind expression, we invoke the underlying function object with the same cv-qualifiers as we are given and pass along all of our arguments (unwrapped). [TR1 3.6.3/5 bullet 2]

Definition at line 1131 of file functional.

The documentation for this class was generated from the following file:

- functional

4.554 std::_Mu< reference_wrapper< _Tp >, false, false > Class Template Reference

Public Types

- typedef _Tp & **result_type**

Public Member Functions

- template<typename _CVRef , typename _Tuple >
  result_type **operator()** (_CVRef &__arg, _Tuple &) const volatile

4.554.1 Detailed Description

template<typename _Tp>class std::_Mu< reference_wrapper< _Tp >, false, false >

If the argument is reference_wrapper<_Tp>, returns the underlying reference. [TR1 3.6.3/5 bullet 1]

Definition at line 1110 of file functional.

The documentation for this class was generated from the following file:

- functional

4.555 std::_Placeholder< _Num > Struct Template Reference

4.555.1 Detailed Description

template<int _Num>struct std::_Placeholder< _Num >

The type of placeholder objects defined by libstdc++.

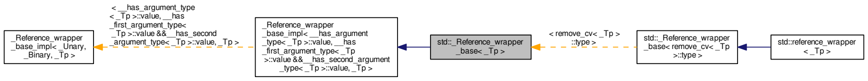
Definition at line 989 of file functional.

The documentation for this struct was generated from the following file:

- functional

4.556 std::_Reference_wrapper_base< _Tp > Struct Template Reference

Inheritance diagram for std::_Reference_wrapper_base< _Tp >:



4.556.1 Detailed Description

template<typename _Tp>struct std::_Reference_wrapper_base< _Tp >

Derives from unary_function or binary_function when it can. Specializations handle all of the easy cases. The primary template determines what to do with a class type, which may derive from both unary_function and binary_function.

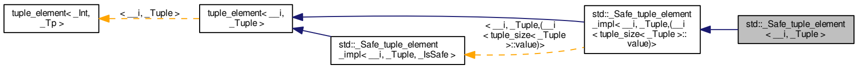
Definition at line 315 of file functional.

The documentation for this struct was generated from the following file:

- functional

4.557 std::_Safe_tuple_element< __i, _Tuple > Struct Template Reference

Inheritance diagram for std::_Safe_tuple_element< __i, _Tuple >:



4.557.1 Detailed Description

template<std::size_t __i, typename _Tuple>struct std::_Safe_tuple_element< __i, _Tuple >

Like tuple_element, but returns `_No_tuple_element` when tuple_element would return an error.

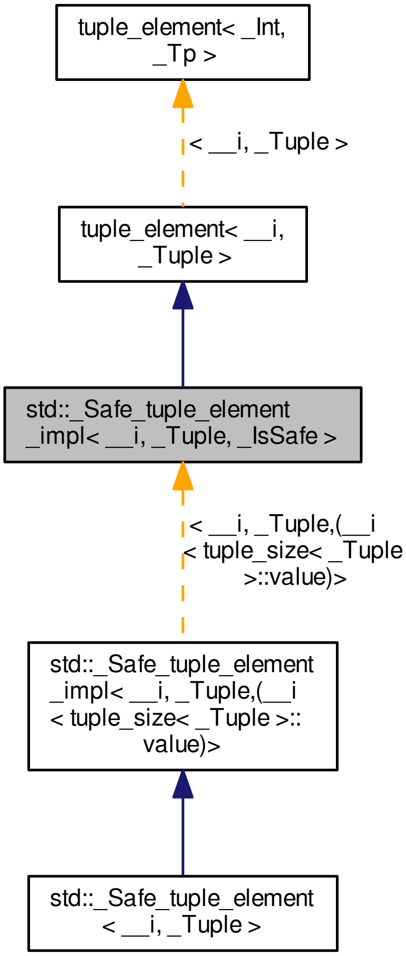
Definition at line 1084 of file functional.

The documentation for this struct was generated from the following file:

- functional

4.558 std::_Safe_tuple_element_impl< __i, _Tuple, _IsSafe > Struct Template Reference

Inheritance diagram for std::_Safe_tuple_element_impl< __i, _Tuple, _IsSafe >:



4.558.1 Detailed Description

template<std::size_t __i, typename _Tuple, bool _IsSafe>struct std::_Safe_tuple_element_impl< __i, _Tuple, _IsSafe >

Implementation helper for _Safe_tuple_element. This primary template handles the case where it is safe to use `tuple_element`.

Definition at line 1065 of file functional.

The documentation for this struct was generated from the following file:

- functional

4.559 std::_Safe_tuple_element_impl< __i, _Tuple, false > Struct Template Reference

Public Types

- typedef _No_tuple_element **type**

4.559.1 Detailed Description

template<std::size_t __i, typename _Tuple>struct std::_Safe_tuple_element_impl< __i, _Tuple, false >

Implementation helper for _Safe_tuple_element. This partial specialization handles the case where it is not safe to use `tuple_element`. We just return `_No_tuple_element`.

Definition at line 1074 of file functional.

The documentation for this struct was generated from the following file:

- functional

4.560 std::_Temporary_buffer< _ForwardIterator, _Tp > Class Template Reference

Inheritance diagram for std::_Temporary_buffer< _ForwardIterator, _Tp >:

4.560.1 Detailed Description

template<typename _ForwardIterator, typename _Tp>class std::_Temporary_buffer< _ForwardIterator, _Tp >

This class is used in two places: stl_algo.h and ext/memory, where it is wrapped as the temporary_buffer class. See temporary_buffer docs for more notes.

Definition at line 122 of file stl_tempbuf.h.

4.560.2 Constructor & Destructor Documentation

4.560.2.1 template<typename _ForwardIterator , typename _Tp > std::_Temporary_buffer< _ForwardIterator, _Tp >::_Temporary_buffer (_ForwardIterator *__first,* _ForwardIterator *__last*)

Constructs a temporary buffer of a size somewhere between zero and the size of the given range.

Definition at line 244 of file stl_tempbuf.h.

References std::pair< _T1, _T2 >::first, std::get_temporary_buffer(), std::return_temporary_buffer(), and std::pair< _T1, _T2 >::second.

4.560.3 Member Function Documentation

4.560.3.1 template<typename _ForwardIterator, typename _Tp> iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::begin ( ) [inline]

As per Table mumble.

Definition at line 151 of file stl_tempbuf.h.

Referenced by std::inplace_merge(), std::stable_partition(), and std::stable_sort().

4.560.3.2 template<typename _ForwardIterator, typename _Tp> iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::end ( ) [inline]

As per Table mumble.

Definition at line 156 of file stl_tempbuf.h.

4.560.3.3 template<typename _ForwardIterator, typename _Tp> size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::requested_size ( ) const [inline]

Returns the size requested by the constructor; may be >size().

Definition at line 146 of file stl_tempbuf.h.

Referenced by std::stable_partition().

4.560.3.4 template<typename _ForwardIterator, typename _Tp> size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::size ( ) const [inline]

As per Table mumble.

Definition at line 141 of file stl_tempbuf.h.

Referenced by std::inplace_merge(), std::stable_partition(), and std::stable_sort().

The documentation for this class was generated from the following file:

- stl_tempbuf.h

- static _Alloc select_on_container_copy_construction (const _Alloc &__rhs)

4.585.1 Detailed Description

template<typename _Alloc>struct std::allocator_traits< _Alloc >

Uniform interface to all allocator types.

Definition at line 87 of file bits/alloc_traits.h.

4.585.2 Member Typedef Documentation

4.585.2.1 template<typename _Alloc> typedef _Alloc std::allocator_traits< _Alloc >::allocator_type

The allocator type.

Definition at line 90 of file bits/alloc_traits.h.

4.585.2.2 template<typename _Alloc> typedef __const_pointer std::allocator_traits< _Alloc >::const_pointer

The allocator's const pointer type.

`Alloc::const_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const value_type>`

Definition at line 120 of file bits/alloc_traits.h.

4.585.2.3 template<typename _Alloc> typedef __const_void_pointer std::allocator_traits< _Alloc >::const_void_pointer

The allocator's const void pointer type.

`Alloc::const_void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const void>`

Definition at line 142 of file bits/alloc_traits.h.

4.585.2.4 template<typename _Alloc> typedef __difference_type std::allocator_traits< _Alloc >::difference_type

The allocator's difference type.

`Alloc::difference_type` if that type exists, otherwise `pointer_traits<pointer>::difference_type`

Definition at line 153 of file bits/alloc_traits.h.

4.585.2.5 template<typename _Alloc> typedef __pointer std::allocator_traits< _Alloc >::pointer

The allocator's pointer type.

`Alloc::pointer` if that type exists, otherwise `value_type*`

Definition at line 109 of file bits/alloc_traits.h.

4.585.2.6 template<typename _Alloc> typedef __propagate_on_container_copy_assignment std::allocator_traits< _Alloc >::propagate_on_container_copy_assignment

How the allocator is propagated on copy assignment.

`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`

Definition at line 176 of file bits/alloc_traits.h.

4.585.2.7 template<typename _Alloc> typedef __propagate_on_container_move_assignment std::allocator_traits< _Alloc >::propagate_on_container_move_assignment

How the allocator is propagated on move assignment.

`Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`

Definition at line 188 of file bits/alloc_traits.h.

4.585.2.8 template<typename _Alloc> typedef __propagate_on_container_swap std::allocator_traits< _Alloc >::propagate_on_container_swap

How the allocator is propagated on swap.

`Alloc::propagate_on_container_swap` if that type exists, otherwise `false_type`

Definition at line 199 of file bits/alloc_traits.h.

4.585.2.9 template<typename _Alloc> typedef __size_type std::allocator_traits< _Alloc >::size_type

The allocator's size type.

`Alloc::size_type` if that type exists, otherwise `make_unsigned<difference_type>::type`

Definition at line 164 of file bits/alloc_traits.h.

4.585.2.10 template<typename _Alloc> typedef _Alloc::value_type std::allocator_traits< _Alloc >::value_type

The allocated type.

Definition at line 92 of file bits/alloc_traits.h.

4.585.2.11 template<typename _Alloc> typedef __void_pointer std::allocator_traits< _Alloc >::void_pointer

The allocator's void pointer type.

`Alloc::void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<void>`

Definition at line 131 of file bits/alloc_traits.h.

4.585.3 Member Function Documentation

4.585.3.1 template<typename _Alloc> static pointer std::allocator_traits< _Alloc >::allocate (_Alloc & __a, size_type __n) [inline], [static]

Allocate memory.

Parameters

__a	An allocator.
__n	The number of objects to allocate space for.

Calls `a.allocate(n)`

Definition at line 352 of file bits/alloc_traits.h.

4.585.3.2 template<typename _Alloc> static pointer std::allocator_traits< _Alloc >::allocate (_Alloc & __a, size_type __n, const_void_pointer __hint) [inline], [static]

Allocate memory.

Parameters

__a	An allocator.
__n	The number of objects to allocate space for.
__hint	Aid to locality.

Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

Definition at line 367 of file bits/alloc_traits.h.

4.585.3.3 template<typename _Alloc> template<typename _Tp , typename... _Args> static auto std::allocator_traits< _Alloc >::construct (_Alloc & __a, _Tp ∗ __p, _Args &&... __args) -> decltype(_S_construct(__a, __p, std::forward< _Args>(__args)...)) [inline], [static]

Construct an object of type *_Tp*.

Parameters

__a	An allocator.
__p	Pointer to memory of suitable size and alignment for Tp
__args	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...)` if that expression is well-formed, otherwise uses placement-new to construct an object of type *_Tp* at location *__p* from the arguments *__args*...

Definition at line 393 of file bits/alloc_traits.h.

4.585.3.4 template<typename _Alloc> static void **std::allocator_traits**< _Alloc >::deallocate (_Alloc & *__a*, **pointer** *__p*, **size_type** *__n*) [inline], [static]

Deallocate memory.

Parameters

__a	An allocator.
__p	Pointer to the memory to deallocate.
__n	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

Definition at line 378 of file bits/alloc_traits.h.

4.585.3.5 template<typename _Alloc> template<class _Tp > static void **std::allocator_traits**< _Alloc >::destroy (_Alloc & *__a*, _Tp * *__p*) [inline], [static]

Destroy an object of type *_Tp*.

Parameters

__a	An allocator.
__p	Pointer to the object to destroy

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`

Definition at line 406 of file bits/alloc_traits.h.

4.585.3.6 template<typename _Alloc> static **size_type std::allocator_traits**< _Alloc >::max_size (const _Alloc & *__a*) [inline], [static]

The maximum supported allocation size.

Parameters

__a	An allocator.

Returns

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_type>::max()`

Definition at line 417 of file bits/alloc_traits.h.

Referenced by std::forward_list< _Tp, _Alloc >::max_size().

4.585.3.7 template<typename _Alloc> static _Alloc **std::allocator_traits**< _Alloc >::select_on_container_copy_construction (const _Alloc & *__rhs*) [inline], [static]

Obtain an allocator to use when copying a container.

Parameters

__rhs	An allocator.

Returns

`__rhs.select_on_container_copy_construction()` or *__rhs*

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns *__rhs*

Definition at line 429 of file bits/alloc_traits.h.

4.586.1 Detailed Description

template<typename _Tp, std::size_t _Nm>struct std::array< _Tp, _Nm >

A standard container for storing a fixed size sequence of elements.

Meets the requirements of a `container`, a `reversible container`, and a `sequence`.

Sets support random access iterators.

Template Parameters

Tp	Type of element. Required to be a complete type.
N	Number of elements.

Definition at line 81 of file array.

The documentation for this struct was generated from the following file:

- array

- void reset (element_type ∗__p=0) throw ()

4.606.1 Detailed Description

template<typename _Tp>class std::auto_ptr< _Tp >

A simple smart pointer providing strict ownership semantics.

The Standard says:

```
An  auto_ptr owns the object it holds a pointer to.  Copying
an  auto_ptr copies the pointer and transfers ownership to the
destination.  If more than one  auto_ptr owns the same object
at the same time the behavior of the program is undefined.

The uses of  auto_ptr include providing temporary
exception-safety for dynamically allocated memory, passing
ownership of dynamically allocated memory to a function, and
returning dynamically allocated memory from a function.   auto_ptr does not meet the CopyConstructibl
requirements for Standard Library  container elements and thus
instantiating a Standard Library container with an  auto_ptr results in undefined behavior.
```

Quoted from [20.4.5]/3.

Good examples of what can and cannot be done with auto_ptr can be found in the libstdc++ testsuite.

_GLIBCXX_RESOLVE_LIB_DEFECTS 127. auto_ptr<> conversion issues These resolutions have all been incorporated.

Definition at line 87 of file auto_ptr.h.

4.606.2 Member Typedef Documentation

4.606.2.1 template<typename _Tp> typedef _Tp **std::auto_ptr< _Tp >::element_type**

The pointed-to type.

Definition at line 94 of file auto_ptr.h.

4.606.3 Constructor & Destructor Documentation

4.606.3.1 template<typename _Tp> **std::auto_ptr< _Tp >::auto_ptr (element_type ∗ *__p* = 0) throw ()** `[inline]`, `[explicit]`

An auto_ptr is usually constructed from a raw pointer.

Parameters

__p	A pointer (defaults to NULL).

This object now *owns* the object pointed to by *__p*.

Definition at line 103 of file auto_ptr.h.

4.606.3.2 template<typename _Tp> **std::auto_ptr< _Tp >::auto_ptr (auto_ptr< _Tp > & *__a*) throw ()** `[inline]`

An auto_ptr can be constructed from another auto_ptr.

Parameters

__a	Another auto_ptr of the same type.

This object now *owns* the object previously owned by *__a*, which has given up ownership.

Definition at line 112 of file auto_ptr.h.

4.606.3.3 template<typename _Tp> template<typename _Tp1 > std::auto_ptr< _Tp >::auto_ptr (auto_ptr< _Tp1 > & *__a*) throw () `[inline]`

An auto_ptr can be constructed from another auto_ptr.

Parameters

__a	Another auto_ptr of a different but related type.

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element_type.

This object now *owns* the object previously owned by __*a*, which has given up ownership.

Definition at line 125 of file auto_ptr.h.

4.606.3.4 template<typename _Tp> std::auto_ptr< _Tp >::~auto_ptr ( ) `[inline]`

When the auto_ptr goes out of scope, the object it owns is deleted. If it no longer owns anything (i.e., `get()` is `NULL`), then this has no effect.

The C++ standard says there is supposed to be an empty throw specification here, but omitting it is standard conforming. Its presence can be detected only if _Tp::~_Tp() throws, but this is prohibited. [17.4.3.6]/2

Definition at line 170 of file auto_ptr.h.

4.606.3.5 template<typename _Tp> std::auto_ptr< _Tp >::auto_ptr (auto_ptr_ref< element_type > *__ref*) throw () `[inline]`

Automatic conversions.

These operations convert an auto_ptr into and from an auto_ptr_ref automatically as needed. This allows constructs such as

```
auto_ptr<Derived>  func_returning_auto_ptr(.....);
...
auto_ptr<Base> ptr = func_returning_auto_ptr(.....);
```

Definition at line 260 of file auto_ptr.h.

4.606.4 Member Function Documentation

4.606.4.1 template<typename _Tp> element_type* std::auto_ptr< _Tp >::get (void) const throw () `[inline]`

Bypassing the smart pointer.

Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

Note

This auto_ptr still owns the memory.

Definition at line 211 of file auto_ptr.h.

4.606.4.2 template<typename _Tp> element_type& std::auto_ptr< _Tp >::operator* ( ) const throw () [inline]

Smart pointer dereferencing.

If this auto_ptr no longer owns anything, then this operation will crash. (For a smart pointer, *no longer owns anything* is the same as being a null pointer, and you know what happens when you dereference one of those...)

Definition at line 181 of file auto_ptr.h.

4.606.4.3 template<typename _Tp> element_type* std::auto_ptr< _Tp >::operator-> ( ) const throw () [inline]

Smart pointer dereferencing.

This returns the pointer itself, which the language then will automatically cause to be dereferenced.

Definition at line 194 of file auto_ptr.h.

4.606.4.4 template<typename _Tp> auto_ptr& std::auto_ptr< _Tp >::operator= (auto_ptr< _Tp > & __a) throw () [inline]

auto_ptr assignment operator.

Parameters

__a	Another auto_ptr of the same type.

This object now *owns* the object previously owned by *__a*, which has given up ownership. The object that this one *used* to own and track has been deleted.

Definition at line 136 of file auto_ptr.h.

References std::auto_ptr< _Tp >::reset().

4.606.4.5 template<typename _Tp> template<typename _Tp1 > auto_ptr& std::auto_ptr< _Tp >::operator= (auto_ptr< _Tp1 > & __a) throw () [inline]

auto_ptr assignment operator.

Parameters

__a	Another auto_ptr of a different but related type.

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element_type.

This object now *owns* the object previously owned by *__a*, which has given up ownership. The object that this one *used* to own and track has been deleted.

Definition at line 154 of file auto_ptr.h.

References std::auto_ptr< _Tp >::reset().

4.606.4.6 template<typename _Tp> element_type* std::auto_ptr< _Tp >::release ( ) throw () [inline]

Bypassing the smart pointer.

Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

Note

This auto_ptr no longer owns the memory. When this object goes out of scope, nothing will happen.

Definition at line 225 of file auto_ptr.h.

4.606.4.7 template<typename _Tp> void **std::auto_ptr**< _Tp >::reset (**element_type** ∗ __p = 0) throw () [inline]

Forcibly deletes the managed object.

Parameters

__p	A pointer (defaults to NULL).

This object now *owns* the object pointed to by *__p*. The previous object has been deleted.

Definition at line 240 of file auto_ptr.h.

Referenced by std::auto_ptr< _Tp >::operator=().

The documentation for this class was generated from the following file:

- auto_ptr.h

4.607 std::auto_ptr_ref< _Tp1 > Struct Template Reference

Public Member Functions

- **auto_ptr_ref** (_Tp1 ∗__p)

Public Attributes

- _Tp1 ∗ **_M_ptr**

4.607.1 Detailed Description

template<typename _Tp1>struct std::auto_ptr_ref< _Tp1 >

A wrapper class to provide auto_ptr with reference semantics. For example, an auto_ptr can be assigned (or constructed from) the result of a function which returns an auto_ptr by value.

All the auto_ptr_ref stuff should happen behind the scenes.

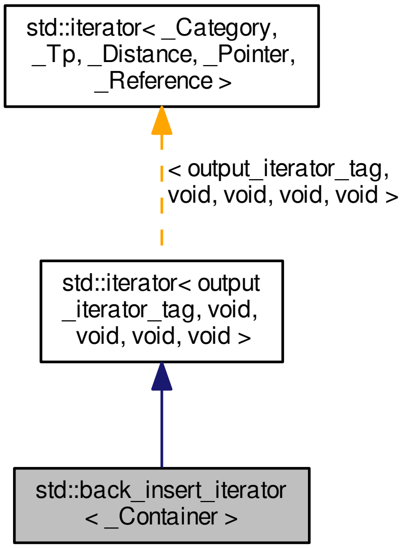
Definition at line 48 of file auto_ptr.h.

The documentation for this struct was generated from the following file:

- auto_ptr.h

4.608 std::back_insert_iterator< _Container > Class Template Reference

Inheritance diagram for std::back_insert_iterator< _Container >:



Public Types

- typedef _Container container_type
- typedef void difference_type
- typedef output_iterator_tag iterator_category
- typedef void pointer
- typedef void reference
- typedef void value_type

Public Member Functions

- back_insert_iterator (_Container &__x)
- back_insert_iterator & operator∗ ()
- back_insert_iterator & operator++ ()
- back_insert_iterator operator++ (int)
- back_insert_iterator & operator= (const typename _Container::value_type &__value)
- back_insert_iterator & **operator=** (typename _Container::value_type &&__value)

Protected Attributes

- _Container ∗ **container**

4.608.1 Detailed Description

template<typename _Container>class std::back_insert_iterator< _Container >

Turns assignment into insertion.

These are output iterators, constructed from a container-of-T. Assigning a T to the iterator appends it to the container using push_back.

Tip: Using the back_inserter function to create these iterators can save typing.

Definition at line 402 of file stl_iterator.h.

4.608.2 Member Typedef Documentation

4.608.2.1 template<typename _Container > typedef _Container **std::back_insert_iterator**< _Container >**::container_type**

A nested typedef for the type of whatever container you used.

Definition at line 410 of file stl_iterator.h.

4.608.2.2 typedef void **std::iterator**< **output_iterator_tag** , void , void , void , void >**::difference_type** `[inherited]`

Distance between iterators is represented as this type.

Definition at line 125 of file stl_iterator_base_types.h.

4.608.2.3 typedef **output_iterator_tag std::iterator**< **output_iterator_tag** , void , void , void , void >**::iterator_category** `[inherited]`

One of the tag types.

Definition at line 121 of file stl_iterator_base_types.h.

4.608.2.4 typedef void **std::iterator**< **output_iterator_tag** , void , void , void , void >**::pointer** `[inherited]`

This type represents a pointer-to-value_type.

Definition at line 127 of file stl_iterator_base_types.h.

4.608.2.5 typedef void **std::iterator**< **output_iterator_tag** , void , void , void , void >**::reference** `[inherited]`

This type represents a reference-to-value_type.

Definition at line 129 of file stl_iterator_base_types.h.

4.608.2.6 typedef void **std::iterator**< **output_iterator_tag** , void , void , void , void >**::value_type** `[inherited]`

The type "pointed to" by the iterator.

Definition at line 123 of file stl_iterator_base_types.h.

4.608.3 Constructor & Destructor Documentation

4.608.3.1 template<typename _Container > **std::back_insert_iterator**< _Container >**::back_insert_iterator** (_Container & *__x*) `[inline]`, `[explicit]`

The only way to create this iterator is with a container.

Definition at line 414 of file stl_iterator.h.

4.608.4 Member Function Documentation

4.608.4.1 template<typename _Container > back_insert_iterator& std::back_insert_iterator< _Container >::operator* ( ) [inline]

Simply returns *this.

Definition at line 452 of file stl_iterator.h.

4.608.4.2 template<typename _Container > back_insert_iterator& std::back_insert_iterator< _Container >::operator++ ( ) [inline]

Simply returns *this. (This iterator does not *move*.)

Definition at line 457 of file stl_iterator.h.

4.608.4.3 template<typename _Container > back_insert_iterator std::back_insert_iterator< _Container >::operator++ (int) [inline]

Simply returns *this. (This iterator does not *move*.)

Definition at line 462 of file stl_iterator.h.

4.608.4.4 template<typename _Container > back_insert_iterator& std::back_insert_iterator< _Container >::operator= (const typename _Container::value_type & __value) [inline]

Parameters

__value	An instance of whatever type container_type::const_reference is; presumably a reference-to-const T for container<T>.

Returns

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the end, if you like). Assigning a value to the iterator will always append the value to the end of the container.

Definition at line 436 of file stl_iterator.h.

4.615.1 Detailed Description

template<typename _CharT, typename _Traits>class std::basic_filebuf< _CharT, _Traits >

The actual work of input and output (for files).

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.

Requirements on traits_type, specific to this class:

- traits_type::pos_type must be fpos<traits_type::state_type>
- traits_type::off_type must be streamoff
- traits_type::state_type must be Assignable and DefaultConstructible,
- traits_type::state_type() must be the initial state for codecvt.

Definition at line 72 of file fstream.

4.615.2 Constructor & Destructor Documentation

4.615.2.1 template<typename _CharT , typename _Traits > **std::basic_filebuf**< _CharT, _Traits >::**basic_filebuf** ( )

Does not open any files.

The default constructor initializes the parent class using its own default ctor.

Definition at line 79 of file fstream.tcc.

References std::basic_streambuf< _CharT, _Traits >::_M_buf_locale.

4.615.2.2 template<typename _CharT, typename _Traits> virtual **std::basic_filebuf**< _CharT, _Traits >::~**basic_filebuf** ( ) `[inline]`, `[virtual]`

The destructor closes the file first.

Definition at line 219 of file fstream.

4.615.3 Member Function Documentation

4.615.3.1 template<typename _CharT, typename _Traits> void **std::basic_filebuf**< _CharT, _Traits >::_M_create_pback ( ) `[inline]`, `[protected]`

Initializes pback buffers, and moves normal buffers to safety. Assumptions: _M_in_cur has already been moved back

Definition at line 177 of file fstream.

4.615.3.2 template<typename _CharT, typename _Traits> void **std::basic_filebuf**< _CharT, _Traits >::_M_destroy_pback ( ) throw () `[inline]`, `[protected]`

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Definition at line 194 of file fstream.

4.615.3.3 template<typename _CharT, typename _Traits> void **std::basic_filebuf**< _CharT, _Traits >::_M_set_buffer (**streamsize** ***__off***) `[inline]`, `[protected]`

This function sets the pointers of the internal buffer, both get and put areas. Typically:

__off == egptr() - eback() upon underflow/uflow (**read** mode); __off == 0 upon overflow (**write** mode); __off == -1 upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: epptr() - pbase() == _M_buf_size - 1, since _M_buf_size reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 395 of file fstream.

4.615.3.4 template<typename _CharT , typename _Traits > **basic_filebuf**< _CharT, _Traits >::**__filebuf_type** ∗ **std::basic_filebuf**< _CharT, _Traits >::close ( )

Closes the currently associated file.

Returns

`this` on success, NULL on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

Definition at line 128 of file fstream.tcc.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), and std::basic_filebuf< char_type, traits_type >::∼basic_filebuf().

4.615.3.5 template<typename _CharT, typename _Traits> char_type∗ **std::basic_streambuf**< _CharT, _Traits >::eback ( ) const `[inline]`, `[protected]`, `[inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 482 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< char_type, traits_type >::sputbackc(), and std::basic_streambuf< char_type, traits_type >::sungetc().

4.615.3.6 template<typename _CharT, typename _Traits> char_type∗ **std::basic_streambuf**< _CharT, _Traits >::egptr ( ) const `[inline]`, `[protected]`, `[inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 488 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_streambuf< char_type, traits_type >::in_avail(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.615.3.7 template<typename _CharT, typename _Traits> char_type∗ std::basic_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 535 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc().

4.615.3.8 template<typename _CharT, typename _Traits> void std::basic_streambuf< _CharT, _Traits >::gbump (int __n) [inline], [protected], [inherited]

Moving the read position.

Parameters

__n	The delta by which to move.

This just advances the read position without returning any data.

Definition at line 498 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), and std::basic_streambuf< char_type, traits_type >::uflow().

4.615.3.9 template<typename _CharT, typename _Traits> locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline], [inherited]

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 226 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubimbue().

4.615.3.10 template<typename _CharT, typename _Traits> char_type∗ std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence

- egptr() returns the end pointer for the input sequence

Definition at line 485 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< char_type, traits_type >::in_avail(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), and std::basic_streambuf< char_type, traits_type >::uflow().

4.615.3.11 template< typename _CharT , typename _Traits > void **std::basic_filebuf**< _CharT, _Traits >::imbue (const **locale** & *__loc*) `[protected]`, `[virtual]`

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 910 of file fstream.tcc.

References std::ios_base::cur.

4.615.3.12 template<typename _CharT, typename _Traits> **streamsize std::basic_streambuf**< _CharT, _Traits >::in_avail ( ) `[inline]`, `[inherited]`

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 284 of file streambuf.

4.615.3.13 template<typename _CharT, typename _Traits> bool **std::basic_filebuf**< _CharT, _Traits >::is_open ( ) const throw () `[inline]`

Returns true if the external file is open.

Definition at line 227 of file fstream.

Referenced by std::basic_ifstream< _CharT, _Traits >::is_open(), std::basic_ofstream< _CharT, _Traits >::is_open(), and std::basic_fstream< _CharT, _Traits >::is_open().

4.615.3.14 template< typename _CharT , typename _Traits > **basic_filebuf**< _CharT, _Traits >::**__filebuf_type** * **std::basic_filebuf**< _CharT, _Traits >::open (const char * *__s*, **ios_base::openmode** *__mode*)

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Returns

`this` on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named *__s* using the flags given in *__mode*.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent fopen() flags. (NB: lines app, in|out|app, in|app, binary|app, binary|in|out|app, and binary|in|app per DR 596) +——————————————+ | ios_base Flag combination stdio equivalent | |binary in out trunc app | +——————————————+ | + w | | + + a | | + a | | + + w | | + r | | + + r+ | | + + + w+ | | + + + a+ | | + + a+ | +——————————————+ | + + wb | | + + + ab | | + + ab | | + + + wb | | + + rb | | + + + r+b | | + + + + w+b | | + + + + a+b | | + + + a+b | +——————————————+

Definition at line 94 of file fstream.tcc.

References std::ios_base::ate, std::ios_base::end, and std::basic_filebuf< _CharT, _Traits >::open().

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), and std::basic_fstream< _CharT, _Traits >::open().

4.615.3.15 template<typename _CharT, typename _Traits> __filebuf_type* std::basic_filebuf< _CharT, _Traits >::open (const std::string & *__s*, ios_base::openmode *__mode*) `[inline]`

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Returns

`this` on success, NULL on failure

Definition at line 280 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::open().

4.615.3.16 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::overflow (int_type *__c* = `_Traits::eof()`) `[protected]`, `[virtual]`

Consumes data from the buffer; writes to the controlled sequence.

Parameters

__c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually *__c*, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *__c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 422 of file fstream.tcc.

References std::ios_base::cur, and std::ios_base::out.

4.615.3.17 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::pbackfail (int_type *__c* = `_Traits::eof()`) `[protected]`, `[virtual]`

Tries to back up the input sequence.

Parameters

__c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 363 of file fstream.tcc.

References std::ios_base::cur, and std::ios_base::in.

4.615.3.18 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::pbase ( ) const `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence

- epptr() returns the end pointer for the output sequence

Definition at line 529 of file streambuf.

Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.615.3.19 template<typename _CharT, typename _Traits> void std::basic_streambuf< _CharT, _Traits >::pbump (int __n) [inline], [protected], [inherited]

Moving the write position.

Parameters

__n	The delta by which to move.

This just advances the write position without returning any data.

Definition at line 545 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc().

4.615.3.20 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::pptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 532 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.615.3.21 template<typename _CharT, typename _Traits> locale std::basic_streambuf< _CharT, _Traits >::pubimbue (const locale & __loc) [inline], [inherited]

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).

Definition at line 209 of file streambuf.

4.615.3.22 template<typename _CharT, typename _Traits> pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (off_type *__off*, ios_base::seekdir *__way*, ios_base::openmode *__mode* = ios_base::in \| ios_base::out) [inline], [inherited]

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.

Definition at line 251 of file streambuf.

4.615.3.23 template<typename _CharT, typename _Traits> pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (pos_type *__sp*, ios_base::openmode *__mode* = ios_base::in \| ios_base::out) [inline], [inherited]

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.

Definition at line 263 of file streambuf.

4.615.3.24 template<typename _CharT, typename _Traits> basic_streambuf* std::basic_streambuf< _CharT, _Traits >::pubsetbuf (char_type * *__s*, streamsize *__n*) [inline], [inherited]

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 239 of file streambuf.

4.615.3.25 template<typename _CharT, typename _Traits> int std::basic_streambuf< _CharT, _Traits >::pubsync ( ) [inline], [inherited]

Calls virtual sync function.

Definition at line 271 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::sync().

4.615.3.26 template<typename _CharT, typename _Traits> int_type **std::basic_streambuf**< _CharT, _Traits >::sbumpc ( ) `[inline]`, `[inherited]`

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 316 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::istreambuf_iterator< _CharT, _Traits >::operator++(), and std::basic_streambuf< char_type, traits_type >::snextc().

4.615.3.27 template<typename _CharT , typename _Traits > **basic_filebuf**< _CharT, _Traits >::pos_type **std::basic_filebuf**< _CharT, _Traits >::seekoff (off_type , **ios_base::seekdir** , **ios_base::openmode** = **ios_base::in** | **ios_base::out**) `[protected]`, `[virtual]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 713 of file fstream.tcc.

References std::ios_base::cur.

4.615.3.28 template<typename _CharT , typename _Traits > **basic_filebuf**< _CharT, _Traits >::pos_type **std::basic_filebuf**< _CharT, _Traits >::seekpos (pos_type , **ios_base::openmode** = **ios_base::in** | **ios_base::out**) `[protected]`, `[virtual]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 773 of file fstream.tcc.

References std::ios_base::beg.

4.615.3.29 template<typename _CharT , typename _Traits > **basic_filebuf**< _CharT, _Traits >::**__streambuf_type** * **std::basic_filebuf**< _CharT, _Traits >::setbuf (char_type * ***__s***, **streamsize** ***__n***) `[protected]`, `[virtual]`

Manipulates the buffer.

Parameters

__s	Pointer to a buffer area.
__n	Size of *__s*.

Returns

`this`

If no file has been opened, and both *__s* and *__n* are zero, then the stream becomes unbuffered. Otherwise, `__s` is used as a buffer; see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html` for more.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 684 of file fstream.tcc.

4.615.3.30 template<typename _CharT, typename _Traits> void **std::basic_streambuf**< _CharT, _Traits >::setg (**char_type** ∗ *__gbeg,* **char_type** ∗ *__gnext,* **char_type** ∗ *__gend*) `[inline]`, `[protected]`, `[inherited]`

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Definition at line 509 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), and std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.615.3.31 template<typename _CharT, typename _Traits> void **std::basic_streambuf**< _CharT, _Traits >::setp (**char_type** ∗ *__pbeg,* **char_type** ∗ *__pend*) `[inline]`, `[protected]`, `[inherited]`

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Definition at line 555 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.615.3.32 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sgetc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 338 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::basic_streambuf< char_type, traits_type >::snextc().

4.615.3.33 template<typename _CharT, typename _Traits> streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (char_type * __s, streamsize __n) [inline], [inherited]

Entry point for xsgetn.

Parameters

__s	A buffer area.
__n	A count.

Returns xsgetn(__s,__n). The effect is to fill *__s*[0] through *__s*[__n-1] with characters from the input sequence, if possible.

Definition at line 357 of file streambuf.

4.615.3.34 template<typename _CharT , typename _Traits > streamsize std::basic_filebuf< _CharT, _Traits >::showmanyc ( ) [protected], [virtual]

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.
The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return `eof()` but that they will return immediately.*

> The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 178 of file fstream.tcc.

References std::ios_base::binary, and std::ios_base::in.

4.615.3.35 template<typename _CharT, typename _Traits> int_type **std::basic_streambuf**< _CharT, _Traits >::snextc ( ) `[inline]`, `[inherited]`

Getting the next character.

Returns

> The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 298 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.615.3.36 template<typename _CharT, typename _Traits> int_type **std::basic_streambuf**< _CharT, _Traits >::sputbackc (**char_type** ***__c***) `[inline]`, `[inherited]`

Pushing characters back into the input stream.

Parameters

__c	The character to push back.

Returns

> The previous character, if possible.

Similar to sungetc(), but *__c* is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be *__c*.

Definition at line 372 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::putback().

4.615.3.37 template<typename _CharT, typename _Traits> int_type **std::basic_streambuf**< _CharT, _Traits >::sputc (**char_type** ***__c***) `[inline]`, `[inherited]`

Entry point for all single-character output functions.

Parameters

__c	A character to output.

Returns

> *__c*, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *__c* in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Definition at line 424 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), and std::ostreambuf_iterator< _CharT, _Traits >::operator=().

4.615.3.38 template<typename _CharT, typename _Traits> streamsize std::basic_streambuf< _CharT, _Traits >::sputn (const char_type * *__s*, streamsize *__n*) `[inline]`, `[inherited]`

Entry point for all single-character output functions.

Parameters

__s	A buffer read area.
__n	A count.

One of two public output functions.

Returns xsputn(__s,__n). The effect is to write *__s*[0] through *__s*[__n-1] to the output sequence, if possible.

Definition at line 450 of file streambuf.

4.615.3.39 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sungetc ( ) `[inline]`, `[inherited]`

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.

Definition at line 397 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::unget().

4.615.3.40 template<typename _CharT , typename _Traits > int std::basic_filebuf< _CharT, _Traits >::sync ( ) `[protected]`, `[virtual]`

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 893 of file fstream.tcc.

4.615.3.41 template<typename _CharT, typename _Traits> virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline], [protected], [virtual], [inherited]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.

Definition at line 700 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sbumpc().

4.615.3.42 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::underflow ( ) [protected], [virtual]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html`

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 204 of file fstream.tcc.

References std::ios_base::in, and std::min().

4.615.3.43 template<typename _CharT , typename _Traits > streamsize std::basic_filebuf< _CharT, _Traits >::xsgetn (char_type * __s, streamsize __n) [protected], [virtual]

Multiple character extraction.

Parameters

__s	A buffer area.
__n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills __*s*[0] through __*s*[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either __*n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 549 of file fstream.tcc.

References std::ios_base::in.

4.615.3.44 template<typename _CharT , typename _Traits > **streamsize std::basic_filebuf< _CharT, _Traits >::xsputn (const char_type * __s, streamsize __n)** `[protected]`, `[virtual]`

Multiple character insertion.

Parameters

__*s*	A buffer area.
__*n*	Maximum number of characters to write.

Returns

The number of characters written.

Writes __*s*[0] through __*s*[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 637 of file fstream.tcc.

References std::min(), and std::ios_base::out.

4.615.4 Member Data Documentation

4.615.4.1 template<typename _CharT, typename _Traits> char_type* **std::basic_filebuf< _CharT, _Traits >::_M_buf** `[protected]`

Pointer to the beginning of internal buffer.

Definition at line 114 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), and std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.615.4.2 template<typename _CharT, typename _Traits> **locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale** `[protected]`, `[inherited]`

Current locale setting.

Definition at line 192 of file streambuf.

Referenced by std::basic_filebuf< _CharT, _Traits >::basic_filebuf(), std::basic_streambuf< char_type, traits_type >::getloc(), and std::basic_streambuf< char_type, traits_type >::pubimbue().

4.615.4.3 template<typename _CharT, typename _Traits> size_t std::basic_filebuf< _CharT, _Traits >::_M_buf_size [protected]

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 121 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.615.4.4 template<typename _CharT, typename _Traits> char* std::basic_filebuf< _CharT, _Traits >::_M_ext_buf [protected]

Buffer for external characters. Used for input when codecvt::always_noconv() == false. When valid, this corresponds to eback().

Definition at line 156 of file fstream.

4.615.4.5 template<typename _CharT, typename _Traits> streamsize std::basic_filebuf< _CharT, _Traits >::_M_ext_buf_size [protected]

Size of buffer held by _M_ext_buf.

Definition at line 161 of file fstream.

4.615.4.6 template<typename _CharT, typename _Traits> const char* std::basic_filebuf< _CharT, _Traits >::_M_ext_next [protected]

Pointers into the buffer held by _M_ext_buf that delimit a subsequence of bytes that have been read but not yet converted. When valid, _M_ext_next corresponds to egptr().

Definition at line 168 of file fstream.

4.615.4.7 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected], [inherited]

Start of get area.

Definition at line 184 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::eback(), and std::basic_streambuf< char_type, traits_type >::setg().

4.615.4.8 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_cur [protected], [inherited]

Current read area.

Definition at line 185 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::gbump(), std::basic_streambuf< char_type, traits_type >::gptr(), and std::basic_streambuf< char_type, traits_type >::setg().

4.615.4.9 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_end [protected], [inherited]

End of get area.

Definition at line 186 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::egptr(), and std::basic_streambuf< char_type, traits_type >::setg().

4.615.4.10 template<typename _CharT, typename _Traits> ios_base::openmode std::basic_filebuf< _CharT, _Traits >::_M_mode [protected]

Place to stash in || out || in | out settings for current filebuf.

Definition at line 99 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.615.4.11 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_beg [protected], [inherited]

Start of put area.

Definition at line 187 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pbase(), and std::basic_streambuf< char_type, traits_type >::setp().

4.615.4.12 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_cur [protected], [inherited]

Current put area.

Definition at line 188 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pbump(), std::basic_streambuf< char_type, traits_type >::pptr(), and std::basic_streambuf< char_type, traits_type >::setp().

4.615.4.13 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_end [protected], [inherited]

End of put area.

Definition at line 189 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::epptr(), and std::basic_streambuf< char_type, traits_type >::setp().

4.615.4.14 template<typename _CharT, typename _Traits> char_type std::basic_filebuf< _CharT, _Traits >::_M_pback [protected]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 142 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback().

4.615.4.15 template<typename _CharT, typename _Traits> char_type* std::basic_filebuf< _CharT, _Traits >::_M_pback_cur_save [protected]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 143 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), and std::basic_filebuf< char_type, traits_type >::_M_destroy_pback().

4.615.4.16 template<typename _CharT, typename _Traits> char_type* std::basic_filebuf< _CharT, _Traits >::_M_pback_end_save [protected]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 144 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), and std::basic_filebuf< char_type, traits_type >::_M_destroy_pback().

4.615.4.17 template<typename _CharT, typename _Traits> bool std::basic_filebuf< _CharT, _Traits >::_M_pback_init [protected]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 145 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), and std::basic_filebuf< char_type, traits_type >::_M_destroy_pback().

4.615.4.18 template<typename _CharT, typename _Traits> bool std::basic_filebuf< _CharT, _Traits >::_M_reading [protected]

_M_reading == false && _M_writing == false for **uncommitted** mode; _M_reading == true for **read** mode; _M_writing == true for **write** mode;

NB: _M_reading == true && _M_writing == true is unused.

Definition at line 133 of file fstream.

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

4.616.1 Detailed Description

template<typename _CharT, typename _Traits>class std::basic_fstream< _CharT, _Traits >

Controlling input and output for files.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class supports reading from and writing to named files, using the inherited functions from std::basic_iostream. To control the associated sequence, an instance of std::basic_filebuf is used, which this page refers to as `sb`.

Definition at line 776 of file fstream.

4.616.2 Member Typedef Documentation

4.616.2.1 template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_put_type `[inherited]`

These are non-standard types.

Definition at line 88 of file basic_ios.h.

4.616.2.2 typedef void(∗ std::ios_base::event_callback)(event __e, ios_base &__b, int __i) `[inherited]`

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ∼ios().

Definition at line 436 of file ios_base.h.

4.616.2.3 typedef _Ios_Fmtflags std::ios_base::fmtflags `[inherited]`

This is a bitmask type.

`_Ios_Fmtflags is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed

- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 255 of file ios_base.h.

4.616.2.4 typedef _Ios_Iostate std::ios_base::iostate `[inherited]`

This is a bitmask type.

`_Ios_Iostate is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 330 of file ios_base.h.

4.616.2.5 typedef _Ios_Openmode std::ios_base::openmode `[inherited]`

This is a bitmask type.

`_Ios_Openmode is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in

- out
- trunc

Definition at line 361 of file ios_base.h.

4.616.2.6 typedef _Ios_Seekdir std::ios_base::seekdir [inherited]

This is an enumerated type.

`_Ios_Seekdir is` implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 393 of file ios_base.h.

4.616.3 Member Enumeration Documentation

4.616.3.1 enum std::ios_base::event [inherited]

The set of events that may be passed to an event callback.

erase_event is used during ∼ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

Definition at line 419 of file ios_base.h.

4.616.4 Constructor & Destructor Documentation

4.616.4.1 template<typename _CharT , typename _Traits > std::basic_fstream< _CharT, _Traits >::basic_fstream ( ) [inline]

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 803 of file fstream.

References std::basic_ios< _CharT, _Traits >::init().

4.616.4.2 template<typename _CharT , typename _Traits > std::basic_fstream< _CharT, _Traits >::basic_fstream (const char ∗ __s, ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [explicit]

Create an input/output file stream.

Parameters

__s	Null terminated string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

Tip: When using std::string to hold the filename, you must use .c_str() before passing it to this constructor.

Definition at line 816 of file fstream.

References std::basic_ios< _CharT, _Traits >::init(), and std::basic_fstream< _CharT, _Traits >::open().

4.616.4.3 template<typename _CharT , typename _Traits > std::basic_fstream< _CharT, _Traits >::basic_fstream (const std::string & __s, ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [explicit]

Create an input/output file stream.

Parameters

__s	Null terminated string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

Definition at line 831 of file fstream.

References std::basic_ios< _CharT, _Traits >::init(), and std::basic_fstream< _CharT, _Traits >::open().

4.616.4.4 template<typename _CharT , typename _Traits > std::basic_fstream< _CharT, _Traits >::~basic_fstream ( ) [inline]

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

Definition at line 846 of file fstream.

4.616.5 Member Function Documentation

4.616.5.1 const locale& std::ios_base::_M_getloc ( ) const [inline], [inherited]

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 706 of file ios_base.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::put().

4.616.5.2 template<typename _CharT, typename _Traits> void std::basic_ostream< _CharT, _Traits >::_M_write (const char_type * __s, streamsize __n) [inline], [inherited]

Core write functionality, without sentry.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Definition at line 311 of file ostream.

Referenced by std::basic_ostream< _CharT, _Traits >::write().

4.616.5.3 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::bad ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 205 of file basic_ios.h.

4.616.5.4 template<typename _CharT , typename _Traits > void **basic_ios**< _CharT, _Traits >::clear (**iostate** *__state* = **goodbit**) `[inherited]`

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic_ios.tcc.

Referenced by std::basic_ios< char, _Traits >::exceptions(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.616.5.5 template<typename _CharT , typename _Traits > void **std::basic_fstream**< _CharT, _Traits >::close ( ) `[inline]`

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 926 of file fstream.

References std::basic_filebuf< _CharT, _Traits >::close(), std::ios_base::failbit, and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.6 template<typename _CharT , typename _Traits > **basic_ios**< _CharT, _Traits > & **basic_ios**< _CharT, _Traits >::copyfmt (const **basic_ios**< _CharT, _Traits > & *__rhs*) `[inherited]`

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().

Definition at line 63 of file basic_ios.tcc.

References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.616.5.7 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 184 of file basic_ios.h.

4.616.5.8 template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 216 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.616.5.9 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions (iostate *__except*) [inline], [inherited]

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
```

```
#include <exception>

int main()
{
    std::set_terminate (
      __gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 251 of file basic_ios.h.

4.616.5.10 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::fail ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Definition at line 195 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::operator void ∗(), std::basic_ios< char, _Traits >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::regex_traits< _Ch_type >::value().

4.616.5.11 template<typename _CharT, typename _Traits> char_type **std::basic_ios**< _CharT, _Traits >::fill ( ) const `[inline]`, `[inherited]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 364 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< char, _Traits >::fill().

4.616.5.12 template<typename _CharT, typename _Traits> char_type **std::basic_ios**< _CharT, _Traits >::fill (**char_type** *__ch*) `[inline]`, `[inherited]`

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 384 of file basic_ios.h.

4.616.5.13 fmtflags std::ios_base::flags ( ) const [inline], [inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 551 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.616.5.14 fmtflags std::ios_base::flags (fmtflags *__fmtfl*) [inline], [inherited]

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

Definition at line 562 of file ios_base.h.

4.616.5.15 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::flush ( ) [inherited]

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::flush().

4.616.5.16 template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline], [inherited]

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

4.616.5.17 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::int_type basic_istream< _CharT, _Traits >::get (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 236 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.18 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (char_type & __c) [inherited]

Simple extraction.

Parameters

__c	The character in which to store data.

Returns

∗this

Tries to extract a character and store it in *__c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.19 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (char_type ∗ __s, streamsize __n, char_type __delim) [inherited]

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.616.5.20 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (char_type ∗ *__s*, streamsize *__n*) `[inline]`, `[inherited]`

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *s*.

Returns

∗this

Returns `get`(__s,__n,widen('\n')).

Definition at line 354 of file istream.

4.616.5.21 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (__streambuf_type & *__sb*, char_type *__delim*) `[inherited]`

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 356 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), std::basic_streambuf< _CharT, _Traits >::snextc(), and std::basic_streambuf< _CharT, _Traits >::sputc().

4.616.5.22 template<typename _CharT, typename _Traits> **__istream_type& std::basic_istream**< _CharT, _Traits >::get (**__streambuf_type** & *__sb*) `[inline]`, `[inherited]`

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

∗this

Returns `get`(__sb,widen('\n')).

Definition at line 387 of file istream.

4.616.5.23 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::getline (char_type ∗ *__s*, **streamsize** *__n*, char_type *__delim*) `[inherited]`

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

∗this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 400 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.616.5.24 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::getline (char_type * *__s*, streamsize *__n*) `[inline]`, `[inherited]`

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.

Returns

*this

Returns `getline`(__s,__n,widen('\n')).

Definition at line 427 of file istream.

Referenced by std::basic_istream< char >::getline().

4.616.5.25 locale std::ios_base::getloc ( ) const `[inline]`, `[inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 695 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::ws().

4.616.5.26 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::good ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.

Definition at line 174 of file basic_ios.h.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.616.5.27 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::ignore (streamsize __n, int_type __delim) [inherited]

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

∗this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 555 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.616.5.28 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::ignore (streamsize __n) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 493 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.616.5.29 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::ignore (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 460 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.30 template<typename _CharT , typename _Traits > **locale basic_ios**< _CharT, _Traits >::imbue (const **locale** & *__loc*) [inherited]

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

Definition at line 114 of file basic_ios.tcc.

References std::ios_base::imbue().

Referenced by std::operator<<().

4.616.5.31 template<typename _CharT, typename _Traits> void **basic_ios**< _CharT, _Traits >::init (**basic_streambuf**< _CharT, _Traits > * *__sb*) [protected], [inherited]

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic_ios.tcc.

Referenced by std::basic_fstream< _CharT, _Traits >::basic_fstream(), std::basic_ifstream< _CharT, _Traits >::basic_ifstream(), std::basic_ios< char, _Traits >::basic_ios(), std::basic_istream< char >::basic_istream(), std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream(), std::basic_ofstream< _CharT, _Traits >::basic_ofstream(), std::basic_ostream< char >::basic_ostream(), std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream(), and std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream().

4.616.5.32 template<typename _CharT , typename _Traits > bool **std::basic_fstream**< _CharT, _Traits >::is_open ( ) [inline]

Wrapper to test for an open file.

Returns

`rdbuf()->is_open()`

Definition at line 865 of file fstream.

References std::basic_filebuf< _CharT, _Traits >::is_open().

4.616.5.33 long& std::ios_base::iword (int __ix) [inline], [inherited]

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 741 of file ios_base.h.

4.616.5.34 template<typename _CharT, typename _Traits> char std::basic_ios< _CharT, _Traits >::narrow (char_type __c, char __dfault) const [inline], [inherited]

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

Definition at line 424 of file basic_ios.h.

4.616.5.35 template<typename _CharT , typename _Traits > void std::basic_fstream< _CharT, _Traits >::open (const char * __s, ios_base::openmode __mode = ios_base::in | ios_base::out) [inline]

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode)`. If that function fails, `failbit` is set in the stream's error state.

Tip: When using std::string to hold the filename, you must use .c_str() before passing it to this constructor.

Definition at line 886 of file fstream.

References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::failbit, std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::basic_fstream< _CharT, _Traits >::basic_fstream().

4.616.5.36 template<typename _CharT , typename _Traits > void **std::basic_fstream**< _CharT, _Traits >::open (const **std::string** & *__s*, **ios_base::openmode** *__mode* = **ios_base::in** | **ios_base::out**) `[inline]`

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode)`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 907 of file fstream.

References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::failbit, std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.37 template<typename _CharT, typename _Traits> **std::basic_ios**< _CharT, _Traits >::operator void * ( ) const `[inline]`, `[inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 115 of file basic_ios.h.

4.616.5.38 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::operator! ( ) const `[inline]`, `[inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 119 of file basic_ios.h.

4.616.5.39 template<typename _CharT, typename _Traits> **__ostream_type& std::basic_ostream**< _CharT, _Traits >::operator<< (**__ostream_type &(*)(__ostream_type &)** *__pf*) `[inline]`, `[inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

Definition at line 108 of file ostream.

4.616.5.40 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (__ios_type &(*)(__ios_type &) __pf) [inline], [inherited]

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

Definition at line 117 of file ostream.

4.616.5.41 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (ios_base &(*)(ios_base &) __pf) [inline], [inherited]

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

4.616.5.42 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 166 of file ostream.

4.616.5.43 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 170 of file ostream.

4.616.5.44 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (bool __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 174 of file ostream.

4.616.5.45 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (short *__n*) `[inherited]`

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

References std::ios_base::basefield, std::ios_base::flags(), std::ios_base::hex, and std::ios_base::oct.

4.616.5.46 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned short *__n*) `[inline]`, `[inherited]`

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 181 of file ostream.

4.616.5.47 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (int *__n*) `[inherited]`

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file ostream.tcc.

References std::ios_base::basefield, std::ios_base::flags(), std::ios_base::hex, and std::ios_base::oct.

4.616.5.48 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned int __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 192 of file ostream.

4.616.5.49 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 201 of file ostream.

4.616.5.50 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 205 of file ostream.

4.616.5.51 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (double __f) [inline], [inherited]

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 220 of file ostream.

4.616.5.52 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (float __f) [inline], [inherited]

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file ostream.

4.616.5.53 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long double __f) [inline], [inherited]

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file ostream.

4.616.5.54 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (const void * __p) [inline], [inherited]

Pointer arithmetic inserters.

Parameters

__p	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file ostream.

4.616.5.55 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (__streambuf_type * __sb) [inherited]

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.56 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (__istream_type &(*)(__istream_type &) __pf) [inline], [inherited]

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the iomanip header.

Definition at line 120 of file istream.

4.616.5.57 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (__ios_type &(*)(__ios_type &) __pf) [inline], [inherited]

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the iomanip header.

Definition at line 124 of file istream.

4.616.5.58 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (ios_base &(*)(ios_base &) __pf) [inline], [inherited]

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the iomanip header.

Definition at line 131 of file istream.

4.616.5.59 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (bool & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 168 of file istream.

4.616.5.60 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::operator>> (short & __n) [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 114 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::failbit, std::num_get< _CharT, _InIter >::get(), std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.61 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned short & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 175 of file istream.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 195 of file istream.

4.616.5.67 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned long long & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 199 of file istream.

4.616.5.68 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (float & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file istream.

4.616.5.69 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (double & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file istream.

4.616.5.70 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (long double & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file istream.

4.616.5.71 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (void *& __p) [inline], [inherited]

Basic arithmetic extractors.

Parameters

__p	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file istream.

4.616.5.72 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::operator>> (__streambuf_type * __sb) [inherited]

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 204 of file istream.tcc.

References std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.73 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::int_type basic_istream< _CharT, _Traits >::peek (void) [inherited]

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.74 **streamsize** std::ios_base::precision ( ) const `[inline]`, `[inherited]`

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 621 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

4.616.5.75 **streamsize** std::ios_base::precision (**streamsize** *__prec*) `[inline]`, `[inherited]`

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 630 of file ios_base.h.

4.616.5.76 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::put (char_type *__c*) `[inherited]`

Simple insertion.

Parameters

__c	The character to insert.

Returns

∗this

Tries to insert `__c`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::endl(), and std::ends().

4.616.5.77 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::putback (char_type *__c*) `[inherited]`

Unextracting a single character.

Parameters

__c	The character to push back into the input stream.

Returns

∗this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sputbackc().

Referenced by std::operator>>().

4.616.5.78 void∗& std::ios_base::pword (int *__ix*) `[inline]`, `[inherited]`

Access to void pointer array.

Parameters

__ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 762 of file ios_base.h.

4.616.5.79 template<typename _CharT, typename _Traits> basic_streambuf< _CharT, _Traits > ∗ basic_ios< _CharT, _Traits >::rdbuf (basic_streambuf< _CharT, _Traits > ∗ *__sb*) `[inherited]`

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.616.5.80 template<typename _CharT , typename _Traits > __filebuf_type* std::basic_fstream< _CharT, _Traits >::rdbuf ( ) const [inline]

Accessing the underlying buffer.

Returns

The current basic_filebuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

Definition at line 857 of file fstream.

4.616.5.81 template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 131 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::eof(), std::basic_ios< char, _Traits >::fail(), std::basic_ios< char, _Traits >::good(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.616.5.82 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::read (char_type * __s, streamsize __n) [inherited]

Extraction without delimiters.

Parameters

__s	A character array.
__n	Maximum number of characters to store.

Returns

∗this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.83 template<typename _CharT , typename _Traits > streamsize basic_istream< _CharT, _Traits >::readsome (char_type ∗ *__s,* streamsize *__n*) `[inherited]`

Extraction until the buffer is exhausted, but no more.

Parameters

__s	A character array.
__n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A` == `-1`, sets eofbit and extracts no characters
- if `A` == `0`, extracts no characters
- if `A` > `0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.84 void std::ios_base::register_callback (event_callback *__fn,* int *__index*) `[inherited]`

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.616.5.85 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::seekg (pos_type *__pos*) `[inherited]`

Changing the current read position.

Parameters

__pos	A file position object.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 845 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.86 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::seekg (off_type *__off*, **ios_base::seekdir** *__dir*) `[inherited]`

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 884 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.87 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::seekp (pos_type *__pos*) `[inherited]`

Changing the current write position.

Parameters

__pos	A file position object.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file ostream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.88 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::seekp (off_type *__off,* **ios_base::seekdir** *__dir*) `[inherited]`

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.

Definition at line 290 of file ostream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.89 **fmtflags** std::ios_base::setf (**fmtflags** *__fmtfl*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 578 of file ios_base.h.

Referenced by std::dec(), std::fixed(), std::hex(), std::left(), std::oct(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

4.616.5.90 fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* `&` *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 595 of file ios_base.h.

4.616.5.91 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate __state) `[inline]`, `[inherited]`

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.

Definition at line 151 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.616.5.92 template<typename _CharT , typename _Traits > int basic_istream< _CharT, _Traits >::sync (void) `[inherited]`

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 781 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_streambuf< _CharT, _Traits >::pubsync(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.616.5.93 static bool std::ios_base::sync_with_stdio (bool *__sync* = `true`) `[static]`, `[inherited]`

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt1` `html`

4.616.5.94 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::pos_type basic_istream< _CharT, _Traits >::tellg (void) `[inherited]`

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

Definition at line 817 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::in, and std::basic_ios< _CharT, _Traits >::rdbuf().

4.616.5.95 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits >::pos_type basic_ostream< _CharT, _Traits >::tellp ( ) `[inherited]`

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.

Definition at line 237 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::rdbuf().

4.616.5.96 template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const [inline], [inherited]

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 289 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.616.5.97 template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (basic_ostream< _CharT, _Traits > * __tiestr) [inline], [inherited]

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

Definition at line 301 of file basic_ios.h.

4.616.5.98 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::unget (void) [inherited]

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 746 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sungetc().

4.616.5.99 void std::ios_base::unsetf (**fmtflags** *__mask*) `[inline], [inherited]`

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

Definition at line 610 of file ios_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

4.616.5.100 template<typename _CharT, typename _Traits> char_type **std::basic_ios**< _CharT, _Traits >::widen (char *__c*) const `[inline], [inherited]`

Widens characters.

Parameters

__c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

Definition at line 443 of file basic_ios.h.

Referenced by std::endl(), std::basic_ios< char, _Traits >::fill(), std::basic_istream< char >::get(), std::basic_istream< char >::getline(), std::getline(), std::tr2::operator>>(), and std::operator>>().

4.616.5.101 **streamsize** std::ios_base::width ( ) const `[inline], [inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 644 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), and std::operator>>().

4.616.5.102 streamsize std::ios_base::width (streamsize __wide) [inline], [inherited]

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 653 of file ios_base.h.

4.616.5.103 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::write (const char_type * __s, streamsize __n) [inherited]

Character string insertion.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Returns

∗this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file ostream.tcc.

References std::basic_ostream< _CharT, _Traits >::_M_write(), and std::ios_base::badbit.

4.616.5.104 static int std::ios_base::xalloc ( ) throw () [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.616.6 Member Data Documentation

4.616.6.1 template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]

The number of characters extracted in the previous unformatted function; see gcount().

Definition at line 82 of file istream.

Referenced by std::basic_istream< char >::gcount(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::unget(), and std::basic_istream< char >::~basic_istream().

4.616.6.2 const fmtflags std::ios_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 310 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.616.6.3 const openmode std::ios_base::app [static], [inherited]

Seek to end before each write.

Definition at line 364 of file ios_base.h.

4.616.6.4 const openmode std::ios_base::ate [static], [inherited]

Open and seek to end immediately after opening.

Definition at line 367 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.616.6.5 const iostate std::ios_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 334 of file ios_base.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::fail(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), std::basic_ostream< _CharT, _Traits >::write(), and std::basic_ostream< _CharT, _Traits >::sentry::~sentry().

4.616.6.6 const fmtflags std::ios_base::basefield [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 313 of file ios_base.h.

Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::hex(), std::oct(), and std::basic_ostream<

_CharT, _Traits >::operator<<().

4.616.6.7 const seekdir std::ios_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.

Definition at line 396 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

4.616.6.8 const openmode std::ios_base::binary [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html.

Definition at line 372 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

4.616.6.9 const fmtflags std::ios_base::boolalpha [static], [inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 258 of file ios_base.h.

Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.616.6.10 const seekdir std::ios_base::cur [static], [inherited]

Request a seek relative to the current position within the sequence.

Definition at line 399 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

4.616.6.11 const fmtflags std::ios_base::dec [static], [inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 261 of file ios_base.h.

Referenced by std::dec().

4.616.6.12 const seekdir std::ios_base::end [static], [inherited]

Request a seek relative to the current end of the sequence.

Definition at line 402 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.616.6.13 const iostate std::ios_base::eofbit [static], [inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 337 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time-

4.616.6.14 const iostate std::ios_base::failbit `[static]`, `[inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 342 of file ios_base.h.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::fail(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.616.6.15 const fmtflags std::ios_base::fixed `[static]`, `[inherited]`

Generate floating-point output in fixed-point notation.

Definition at line 264 of file ios_base.h.

Referenced by std::fixed().

4.616.6.16 const fmtflags std::ios_base::floatfield `[static]`, `[inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 316 of file ios_base.h.

Referenced by std::fixed(), and std::scientific().

4.616.6.17 const iostate std::ios_base::goodbit `[static]`, `[inherited]`

Indicates all is well.

Definition at line 345 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.616.6.18 const fmtflags std::ios_base::hex [static], [inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 267 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.616.6.19 const openmode std::ios_base::in [static], [inherited]

Open for input. Default for `ifstream` and fstream.

Definition at line 375 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.616.6.20 const fmtflags std::ios_base::internal [static], [inherited]

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 272 of file ios_base.h.

Referenced by std::internal().

4.616.6.21 const fmtflags std::ios_base::left [static], [inherited]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 276 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.616.6.22 const fmtflags std::ios_base::oct [static], [inherited]

Converts integer input or generates integer output in octal base.

Definition at line 279 of file ios_base.h.

Referenced by std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.616.6.23 const openmode std::ios_base::out [static], [inherited]

Open for output. Default for `ofstream` and fstream.

Definition at line 378 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.616.6.24 const fmtflags std::ios_base::right [static], [inherited]

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 283 of file ios_base.h.

Referenced by std::right().

4.616.6.25 const **fmtflags** std::ios_base::scientific `[static], [inherited]`

Generates floating-point output in scientific notation.

Definition at line 286 of file ios_base.h.

Referenced by std::scientific().

4.616.6.26 const **fmtflags** std::ios_base::showbase `[static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 290 of file ios_base.h.

Referenced by std::noshowbase(), and std::showbase().

4.616.6.27 const **fmtflags** std::ios_base::showpoint `[static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 294 of file ios_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

4.616.6.28 const **fmtflags** std::ios_base::showpos `[static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 297 of file ios_base.h.

Referenced by std::noshowpos(), and std::showpos().

4.616.6.29 const **fmtflags** std::ios_base::skipws `[static], [inherited]`

Skips leading white space before certain input operations.

Definition at line 300 of file ios_base.h.

Referenced by std::noskipws(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::skipws().

4.616.6.30 const **openmode** std::ios_base::trunc `[static], [inherited]`

Open for input. Default for `ofstream`.

Definition at line 381 of file ios_base.h.

4.616.6.31 const **fmtflags** std::ios_base::unitbuf `[static], [inherited]`

Flushes output after each output operation.

Definition at line 303 of file ios_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic_ostream< _CharT, _Traits >::sentry::∼sentry().

4.616.6.32 const **fmtflags** std::ios_base::uppercase `[static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 307 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

The documentation for this class was generated from the following file:

Extractors

All the `operator>>` *functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.*

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

4.617.1 Detailed Description

template<typename _CharT, typename _Traits>class std::basic_ifstream< _CharT, _Traits >

Controlling input for files.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class supports reading from named files, using the inherited functions from std::basic_istream. To control the associated sequence, an instance of std::basic_filebuf is used, which this page refers to as `sb`.

Definition at line 427 of file fstream.

4.617.2 Member Typedef Documentation

4.617.2.1 template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_put_type `[inherited]`

These are non-standard types.

Definition at line 88 of file basic_ios.h.

4.617.2.2 typedef void(* std::ios_base::event_callback)(event __e, ios_base &__b, int __i) `[inherited]`

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ∼ios().

Definition at line 436 of file ios_base.h.

4.617.2.3 typedef _Ios_Fmtflags std::ios_base::fmtflags `[inherited]`

This is a bitmask type.

`_Ios_Fmtflags is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left

- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 255 of file ios_base.h.

4.617.2.4 typedef _Ios_Iostate std::ios_base::iostate `[inherited]`

This is a bitmask type.

`_Ios_Iostate` `is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 330 of file ios_base.h.

4.617.2.5 typedef _Ios_Openmode std::ios_base::openmode `[inherited]`

This is a bitmask type.

`_Ios_Openmode` `is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 361 of file ios_base.h.

4.617.2.6 typedef _Ios_Seekdir std::ios_base::seekdir `[inherited]`

This is an enumerated type.

`_Ios_Seekdir is` implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 393 of file ios_base.h.

4.617.3 Member Enumeration Documentation

4.617.3.1 enum **std::ios_base::event** `[inherited]`

The set of events that may be passed to an event callback.

erase_event is used during ∼ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

Definition at line 419 of file ios_base.h.

4.617.4 Constructor & Destructor Documentation

4.617.4.1 template<typename _CharT , typename _Traits > **std::basic_ifstream**< _CharT, _Traits >**::basic_ifstream** ( ) `[inline]`

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 453 of file fstream.

References std::basic_ios< _CharT, _Traits >::init().

4.617.4.2 template<typename _CharT , typename _Traits > **std::basic_ifstream**< _CharT, _Traits >**::basic_ifstream** (const char ∗ *__s*, **ios_base::openmode** *__mode* = **ios_base::in**) `[inline]`, `[explicit]`

Create an input file stream.

Parameters

__s	Null terminated string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

`ios_base::in` is automatically included in *__mode*.

Tip: When using std::string to hold the filename, you must use .c_str() before passing it to this constructor.

Definition at line 467 of file fstream.

References std::basic_ios< _CharT, _Traits >::init(), and std::basic_ifstream< _CharT, _Traits >::open().

4.617.4.3 template<typename _CharT , typename _Traits > **std::basic_ifstream**< _CharT, _Traits >::**basic_ifstream** (const std::string & *__s*, ios_base::openmode *__mode* = ios_base::in) `[inline]`, `[explicit]`

Create an input file stream.

Parameters

__s	std::string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

`ios_base::in` is automatically included in *__mode*.

Definition at line 483 of file fstream.

References std::basic_ios< _CharT, _Traits >::init(), and std::basic_ifstream< _CharT, _Traits >::open().

4.617.4.4 template<typename _CharT , typename _Traits > **std::basic_ifstream**< _CharT, _Traits >::~**basic_ifstream** ( ) `[inline]`

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

Definition at line 498 of file fstream.

4.617.5 Member Function Documentation

4.617.5.1 const **locale**& std::ios_base::_M_getloc ( ) const `[inline]`, `[inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 706 of file ios_base.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::put().

4.617.5.2 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::bad ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 205 of file basic_ios.h.

4.617.5.3 template<typename _CharT , typename _Traits > void basic_ios< _CharT, _Traits >::clear (iostate *__state* = goodbit) [inherited]

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic_ios.tcc.

Referenced by std::basic_ios< char, _Traits >::exceptions(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.617.5.4 template<typename _CharT , typename _Traits > void std::basic_ifstream< _CharT, _Traits >::close ( ) [inline]

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 576 of file fstream.

References std::basic_filebuf< _CharT, _Traits >::close(), std::ios_base::failbit, and std::basic_ios< _CharT, _Traits >::setstate().

4.617.5.5 template<typename _CharT , typename _Traits > basic_ios< _CharT, _Traits > & basic_ios< _CharT, _Traits >::copyfmt (const basic_ios< _CharT, _Traits > & *__rhs*) [inherited]

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().

Definition at line 63 of file basic_ios.tcc.

References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.617.5.6 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 184 of file basic_ios.h.

4.617.5.7 template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 216 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.617.5.8 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions (iostate *__except*) [inline], [inherited]

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (
      __gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 251 of file basic_ios.h.

4.617.5.9 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Definition at line 195 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::operator void ∗(), std::basic_ios< char, _Traits >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::regex_traits< _Ch_type >::value().

4.617.5.10 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 364 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< char, _Traits >::fill().

4.617.5.11 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill (char_type __ch) [inline], [inherited]

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 384 of file basic_ios.h.

4.617.5.12 fmtflags std::ios_base::flags ( ) const [inline], [inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 551 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.617.5.13 **fmtflags** std::ios_base::flags (**fmtflags** *__fmtfl*) [inline], [inherited]

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

Definition at line 562 of file ios_base.h.

4.617.5.14 template<typename _CharT, typename _Traits> **streamsize std::basic_istream**< _CharT, _Traits >::gcount ( ) const [inline], [inherited]

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

4.617.5.15 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits >::int_type **basic_istream**< _CharT, _Traits >::get (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 236 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.617.5.16 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::get (char_type & *__c*) [inherited]

Simple extraction.

Parameters

__c	The character in which to store data.

Returns

∗this

Tries to extract a character and store it in *__c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.617.5.17 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (char_type * __s, streamsize __n, char_type __delim) [inherited]

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

*this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.617.5.18 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (char_type * __s, streamsize __n) [inline], [inherited]

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *s*.

Returns

∗this

Returns `get`(__s,__n,widen('\n')).

Definition at line 354 of file istream.

4.617.5.19 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (__streambuf_type & *__sb*, char_type *__delim*) `[inherited]`

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 356 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), std::basic_streambuf< _CharT, _Traits >::snextc(), and std::basic_streambuf< _CharT, _Traits >::sputc().

4.617.5.20 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (__streambuf_type & *__sb*) `[inline]`, `[inherited]`

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

∗this

Returns `get`(__sb,widen('\n')).

Definition at line 387 of file istream.

4.617.5.21 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::getline (char_type * __s, streamsize __n, char_type __delim) [inherited]

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 400 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.617.5.22 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::getline (char_type * __s, streamsize __n) [inline], [inherited]

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.

Returns

*this

Returns `getline`(__s,__n,widen('\n')).

Definition at line 427 of file istream.

Referenced by std::basic_istream< char >::getline().

4.617.5.23 locale std::ios_base::getloc ( ) const [inline], [inherited]

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 695 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::ws().

4.617.5.24 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.

Definition at line 174 of file basic_ios.h.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.617.5.25 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::ignore (streamsize *__n*, int_type *__delim*) [inherited]

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

∗this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 555 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.617.5.26 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::ignore (**streamsize** *__n*) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 493 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.617.5.27 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::ignore (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 460 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), and std::basic_ios< _CharT, _Traits >::setstate().

4.617.5.28 template<typename _CharT , typename _Traits > **locale basic_ios**< _CharT, _Traits >::imbue (const **locale** & *__loc*) [inherited]

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

Definition at line 114 of file basic_ios.tcc.

References std::ios_base::imbue().

Referenced by std::operator<<().

4.617.5.29 template<typename _CharT, typename _Traits> void **basic_ios**< _CharT, _Traits >::init (**basic_streambuf**< _CharT, _Traits > * ___sb_) [protected], [inherited]

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic_ios.tcc.

Referenced by std::basic_fstream< _CharT, _Traits >::basic_fstream(), std::basic_ifstream< _CharT, _Traits >::basic_ifstream(), std::basic_ios< char, _Traits >::basic_ios(), std::basic_istream< char >::basic_istream(), std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream(), std::basic_ofstream< _CharT, _Traits >::basic_ofstream(), std::basic_ostream< char >::basic_ostream(), std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream(), and std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream().

4.617.5.30 template<typename _CharT , typename _Traits > bool **std::basic_ifstream**< _CharT, _Traits >::is_open ( ) [inline]

Wrapper to test for an open file.

Returns

`rdbuf()->is_open()`

Definition at line 517 of file fstream.

References std::basic_filebuf< _CharT, _Traits >::is_open().

4.617.5.31 long& std::ios_base::iword (int ___ix_) [inline], [inherited]

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 741 of file ios_base.h.

4.617.5.32 template<typename _CharT, typename _Traits> char **std::basic_ios**< _CharT, _Traits >::narrow (**char_type** ___c_, char ___dfault_) const [inline], [inherited]

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Additional l10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Definition at line 424 of file basic_ios.h.

4.617.5.33 template<typename _CharT , typename _Traits > void **std::basic_ifstream**< _CharT, _Traits >::open (const char * *__s,* **ios_base::openmode** *__mode* = **ios_base::in**) `[inline]`

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open`(s,__mode|in). If that function fails, `failbit` is set in the stream's error state.

Tip: When using std::string to hold the filename, you must use .c_str() before passing it to this constructor.

Definition at line 538 of file fstream.

References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::failbit, std::ios_base::in, std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::basic_ifstream< _CharT, _Traits >::basic_ifstream().

4.617.5.34 template<typename _CharT , typename _Traits > void **std::basic_ifstream**< _CharT, _Traits >::open (const **std::string** & *__s,* **ios_base::openmode** *__mode* = **ios_base::in**) `[inline]`

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open`(__s,__mode|in). If that function fails, `failbit` is set in the stream's error state.

Definition at line 558 of file fstream.

References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::failbit, std::ios_base::in, std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_ios< _CharT, _Traits >::setstate().

4.617.5.35 template<typename _CharT, typename _Traits> **std::basic_ios**< _CharT, _Traits >::operator void * ( ) const `[inline]`, `[inherited]`

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 199 of file istream.

4.617.5.49 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (float & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file istream.

4.617.5.50 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (double & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file istream.

4.617.5.51 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (long double & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file istream.

4.617.5.52 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (void *& __p) [inline], [inherited]

Basic arithmetic extractors.

Parameters

__p	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file istream.

4.617.5.53 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::operator>> (__streambuf_type * __sb) [inherited]

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 204 of file istream.tcc.

References std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.617.5.54 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::int_type basic_istream< _CharT, _Traits >::peek (void) [inherited]

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.617.5.55 streamsize std::ios_base::precision ( ) const [inline], [inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 621 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

4.617.5.56 streamsize std::ios_base::precision (streamsize __prec) [inline], [inherited]

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 630 of file ios_base.h.

4.617.5.57 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::putback (char_type *__c*) `[inherited]`

Unextracting a single character.

Parameters

__c	The character to push back into the input stream.

Returns

∗this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sputbackc().

Referenced by std::operator>>().

4.617.5.58 void∗& std::ios_base::pword (int *__ix*) `[inline]`, `[inherited]`

Access to void pointer array.

Parameters

__ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 762 of file ios_base.h.

4.617.5.59 template<typename _CharT, typename _Traits> basic_streambuf< _CharT, _Traits > * basic_ios< _CharT, _Traits >::rdbuf (basic_streambuf< _CharT, _Traits > * __sb) [inherited]

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.617.5.60 template<typename _CharT , typename _Traits > __filebuf_type* std::basic_ifstream< _CharT, _Traits >::rdbuf ( ) const [inline]

Accessing the underlying buffer.

Returns

The current basic_filebuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

Definition at line 509 of file fstream.

4.617.5.61 template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 131 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::eof(), std::basic_ios< char, _Traits >::fail(), std::basic_ios< char, _Traits >::good(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.617.5.62 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::read (char_type * __s, streamsize __n) [inherited]

Extraction without delimiters.

Parameters

__s	A character array.
__n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.617.5.63 template<typename _CharT , typename _Traits > streamsize basic_istream< _CharT, _Traits >::readsome (char_type * __s, streamsize __n) [inherited]

Extraction until the buffer is exhausted, but no more.

Parameters

__s	A character array.
__n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.617.5.64 void std::ios_base::register_callback (event_callback *__fn,* int *__index*) `[inherited]`

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.617.5.65 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::seekg (pos_type *__pos*) `[inherited]`

Changing the current read position.

Parameters

__pos	A file position object.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 845 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), and std::basic_ios< _CharT, _Traits >::setstate().

4.617.5.66 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::seekg (off_type *__off,* ios_base::seekdir *__dir*) `[inherited]`

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 884 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), and std::basic_ios< _CharT, _Traits >::setstate().

4.617.5.67 fmtflags std::ios_base::setf (fmtflags *__fmtfl*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 578 of file ios_base.h.

Referenced by std::dec(), std::fixed(), std::hex(), std::left(), std::oct(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

4.617.5.68 fmtflags std::ios_base::setf (fmtflags *__fmtfl*, fmtflags *__mask*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* `&` *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 595 of file ios_base.h.

4.617.5.69 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate *__state*) `[inline]`, `[inherited]`

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.

Definition at line 151 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.617.5.70 template<typename _CharT , typename _Traits > int basic_istream< _CharT, _Traits >::sync (void) [inherited]

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 781 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_streambuf< _CharT, _Traits >::pubsync(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.617.5.71 static bool std::ios_base::sync_with_stdio (bool *__sync* = `true`) [static], [inherited]

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt1` `html`

4.617.5.72 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits >::pos_type **basic_istream**< _CharT, _Traits >::tellg (void) [inherited]

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

Definition at line 817 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::in, and std::basic_ios< _CharT, _Traits >::rdbuf().

4.617.5.73 template<typename _CharT, typename _Traits> **basic_ostream**<_CharT, _Traits>* **std::basic_ios**< _CharT, _Traits >::tie ( ) const [inline], [inherited]

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 289 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.617.5.74 template<typename _CharT, typename _Traits> **basic_ostream**<_CharT, _Traits>* **std::basic_ios**< _CharT, _Traits >::tie (**basic_ostream**< _CharT, _Traits > * *__tiestr*) [inline], [inherited]

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

Definition at line 301 of file basic_ios.h.

4.617.5.75 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::unget (void) [inherited]

Unextracting the previous character.

Returns

∗this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 746 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sungetc().

4.617.5.76 void std::ios_base::unsetf (fmtflags __mask) [inline], [inherited]

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

Definition at line 610 of file ios_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

4.617.5.77 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::widen (char __c) const [inline], [inherited]

Widens characters.

Parameters

__c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional l10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Definition at line 443 of file basic_ios.h.

Referenced by std::endl(), std::basic_ios< char, _Traits >::fill(), std::basic_istream< char >::get(), std::basic_istream< char >::getline(), std::getline(), std::tr2::operator>>(), and std::operator>>().

4.617.5.78 streamsize std::ios_base::width ( ) const [inline], [inherited]

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 644 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), and std::operator>>().

4.617.5.79 streamsize std::ios_base::width (streamsize *__wide*) [inline], [inherited]

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 653 of file ios_base.h.

4.617.5.80 static int std::ios_base::xalloc ( ) throw () [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.617.6 Member Data Documentation

4.617.6.1 template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]

The number of characters extracted in the previous unformatted function; see gcount().

Definition at line 82 of file istream.

Referenced by std::basic_istream< char >::gcount(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::unget(), and std::basic_istream< char >::~basic_istream().

4.617.6.2 const fmtflags std::ios_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 310 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.617.6.3 const openmode std::ios_base::app [static], [inherited]

Seek to end before each write.

Definition at line 364 of file ios_base.h.

4.617.6.4 const openmode std::ios_base::ate [static], [inherited]

Open and seek to end immediately after opening.

Definition at line 367 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.617.6.5 const iostate std::ios_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 334 of file ios_base.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::fail(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), std::basic_ostream< _CharT, _Traits >::write(), and std::basic_ostream< _CharT, _Traits >::sentry::~sentry().

4.617.6.6 const fmtflags std::ios_base::basefield [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 313 of file ios_base.h.

Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::hex(), std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.617.6.7 const **seekdir** std::ios_base::beg `[static], [inherited]`

Request a seek relative to the beginning of the stream.

Definition at line 396 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

4.617.6.8 const **openmode** std::ios_base::binary `[static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html`.

Definition at line 372 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

4.617.6.9 const **fmtflags** std::ios_base::boolalpha `[static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 258 of file ios_base.h.

Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.617.6.10 const **seekdir** std::ios_base::cur `[static], [inherited]`

Request a seek relative to the current position within the sequence.

Definition at line 399 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

4.617.6.11 const **fmtflags** std::ios_base::dec `[static], [inherited]`

Converts integer input or generates integer output in decimal base.

Definition at line 261 of file ios_base.h.

Referenced by std::dec().

4.617.6.12 const **seekdir** std::ios_base::end `[static], [inherited]`

Request a seek relative to the current end of the sequence.

Definition at line 402 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.617.6.13 const **iostate** std::ios_base::eofbit `[static], [inherited]`

Indicates that an input operation reached the end of an input sequence.

Definition at line 337 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::eof(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.617.6.14 const **iostate** std::ios_base::failbit `[static]`, `[inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 342 of file ios_base.h.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::fail(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.617.6.15 const **fmtflags** std::ios_base::fixed `[static]`, `[inherited]`

Generate floating-point output in fixed-point notation.

Definition at line 264 of file ios_base.h.

Referenced by std::fixed().

4.617.6.16 const **fmtflags** std::ios_base::floatfield `[static]`, `[inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 316 of file ios_base.h.

Referenced by std::fixed(), and std::scientific().

4.617.6.17 const **iostate** std::ios_base::goodbit `[static]`, `[inherited]`

Indicates all is well.

Definition at line 345 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.617.6.18 const fmtflags std::ios_base::hex [static], [inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 267 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.617.6.19 const openmode std::ios_base::in [static], [inherited]

Open for input. Default for `ifstream` and fstream.

Definition at line 375 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.617.6.20 const fmtflags std::ios_base::internal [static], [inherited]

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 272 of file ios_base.h.

Referenced by std::internal().

4.617.6.21 const fmtflags std::ios_base::left [static], [inherited]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 276 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.617.6.22 const fmtflags std::ios_base::oct [static], [inherited]

Converts integer input or generates integer output in octal base.

Definition at line 279 of file ios_base.h.

Referenced by std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.617.6.23 const openmode std::ios_base::out [static], [inherited]

Open for output. Default for `ofstream` and fstream.

Definition at line 378 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.617.6.24 const fmtflags std::ios_base::right [static], [inherited]

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 283 of file ios_base.h.

Referenced by std::right().

4.617.6.25 const fmtflags std::ios_base::scientific `[static], [inherited]`

Generates floating-point output in scientific notation.

Definition at line 286 of file ios_base.h.

Referenced by std::scientific().

4.617.6.26 const fmtflags std::ios_base::showbase `[static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 290 of file ios_base.h.

Referenced by std::noshowbase(), and std::showbase().

4.617.6.27 const fmtflags std::ios_base::showpoint `[static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 294 of file ios_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

4.617.6.28 const fmtflags std::ios_base::showpos `[static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 297 of file ios_base.h.

Referenced by std::noshowpos(), and std::showpos().

4.617.6.29 const fmtflags std::ios_base::skipws `[static], [inherited]`

Skips leading white space before certain input operations.

Definition at line 300 of file ios_base.h.

Referenced by std::noskipws(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::skipws().

4.617.6.30 const openmode std::ios_base::trunc `[static], [inherited]`

Open for input. Default for `ofstream`.

Definition at line 381 of file ios_base.h.

4.617.6.31 const fmtflags std::ios_base::unitbuf `[static], [inherited]`

Flushes output after each output operation.

Definition at line 303 of file ios_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic_ostream< _CharT, _Traits >::sentry::∼sentry().

4.617.6.32 const fmtflags std::ios_base::uppercase `[static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 307 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

The documentation for this class was generated from the following file:

- fstream

4.618.1 Detailed Description

template<typename _CharT, typename _Traits>class std::basic_ios< _CharT, _Traits >

Template class basic_ios, virtual base class for all stream classes.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class.

Definition at line 66 of file basic_ios.h.

4.618.2 Member Typedef Documentation

4.618.2.1 template<typename _CharT, typename _Traits> typedef ctype<_CharT> std::basic_ios< _CharT, _Traits >::__ctype_type

These are non-standard types.

Definition at line 86 of file basic_ios.h.

4.618.2.2 template<typename _CharT, typename _Traits> typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_get_type

These are non-standard types.

Definition at line 90 of file basic_ios.h.

4.618.2.3 template<typename _CharT, typename _Traits> typedef **num_put**<_CharT, **ostreambuf_iterator**<_CharT, _Traits> > **std::basic_ios**< _CharT, _Traits >::**__num_put_type**

These are non-standard types.

Definition at line 88 of file basic_ios.h.

4.618.2.4 template<typename _CharT, typename _Traits> typedef _CharT **std::basic_ios**< _CharT, _Traits >::**char_type**

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 75 of file basic_ios.h.

4.618.2.5 typedef void(∗ std::ios_base::event_callback)(**event** __e, **ios_base** &__b, int __i) `[inherited]`

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ∼ios().

Definition at line 436 of file ios_base.h.

4.618.2.6 typedef _Ios_Fmtflags std::ios_base::fmtflags `[inherited]`

This is a bitmask type.

`_Ios_Fmtflags is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws

- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 255 of file ios_base.h.

4.618.2.7 template<typename _CharT, typename _Traits> typedef _Traits::int_type **std::basic_ios< _CharT, _Traits >::int_type**

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 76 of file basic_ios.h.

4.618.2.8 typedef _Ios_Iostate std::ios_base::iostate `[inherited]`

This is a bitmask type.

`_Ios_Iostate is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 330 of file ios_base.h.

4.618.2.9 template<typename _CharT, typename _Traits> typedef _Traits::off_type **std::basic_ios< _CharT, _Traits >::off_type**

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 78 of file basic_ios.h.

4.618.2.10 typedef _Ios_Openmode std::ios_base::openmode `[inherited]`

This is a bitmask type.

`_Ios_Openmode is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 361 of file ios_base.h.

4.618.2.11 template<typename _CharT, typename _Traits> typedef _Traits::pos_type **std::basic_ios< _CharT, _Traits >::pos_type**

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 77 of file basic_ios.h.

4.618.2.12 typedef _Ios_Seekdir std::ios_base::seekdir `[inherited]`

This is an enumerated type.

`_Ios_Seekdir` `is` implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 393 of file ios_base.h.

4.618.2.13 template<typename _CharT, typename _Traits> typedef _Traits **std::basic_ios< _CharT, _Traits >::traits_type**

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 79 of file basic_ios.h.

4.618.3 Member Enumeration Documentation

4.618.3.1 enum **std::ios_base::event** `[inherited]`

The set of events that may be passed to an event callback.

erase_event is used during ∼ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

Definition at line 419 of file ios_base.h.

4.618.4 Constructor & Destructor Documentation

4.618.4.1 template<typename _CharT, typename _Traits> **std::basic_ios< _CharT, _Traits >::basic_ios (basic_streambuf< _CharT, _Traits > ∗ *__sb*)** `[inline]`, `[explicit]`

Constructor performs initialization.

The parameter is passed by derived streams.

Definition at line 264 of file basic_ios.h.

4.618.4.2 template<typename _CharT, typename _Traits> virtual **std::basic_ios< _CharT, _Traits >::∼basic_ios ( )** `[inline]`, `[virtual]`

Empty.

The destructor does nothing. More specifically, it does not destroy the streambuf held by rdbuf().

Definition at line 276 of file basic_ios.h.

4.618.4.3 template<typename _CharT, typename _Traits> **std::basic_ios**< _CharT, _Traits >**::basic_ios** ( ) `[inline]`, `[protected]`

Empty.

The default constructor does nothing and is not normally accessible to users.

Definition at line 454 of file basic_ios.h.

4.618.5 Member Function Documentation

4.618.5.1 const **locale**& std::ios_base::_M_getloc ( ) const `[inline]`, `[inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 706 of file ios_base.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::put().

4.618.5.2 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::bad ( ) const `[inline]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 205 of file basic_ios.h.

4.618.5.3 template<typename _CharT , typename _Traits > void **basic_ios**< _CharT, _Traits >::clear (**iostate** *__state* = **goodbit**)

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic_ios.tcc.

Referenced by std::basic_ios< char, _Traits >::exceptions(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.618.5.4 template<typename _CharT , typename _Traits > **basic_ios**< _CharT, _Traits > & **basic_ios**< _CharT, _Traits >::copyfmt (const **basic_ios**< _CharT, _Traits > & *__rhs*)

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().

Definition at line 63 of file basic_ios.tcc.

References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.618.5.5 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::eof ( ) const [inline]

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 184 of file basic_ios.h.

4.618.5.6 template<typename _CharT, typename _Traits> **iostate std::basic_ios**< _CharT, _Traits >::exceptions ( ) const [inline]

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 216 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.618.5.7 template<typename _CharT, typename _Traits> void **std::basic_ios**< _CharT, _Traits >::exceptions (**iostate** *__except*) [inline]

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (
      __gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 251 of file basic_ios.h.

4.618.5.8 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::fail ( ) const [inline]

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Definition at line 195 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::operator void ∗(), std::basic_ios< char, _Traits >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::regex_traits< _Ch_type >::value().

4.618.5.9 template<typename _CharT, typename _Traits> char_type **std::basic_ios**< _CharT, _Traits >::fill ( ) const [inline]

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 364 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< char, _Traits >::fill().

4.618.5.10 template<typename _CharT, typename _Traits> char_type **std::basic_ios**< _CharT, _Traits >::fill (char_type *__ch*) [inline]

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 384 of file basic_ios.h.

4.618.5.11 fmtflags std::ios_base::flags ( ) const [inline], [inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 551 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.618.5.12 fmtflags std::ios_base::flags (fmtflags *__fmtfl*) [inline], [inherited]

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

Definition at line 562 of file ios_base.h.

4.618.5.13 locale std::ios_base::getloc ( ) const [inline], [inherited]

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 695 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::ws().

4.618.5.14 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::good ( ) const [inline]

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.

Definition at line 174 of file basic_ios.h.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.618.5.15 template<typename _CharT , typename _Traits > **locale basic_ios**< _CharT, _Traits >::imbue (const **locale** & *__loc*)

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

Definition at line 114 of file basic_ios.tcc.

References std::ios_base::imbue().

Referenced by std::operator<<().

4.618.5.16 template<typename _CharT, typename _Traits> void **basic_ios**< _CharT, _Traits >::init (**basic_streambuf**< _CharT, _Traits > * *__sb*) [protected]

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic_ios.tcc.

Referenced by std::basic_fstream< _CharT, _Traits >::basic_fstream(), std::basic_ifstream< _CharT, _Traits >::basic_ifstream(), std::basic_ios< char, _Traits >::basic_ios(), std::basic_istream< char >::basic_istream(), std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream(), std::basic_ofstream< _CharT, _Traits >::basic_ofstream(), std::basic_ostream< char >::basic_ostream(), std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream(), and std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream().

4.618.5.17 long& std::ios_base::iword (int *__ix*) [inline], [inherited]

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 741 of file ios_base.h.

4.618.5.18 template<typename _CharT, typename _Traits> char **std::basic_ios**< _CharT, _Traits >::narrow (**char_type** *__c*, char *__dfault*) const [inline]

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

Definition at line 424 of file basic_ios.h.

4.618.5.19 template<typename _CharT, typename _Traits> **std::basic_ios**< _CharT, _Traits >::operator void * ( ) const [inline]

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 115 of file basic_ios.h.

4.618.5.20 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::operator! ( ) const [inline]

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 119 of file basic_ios.h.

4.618.5.21 streamsize std::ios_base::precision ( ) const [inline], [inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 621 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

4.618.5.22 streamsize std::ios_base::precision (streamsize *__prec*) [inline], [inherited]

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 630 of file ios_base.h.

4.618.5.23 void∗& std::ios_base::pword (int *__ix*) [inline], [inherited]

Access to void pointer array.

Parameters

__ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 762 of file ios_base.h.

4.618.5.24 template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits>∗ std::basic_ios< _CharT, _Traits >::rdbuf ( ) const [inline]

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.

Definition at line 315 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.618.5.25 template<typename _CharT, typename _Traits> **basic_streambuf**< _CharT, _Traits > ∗ **basic_ios**< _CharT, _Traits >::rdbuf (**basic_streambuf**< _CharT, _Traits > ∗ *__sb*)

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.618.5.26 template<typename _CharT, typename _Traits> **iostate std::basic_ios**< _CharT, _Traits >::rdstate ( ) const [inline]

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 131 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::eof(), std::basic_ios< char, _Traits >::fail(), std::basic_ios< char, _Traits >::good(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.618.5.27 void std::ios_base::register_callback (**event_callback** *__fn*, int *__index*) [inherited]

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.618.5.28 fmtflags std::ios_base::setf (fmtflags *__fmtfl*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 578 of file ios_base.h.

Referenced by std::dec(), std::fixed(), std::hex(), std::left(), std::oct(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

4.618.5.29 fmtflags std::ios_base::setf (fmtflags *__fmtfl*, fmtflags *__mask*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* `&` *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 595 of file ios_base.h.

4.618.5.30 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate *__state*) `[inline]`

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.

Definition at line 151 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.618.5.31 static bool std::ios_base::sync_with_stdio (bool *__sync* = `true`) `[static]`, `[inherited]`

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt1` `html`

4.618.5.32 template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const `[inline]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 289 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.618.5.33 template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (basic_ostream< _CharT, _Traits > * *__tiestr*) `[inline]`

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

Definition at line 301 of file basic_ios.h.

4.618.5.34 void std::ios_base::unsetf (fmtflags __mask) [inline], [inherited]

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

Definition at line 610 of file ios_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

4.618.5.35 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::widen (char __c) const [inline]

Widens characters.

Parameters

__c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional l10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Definition at line 443 of file basic_ios.h.

Referenced by std::endl(), std::basic_ios< char, _Traits >::fill(), std::basic_istream< char >::get(), std::basic_istream< char >::getline(), std::getline(), std::tr2::operator>>(), and std::operator>>().

4.618.5.36 streamsize std::ios_base::width ( ) const [inline], [inherited]

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 644 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), and std::operator>>().

4.618.5.37 streamsize std::ios_base::width (streamsize *__wide*) `[inline]`, `[inherited]`

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 653 of file ios_base.h.

4.618.5.38 static int std::ios_base::xalloc ( ) throw () `[static]`, `[inherited]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.618.6 Member Data Documentation

4.618.6.1 const fmtflags std::ios_base::adjustfield `[static]`, `[inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 310 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.618.6.2 const openmode std::ios_base::app `[static]`, `[inherited]`

Seek to end before each write.

Definition at line 364 of file ios_base.h.

4.618.6.3 const openmode std::ios_base::ate `[static]`, `[inherited]`

Open and seek to end immediately after opening.

Definition at line 367 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.618.6.4 const **iostate** std::ios_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 334 of file ios_base.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::fail(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), std::basic_ostream< _CharT, _Traits >::write(), and std::basic_ostream< _CharT, _Traits >::sentry::~sentry().

4.618.6.5 const **fmtflags** std::ios_base::basefield [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 313 of file ios_base.h.

Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::hex(), std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.618.6.6 const **seekdir** std::ios_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.

Definition at line 396 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

4.618.6.7 const **openmode** std::ios_base::binary [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html`.

Definition at line 372 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

4.618.6.8 const **fmtflags** std::ios_base::boolalpha [static], [inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 258 of file ios_base.h.

Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.618.6.9 const **seekdir** std::ios_base::cur [static], [inherited]

Request a seek relative to the current position within the sequence.

Definition at line 399 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

4.618.6.10 const fmtflags std::ios_base::dec [static], [inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 261 of file ios_base.h.

Referenced by std::dec().

4.618.6.11 const seekdir std::ios_base::end [static], [inherited]

Request a seek relative to the current end of the sequence.

Definition at line 402 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.618.6.12 const iostate std::ios_base::eofbit [static], [inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 337 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::eof(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.618.6.13 const iostate std::ios_base::failbit [static], [inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 342 of file ios_base.h.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::fail(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.618.6.14 const fmtflags std::ios_base::fixed [static], [inherited]

Generate floating-point output in fixed-point notation.

Definition at line 264 of file ios_base.h.

Referenced by std::fixed().

4.618.6.15 const fmtflags std::ios_base::floatfield [static], [inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 316 of file ios_base.h.

Referenced by std::fixed(), and std::scientific().

4.618.6.16 const iostate std::ios_base::goodbit [static], [inherited]

Indicates all is well.

Definition at line 345 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.618.6.17 const fmtflags std::ios_base::hex [static], [inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 267 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.618.6.18 const openmode std::ios_base::in [static], [inherited]

Open for input. Default for `ifstream` and fstream.

Definition at line 375 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.618.6.19 const fmtflags std::ios_base::internal [static], [inherited]

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 272 of file ios_base.h.

Referenced by std::internal().

4.618.6.20 const fmtflags std::ios_base::left [static], [inherited]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 276 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.618.6.21 const fmtflags std::ios_base::oct [static], [inherited]

Converts integer input or generates integer output in octal base.

Definition at line 279 of file ios_base.h.

Referenced by std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.618.6.22 const openmode std::ios_base::out [static], [inherited]

Open for output. Default for `ofstream` and fstream.

Definition at line 378 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.618.6.23 const fmtflags std::ios_base::right [static], [inherited]

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 283 of file ios_base.h.

Referenced by std::right().

4.618.6.24 const fmtflags std::ios_base::scientific [static], [inherited]

Generates floating-point output in scientific notation.

Definition at line 286 of file ios_base.h.

Referenced by std::scientific().

4.618.6.25 const fmtflags std::ios_base::showbase [static], [inherited]

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 290 of file ios_base.h.

Referenced by std::noshowbase(), and std::showbase().

4.618.6.26 const fmtflags std::ios_base::showpoint [static], [inherited]

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 294 of file ios_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

4.618.6.27 const fmtflags std::ios_base::showpos [static], [inherited]

Generates a + sign in non-negative generated numeric output.

Definition at line 297 of file ios_base.h.

Referenced by std::noshowpos(), and std::showpos().

4.618.6.28 const fmtflags std::ios_base::skipws [static], [inherited]

Skips leading white space before certain input operations.

Definition at line 300 of file ios_base.h.

Referenced by std::noskipws(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::skipws().

4.618.6.29 const openmode std::ios_base::trunc `[static], [inherited]`

Open for input. Default for `ofstream`.

Definition at line 381 of file ios_base.h.

4.618.6.30 const fmtflags std::ios_base::unitbuf `[static], [inherited]`

Flushes output after each output operation.

Definition at line 303 of file ios_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic_ostream< _CharT, _Traits >::sentry::∼sentry().

4.618.6.31 const fmtflags std::ios_base::uppercase `[static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 307 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

The documentation for this class was generated from the following files:

- basic_ios.h
- basic_ios.tcc

Extractors

All the `operator>>` *functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.*

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

4.619.1 Detailed Description

template<typename _CharT, typename _Traits>class std::basic_iostream< _CharT, _Traits >

Template class basic_iostream.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class multiply inherits from the input and output stream classes simply to provide a single interface.

Definition at line 795 of file istream.

4.619.2 Member Typedef Documentation

4.619.2.1 template<typename _CharT, typename _Traits> typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_put_type [inherited]

These are non-standard types.

Definition at line 88 of file basic_ios.h.

4.619.2.2 typedef void(* std::ios_base::event_callback)(event __e, ios_base &__b, int __i) [inherited]

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ∼ios().

Definition at line 436 of file ios_base.h.

4.619.2.3 typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]

This is a bitmask type.

`_Ios_Fmtflags` `is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct

- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 255 of file ios_base.h.

4.619.2.4 typedef _Ios_Iostate std::ios_base::iostate [inherited]

This is a bitmask type.

`_Ios_Iostate is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 330 of file ios_base.h.

4.619.2.5 typedef _Ios_Openmode std::ios_base::openmode [inherited]

This is a bitmask type.

`_Ios_Openmode is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 361 of file ios_base.h.

4.619.2.6 typedef _Ios_Seekdir std::ios_base::seekdir [inherited]

This is an enumerated type.

`_Ios_Seekdir is` implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 393 of file ios_base.h.

4.619.3 Member Enumeration Documentation

4.619.3.1 enum **std::ios_base::event** [inherited]

The set of events that may be passed to an event callback.

erase_event is used during ∼ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

Definition at line 419 of file ios_base.h.

4.619.4 Constructor & Destructor Documentation

4.619.4.1 template<typename _CharT, typename _Traits> **std::basic_iostream**< _CharT, _Traits >::**basic_iostream** (**basic_streambuf**< _CharT, _Traits > ∗ ___sb) [inline], [explicit]

Constructor does nothing.

Both of the parent classes are initialized with the same streambuf pointer passed to this constructor.

Definition at line 820 of file istream.

4.619.4.2 template<typename _CharT, typename _Traits> virtual **std::basic_iostream**< _CharT, _Traits >::∼**basic_iostream** ( ) [inline], [virtual]

Destructor does nothing.

Definition at line 827 of file istream.

4.619.5 Member Function Documentation

4.619.5.1 const **locale**& std::ios_base::_M_getloc ( ) const [inline], [inherited]

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 706 of file ios_base.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::put().

4.619.5.2 template<typename _CharT, typename _Traits> void **std::basic_ostream**< _CharT, _Traits >::_M_write (const char_type * *__s*, streamsize *__n*) [inline], [inherited]

Core write functionality, without sentry.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Definition at line 311 of file ostream.

Referenced by std::basic_ostream< _CharT, _Traits >::write().

4.619.5.3 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::bad ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 205 of file basic_ios.h.

4.619.5.4 template<typename _CharT , typename _Traits > void **basic_ios**< _CharT, _Traits >::clear (iostate *__state* = goodbit) [inherited]

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic_ios.tcc.

Referenced by std::basic_ios< char, _Traits >::exceptions(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.619.5.5 template<typename _CharT , typename _Traits > **basic_ios**< _CharT, _Traits > & **basic_ios**< _CharT, _Traits >::copyfmt (const **basic_ios**< _CharT, _Traits > & *__rhs*) [inherited]

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().

Definition at line 63 of file basic_ios.tcc.

References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.619.5.6 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 184 of file basic_ios.h.

4.619.5.7 template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const `[inline]`, `[inherited]`

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 216 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.619.5.8 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions (iostate *__except*) `[inline]`, `[inherited]`

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (
      __gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 251 of file basic_ios.h.

4.619.5.9 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::fail ( ) const [inline], [inherited]

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Definition at line 195 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::operator void ∗(), std::basic_ios< char, _Traits >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::regex_traits< _Ch_type >::value().

4.619.5.10 template<typename _CharT, typename _Traits> char_type **std::basic_ios**< _CharT, _Traits >::fill ( ) const [inline], [inherited]

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 364 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< char, _Traits >::fill().

4.619.5.11 template<typename _CharT, typename _Traits> char_type **std::basic_ios**< _CharT, _Traits >::fill (**char_type** *__ch*) [inline], [inherited]

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 384 of file basic_ios.h.

4.619.5.12 fmtflags std::ios_base::flags ( ) const `[inline]`, `[inherited]`

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 551 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.619.5.13 fmtflags std::ios_base::flags (fmtflags *__fmtfl*) `[inline]`, `[inherited]`

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

Definition at line 562 of file ios_base.h.

4.619.5.14 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::flush ( ) `[inherited]`

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::flush().

4.619.5.15 template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline], [inherited]

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

4.619.5.16 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::int_type basic_istream< _CharT, _Traits >::get (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 236 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.17 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (char_type & __c) [inherited]

Simple extraction.

Parameters

__c	The character in which to store data.

Returns

∗this

Tries to extract a character and store it in *__c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.18 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (char_type ∗ __s, streamsize __n, char_type __delim) [inherited]

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.619.5.19 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (char_type ∗ *__s*, streamsize *__n*) `[inline]`, `[inherited]`

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *s*.

Returns

∗this

Returns `get`(__s,__n,widen('\n')).

Definition at line 354 of file istream.

4.619.5.20 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (__streambuf_type & *__sb*, char_type *__delim*) `[inherited]`

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 356 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), std::basic_streambuf< _CharT, _Traits >::snextc(), and std::basic_streambuf< _CharT, _Traits >::sputc().

4.619.5.21 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (__streambuf_type & *__sb*) `[inline]`, `[inherited]`

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

∗this

Returns `get`(__sb,widen('\n')).

Definition at line 387 of file istream.

4.619.5.22 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::getline (char_type ∗ *__s*, streamsize *__n*, char_type *__delim*) `[inherited]`

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

∗this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 400 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.619.5.23 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::getline (char_type ∗ *__s*, streamsize *__n*) `[inline]`, `[inherited]`

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.

Returns

∗this

Returns `getline`(__s,__n,widen('\n')).

Definition at line 427 of file istream.

Referenced by std::basic_istream< char >::getline().

4.619.5.24 locale std::ios_base::getloc ( ) const `[inline]`, `[inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 695 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::ws().

4.619.5.25 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.

Definition at line 174 of file basic_ios.h.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.619.5.26 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::ignore (streamsize __n, int_type __delim) [inherited]

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

∗this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 555 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.619.5.27 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::ignore (streamsize __n) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 493 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.619.5.28 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::ignore (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 460 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.29 template<typename _CharT , typename _Traits > locale basic_ios< _CharT, _Traits >::imbue (const locale & __loc) [inherited]

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Definition at line 114 of file basic_ios.tcc.

References std::ios_base::imbue().

Referenced by std::operator<<().

4.619.5.30 template<typename _CharT, typename _Traits> void basic_ios< _CharT, _Traits >::init (basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic_ios.tcc.

Referenced by std::basic_fstream< _CharT, _Traits >::basic_fstream(), std::basic_ifstream< _CharT, _Traits >::basic_ifstream(), std::basic_ios< char, _Traits >::basic_ios(), std::basic_istream< char >::basic_istream(), std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream(), std::basic_ofstream< _CharT, _Traits >::basic_ofstream(), std::basic_ostream< char >::basic_ostream(), std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream(), and std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream().

4.619.5.31 long& std::ios_base::iword (int *__ix*) `[inline]`, `[inherited]`

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 741 of file ios_base.h.

4.619.5.32 template<typename _CharT, typename _Traits> char std::basic_ios< _CharT, _Traits >::narrow (char_type *__c*, char *__dfault*) const `[inline]`, `[inherited]`

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

4.619.5.38 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 166 of file ostream.

4.619.5.39 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 170 of file ostream.

4.619.5.40 template<typename _CharT, typename _Traits> **__ostream_type& std::basic_ostream**< _CharT, _Traits >::operator<<(bool *__n*) `[inline]`, `[inherited]`

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 174 of file ostream.

4.619.5.41 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::operator<<(short *__n*) `[inherited]`

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

References std::ios_base::basefield, std::ios_base::flags(), std::ios_base::hex, and std::ios_base::oct.

4.619.5.42 template<typename _CharT, typename _Traits> **__ostream_type& std::basic_ostream**< _CharT, _Traits >::operator<<(unsigned short *__n*) `[inline]`, `[inherited]`

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 181 of file ostream.

4.619.5.43 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (int __n) [inherited]

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 205 of file ostream.

4.619.5.47 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (double __f) [inline], [inherited]

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 220 of file ostream.

4.619.5.48 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (float __f) [inline], [inherited]

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file ostream.

4.619.5.49 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long double __f) [inline], [inherited]

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file ostream.

4.619.5.50 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (const void * __p) [inline], [inherited]

Pointer arithmetic inserters.

Parameters

__p	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file ostream.

4.619.5.51 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (__streambuf_type * __sb) [inherited]

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.52 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (__istream_type &(*)(__istream_type &) *__pf*) [inline], [inherited]

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the iomanip header.

Definition at line 120 of file istream.

4.619.5.53 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (__ios_type &(*)(__ios_type &) *__pf*) [inline], [inherited]

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the iomanip header.

Definition at line 124 of file istream.

4.619.5.54 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (ios_base &(*)(ios_base &) *__pf*) [inline], [inherited]

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the iomanip header.

Definition at line 131 of file istream.

4.619.5.55 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (bool & *__n*) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 168 of file istream.

4.619.5.56 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::operator>> (short & *__n*) [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 114 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::failbit, std::num_get< _CharT, _InIter >::get(), std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.57 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned short & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 175 of file istream.

4.619.5.58 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::operator>> (int & __n) [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 159 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::failbit, std::num_get< _CharT, _InIter >::get(), std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.59 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned int & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 182 of file istream.

4.619.5.60 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (long & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 186 of file istream.

4.619.5.61 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned long & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 190 of file istream.

4.619.5.62 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (long long & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 195 of file istream.

4.619.5.63 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned long long & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 199 of file istream.

4.619.5.64 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (float & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file istream.

4.619.5.65 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (double & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file istream.

4.619.5.66 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (long double & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file istream.

4.619.5.67 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (void *& __p) [inline], [inherited]

Basic arithmetic extractors.

Parameters

__p	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file istream.

4.619.5.68 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::operator>> (__streambuf_type * __sb) [inherited]

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 204 of file istream.tcc.

References std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.69 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits >::int_type **basic_istream**< _CharT, _Traits >::peek (void) `[inherited]`

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.70 **streamsize** std::ios_base::precision ( ) const `[inline]`, `[inherited]`

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 621 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

4.619.5.71 **streamsize** std::ios_base::precision (**streamsize** *__prec*) `[inline]`, `[inherited]`

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 630 of file ios_base.h.

4.619.5.72 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::put (char_type *__c*) `[inherited]`

Simple insertion.

Parameters

__c	The character to insert.

Returns

∗this

Tries to insert `__c`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::endl(), and std::ends().

4.619.5.73 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::putback (char_type __c) `[inherited]`

Unextracting a single character.

Parameters

__c	The character to push back into the input stream.

Returns

∗this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sputbackc().

Referenced by std::operator>>().

4.619.5.74 void∗& std::ios_base::pword (int __ix) `[inline]`, `[inherited]`

Access to void pointer array.

Parameters

__ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 762 of file ios_base.h.

4.619.5.75 template<typename _CharT, typename _Traits> **basic_streambuf**<_CharT, _Traits>∗ **std::basic_ios**< _CharT, _Traits >::rdbuf ( ) const [inline], [inherited]

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.

Definition at line 315 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.619.5.76 template<typename _CharT, typename _Traits> **basic_streambuf**< _CharT, _Traits > ∗ **basic_ios**< _CharT, _Traits >::rdbuf (**basic_streambuf**< _CharT, _Traits > ∗ *__sb*) [inherited]

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.619.5.77 template<typename _CharT, typename _Traits> **iostate std::basic_ios**< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 131 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::eof(), std::basic_ios< char, _Traits >::fail(), std::basic_ios< char, _Traits >::good(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.619.5.78 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::read (char_type * __s, **streamsize** __n) [inherited]

Extraction without delimiters.

Parameters

__s	A character array.
__n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.79 template<typename _CharT , typename _Traits > **streamsize basic_istream**< _CharT, _Traits >::readsome (char_type * __s, **streamsize** __n) [inherited]

Extraction until the buffer is exhausted, but no more.

Parameters

__s	A character array.
__n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.80 void std::ios_base::register_callback (**event_callback** *__fn*, int *__index*) `[inherited]`

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.619.5.81 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::seekg (pos_type *__pos*) `[inherited]`

Changing the current read position.

Parameters

__pos	A file position object.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 845 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.82 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::seekg (off_type *__off*, **ios_base::seekdir** *__dir*) `[inherited]`

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 884 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.83 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::seekp (pos_type *__pos*) `[inherited]`

Changing the current write position.

Parameters

__pos	A file position object.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file ostream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.84 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::seekp (off_type *__off*, **ios_base::seekdir** *__dir*) `[inherited]`

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.

Definition at line 290 of file ostream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.85 fmtflags std::ios_base::setf (fmtflags *__fmtfl*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 578 of file ios_base.h.

Referenced by std::dec(), std::fixed(), std::hex(), std::left(), std::oct(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

4.619.5.86 fmtflags std::ios_base::setf (fmtflags *__fmtfl,* fmtflags *__mask*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* `&` *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 595 of file ios_base.h.

4.619.5.87 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate *__state*) `[inline]`, `[inherited]`

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.

Definition at line 151 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.619.5.88 template<typename _CharT , typename _Traits > int basic_istream< _CharT, _Traits >::sync (void) [inherited]

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 781 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_streambuf< _CharT, _Traits >::pubsync(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.619.5.89 static bool std::ios_base::sync_with_stdio (bool *__sync* = `true`) [static], [inherited]

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt1 html`

4.619.5.90 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits >::pos_type **basic_istream**< _CharT, _Traits >::tellg (void) `[inherited]`

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in).`

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

Definition at line 817 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::in, and std::basic_ios< _CharT, _Traits >::rdbuf().

4.619.5.91 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits >::pos_type **basic_ostream**< _CharT, _Traits >::tellp ( ) `[inherited]`

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out).`

Definition at line 237 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::rdbuf().

4.619.5.92 template<typename _CharT, typename _Traits> **basic_ostream**<_CharT, _Traits>* **std::basic_ios**< _CharT, _Traits >::tie ( ) const `[inline]`, `[inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 289 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.619.5.93 template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (basic_ostream< _CharT, _Traits > * *__tiestr*) [inline], [inherited]

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

Definition at line 301 of file basic_ios.h.

4.619.5.94 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::unget (void) [inherited]

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 746 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sungetc().

4.619.5.95 void std::ios_base::unsetf (fmtflags *__mask*) [inline], [inherited]

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

Definition at line 610 of file ios_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

4.619.5.96 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::widen (char __c) const [inline], [inherited]

Widens characters.

Parameters

__c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional l10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Definition at line 443 of file basic_ios.h.

Referenced by std::endl(), std::basic_ios< char, _Traits >::fill(), std::basic_istream< char >::get(), std::basic_istream< char >::getline(), std::getline(), std::tr2::operator>>(), and std::operator>>().

4.619.5.97 streamsize std::ios_base::width ( ) const [inline], [inherited]

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 644 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), and std::operator>>().

4.619.5.98 streamsize std::ios_base::width (streamsize __wide) [inline], [inherited]

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 653 of file ios_base.h.

4.619.5.99 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::write (const char_type * __s, streamsize __n) [inherited]

Character string insertion.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Returns

*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file ostream.tcc.

References std::basic_ostream< _CharT, _Traits >::_M_write(), and std::ios_base::badbit.

4.619.5.100 static int std::ios_base::xalloc ( ) throw () [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.619.6 Member Data Documentation

4.619.6.1 template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]

The number of characters extracted in the previous unformatted function; see gcount().

Definition at line 82 of file istream.

Referenced by std::basic_istream< char >::gcount(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::unget(), and std::basic_istream< char >::∼basic_istream().

4.619.6.2 const **fmtflags** std::ios_base::adjustfield `[static]`, `[inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 310 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.619.6.3 const **openmode** std::ios_base::app `[static]`, `[inherited]`

Seek to end before each write.

Definition at line 364 of file ios_base.h.

4.619.6.4 const **openmode** std::ios_base::ate `[static]`, `[inherited]`

Open and seek to end immediately after opening.

Definition at line 367 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.619.6.5 const **iostate** std::ios_base::badbit `[static]`, `[inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 334 of file ios_base.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::fail(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), std::basic_ostream< _CharT, _Traits >::write(), and std::basic_ostream< _CharT, _Traits >::sentry::∼sentry().

4.619.6.6 const **fmtflags** std::ios_base::basefield `[static]`, `[inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 313 of file ios_base.h.

Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::hex(), std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.619.6.7 const **seekdir** std::ios_base::beg `[static]`, `[inherited]`

Request a seek relative to the beginning of the stream.

Definition at line 396 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

4.619.6.8 const **openmode** std::ios_base::binary `[static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html`.

Definition at line 372 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

4.619.6.9 const **fmtflags** std::ios_base::boolalpha `[static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 258 of file ios_base.h.

Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.619.6.10 const **seekdir** std::ios_base::cur `[static], [inherited]`

Request a seek relative to the current position within the sequence.

Definition at line 399 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

4.619.6.11 const **fmtflags** std::ios_base::dec `[static], [inherited]`

Converts integer input or generates integer output in decimal base.

Definition at line 261 of file ios_base.h.

Referenced by std::dec().

4.619.6.12 const **seekdir** std::ios_base::end `[static], [inherited]`

Request a seek relative to the current end of the sequence.

Definition at line 402 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.619.6.13 const **iostate** std::ios_base::eofbit `[static], [inherited]`

Indicates that an input operation reached the end of an input sequence.

Definition at line 337 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::eof(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.619.6.14 const iostate std::ios_base::failbit [static], [inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 342 of file ios_base.h.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::fail(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.619.6.15 const fmtflags std::ios_base::fixed [static], [inherited]

Generate floating-point output in fixed-point notation.

Definition at line 264 of file ios_base.h.

Referenced by std::fixed().

4.619.6.16 const fmtflags std::ios_base::floatfield [static], [inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 316 of file ios_base.h.

Referenced by std::fixed(), and std::scientific().

4.619.6.17 const iostate std::ios_base::goodbit [static], [inherited]

Indicates all is well.

Definition at line 345 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.619.6.18 const fmtflags std::ios_base::hex [static], [inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 267 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.619.6.19 const openmode std::ios_base::in [static], [inherited]

Open for input. Default for `ifstream` and fstream.

Definition at line 375 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.619.6.20 const fmtflags std::ios_base::internal [static], [inherited]

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 272 of file ios_base.h.

Referenced by std::internal().

4.619.6.21 const fmtflags std::ios_base::left [static], [inherited]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 276 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.619.6.22 const fmtflags std::ios_base::oct [static], [inherited]

Converts integer input or generates integer output in octal base.

Definition at line 279 of file ios_base.h.

Referenced by std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.619.6.23 const openmode std::ios_base::out [static], [inherited]

Open for output. Default for `ofstream` and fstream.

Definition at line 378 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.619.6.24 const fmtflags std::ios_base::right [static], [inherited]

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 283 of file ios_base.h.

Referenced by std::right().

4.619.6.25 const fmtflags std::ios_base::scientific [static], [inherited]

Generates floating-point output in scientific notation.

Definition at line 286 of file ios_base.h.

Referenced by std::scientific().

4.619.6.26 const **fmtflags** std::ios_base::showbase `[static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 290 of file ios_base.h.

Referenced by std::noshowbase(), and std::showbase().

4.619.6.27 const **fmtflags** std::ios_base::showpoint `[static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 294 of file ios_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

4.619.6.28 const **fmtflags** std::ios_base::showpos `[static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 297 of file ios_base.h.

Referenced by std::noshowpos(), and std::showpos().

4.619.6.29 const **fmtflags** std::ios_base::skipws `[static], [inherited]`

Skips leading white space before certain input operations.

Definition at line 300 of file ios_base.h.

Referenced by std::noskipws(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::skipws().

4.619.6.30 const **openmode** std::ios_base::trunc `[static], [inherited]`

Open for input. Default for `ofstream`.

Definition at line 381 of file ios_base.h.

4.619.6.31 const **fmtflags** std::ios_base::unitbuf `[static], [inherited]`

Flushes output after each output operation.

Definition at line 303 of file ios_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic_ostream< _CharT, _Traits >::sentry::~sentry().

4.619.6.32 const **fmtflags** std::ios_base::uppercase `[static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 307 of file ios_base.h.

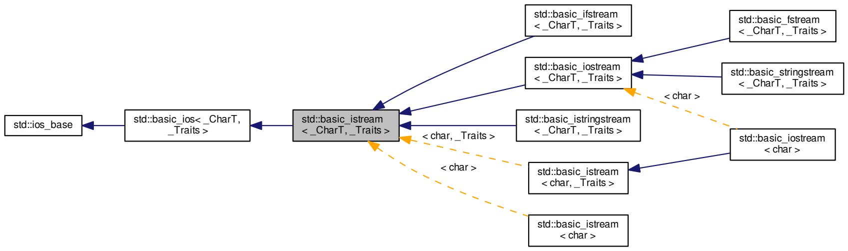
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

The documentation for this class was generated from the following file:

- istream

4.620 std::basic_istream< _CharT, _Traits > Class Template Reference

Inheritance diagram for std::basic_istream< _CharT, _Traits >:



Classes

- class sentry

    Performs setup work for input streams.

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

4.620.1 Detailed Description

template<typename _CharT, typename _Traits>class std::basic_istream< _CharT, _Traits >

Template class basic_istream.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from basic_streambuf to do the actual input.

Definition at line 58 of file istream.

4.620.2 Member Typedef Documentation

4.620.2.1 template<typename _CharT, typename _Traits> typedef **num_put**<_CharT, **ostreambuf_iterator**<_CharT, _Traits> > **std::basic_ios**< _CharT, _Traits >::**__num_put_type** `[inherited]`

These are non-standard types.

Definition at line 88 of file basic_ios.h.

4.620.2.2 typedef void(∗ std::ios_base::event_callback)(event __e, ios_base &__b, int __i) [inherited]

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ∼ios().

Definition at line 436 of file ios_base.h.

4.620.2.3 typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]

This is a bitmask type.

`_Ios_Fmtflags is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 255 of file ios_base.h.

4.620.2.4 typedef _Ios_Iostate std::ios_base::iostate `[inherited]`

This is a bitmask type.

_Ios_Iostate `is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 330 of file ios_base.h.

4.620.2.5 typedef _Ios_Openmode std::ios_base::openmode `[inherited]`

This is a bitmask type.

_Ios_Openmode `is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 361 of file ios_base.h.

4.620.2.6 typedef _Ios_Seekdir std::ios_base::seekdir `[inherited]`

This is an enumerated type.

_Ios_Seekdir `is` implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 393 of file ios_base.h.

4.620.3 Member Enumeration Documentation

4.620.3.1 enum std::ios_base::event `[inherited]`

The set of events that may be passed to an event callback.

erase_event is used during ∼ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

Definition at line 419 of file ios_base.h.

4.620.4 Constructor & Destructor Documentation

4.620.4.1 template<typename _CharT, typename _Traits> std::basic_istream< _CharT, _Traits >::basic_istream (__streambuf_type * *__sb*) [inline], [explicit]

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

Definition at line 93 of file istream.

4.620.4.2 template<typename _CharT, typename _Traits> virtual std::basic_istream< _CharT, _Traits >::∼basic_istream ( ) [inline], [virtual]

Base destructor.

This does very little apart from providing a virtual base dtor.

Definition at line 103 of file istream.

4.620.5 Member Function Documentation

4.620.5.1 const locale& std::ios_base::_M_getloc ( ) const [inline], [inherited]

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 706 of file ios_base.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::put().

4.620.5.2 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 205 of file basic_ios.h.

4.620.5.3 template<typename _CharT , typename _Traits > void basic_ios< _CharT, _Traits >::clear (iostate *__state* = goodbit) [inherited]

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic_ios.tcc.

Referenced by std::basic_ios< char, _Traits >::exceptions(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.620.5.4 template< typename _CharT , typename _Traits > basic_ios< _CharT, _Traits > & basic_ios< _CharT, _Traits >::copyfmt (const basic_ios< _CharT, _Traits > & *__rhs*) [inherited]

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().

Definition at line 63 of file basic_ios.tcc.

References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.620.5.5 template< typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 184 of file basic_ios.h.

4.620.5.6 template< typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 216 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.620.5.7 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions (iostate __except) [inline], [inherited]

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (
      __gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 251 of file basic_ios.h.

4.620.5.8 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Definition at line 195 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::operator void ∗(), std::basic_ios< char, _Traits >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::regex_traits< _Ch_type >::value().

4.620.5.9 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 364 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< char, _Traits >::fill().

4.620.5.10 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill (char_type __ch) [inline], [inherited]

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 384 of file basic_ios.h.

4.620.5.11 fmtflags std::ios_base::flags ( ) const [inline], [inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 551 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.620.5.12 fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline], [inherited]

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

Definition at line 562 of file ios_base.h.

4.620.5.13 template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline]

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

4.620.5.14 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::int_type basic_istream< _CharT, _Traits >::get (void)

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 236 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.620.5.15 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (char_type & *__c*)

Simple extraction.

Parameters

__c	The character in which to store data.

Returns

∗this

Tries to extract a character and store it in *__c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.620.5.16 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (char_type ∗ __s, streamsize __n, char_type __delim)

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.620.5.17 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (char_type ∗ __s, streamsize __n) `[inline]`

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *s*.

Returns

∗this

Returns `get`(__s,__n,widen('\n')).

Definition at line 354 of file istream.

4.620.5.18 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (__streambuf_type & *__sb,* char_type *__delim*)

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 356 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), std::basic_streambuf< _CharT, _Traits >::snextc(), and std::basic_streambuf< _CharT, _Traits >::sputc().

4.620.5.19 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (__streambuf_type & *__sb*) `[inline]`

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

∗this

Returns `get`(__sb,widen('\n')).

Definition at line 387 of file istream.

4.620.5.20 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::getline (char_type * __s, streamsize __n, char_type __delim)

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 400 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.620.5.21 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::getline (char_type * __s, streamsize __n) [inline]

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.

Returns

*this

Returns `getline`(__s,__n,widen('\n')).

Definition at line 427 of file istream.

Referenced by std::basic_istream< char >::getline().

4.620.5.22 **locale** std::ios_base::getloc ( ) const `[inline], [inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 695 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::ws().

4.620.5.23 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::good ( ) const `[inline], [inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.

Definition at line 174 of file basic_ios.h.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.620.5.24 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::ignore (**streamsize** *__n*, int_type *__delim*)

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 555 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.620.5.25 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::ignore (**streamsize** *__n*)

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 493 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.620.5.26 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::ignore (void)

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 460 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), and std::basic_ios< _CharT, _Traits >::setstate().

4.620.5.27 template<typename _CharT , typename _Traits > **locale basic_ios**< _CharT, _Traits >::imbue (**const locale &** *__loc*) `[inherited]`

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

Definition at line 114 of file basic_ios.tcc.

References std::ios_base::imbue().

Referenced by std::operator<<().

4.620.5.28 template<typename _CharT, typename _Traits> void **basic_ios**< _CharT, _Traits >::init (**basic_streambuf**< _CharT, _Traits > * *__sb*) [protected], [inherited]

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic_ios.tcc.

Referenced by std::basic_fstream< _CharT, _Traits >::basic_fstream(), std::basic_ifstream< _CharT, _Traits >::basic_ifstream(), std::basic_ios< char, _Traits >::basic_ios(), std::basic_istream< char >::basic_istream(), std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream(), std::basic_ofstream< _CharT, _Traits >::basic_ofstream(), std::basic_ostream< char >::basic_ostream(), std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream(), and std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream().

4.620.5.29 long& std::ios_base::iword (int *__ix*) [inline], [inherited]

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 741 of file ios_base.h.

4.620.5.30 template<typename _CharT, typename _Traits> char **std::basic_ios**< _CharT, _Traits >::narrow (**char_type** *__c*, char *__dfault*) const [inline], [inherited]

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 199 of file istream.

4.620.5.45 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (float & __f) [inline]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file istream.

4.620.5.46 template<typename _CharT, typename _Traits> **__istream_type& std::basic_istream**< _CharT, _Traits >::operator>> (double & *__f*) [inline]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file istream.

4.620.5.47 template<typename _CharT, typename _Traits> **__istream_type& std::basic_istream**< _CharT, _Traits >::operator>> (long double & *__f*) [inline]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file istream.

4.620.5.48 template<typename _CharT, typename _Traits> **__istream_type& std::basic_istream**< _CharT, _Traits >::operator>> (void *& *__p*) [inline]

Basic arithmetic extractors.

Parameters

__p	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file istream.

4.620.5.49 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::operator>> (**__streambuf_type** * *__sb*)

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 204 of file istream.tcc.

References std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.620.5.50 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::int_type basic_istream< _CharT, _Traits >::peek (void)

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.620.5.51 streamsize std::ios_base::precision ( ) const `[inline]`, `[inherited]`

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 621 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

4.620.5.52 streamsize std::ios_base::precision (streamsize *__prec*) `[inline]`, `[inherited]`

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 630 of file ios_base.h.

4.620.5.53 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::putback (char_type *__c*)

Unextracting a single character.

Parameters

__c	The character to push back into the input stream.

Returns

∗this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sputbackc().

Referenced by std::operator>>().

4.620.5.54 void∗& std::ios_base::pword (int *__ix*) `[inline]`, `[inherited]`

Access to void pointer array.

Parameters

__ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 762 of file ios_base.h.

4.620.5.55 template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::rdbuf ( ) const [inline], [inherited]

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.

Definition at line 315 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.620.5.56 template<typename _CharT, typename _Traits> basic_streambuf< _CharT, _Traits > * basic_ios< _CharT, _Traits >::rdbuf (basic_streambuf< _CharT, _Traits > * *__sb*) [inherited]

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.620.5.57 template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 131 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::eof(), std::basic_ios< char, _Traits >::fail(), std::basic_ios< char, _Traits >::good(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.620.5.58 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::read (char_type * __s, streamsize __n)

Extraction without delimiters.

Parameters

__s	A character array.
__n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.620.5.59 template<typename _CharT , typename _Traits > streamsize basic_istream< _CharT, _Traits >::readsome (char_type * __s, streamsize __n)

Extraction until the buffer is exhausted, but no more.

Parameters

__s	A character array.
__n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.620.5.60 void std::ios_base::register_callback (**event_callback** *__fn,* int *__index*) `[inherited]`

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.620.5.61 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::seekg (pos_type *__pos*)

Changing the current read position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 845 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), and std::basic_ios< _CharT, _Traits >::setstate().

4.620.5.62 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::seekg (off_type *__off,* **ios_base::seekdir** *__dir*)

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 884 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), and std::basic_ios< _CharT, _Traits >::setstate().

4.620.5.63 **fmtflags** std::ios_base::setf (**fmtflags** *__fmtfl*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 578 of file ios_base.h.

Referenced by std::dec(), std::fixed(), std::hex(), std::left(), std::oct(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

4.620.5.64 **fmtflags** std::ios_base::setf (**fmtflags** *__fmtfl,* **fmtflags** *__mask*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* `&` *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 595 of file ios_base.h.

4.620.5.65 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate *__state*) `[inline]`, `[inherited]`

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.

Definition at line 151 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.620.5.66 template<typename _CharT , typename _Traits > int basic_istream< _CharT, _Traits >::sync (void)

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 781 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_streambuf< _CharT, _Traits >::pubsync(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.620.5.67 static bool std::ios_base::sync_with_stdio (bool *__sync* = `true`) `[static]`, `[inherited]`

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt1` `html`

4.620.5.68 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::pos_type basic_istream< _CharT, _Traits >::tellg (void)

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

Definition at line 817 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::in, and std::basic_ios< _CharT, _Traits >::rdbuf().

4.620.5.69 template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const `[inline]`, `[inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 289 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.620.5.70 template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (basic_ostream< _CharT, _Traits > * *__tiestr*) `[inline]`, `[inherited]`

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

Definition at line 301 of file basic_ios.h.

4.620.5.71 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::unget (void)

Unextracting the previous character.

Returns

∗this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 746 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sungetc().

4.620.5.72 void std::ios_base::unsetf (fmtflags *__mask*) `[inline]`, `[inherited]`

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

Definition at line 610 of file ios_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

4.620.5.73 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::widen (char *__c*) const `[inline]`, `[inherited]`

Widens characters.

Parameters

__c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

Definition at line 443 of file basic_ios.h.

Referenced by std::endl(), std::basic_ios< char, _Traits >::fill(), std::basic_istream< char >::get(), std::basic_istream< char >::getline(), std::getline(), std::tr2::operator>>(), and std::operator>>().

4.620.5.74 **streamsize** std::ios_base::width ( ) const `[inline]`, `[inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 644 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), and std::operator>>().

4.620.5.75 **streamsize** std::ios_base::width (**streamsize** *__wide*) `[inline]`, `[inherited]`

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 653 of file ios_base.h.

4.620.5.76 static int std::ios_base::xalloc ( ) throw () `[static]`, `[inherited]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.620.6 Member Data Documentation

4.620.6.1 template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::_M_gcount `[protected]`

The number of characters extracted in the previous unformatted function; see gcount().

Definition at line 82 of file istream.

Referenced by std::basic_istream< char >::gcount(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::unget(), and std::basic_istream< char >::∼basic_istream().

4.620.6.2 const fmtflags std::ios_base::adjustfield `[static]`, `[inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 310 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.620.6.3 const openmode std::ios_base::app `[static]`, `[inherited]`

Seek to end before each write.

Definition at line 364 of file ios_base.h.

4.620.6.4 const openmode std::ios_base::ate `[static]`, `[inherited]`

Open and seek to end immediately after opening.

Definition at line 367 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.620.6.5 const iostate std::ios_base::badbit `[static]`, `[inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 334 of file ios_base.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::fail(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std-

::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), std::basic_ostream< _CharT, _Traits >::write(), and std::basic_ostream< _CharT, _Traits >::sentry::~sentry().

4.620.6.6 const **fmtflags** std::ios_base::basefield `[static]`, `[inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 313 of file ios_base.h.

Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::hex(), std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.620.6.7 const **seekdir** std::ios_base::beg `[static]`, `[inherited]`

Request a seek relative to the beginning of the stream.

Definition at line 396 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

4.620.6.8 const **openmode** std::ios_base::binary `[static]`, `[inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html`.

Definition at line 372 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

4.620.6.9 const **fmtflags** std::ios_base::boolalpha `[static]`, `[inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 258 of file ios_base.h.

Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.620.6.10 const **seekdir** std::ios_base::cur `[static]`, `[inherited]`

Request a seek relative to the current position within the sequence.

Definition at line 399 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

4.620.6.11 const **fmtflags** std::ios_base::dec `[static]`, `[inherited]`

Converts integer input or generates integer output in decimal base.

Definition at line 261 of file ios_base.h.

Referenced by std::dec().

4.620.6.12 const **seekdir** std::ios_base::end `[static]`, `[inherited]`

Request a seek relative to the current end of the sequence.

Definition at line 402 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.620.6.13 const **iostate** std::ios_base::eofbit `[static]`, `[inherited]`

Indicates that an input operation reached the end of an input sequence.

Definition at line 337 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::eof(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.620.6.14 const **iostate** std::ios_base::failbit `[static]`, `[inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 342 of file ios_base.h.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::fail(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.620.6.15 const **fmtflags** std::ios_base::fixed `[static]`, `[inherited]`

Generate floating-point output in fixed-point notation.

Definition at line 264 of file ios_base.h.

Referenced by std::fixed().

4.620.6.16 const **fmtflags** std::ios_base::floatfield `[static]`, `[inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 316 of file ios_base.h.

Referenced by std::fixed(), and std::scientific().

4.620.6.17 const **iostate** std::ios_base::goodbit `[static]`, `[inherited]`

Indicates all is well.

Definition at line 345 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits

>::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.620.6.18 const fmtflags std::ios_base::hex `[static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Definition at line 267 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.620.6.19 const openmode std::ios_base::in `[static], [inherited]`

Open for input. Default for `ifstream` and fstream.

Definition at line 375 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.620.6.20 const fmtflags std::ios_base::internal `[static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 272 of file ios_base.h.

Referenced by std::internal().

4.620.6.21 const fmtflags std::ios_base::left `[static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 276 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.620.6.22 const fmtflags std::ios_base::oct `[static], [inherited]`

Converts integer input or generates integer output in octal base.

Definition at line 279 of file ios_base.h.

Referenced by std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.620.6.23 const openmode std::ios_base::out `[static], [inherited]`

Open for output. Default for `ofstream` and fstream.

Definition at line 378 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.620.6.24 const fmtflags std::ios_base::right `[static]`, `[inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 283 of file ios_base.h.

Referenced by std::right().

4.620.6.25 const fmtflags std::ios_base::scientific `[static]`, `[inherited]`

Generates floating-point output in scientific notation.

Definition at line 286 of file ios_base.h.

Referenced by std::scientific().

4.620.6.26 const fmtflags std::ios_base::showbase `[static]`, `[inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 290 of file ios_base.h.

Referenced by std::noshowbase(), and std::showbase().

4.620.6.27 const fmtflags std::ios_base::showpoint `[static]`, `[inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 294 of file ios_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

4.620.6.28 const fmtflags std::ios_base::showpos `[static]`, `[inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 297 of file ios_base.h.

Referenced by std::noshowpos(), and std::showpos().

4.620.6.29 const fmtflags std::ios_base::skipws `[static]`, `[inherited]`

Skips leading white space before certain input operations.

Definition at line 300 of file ios_base.h.

Referenced by std::noskipws(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::skipws().

4.620.6.30 const openmode std::ios_base::trunc `[static]`, `[inherited]`

Open for input. Default for `ofstream`.

Definition at line 381 of file ios_base.h.

4.620.6.31 const fmtflags std::ios_base::unitbuf `[static]`, `[inherited]`

Flushes output after each output operation.

Definition at line 303 of file ios_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic_ostream< _CharT, _Traits >::sentry::~sentry().

4.620.6.32 const fmtflags std::ios_base::uppercase `[static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 307 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

- operator bool () const

4.621.1 Detailed Description

template<typename _CharT, typename _Traits>class std::basic_istream< _CharT, _Traits >::sentry

Performs setup work for input streams.

Objects of this class are created before all of the standard extractors are run. It is responsible for *exception-safe prefix and suffix operations,* although only prefix actions are currently required by the standard.

Definition at line 657 of file istream.

4.621.2 Member Typedef Documentation

4.621.2.1 template<typename _CharT, typename _Traits> typedef _Traits std::basic_istream< _CharT, _Traits >::sentry::traits_type

Easy access to dependent types.

Definition at line 664 of file istream.

4.621.3 Constructor & Destructor Documentation

4.621.3.1 template<typename _CharT, typename _Traits> std::basic_istream< _CharT, _Traits >::sentry::sentry (basic_istream< _CharT, _Traits > & *__is*, bool *__noskipws* = `false`) `[explicit]`

The constructor performs all the work.

Parameters

__is	The input stream to guard.
__noskipws	Whether to consume whitespace or not.

If the stream state is good (*__is.good()* is true), then the following actions are performed, otherwise the sentry state is false (*not okay*) and failbit is set in the stream state.

The sentry's preparatory actions are:

1. if the stream is tied to an output stream, `is.tie()->flush()` is called to synchronize the output sequence
2. if *__noskipws* is false, and `ios_base::skipws` is set in `is.flags()`, the sentry extracts and discards whitespace characters from the stream. The currently imbued locale is used to determine whether each character is whitespace.

If the stream state is still good, then the sentry state becomes true (*okay*).

Definition at line 47 of file istream.tcc.

References std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::flags(), std::basic_ios< _CharT, _Traits >::good(), std::ios_base::goodbit, std::__ctype_abstract_base< _CharT >::is(), std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), std::ios_base::skipws, std::basic_streambuf< _CharT, _Traits >::snextc(), and std::basic_ios< _CharT, _Traits >::tie().

4.621.4 Member Function Documentation

4.621.4.1 template<typename _CharT, typename _Traits> std::basic_istream< _CharT, _Traits >::sentry::operator bool ( ) const `[inline]`, `[explicit]`

Quick status checking.

Returns

The sentry state.

For ease of use, sentries may be converted to booleans. The return value is that of the sentry state (true == okay).

Definition at line 705 of file istream.

Extractors

All the `operator>>` *functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.*

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

4.622.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>class std::basic_istringstream< _CharT, _Traits, _Alloc >

Controlling input for std::string.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

This class supports reading from objects of type std::basic_string, using the inherited functions from std::basic_istream. To control the associated sequence, an instance of std::basic_stringbuf is used, which this page refers to as `sb`.

Definition at line 272 of file sstream.

4.622.2 Member Typedef Documentation

4.622.2.1 template<typename _CharT, typename _Traits> typedef num_put< _CharT, ostreambuf_iterator< _CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_put_type `[inherited]`

These are non-standard types.

Definition at line 88 of file basic_ios.h.

4.622.2.2 typedef void(* std::ios_base::event_callback)(event __e, ios_base &__b, int __i) `[inherited]`

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ∼ios().

Definition at line 436 of file ios_base.h.

4.622.2.3 typedef _Ios_Fmtflags std::ios_base::fmtflags `[inherited]`

This is a bitmask type.

`_Ios_Fmtflags is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal

- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 255 of file ios_base.h.

4.622.2.4 typedef _Ios_Iostate std::ios_base::iostate `[inherited]`

This is a bitmask type.

`_Ios_Iostate is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 330 of file ios_base.h.

4.622.2.5 typedef _Ios_Openmode std::ios_base::openmode `[inherited]`

This is a bitmask type.

`_Ios_Openmode is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 361 of file ios_base.h.

4.622.2.6 typedef _Ios_Seekdir std::ios_base::seekdir [inherited]

This is an enumerated type.

`_Ios_Seekdir is` implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 393 of file ios_base.h.

4.622.3 Member Enumeration Documentation

4.622.3.1 enum **std::ios_base::event** [inherited]

The set of events that may be passed to an event callback.

erase_event is used during ∼ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

Definition at line 419 of file ios_base.h.

4.622.4 Constructor & Destructor Documentation

4.622.4.1 template<typename _CharT, typename _Traits, typename _Alloc> **std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream (ios_base::openmode** *__mode* = **ios_base::in)** [inline], [explicit]

Default constructor starts with an empty string buffer.

Parameters

__mode	Whether the buffer can read, or write, or both.

`ios_base::in` is automatically included in *__mode*.

Initializes `sb` using __mode|in, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 308 of file sstream.

References std::basic_ios< _CharT, _Traits >::init().

4.622.4.2 template<typename _CharT, typename _Traits, typename _Alloc> **std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream (** const **__string_type &** *__str,* **ios_base::openmode** *__mode* = **ios_base::in)** [inline], [explicit]

Starts with an existing string buffer.

Parameters

__str	A string to copy as a starting buffer.
__mode	Whether the buffer can read, or write, or both.

`ios_base::in` is automatically included in *mode*.

Initializes `sb` using *str* and `mode|in`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 326 of file sstream.

References std::basic_ios< _CharT, _Traits >::init().

4.622.4.3 template<typename _CharT, typename _Traits, typename _Alloc> std::basic_istringstream< _CharT, _Traits, _Alloc >::∼basic_istringstream ( ) `[inline]`

The destructor does nothing.

The buffer is deallocated by the stringbuf object, not the formatting stream.

Definition at line 337 of file sstream.

4.622.5 Member Function Documentation

4.622.5.1 const locale& std::ios_base::_M_getloc ( ) const `[inline]`, `[inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 706 of file ios_base.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::put().

4.622.5.2 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::bad ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 205 of file basic_ios.h.

4.622.5.3 template<typename _CharT , typename _Traits > void basic_ios< _CharT, _Traits >::clear (iostate *__state* = goodbit) `[inherited]`

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic_ios.tcc.

Referenced by std::basic_ios< char, _Traits >::exceptions(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.622.5.4 template<typename _CharT , typename _Traits > basic_ios< _CharT, _Traits > & basic_ios< _CharT, _Traits >::copyfmt (const basic_ios< _CharT, _Traits > & *__rhs*) [inherited]

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().

Definition at line 63 of file basic_ios.tcc.

References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.622.5.5 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 184 of file basic_ios.h.

4.622.5.6 template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 216 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.622.5.7 template<typename _CharT, typename _Traits> void **std::basic_ios**< _CharT, _Traits >::exceptions (**iostate** *__except*) [inline], [inherited]

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (
      __gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 251 of file basic_ios.h.

4.622.5.8 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::fail ( ) const [inline], [inherited]

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Definition at line 195 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::operator void *(), std::basic_ios< char, _Traits >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::regex_traits< _Ch_type >::value().

4.622.5.9 template<typename _CharT, typename _Traits> char_type **std::basic_ios**< _CharT, _Traits >::fill ( ) const [inline], [inherited]

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 364 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< char, _Traits >::fill().

4.622.5.10 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill (char_type __ch) [inline], [inherited]

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 384 of file basic_ios.h.

4.622.5.11 fmtflags std::ios_base::flags ( ) const [inline], [inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 551 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.622.5.12 fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline], [inherited]

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

Definition at line 562 of file ios_base.h.

4.622.5.13 template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline], [inherited]

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

4.622.5.14 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits >::int_type **basic_istream**< _CharT, _Traits >::get (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 236 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.622.5.15 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::get (char_type & *__c*) [inherited]

Simple extraction.

Parameters

__c	The character in which to store data.

Returns

∗this

Tries to extract a character and store it in *__c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.622.5.16 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::get (char_type ∗ *__s*, **streamsize** *__n*, char_type *__delim*) [inherited]

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.622.5.17 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (char_type ∗ *__s*, streamsize *__n*) `[inline]`, `[inherited]`

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *s*.

Returns

∗this

Returns `get`(__s,__n,widen('\n')).

Definition at line 354 of file istream.

4.622.5.18 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (__streambuf_type & *__sb*, char_type *__delim*) `[inherited]`

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 356 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), std::basic_streambuf< _CharT, _Traits >::snextc(), and std::basic_streambuf< _CharT, _Traits >::sputc().

4.622.5.19 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (__streambuf_type & __sb) [inline], [inherited]

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

∗this

Returns `get`(__sb,widen('\n')).

Definition at line 387 of file istream.

4.622.5.20 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::getline (char_type ∗ __s, streamsize __n, char_type __delim) [inherited]

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

∗this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 400 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.622.5.21 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::getline (char_type * *__s*, streamsize *__n*) `[inline]`, `[inherited]`

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.

Returns

∗this

Returns `getline`(__s,__n,widen('\n')).

Definition at line 427 of file istream.

Referenced by std::basic_istream< char >::getline().

4.622.5.22 locale std::ios_base::getloc ( ) const `[inline]`, `[inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 695 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::ws().

4.622.5.23 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::good ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.

Definition at line 174 of file basic_ios.h.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.622.5.24 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::ignore (streamsize __n, int_type __delim) [inherited]

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

∗this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 555 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.622.5.25 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::ignore (streamsize __n) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 493 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.622.5.26 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::ignore (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 460 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), and std::basic_ios< _CharT, _Traits >::setstate().

4.622.5.27 template<typename _CharT , typename _Traits > **locale basic_ios**< _CharT, _Traits >::imbue (const **locale** & *__loc*) [inherited]

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Definition at line 114 of file basic_ios.tcc.

References std::ios_base::imbue().

Referenced by std::operator<<().

4.622.5.28 template<typename _CharT, typename _Traits> void **basic_ios**< _CharT, _Traits >::init (**basic_streambuf**< _CharT, _Traits > * *__sb*) [protected], [inherited]

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic_ios.tcc.

Referenced by std::basic_fstream< _CharT, _Traits >::basic_fstream(), std::basic_ifstream< _CharT, _Traits >::basic_ifstream(), std::basic_ios< char, _Traits >::basic_ios(), std::basic_istream< char >::basic_istream(), std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream(), std::basic_ofstream< _CharT, _Traits >::basic_ofstream(), std::basic_ostream< char >::basic_ostream(), std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream(), and std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream().

4.622.5.29 long& std::ios_base::iword (int *__ix*) [inline], [inherited]

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 741 of file ios_base.h.

4.622.5.30 template<typename _CharT, typename _Traits> char **std::basic_ios**< _CharT, _Traits >::narrow (**char_type** *__c*, char *__dfault*) const [inline], [inherited]

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 195 of file istream.

4.622.5.44 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned long long & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 199 of file istream.

4.622.5.45 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (float & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file istream.

4.622.5.46 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (double & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file istream.

4.622.5.47 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (long double & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file istream.

4.622.5.48 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (void *& __p) [inline], [inherited]

Basic arithmetic extractors.

Parameters

__p	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file istream.

4.622.5.49 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::operator>> (__streambuf_type * __sb) [inherited]

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 204 of file istream.tcc.

References std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.622.5.50 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits >::int_type **basic_istream**< _CharT, _Traits >::peek (void) [inherited]

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.622.5.51 **streamsize** std::ios_base::precision ( ) const [inline], [inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 621 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

4.622.5.52 **streamsize** std::ios_base::precision (**streamsize** *__prec*) [inline], [inherited]

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 630 of file ios_base.h.

4.622.5.53 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::putback (char_type *__c*) [inherited]

Unextracting a single character.

Parameters

__c	The character to push back into the input stream.

Returns

∗this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sputbackc().

Referenced by std::operator>>().

4.622.5.54 void∗& std::ios_base::pword (int *__ix*) `[inline]`, `[inherited]`

Access to void pointer array.

Parameters

__ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 762 of file ios_base.h.

4.622.5.55 template<typename _CharT, typename _Traits> basic_streambuf< _CharT, _Traits > ∗ basic_ios< _CharT, _Traits >::rdbuf (basic_streambuf< _CharT, _Traits > ∗ *__sb*) `[inherited]`

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.622.5.56 template<typename _CharT, typename _Traits, typename _Alloc> __stringbuf_type* **std::basic_istringstream**< _CharT, _Traits, _Alloc >::rdbuf ( ) const [inline]

Accessing the underlying buffer.

Returns

The current basic_stringbuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

Definition at line 348 of file sstream.

4.622.5.57 template<typename _CharT, typename _Traits> **iostate std::basic_ios**< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 131 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::eof(), std::basic_ios< char, _Traits >::fail(), std::basic_ios< char, _Traits >::good(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.622.5.58 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::read (char_type * *__s*, **streamsize** *__n*) [inherited]

Extraction without delimiters.

Parameters

__s	A character array.
__n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.622.5.59 template<typename _CharT , typename _Traits > streamsize basic_istream< _CharT, _Traits >::readsome (char_type * __s, streamsize __n) [inherited]

Extraction until the buffer is exhausted, but no more.

Parameters

__s	A character array.
__n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.622.5.60 void std::ios_base::register_callback (event_callback __fn, int __index) [inherited]

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.622.5.61 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::seekg (pos_type __pos) [inherited]

Changing the current read position.

Parameters

__pos	A file position object.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 845 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), and std::basic_ios< _CharT, _Traits >::setstate().

4.622.5.62 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::seekg (off_type *__off,* **ios_base::seekdir** *__dir*) `[inherited]`

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 884 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), and std::basic_ios< _CharT, _Traits >::setstate().

4.622.5.63 **fmtflags** std::ios_base::setf (**fmtflags** *__fmtfl*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 578 of file ios_base.h.

Referenced by std::dec(), std::fixed(), std::hex(), std::left(), std::oct(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

4.622.5.64 fmtflags std::ios_base::setf (fmtflags *__fmtfl*, fmtflags *__mask*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* `&` *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 595 of file ios_base.h.

4.622.5.65 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate *__state*) `[inline]`, `[inherited]`

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.

Definition at line 151 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.622.5.66 template<typename _CharT, typename _Traits, typename _Alloc> __string_type std::basic_istringstream< _CharT, _Traits, _Alloc >::str ( ) const [inline]

Copying out the string buffer.

Returns

`rdbuf()->str()`

Definition at line 356 of file sstream.

4.622.5.67 template<typename _CharT, typename _Traits, typename _Alloc> void std::basic_istringstream< _CharT, _Traits, _Alloc >::str (const __string_type & __s) [inline]

Setting a new buffer.

Parameters

__s	The string to use as a new sequence.

Calls `rdbuf()->str(s)`.

Definition at line 366 of file sstream.

4.622.5.68 template<typename _CharT , typename _Traits > int basic_istream< _CharT, _Traits >::sync (void) [inherited]

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 781 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_streambuf< _CharT, _Traits >::pubsync(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.622.5.69 static bool std::ios_base::sync_with_stdio (bool __sync = `true`) [static], [inherited]

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt1
html

4.622.5.70 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits >::pos_type **basic_istream**< _CharT, _Traits >::tellg (void) `[inherited]`

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

Definition at line 817 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::in, and std::basic_ios< _CharT, _Traits >::rdbuf().

4.622.5.71 template<typename _CharT, typename _Traits> **basic_ostream**<_CharT, _Traits>* **std::basic_ios**< _CharT, _Traits >::tie ( ) const `[inline]`, `[inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 289 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.622.5.72 template<typename _CharT, typename _Traits> **basic_ostream**<_CharT, _Traits>* **std::basic_ios**< _CharT, _Traits >::tie (**basic_ostream**< _CharT, _Traits > * *__tiestr*) `[inline]`, `[inherited]`

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

Definition at line 301 of file basic_ios.h.

4.622.5.73 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::unget (void) [inherited]

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 746 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sungetc().

4.622.5.74 void std::ios_base::unsetf (**fmtflags** *__mask*) [inline], [inherited]

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

Definition at line 610 of file ios_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

4.622.5.75 template<typename _CharT, typename _Traits> char_type **std::basic_ios**< _CharT, _Traits >::widen (char *__c*) const [inline], [inherited]

Widens characters.

Parameters

__c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional l10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Definition at line 443 of file basic_ios.h.

Referenced by std::endl(), std::basic_ios< char, _Traits >::fill(), std::basic_istream< char >::get(), std::basic_istream< char >::getline(), std::getline(), std::tr2::operator>>(), and std::operator>>().

4.622.5.76 streamsize std::ios_base::width ( ) const [inline], [inherited]

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 644 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), and std::operator>>().

4.622.5.77 streamsize std::ios_base::width (streamsize __wide) [inline], [inherited]

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 653 of file ios_base.h.

4.622.5.78 static int std::ios_base::xalloc ( ) throw () [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.622.6 Member Data Documentation

4.622.6.1 template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::_M_gcount `[protected]`, `[inherited]`

The number of characters extracted in the previous unformatted function; see gcount().

Definition at line 82 of file istream.

Referenced by std::basic_istream< char >::gcount(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::unget(), and std::basic_istream< char >::∼basic_istream().

4.622.6.2 const fmtflags std::ios_base::adjustfield `[static]`, `[inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 310 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.622.6.3 const openmode std::ios_base::app `[static]`, `[inherited]`

Seek to end before each write.

Definition at line 364 of file ios_base.h.

4.622.6.4 const openmode std::ios_base::ate `[static]`, `[inherited]`

Open and seek to end immediately after opening.

Definition at line 367 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.622.6.5 const iostate std::ios_base::badbit `[static]`, `[inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 334 of file ios_base.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::fail(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), std::basic_ostream< _CharT, _Traits >::write(), and std::basic_ostream< _CharT, _Traits >::sentry::∼sentry().

4.622.6.6 const fmtflags std::ios_base::basefield `[static]`, `[inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 313 of file ios_base.h.

Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::hex(), std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.622.6.7 const **seekdir** std::ios_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.

Definition at line 396 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

4.622.6.8 const **openmode** std::ios_base::binary [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html.

Definition at line 372 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

4.622.6.9 const **fmtflags** std::ios_base::boolalpha [static], [inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 258 of file ios_base.h.

Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.622.6.10 const **seekdir** std::ios_base::cur [static], [inherited]

Request a seek relative to the current position within the sequence.

Definition at line 399 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

4.622.6.11 const **fmtflags** std::ios_base::dec [static], [inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 261 of file ios_base.h.

Referenced by std::dec().

4.622.6.12 const **seekdir** std::ios_base::end [static], [inherited]

Request a seek relative to the current end of the sequence.

Definition at line 402 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.622.6.13 const **iostate** std::ios_base::eofbit [static], [inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 337 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::eof(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.622.6.14 const iostate std::ios_base::failbit [static], [inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 342 of file ios_base.h.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::fail(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.622.6.15 const fmtflags std::ios_base::fixed [static], [inherited]

Generate floating-point output in fixed-point notation.

Definition at line 264 of file ios_base.h.

Referenced by std::fixed().

4.622.6.16 const fmtflags std::ios_base::floatfield [static], [inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 316 of file ios_base.h.

Referenced by std::fixed(), and std::scientific().

4.622.6.17 const iostate std::ios_base::goodbit [static], [inherited]

Indicates all is well.

Definition at line 345 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.622.6.18 const fmtflags std::ios_base::hex `[static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Definition at line 267 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.622.6.19 const openmode std::ios_base::in `[static], [inherited]`

Open for input. Default for `ifstream` and fstream.

Definition at line 375 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.622.6.20 const fmtflags std::ios_base::internal `[static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 272 of file ios_base.h.

Referenced by std::internal().

4.622.6.21 const fmtflags std::ios_base::left `[static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 276 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.622.6.22 const fmtflags std::ios_base::oct `[static], [inherited]`

Converts integer input or generates integer output in octal base.

Definition at line 279 of file ios_base.h.

Referenced by std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.622.6.23 const openmode std::ios_base::out `[static], [inherited]`

Open for output. Default for `ofstream` and fstream.

Definition at line 378 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.622.6.24 const fmtflags std::ios_base::right `[static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 283 of file ios_base.h.

Referenced by std::right().

4.622.6.25 const fmtflags std::ios_base::scientific `[static], [inherited]`

Generates floating-point output in scientific notation.

Definition at line 286 of file ios_base.h.

Referenced by std::scientific().

4.622.6.26 const fmtflags std::ios_base::showbase `[static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 290 of file ios_base.h.

Referenced by std::noshowbase(), and std::showbase().

4.622.6.27 const fmtflags std::ios_base::showpoint `[static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 294 of file ios_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

4.622.6.28 const fmtflags std::ios_base::showpos `[static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 297 of file ios_base.h.

Referenced by std::noshowpos(), and std::showpos().

4.622.6.29 const fmtflags std::ios_base::skipws `[static], [inherited]`

Skips leading white space before certain input operations.

Definition at line 300 of file ios_base.h.

Referenced by std::noskipws(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::skipws().

4.622.6.30 const openmode std::ios_base::trunc `[static], [inherited]`

Open for input. Default for `ofstream`.

Definition at line 381 of file ios_base.h.

4.622.6.31 const fmtflags std::ios_base::unitbuf `[static], [inherited]`

Flushes output after each output operation.

Definition at line 303 of file ios_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic_ostream< _CharT, _Traits >::sentry::∼sentry().

4.622.6.32 const fmtflags std::ios_base::uppercase `[static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 307 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

- __ostream_type & operator<< (ios_base &(∗__pf)(ios_base &))

Inserters

All the `operator<<` *functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.*

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

  - __ostream_type & operator<< (long __n)
  - __ostream_type & operator<< (unsigned long __n)
  - __ostream_type & operator<< (bool __n)
  - __ostream_type & operator<< (short __n)
  - __ostream_type & operator<< (unsigned short __n)
  - __ostream_type & operator<< (int __n)
  - __ostream_type & operator<< (unsigned int __n)
  - __ostream_type & operator<< (long long __n)
  - __ostream_type & operator<< (unsigned long long __n)

- __ostream_type & operator<< (double __f)
- __ostream_type & operator<< (float __f)
- __ostream_type & operator<< (long double __f)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

  - __ostream_type & put (char_type __c)
  - void _M_write (const char_type ∗__s, streamsize __n)
  - __ostream_type & write (const char_type ∗__s, streamsize __n)

- operator void ∗ () const
- bool operator! () const

4.623.1 Detailed Description

template<typename _CharT, typename _Traits>class std::basic_ofstream< _CharT, _Traits >

Controlling output for files.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class supports reading from named files, using the inherited functions from std::basic_ostream. To control the associated sequence, an instance of std::basic_filebuf is used, which this page refers to as `sb`.

Definition at line 599 of file fstream.

4.623.2 Member Typedef Documentation

4.623.2.1 template<typename _CharT, typename _Traits> typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_get_type [inherited]

These are non-standard types.

Definition at line 90 of file basic_ios.h.

4.623.2.2 typedef void(∗ std::ios_base::event_callback)(event __e, ios_base &__b, int __i) [inherited]

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ∼ios().

Definition at line 436 of file ios_base.h.

4.623.2.3 typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]

This is a bitmask type.

`_Ios_Fmtflags is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 255 of file ios_base.h.

4.623.2.4 typedef _Ios_Iostate std::ios_base::iostate `[inherited]`

This is a bitmask type.

_Ios_Iostate `is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 330 of file ios_base.h.

4.623.2.5 typedef _Ios_Openmode std::ios_base::openmode `[inherited]`

This is a bitmask type.

_Ios_Openmode `is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 361 of file ios_base.h.

4.623.2.6 typedef _Ios_Seekdir std::ios_base::seekdir `[inherited]`

This is an enumerated type.

_Ios_Seekdir `is` implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 393 of file ios_base.h.

4.623.3 Member Enumeration Documentation

4.623.3.1 enum std::ios_base::event `[inherited]`

The set of events that may be passed to an event callback.

erase_event is used during ∼ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

Definition at line 419 of file ios_base.h.

4.623.4 Constructor & Destructor Documentation

4.623.4.1 template<typename _CharT , typename _Traits > **std::basic_ofstream< _CharT, _Traits >::basic_ofstream ( )** [inline]

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 625 of file fstream.

References std::basic_ios< _CharT, _Traits >::init().

4.623.4.2 template<typename _CharT , typename _Traits > **std::basic_ofstream< _CharT, _Traits >::basic_ofstream (** const char * *__s*, **ios_base::openmode** *__mode* = **ios_base::out|ios_base::trunc)** [inline], [explicit]

Create an output file stream.

Parameters

__s	Null terminated string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

`ios_base::out | ios_base::trunc` is automatically included in *__mode*.

Tip: When using std::string to hold the filename, you must use .c_str() before passing it to this constructor.

Definition at line 640 of file fstream.

References std::basic_ios< _CharT, _Traits >::init(), and std::basic_ofstream< _CharT, _Traits >::open().

4.623.4.3 template<typename _CharT , typename _Traits > **std::basic_ofstream< _CharT, _Traits >::basic_ofstream (** const **std::string &** *__s*, **ios_base::openmode** *__mode* = **ios_base::out|ios_base::trunc)** [inline], [explicit]

Create an output file stream.

Parameters

__s	std::string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

`ios_base::out | ios_base::trunc` is automatically included in *__mode*.

Definition at line 658 of file fstream.

References std::basic_ios< _CharT, _Traits >::init(), and std::basic_ofstream< _CharT, _Traits >::open().

4.623.4.4 template<typename _CharT , typename _Traits > **std::basic_ofstream< _CharT, _Traits >::∼basic_ofstream ( )** [inline]

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

Definition at line 673 of file fstream.

4.623.5 Member Function Documentation

4.623.5.1 const **locale**& std::ios_base::_M_getloc ( ) const `[inline]`, `[inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 706 of file ios_base.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::put().

4.623.5.2 template<typename _CharT, typename _Traits> void **std::basic_ostream**< _CharT, _Traits >::_M_write (const char_type * *__s*, **streamsize** *__n*) `[inline]`, `[inherited]`

Core write functionality, without sentry.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Definition at line 311 of file ostream.

Referenced by std::basic_ostream< _CharT, _Traits >::write().

4.623.5.3 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::bad ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 205 of file basic_ios.h.

4.623.5.4 template<typename _CharT , typename _Traits > void **basic_ios**< _CharT, _Traits >::clear (**iostate** *__state* = **goodbit**) `[inherited]`

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic_ios.tcc.

Referenced by std::basic_ios< char, _Traits >::exceptions(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.623.5.5 template<typename _CharT , typename _Traits > void **std::basic_ofstream**< _CharT, _Traits >::close ( ) `[inline]`

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

Definition at line 753 of file fstream.

References std::basic_filebuf< _CharT, _Traits >::close(), std::ios_base::failbit, and std::basic_ios< _CharT, _Traits >::setstate().

4.623.5.6 template<typename _CharT , typename _Traits > **basic_ios**< _CharT, _Traits > & **basic_ios**< _CharT, _Traits >::copyfmt (const **basic_ios**< _CharT, _Traits > & *__rhs*) `[inherited]`

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().

Definition at line 63 of file basic_ios.tcc.

References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.623.5.7 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::eof ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 184 of file basic_ios.h.

4.623.5.8 template<typename _CharT, typename _Traits> **iostate std::basic_ios**< _CharT, _Traits >::exceptions ( ) const `[inline]`, `[inherited]`

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 216 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.623.5.9 template<typename _CharT, typename _Traits> void **std::basic_ios**< _CharT, _Traits >::exceptions (**iostate** *__except*) `[inline]`, `[inherited]`

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (
      __gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 251 of file basic_ios.h.

4.623.5.10 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::fail ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Definition at line 195 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::operator void ∗(), std::basic_ios< char, _Traits >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::regex_traits< _Ch_type >::value().

4.623.5.11 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 364 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< char, _Traits >::fill().

4.623.5.12 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill (char_type *__ch*) [inline], [inherited]

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 384 of file basic_ios.h.

4.623.5.13 fmtflags std::ios_base::flags ( ) const [inline], [inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 551 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.623.5.14 fmtflags std::ios_base::flags (fmtflags *__fmtfl*) [inline], [inherited]

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

Definition at line 562 of file ios_base.h.

4.623.5.15 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::flush ( ) [inherited]

Synchronizing the stream buffer.

Returns

∗this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::flush().

4.623.5.16 locale std::ios_base::getloc ( ) const [inline], [inherited]

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 695 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::ws().

4.623.5.17 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.

Definition at line 174 of file basic_ios.h.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.623.5.18 template<typename _CharT , typename _Traits > locale basic_ios< _CharT, _Traits >::imbue (const locale & __loc) [inherited]

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

Definition at line 114 of file basic_ios.tcc.

References std::ios_base::imbue().

Referenced by std::operator<<().

4.623.5.19 template<typename _CharT, typename _Traits> void basic_ios< _CharT, _Traits >::init (basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic_ios.tcc.

Referenced by std::basic_fstream< _CharT, _Traits >::basic_fstream(), std::basic_ifstream< _CharT, _Traits >::basic_ifstream(), std::basic_ios< char, _Traits >::basic_ios(), std::basic_istream< char >::basic_istream(), std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream(), std::basic_ofstream< _CharT, _Traits >::basic_ofstream(), std::basic_ostream< char >::basic_ostream(), std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream(), and std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream().

4.623.5.20 template<typename _CharT , typename _Traits > bool std::basic_ofstream< _CharT, _Traits >::is_open ( ) [inline]

Wrapper to test for an open file.

Returns

`rdbuf()->is_open()`

Definition at line 692 of file fstream.

References std::basic_filebuf< _CharT, _Traits >::is_open().

4.623.5.21 long& std::ios_base::iword (int __ix) [inline], [inherited]

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 741 of file ios_base.h.

4.623.5.22 template<typename _CharT, typename _Traits> char std::basic_ios< _CharT, _Traits >::narrow (char_type *__c*, char *__dfault*) const [inline], [inherited]

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Additional l10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Definition at line 424 of file basic_ios.h.

4.623.5.23 template<typename _CharT , typename _Traits > void std::basic_ofstream< _CharT, _Traits >::open (const char * *__s*, ios_base::openmode *__mode* = ios_base::out | ios_base::trunc) [inline]

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open`(__s,__mode|out|trunc). If that function fails, `failbit` is set in the stream's error state.

Tip: When using std::string to hold the filename, you must use .c_str() before passing it to this constructor.

Definition at line 713 of file fstream.

References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::failbit, std::basic_filebuf< _CharT, _Traits >::open(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::basic_ofstream< _CharT, _Traits >::basic_ofstream().

4.623.5.24 template<typename _CharT , typename _Traits > void **std::basic_ofstream**< _CharT, _Traits >::open (const std::string & *__s*, ios_base::openmode *__mode* = ios_base::out | ios_base::trunc) `[inline]`

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open`(s,mode|out|trunc). If that function fails, `failbit` is set in the stream's error state.

Definition at line 734 of file fstream.

References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::failbit, std::basic_filebuf< _CharT, _Traits >::open(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::setstate().

4.623.5.25 template<typename _CharT, typename _Traits> **std::basic_ios**< _CharT, _Traits >::operator void ∗ ( ) const `[inline]`, `[inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 115 of file basic_ios.h.

4.623.5.26 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::operator! ( ) const `[inline]`, `[inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 119 of file basic_ios.h.

4.623.5.27 template<typename _CharT, typename _Traits> **__ostream_type& std::basic_ostream**< _CharT, _Traits >::operator<< (__ostream_type &(∗)(__ostream_type &) *__pf*) `[inline]`, `[inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

Definition at line 108 of file ostream.

4.623.5.28 template<typename _CharT, typename _Traits> **__ostream_type& std::basic_ostream**< _CharT, _Traits >::operator<< (__ios_type &(∗)(__ios_type &) *__pf*) `[inline]`, `[inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

Definition at line 117 of file ostream.

4.623.5.29 template<typename _CharT, typename _Traits> **__ostream_type& std::basic_ostream**< _CharT, _Traits >::operator<< (ios_base &(∗)(ios_base &) *__pf*) `[inline]`, `[inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

Definition at line 127 of file ostream.

4.623.5.30 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 166 of file ostream.

4.623.5.31 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 170 of file ostream.

4.623.5.32 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (bool __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 174 of file ostream.

4.623.5.33 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (short __n) [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

References std::ios_base::basefield, std::ios_base::flags(), std::ios_base::hex, and std::ios_base::oct.

4.623.5.34 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned short __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 181 of file ostream.

4.623.5.35 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (int __n) [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file ostream.tcc.

References std::ios_base::basefield, std::ios_base::flags(), std::ios_base::hex, and std::ios_base::oct.

4.623.5.36 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned int __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 192 of file ostream.

4.623.5.37 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 201 of file ostream.

4.623.5.38 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 205 of file ostream.

4.623.5.39 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (double __f) [inline], [inherited]

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 220 of file ostream.

4.623.5.40 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (float __f) [inline], [inherited]

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file ostream.

4.623.5.41 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long double __f) [inline], [inherited]

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file ostream.

4.623.5.42 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (const void * __p) [inline], [inherited]

Pointer arithmetic inserters.

Parameters

__p	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file ostream.

4.623.5.43 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (__streambuf_type * __sb) [inherited]

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.623.5.44 streamsize std::ios_base::precision ( ) const [inline], [inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 621 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

4.623.5.45 **streamsize** std::ios_base::precision (**streamsize** *__prec*) [inline], [inherited]

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 630 of file ios_base.h.

4.623.5.46 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::put (char_type *__c*) [inherited]

Simple insertion.

Parameters

__c	The character to insert.

Returns

∗this

Tries to insert __`c`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::endl(), and std::ends().

4.623.5.47 void∗& std::ios_base::pword (int *__ix*) [inline], [inherited]

Access to void pointer array.

Parameters

__ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 762 of file ios_base.h.

4.623.5.48 template<typename _CharT, typename _Traits> **basic_streambuf**< _CharT, _Traits > ∗ **basic_ios**< _CharT, _Traits >::rdbuf (**basic_streambuf**< _CharT, _Traits > ∗ *__sb*) [inherited]

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.623.5.49 template<typename _CharT , typename _Traits > **__filebuf_type**∗ **std::basic_ofstream**< _CharT, _Traits >::rdbuf ( ) const [inline]

Accessing the underlying buffer.

Returns

The current basic_filebuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

Definition at line 684 of file fstream.

4.623.5.50 template<typename _CharT, typename _Traits> **iostate std::basic_ios**< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 131 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::eof(), std::basic_ios< char, _Traits >::fail(), std::basic_ios< char, _Traits >::good(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.623.5.51 void std::ios_base::register_callback (**event_callback** *__fn,* int *__index*) `[inherited]`

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.623.5.52 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::seekp (pos_type *__pos*) `[inherited]`

Changing the current write position.

Parameters

__pos	A file position object.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file ostream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.623.5.53 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::seekp (off_type *__off,* **ios_base::seekdir** *__dir*) `[inherited]`

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.

Definition at line 290 of file ostream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.623.5.54 **fmtflags** std::ios_base::setf (**fmtflags** *__fmtfl*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 578 of file ios_base.h.

Referenced by std::dec(), std::fixed(), std::hex(), std::left(), std::oct(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

4.623.5.55 fmtflags std::ios_base::setf (fmtflags *__fmtfl,* fmtflags *__mask*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* `&` *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 595 of file ios_base.h.

4.623.5.56 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate *__state*) `[inline]`, `[inherited]`

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.

Definition at line 151 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.623.5.57 static bool std::ios_base::sync_with_stdio (bool *__sync* = `true`) `[static]`, `[inherited]`

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt1` `html`

4.623.5.58 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits >::pos_type basic_ostream< _CharT, _Traits >::tellp ( ) `[inherited]`

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.

Definition at line 237 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::rdbuf().

4.623.5.59 template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const `[inline]`, `[inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 289 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.623.5.60 template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (basic_ostream< _CharT, _Traits > * *__tiestr*) `[inline]`, `[inherited]`

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

Definition at line 301 of file basic_ios.h.

4.623.5.61 void std::ios_base::unsetf (fmtflags __mask) [inline], [inherited]

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

Definition at line 610 of file ios_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

4.623.5.62 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::widen (char __c) const [inline], [inherited]

Widens characters.

Parameters

__c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional l10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Definition at line 443 of file basic_ios.h.

Referenced by std::endl(), std::basic_ios< char, _Traits >::fill(), std::basic_istream< char >::get(), std::basic_istream< char >::getline(), std::getline(), std::tr2::operator>>(), and std::operator>>().

4.623.5.63 streamsize std::ios_base::width ( ) const [inline], [inherited]

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 644 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), and std::operator>>().

4.623.5.64 **streamsize** std::ios_base::width (**streamsize** *__wide*) [inline], [inherited]

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 653 of file ios_base.h.

4.623.5.65 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::write (const char_type * *__s*, **streamsize** *__n*) [inherited]

Character string insertion.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Returns

*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file ostream.tcc.

References std::basic_ostream< _CharT, _Traits >::_M_write(), and std::ios_base::badbit.

4.623.5.66 static int std::ios_base::xalloc ( ) throw () [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.623.6 Member Data Documentation

4.623.6.1 const fmtflags std::ios_base::adjustfield `[static], [inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 310 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.623.6.2 const openmode std::ios_base::app `[static], [inherited]`

Seek to end before each write.

Definition at line 364 of file ios_base.h.

4.623.6.3 const openmode std::ios_base::ate `[static], [inherited]`

Open and seek to end immediately after opening.

Definition at line 367 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.623.6.4 const iostate std::ios_base::badbit `[static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 334 of file ios_base.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::fail(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), std::basic_ostream< _CharT, _Traits >::write(), and std::basic_ostream< _CharT, _Traits >::sentry::∼sentry().

4.623.6.5 const fmtflags std::ios_base::basefield `[static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 313 of file ios_base.h.

Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::hex(), std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.623.6.6 const **seekdir** std::ios_base::beg `[static]`, `[inherited]`

Request a seek relative to the beginning of the stream.

Definition at line 396 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

4.623.6.7 const **openmode** std::ios_base::binary `[static]`, `[inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html`.

Definition at line 372 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

4.623.6.8 const **fmtflags** std::ios_base::boolalpha `[static]`, `[inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 258 of file ios_base.h.

Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.623.6.9 const **seekdir** std::ios_base::cur `[static]`, `[inherited]`

Request a seek relative to the current position within the sequence.

Definition at line 399 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

4.623.6.10 const **fmtflags** std::ios_base::dec `[static]`, `[inherited]`

Converts integer input or generates integer output in decimal base.

Definition at line 261 of file ios_base.h.

Referenced by std::dec().

4.623.6.11 const **seekdir** std::ios_base::end `[static]`, `[inherited]`

Request a seek relative to the current end of the sequence.

Definition at line 402 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.623.6.12 const **iostate** std::ios_base::eofbit `[static]`, `[inherited]`

Indicates that an input operation reached the end of an input sequence.

Definition at line 337 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits

>::eof(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.623.6.13 const iostate std::ios_base::failbit [static], [inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 342 of file ios_base.h.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::fail(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.623.6.14 const fmtflags std::ios_base::fixed [static], [inherited]

Generate floating-point output in fixed-point notation.

Definition at line 264 of file ios_base.h.

Referenced by std::fixed().

4.623.6.15 const fmtflags std::ios_base::floatfield [static], [inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 316 of file ios_base.h.

Referenced by std::fixed(), and std::scientific().

4.623.6.16 const iostate std::ios_base::goodbit [static], [inherited]

Indicates all is well.

Definition at line 345 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.623.6.17 const fmtflags std::ios_base::hex [static], [inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 267 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.623.6.18 const openmode std::ios_base::in `[static], [inherited]`

Open for input. Default for `ifstream` and fstream.

Definition at line 375 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.623.6.19 const fmtflags std::ios_base::internal `[static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 272 of file ios_base.h.

Referenced by std::internal().

4.623.6.20 const fmtflags std::ios_base::left `[static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 276 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.623.6.21 const fmtflags std::ios_base::oct `[static], [inherited]`

Converts integer input or generates integer output in octal base.

Definition at line 279 of file ios_base.h.

Referenced by std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.623.6.22 const openmode std::ios_base::out `[static], [inherited]`

Open for output. Default for `ofstream` and fstream.

Definition at line 378 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.623.6.23 const fmtflags std::ios_base::right `[static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 283 of file ios_base.h.

Referenced by std::right().

4.623.6.24 const fmtflags std::ios_base::scientific `[static]`, `[inherited]`

Generates floating-point output in scientific notation.

Definition at line 286 of file ios_base.h.

Referenced by std::scientific().

4.623.6.25 const fmtflags std::ios_base::showbase `[static]`, `[inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 290 of file ios_base.h.

Referenced by std::noshowbase(), and std::showbase().

4.623.6.26 const fmtflags std::ios_base::showpoint `[static]`, `[inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 294 of file ios_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

4.623.6.27 const fmtflags std::ios_base::showpos `[static]`, `[inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 297 of file ios_base.h.

Referenced by std::noshowpos(), and std::showpos().

4.623.6.28 const fmtflags std::ios_base::skipws `[static]`, `[inherited]`

Skips leading white space before certain input operations.

Definition at line 300 of file ios_base.h.

Referenced by std::noskipws(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::skipws().

4.623.6.29 const openmode std::ios_base::trunc `[static]`, `[inherited]`

Open for input. Default for `ofstream`.

Definition at line 381 of file ios_base.h.

4.623.6.30 const fmtflags std::ios_base::unitbuf `[static]`, `[inherited]`

Flushes output after each output operation.

Definition at line 303 of file ios_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic_ostream< _CharT, _Traits >::sentry::∼sentry().

4.623.6.31 const fmtflags std::ios_base::uppercase `[static]`, `[inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 307 of file ios_base.h.

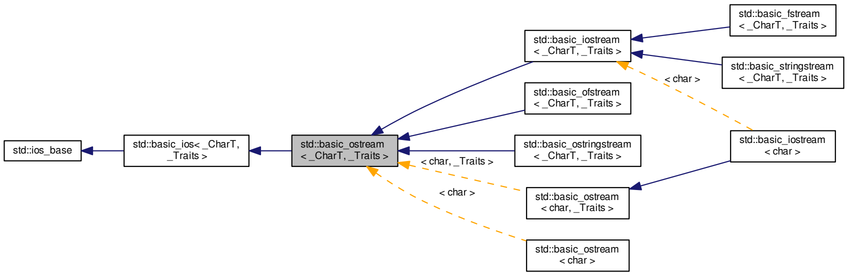
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

The documentation for this class was generated from the following file:

- fstream

4.624 std::basic_ostream< _CharT, _Traits > Class Template Reference

Inheritance diagram for std::basic_ostream< _CharT, _Traits >:



Classes

- class sentry

  Performs setup work for output streams.

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __ostream_type & operator<< (long __n)
- __ostream_type & operator<< (unsigned long __n)
- __ostream_type & operator<< (bool __n)

- __ostream_type & operator<< (double __f)
- __ostream_type & operator<< (float __f)
- __ostream_type & operator<< (long double __f)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

4.624.1 Detailed Description

template<typename _CharT, typename _Traits>class std::basic_ostream< _CharT, _Traits >

Template class basic_ostream.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from basic_streambuf to do the actual output.

Definition at line 58 of file ostream.

4.624.2 Member Typedef Documentation

4.624.2.1 template<typename _CharT, typename _Traits> typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_get_type `[inherited]`

These are non-standard types.

Definition at line 90 of file basic_ios.h.

4.624.2.2 typedef void(∗ std::ios_base::event_callback)(event __e, ios_base &__b, int __i) `[inherited]`

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ∼ios().

Definition at line 436 of file ios_base.h.

4.624.2.3 typedef _Ios_Fmtflags std::ios_base::fmtflags `[inherited]`

This is a bitmask type.

`_Ios_Fmtflags is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 255 of file ios_base.h.

4.624.2.4 typedef _Ios_Iostate std::ios_base::iostate `[inherited]`

This is a bitmask type.

`_Ios_Iostate` `is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 330 of file ios_base.h.

4.624.2.5 typedef _Ios_Openmode std::ios_base::openmode `[inherited]`

This is a bitmask type.

`_Ios_Openmode` `is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 361 of file ios_base.h.

4.624.2.6 typedef _Ios_Seekdir std::ios_base::seekdir `[inherited]`

This is an enumerated type.

`_Ios_Seekdir` `is` implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 393 of file ios_base.h.

4.624.3 Member Enumeration Documentation

4.624.3.1 enum std::ios_base::event `[inherited]`

The set of events that may be passed to an event callback.

erase_event is used during ∼ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

Definition at line 419 of file ios_base.h.

4.624.4 Constructor & Destructor Documentation

4.624.4.1 template<typename _CharT, typename _Traits> **std::basic_ostream**< _CharT, _Traits >::**basic_ostream** (**__streambuf_type** * *__sb*) [inline], [explicit]

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

Definition at line 84 of file ostream.

4.624.4.2 template<typename _CharT, typename _Traits> virtual **std::basic_ostream**< _CharT, _Traits >::~**basic_ostream** ( ) [inline], [virtual]

Base destructor.

This does very little apart from providing a virtual base dtor.

Definition at line 93 of file ostream.

4.624.5 Member Function Documentation

4.624.5.1 const **locale**& std::ios_base::_M_getloc ( ) const [inline], [inherited]

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 706 of file ios_base.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::put().

4.624.5.2 template<typename _CharT, typename _Traits> void **std::basic_ostream**< _CharT, _Traits >::_M_write (const char_type * *__s*, **streamsize** *__n*) [inline]

Core write functionality, without sentry.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Definition at line 311 of file ostream.

Referenced by std::basic_ostream< _CharT, _Traits >::write().

4.624.5.3 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::bad ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 205 of file basic_ios.h.

4.624.5.4 template<typename _CharT , typename _Traits > void basic_ios< _CharT, _Traits >::clear (iostate *__state* = goodbit) [inherited]

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic_ios.tcc.

Referenced by std::basic_ios< char, _Traits >::exceptions(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.624.5.5 template<typename _CharT , typename _Traits > basic_ios< _CharT, _Traits > & basic_ios< _CharT, _Traits >::copyfmt (const basic_ios< _CharT, _Traits > & *__rhs*) [inherited]

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().

Definition at line 63 of file basic_ios.tcc.

References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.624.5.6 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 184 of file basic_ios.h.

4.624.5.7 template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 216 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.624.5.8 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions (iostate *__except*) [inline], [inherited]

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (
      __gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 251 of file basic_ios.h.

4.624.5.9 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Definition at line 195 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::operator void ∗(), std::basic_ios< char, _Traits >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::regex_traits< _Ch_type >::value().

4.624.5.10 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 364 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< char, _Traits >::fill().

4.624.5.11 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill (char_type __ch) [inline], [inherited]

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 384 of file basic_ios.h.

4.624.5.12 fmtflags std::ios_base::flags ( ) const [inline], [inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 551 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.624.5.13 fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline], [inherited]

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

Definition at line 562 of file ios_base.h.

4.624.5.14 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::flush ( )

Synchronizing the stream buffer.

Returns

∗this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::flush().

4.624.5.15 locale std::ios_base::getloc ( ) const [inline], [inherited]

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 695 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::ws().

4.624.5.16 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.

Definition at line 174 of file basic_ios.h.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.624.5.17 template<typename _CharT , typename _Traits > locale basic_ios< _CharT, _Traits >::imbue (const locale & *__loc*) [inherited]

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

Definition at line 114 of file basic_ios.tcc.

References std::ios_base::imbue().

Referenced by std::operator<<().

4.624.5.18 template<typename _CharT, typename _Traits> void basic_ios< _CharT, _Traits >::init (basic_streambuf< _CharT, _Traits > * *__sb*) [protected], [inherited]

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic_ios.tcc.

Referenced by std::basic_fstream< _CharT, _Traits >::basic_fstream(), std::basic_ifstream< _CharT, _Traits >::basic_ifstream(), std::basic_ios< char, _Traits >::basic_ios(), std::basic_istream< char >::basic_istream(), std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream(), std::basic_ofstream< _CharT, _Traits >::basic_ofstream(), std::basic_ostream< char >::basic_ostream(), std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream(), and std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream().

4.624.5.19 long& std::ios_base::iword (int *__ix*) [inline], [inherited]

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 741 of file ios_base.h.

4.624.5.20 template<typename _CharT, typename _Traits> char **std::basic_ios**< _CharT, _Traits >::narrow (**char_type** *__c*, char *__dfault*) const `[inline]`, `[inherited]`

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

4.624.5.26 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long *__n*) [inline]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 166 of file ostream.

4.624.5.27 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long *__n*) [inline]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 170 of file ostream.

4.624.5.28 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (bool *__n*) [inline]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 174 of file ostream.

4.624.5.29 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (short __n)

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

References std::ios_base::basefield, std::ios_base::flags(), std::ios_base::hex, and std::ios_base::oct.

4.624.5.30 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned short __n) `[inline]`

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 181 of file ostream.

4.624.5.31 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (int __n)

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file ostream.tcc.

References std::ios_base::basefield, std::ios_base::flags(), std::ios_base::hex, and std::ios_base::oct.

4.624.5.32 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned int __n) [inline]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 192 of file ostream.

4.624.5.33 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long long __n) [inline]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 201 of file ostream.

4.624.5.34 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long long __n) [inline]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 205 of file ostream.

4.624.5.35 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (double __f) [inline]

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 220 of file ostream.

4.624.5.36 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<<(float *__f*) `[inline]`

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file ostream.

4.624.5.37 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<<(long double *__f*) `[inline]`

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file ostream.

4.624.5.38 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<<(const void * *__p*) `[inline]`

Pointer arithmetic inserters.

Parameters

__p	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file ostream.

4.624.5.39 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (__streambuf_type * __sb)

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.624.5.40 streamsize std::ios_base::precision ( ) const `[inline]`, `[inherited]`

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 621 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

4.624.5.41 streamsize std::ios_base::precision (streamsize __prec) `[inline]`, `[inherited]`

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 630 of file ios_base.h.

4.624.5.42 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::put (char_type __c)

Simple insertion.

Parameters

__c	The character to insert.

Returns

∗this

Tries to insert `__c`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::endl(), and std::ends().

4.624.5.43 void∗& std::ios_base::pword (int __ix) [inline], [inherited]

Access to void pointer array.

Parameters

__ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 762 of file ios_base.h.

4.624.5.44 template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits>∗ std::basic_ios< _CharT, _Traits >::rdbuf ( ) const [inline], [inherited]

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.

Definition at line 315 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.624.5.45 template<typename _CharT, typename _Traits> **basic_streambuf**< _CharT, _Traits > ∗ **basic_ios**< _CharT, _Traits >::rdbuf (**basic_streambuf**< _CharT, _Traits > ∗ *__sb*) `[inherited]`

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.624.5.46 template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const `[inline]`, `[inherited]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 131 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::eof(), std::basic_ios< char, _Traits >::fail(), std::basic_ios< char, _Traits >::good(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.624.5.47 void std::ios_base::register_callback (**event_callback** *__fn,* int *__index*) [inherited]

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.624.5.48 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::seekp (pos_type *__pos*)

Changing the current write position.

Parameters

__pos	A file position object.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file ostream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.624.5.49 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::seekp (off_type *__off,* **ios_base::seekdir** *__dir*)

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.

Definition at line 290 of file ostream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.624.5.50 **fmtflags** std::ios_base::setf (**fmtflags** *__fmtfl*) [inline], [inherited]

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 578 of file ios_base.h.

Referenced by std::dec(), std::fixed(), std::hex(), std::left(), std::oct(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

4.624.5.51 fmtflags std::ios_base::setf (fmtflags *__fmtfl,* fmtflags *__mask*) [inline], [inherited]

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* `&` *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 595 of file ios_base.h.

4.624.5.52 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate *__state*) [inline], [inherited]

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.

Definition at line 151 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.624.5.53 static bool std::ios_base::sync_with_stdio (bool *__sync* = `true`) `[static]`, `[inherited]`

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt1` `html`

4.624.5.54 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits >::pos_type **basic_ostream**< _CharT, _Traits >::tellp ( )

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.

Definition at line 237 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::rdbuf().

4.624.5.55 template<typename _CharT, typename _Traits> **basic_ostream**<_CharT, _Traits>* **std::basic_ios**< _CharT, _Traits >::tie ( ) const `[inline]`, `[inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 289 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.624.5.56 template<typename _CharT, typename _Traits> **basic_ostream**<_CharT, _Traits>* **std::basic_ios**< _CharT, _Traits >::tie (**basic_ostream**< _CharT, _Traits > * *__tiestr*) `[inline]`, `[inherited]`

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

Definition at line 301 of file basic_ios.h.

4.624.5.57 void std::ios_base::unsetf (fmtflags *__mask*) [inline], [inherited]

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

Definition at line 610 of file ios_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

4.624.5.58 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::widen (char *__c*) const [inline], [inherited]

Widens characters.

Parameters

__c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional l10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Definition at line 443 of file basic_ios.h.

Referenced by std::endl(), std::basic_ios< char, _Traits >::fill(), std::basic_istream< char >::get(), std::basic_istream< char >::getline(), std::getline(), std::tr2::operator>>(), and std::operator>>().

4.624.5.59 streamsize std::ios_base::width ( ) const [inline], [inherited]

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 644 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), and std::operator>>().

4.624.5.60 **streamsize** std::ios_base::width (**streamsize** *__wide*) [inline], [inherited]

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 653 of file ios_base.h.

4.624.5.61 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::write (const char_type * *__s*, **streamsize** *__n*)

Character string insertion.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Returns

*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file ostream.tcc.

References std::basic_ostream< _CharT, _Traits >::_M_write(), and std::ios_base::badbit.

4.624.5.62 static int std::ios_base::xalloc ( ) throw () [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.624.6 Member Data Documentation

4.624.6.1 const fmtflags std::ios_base::adjustfield `[static]`, `[inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 310 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.624.6.2 const openmode std::ios_base::app `[static]`, `[inherited]`

Seek to end before each write.

Definition at line 364 of file ios_base.h.

4.624.6.3 const openmode std::ios_base::ate `[static]`, `[inherited]`

Open and seek to end immediately after opening.

Definition at line 367 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.624.6.4 const iostate std::ios_base::badbit `[static]`, `[inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 334 of file ios_base.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::fail(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), std::basic_ostream< _CharT, _Traits >::write(), and std::basic_ostream< _CharT, _Traits >::sentry::∼sentry().

4.624.6.5 const fmtflags std::ios_base::basefield `[static]`, `[inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 313 of file ios_base.h.

Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::hex(), std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.624.6.6 const **seekdir** std::ios_base::beg `[static]`, `[inherited]`

Request a seek relative to the beginning of the stream.

Definition at line 396 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

4.624.6.7 const **openmode** std::ios_base::binary `[static]`, `[inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html`.

Definition at line 372 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

4.624.6.8 const **fmtflags** std::ios_base::boolalpha `[static]`, `[inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 258 of file ios_base.h.

Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.624.6.9 const **seekdir** std::ios_base::cur `[static]`, `[inherited]`

Request a seek relative to the current position within the sequence.

Definition at line 399 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

4.624.6.10 const **fmtflags** std::ios_base::dec `[static]`, `[inherited]`

Converts integer input or generates integer output in decimal base.

Definition at line 261 of file ios_base.h.

Referenced by std::dec().

4.624.6.11 const **seekdir** std::ios_base::end `[static]`, `[inherited]`

Request a seek relative to the current end of the sequence.

Definition at line 402 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.624.6.12 const **iostate** std::ios_base::eofbit `[static]`, `[inherited]`

Indicates that an input operation reached the end of an input sequence.

Definition at line 337 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits

>::eof(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.624.6.13 const **iostate** std::ios_base::failbit [static], [inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 342 of file ios_base.h.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::fail(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.624.6.14 const **fmtflags** std::ios_base::fixed [static], [inherited]

Generate floating-point output in fixed-point notation.

Definition at line 264 of file ios_base.h.

Referenced by std::fixed().

4.624.6.15 const **fmtflags** std::ios_base::floatfield [static], [inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 316 of file ios_base.h.

Referenced by std::fixed(), and std::scientific().

4.624.6.16 const **iostate** std::ios_base::goodbit [static], [inherited]

Indicates all is well.

Definition at line 345 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.624.6.17 const **fmtflags** std::ios_base::hex [static], [inherited]

Converts integer input or generates integer output in hexadecimal base.

Definition at line 267 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.624.6.18 const **openmode** std::ios_base::in `[static]`, `[inherited]`

Open for input. Default for `ifstream` and fstream.

Definition at line 375 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.624.6.19 const **fmtflags** std::ios_base::internal `[static]`, `[inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 272 of file ios_base.h.

Referenced by std::internal().

4.624.6.20 const **fmtflags** std::ios_base::left `[static]`, `[inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 276 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.624.6.21 const **fmtflags** std::ios_base::oct `[static]`, `[inherited]`

Converts integer input or generates integer output in octal base.

Definition at line 279 of file ios_base.h.

Referenced by std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.624.6.22 const **openmode** std::ios_base::out `[static]`, `[inherited]`

Open for output. Default for `ofstream` and fstream.

Definition at line 378 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.624.6.23 const **fmtflags** std::ios_base::right `[static]`, `[inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 283 of file ios_base.h.

Referenced by std::right().

4.624.6.24 const fmtflags std::ios_base::scientific `[static]`, `[inherited]`

Generates floating-point output in scientific notation.

Definition at line 286 of file ios_base.h.

Referenced by std::scientific().

4.624.6.25 const fmtflags std::ios_base::showbase `[static]`, `[inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 290 of file ios_base.h.

Referenced by std::noshowbase(), and std::showbase().

4.624.6.26 const fmtflags std::ios_base::showpoint `[static]`, `[inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 294 of file ios_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

4.624.6.27 const fmtflags std::ios_base::showpos `[static]`, `[inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 297 of file ios_base.h.

Referenced by std::noshowpos(), and std::showpos().

4.624.6.28 const fmtflags std::ios_base::skipws `[static]`, `[inherited]`

Skips leading white space before certain input operations.

Definition at line 300 of file ios_base.h.

Referenced by std::noskipws(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::skipws().

4.624.6.29 const openmode std::ios_base::trunc `[static]`, `[inherited]`

Open for input. Default for `ofstream`.

Definition at line 381 of file ios_base.h.

4.624.6.30 const fmtflags std::ios_base::unitbuf `[static]`, `[inherited]`

Flushes output after each output operation.

Definition at line 303 of file ios_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic_ostream< _CharT, _Traits >::sentry::∼sentry().

4.624.6.31 const fmtflags std::ios_base::uppercase `[static]`, `[inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 307 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

The documentation for this class was generated from the following files:

- ostream

- ostream.tcc

4.625 std::basic_ostream< _CharT, _Traits >::sentry Class Reference

Public Member Functions

- sentry (basic_ostream< _CharT, _Traits > &__os)
- ∼sentry ()
- operator bool () const

4.625.1 Detailed Description

template<typename _CharT, typename _Traits>class std::basic_ostream< _CharT, _Traits >::sentry

Performs setup work for output streams.

Objects of this class are created before all of the standard inserters are run. It is responsible for *exception-safe prefix and suffix operations*.

Definition at line 400 of file ostream.

4.625.2 Constructor & Destructor Documentation

4.625.2.1 template<typename _CharT, typename _Traits> std::basic_ostream< _CharT, _Traits >::sentry::sentry (basic_ostream< _CharT, _Traits > & __os) [explicit]

The constructor performs preparatory work.

Parameters

__os	The output stream to guard.

If the stream state is good (*__os.good()* is true), then if the stream is tied to another output stream, `is.tie()->flush()` is called to synchronize the output sequences.

If the stream state is still good, then the sentry state becomes true (*okay*).

Definition at line 47 of file ostream.tcc.

References std::ios_base::failbit, std::basic_ios< _CharT, _Traits >::good(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_ios< _CharT, _Traits >::tie().

4.625.2.2 template<typename _CharT, typename _Traits> std::basic_ostream< _CharT, _Traits >::sentry::∼sentry ( ) [inline]

Possibly flushes the stream.

If `ios_base::unitbuf` is set in `os.flags()`, and `std::uncaught_exception()` is true, the sentry destructor calls `flush()` on the output stream.

Definition at line 428 of file ostream.

References std::ios_base::badbit, std::uncaught_exception(), and std::ios_base::unitbuf.

4.625.3 Member Function Documentation

4.625.3.1 template<typename _CharT, typename _Traits> std::basic_ostream< _CharT, _Traits >::sentry::operator bool ( ) const [inline], [explicit]

Quick status checking.

Returns

The sentry state.

For ease of use, sentries may be converted to booleans. The return value is that of the sentry state (true == okay).

Definition at line 449 of file ostream.

The documentation for this class was generated from the following files:

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __ostream_type & operator<< (double __f)
- __ostream_type & operator<< (float __f)
- __ostream_type & operator<< (long double __f)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

4.626.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>class std::basic_ostringstream< _CharT, _Traits, _Alloc >

Controlling output for std::string.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

This class supports writing to objects of type std::basic_string, using the inherited functions from std::basic_ostream. To control the associated sequence, an instance of std::basic_stringbuf is used, which this page refers to as `sb`.

Definition at line 387 of file sstream.

4.626.2 Member Typedef Documentation

4.626.2.1 template<typename _CharT, typename _Traits> typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_get_type `[inherited]`

These are non-standard types.

Definition at line 90 of file basic_ios.h.

4.626.2.2 typedef void(* std::ios_base::event_callback)(event __e, ios_base &__b, int __i) `[inherited]`

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ∼ios().

Definition at line 436 of file ios_base.h.

4.626.2.3 typedef _Ios_Fmtflags std::ios_base::fmtflags `[inherited]`

This is a bitmask type.

`_Ios_Fmtflags is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal

- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 255 of file ios_base.h.

4.626.2.4 typedef _Ios_Iostate std::ios_base::iostate `[inherited]`

This is a bitmask type.

`_Ios_Iostate is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 330 of file ios_base.h.

4.626.2.5 typedef _Ios_Openmode std::ios_base::openmode `[inherited]`

This is a bitmask type.

`_Ios_Openmode is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 361 of file ios_base.h.

4.626.2.6 typedef _Ios_Seekdir std::ios_base::seekdir [inherited]

This is an enumerated type.

`_Ios_Seekdir is` implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 393 of file ios_base.h.

4.626.3 Member Enumeration Documentation

4.626.3.1 enum **std::ios_base::event** [inherited]

The set of events that may be passed to an event callback.

erase_event is used during ∼ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

Definition at line 419 of file ios_base.h.

4.626.4 Constructor & Destructor Documentation

4.626.4.1 template<typename _CharT, typename _Traits, typename _Alloc> **std::basic_ostringstream**< _CharT, _Traits, _Alloc >**::basic_ostringstream (ios_base::openmode** *__mode* = **ios_base::out)** [inline], [explicit]

Default constructor starts with an empty string buffer.

Parameters

__mode	Whether the buffer can read, or write, or both.

`ios_base::out` is automatically included in *mode*.

Initializes `sb` using `mode|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 423 of file sstream.

References std::basic_ios< _CharT, _Traits >::init().

4.626.4.2 template<typename _CharT, typename _Traits, typename _Alloc> **std::basic_ostringstream**< _CharT, _Traits, _Alloc >**::basic_ostringstream (** const **__string_type &** *__str,* **ios_base::openmode** *__mode* = **ios_base::out)** [inline], [explicit]

Starts with an existing string buffer.

Parameters

__str	A string to copy as a starting buffer.
__mode	Whether the buffer can read, or write, or both.

`ios_base::out` is automatically included in *mode*.

Initializes `sb` using *str* and `mode|out`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 441 of file sstream.

References std::basic_ios< _CharT, _Traits >::init().

4.626.4.3 template<typename _CharT, typename _Traits, typename _Alloc> std::basic_ostringstream< _CharT, _Traits, _Alloc >::∼basic_ostringstream ( ) `[inline]`

The destructor does nothing.

The buffer is deallocated by the stringbuf object, not the formatting stream.

Definition at line 452 of file sstream.

4.626.5 Member Function Documentation

4.626.5.1 const locale& std::ios_base::_M_getloc ( ) const `[inline]`, `[inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 706 of file ios_base.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::put().

4.626.5.2 template<typename _CharT, typename _Traits> void std::basic_ostream< _CharT, _Traits >::_M_write (const char_type ∗ *__s*, streamsize *__n*) `[inline]`, `[inherited]`

Core write functionality, without sentry.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Definition at line 311 of file ostream.

Referenced by std::basic_ostream< _CharT, _Traits >::write().

4.626.5.3 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::bad ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 205 of file basic_ios.h.

4.626.5.4 template<typename _CharT , typename _Traits > void basic_ios< _CharT, _Traits >::clear (iostate *__state* = goodbit) [inherited]

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic_ios.tcc.

Referenced by std::basic_ios< char, _Traits >::exceptions(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.626.5.5 template<typename _CharT , typename _Traits > basic_ios< _CharT, _Traits > & basic_ios< _CharT, _Traits >::copyfmt (const basic_ios< _CharT, _Traits > & *__rhs*) [inherited]

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().

Definition at line 63 of file basic_ios.tcc.

References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.626.5.6 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 184 of file basic_ios.h.

4.626.5.7 template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 216 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.626.5.8 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions (iostate __except) [inline], [inherited]

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (
      __gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 251 of file basic_ios.h.

4.626.5.9 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Definition at line 195 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::operator void ∗(), std::basic_ios< char, _Traits >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::regex_traits< _Ch_type >::value().

4.626.5.10 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 364 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< char, _Traits >::fill().

4.626.5.11 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::fill (char_type __ch) [inline], [inherited]

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 384 of file basic_ios.h.

4.626.5.12 fmtflags std::ios_base::flags ( ) const [inline], [inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 551 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.626.5.13 fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline], [inherited]

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

Definition at line 562 of file ios_base.h.

4.626.5.14 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::flush ( ) `[inherited]`

Synchronizing the stream buffer.

Returns

∗this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::flush().

4.626.5.15 locale std::ios_base::getloc ( ) const `[inline]`, `[inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 695 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::ws().

4.626.5.16 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::good ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.

Definition at line 174 of file basic_ios.h.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.626.5.17 template<typename _CharT , typename _Traits > locale basic_ios< _CharT, _Traits >::imbue (const locale & __loc) [inherited]

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Definition at line 114 of file basic_ios.tcc.

References std::ios_base::imbue().

Referenced by std::operator<<().

4.626.5.18 template<typename _CharT, typename _Traits> void basic_ios< _CharT, _Traits >::init (basic_streambuf< _CharT, _Traits > * __sb) [protected], [inherited]

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic_ios.tcc.

Referenced by std::basic_fstream< _CharT, _Traits >::basic_fstream(), std::basic_ifstream< _CharT, _Traits >::basic_ifstream(), std::basic_ios< char, _Traits >::basic_ios(), std::basic_istream< char >::basic_istream(), std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream(), std::basic_ofstream< _CharT, _Traits >::basic_ofstream(), std::basic_ostream< char >::basic_ostream(), std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream(), and std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream().

4.626.5.19 long& std::ios_base::iword (int __ix) [inline], [inherited]

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 741 of file ios_base.h.

4.626.5.20 template<typename _CharT, typename _Traits> char **std::basic_ios**< _CharT, _Traits >::narrow (**char_type** *__c*, char *__dfault*) const `[inline]`, `[inherited]`

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Additional l10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html

Definition at line 424 of file basic_ios.h.

4.626.5.21 template<typename _CharT, typename _Traits> **std::basic_ios**< _CharT, _Traits >::operator void ∗ ( ) const `[inline]`, `[inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 115 of file basic_ios.h.

4.626.5.22 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::operator! ( ) const `[inline]`, `[inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

Definition at line 119 of file basic_ios.h.

4.626.5.23 template<typename _CharT, typename _Traits> **__ostream_type& std::basic_ostream**< _CharT, _Traits >::operator<< (**__ostream_type** &(∗)(**__ostream_type** &) *__pf*) `[inline]`, `[inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

Definition at line 108 of file ostream.

4.626.5.24 template<typename _CharT, typename _Traits> **__ostream_type& std::basic_ostream**< _CharT, _Traits >::operator<< (**__ios_type** &(∗)(**__ios_type** &) *__pf*) `[inline]`, `[inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

Definition at line 117 of file ostream.

4.626.5.25 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (ios_base &(*)(ios_base &) __pf) [inline], [inherited]

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

Definition at line 127 of file ostream.

4.626.5.26 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 166 of file ostream.

4.626.5.27 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 170 of file ostream.

4.626.5.28 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (bool __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 174 of file ostream.

4.626.5.29 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (short __n) [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 92 of file ostream.tcc.

References std::ios_base::basefield, std::ios_base::flags(), std::ios_base::hex, and std::ios_base::oct.

4.626.5.30 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned short __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 181 of file ostream.

4.626.5.31 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (int __n) [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 106 of file ostream.tcc.

References std::ios_base::basefield, std::ios_base::flags(), std::ios_base::hex, and std::ios_base::oct.

4.626.5.32 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned int __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 192 of file ostream.

4.626.5.33 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 201 of file ostream.

4.626.5.34 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 205 of file ostream.

4.626.5.35 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (double __f) [inline], [inherited]

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 220 of file ostream.

4.626.5.36 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (float *__f*) [inline], [inherited]

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file ostream.

4.626.5.37 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long double *__f*) [inline], [inherited]

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file ostream.

4.626.5.38 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (const void * *__p*) [inline], [inherited]

Pointer arithmetic inserters.

Parameters

__p	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file ostream.

4.626.5.39 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (__streambuf_type * __sb) `[inherited]`

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.626.5.40 streamsize std::ios_base::precision ( ) const `[inline]`, `[inherited]`

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 621 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

4.626.5.41 streamsize std::ios_base::precision (streamsize __prec) `[inline]`, `[inherited]`

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 630 of file ios_base.h.

4.626.5.42 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::put (char_type __c) [inherited]

Simple insertion.

Parameters

__c	The character to insert.

Returns

∗this

Tries to insert `__c`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::endl(), and std::ends().

4.626.5.43 void∗& std::ios_base::pword (int __ix) [inline], [inherited]

Access to void pointer array.

Parameters

__ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 762 of file ios_base.h.

4.626.5.44 template<typename _CharT, typename _Traits> basic_streambuf< _CharT, _Traits > ∗ basic_ios< _CharT, _Traits >::rdbuf (basic_streambuf< _CharT, _Traits > ∗ __sb) [inherited]

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.626.5.45 template<typename _CharT, typename _Traits, typename _Alloc> __stringbuf_type* **std::basic_ostringstream**< _CharT, _Traits, _Alloc >::rdbuf ( ) const `[inline]`

Accessing the underlying buffer.

Returns

The current basic_stringbuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

Definition at line 463 of file sstream.

4.626.5.46 template<typename _CharT, typename _Traits> **iostate std::basic_ios**< _CharT, _Traits >::rdstate ( ) const `[inline]`, `[inherited]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 131 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::eof(), std::basic_ios< char, _Traits >::fail(), std::basic_ios< char, _Traits >::good(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.626.5.47 void std::ios_base::register_callback (**event_callback** *__fn*, int *__index*) `[inherited]`

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.626.5.48 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::seekp (pos_type __pos) [inherited]

Changing the current write position.

Parameters

__pos	A file position object.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file ostream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.626.5.49 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::seekp (off_type __off, ios_base::seekdir __dir) [inherited]

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.

Definition at line 290 of file ostream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.626.5.50 fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline], [inherited]

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 578 of file ios_base.h.

Referenced by std::dec(), std::fixed(), std::hex(), std::left(), std::oct(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

4.626.5.51 fmtflags std::ios_base::setf (fmtflags *__fmtfl,* fmtflags *__mask*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* `&` *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 595 of file ios_base.h.

4.626.5.52 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate *__state*) `[inline]`, `[inherited]`

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.

Definition at line 151 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.626.5.53 template<typename _CharT, typename _Traits, typename _Alloc> __string_type std::basic_ostringstream< _CharT, _Traits, _Alloc >::str ( ) const `[inline]`

Copying out the string buffer.

Returns

`rdbuf()->str()`

Definition at line 471 of file sstream.

Referenced by std::operator<<().

4.626.5.54 template<typename _CharT, typename _Traits, typename _Alloc> void std::basic_ostringstream< _CharT, _Traits, _Alloc >::str (const __string_type & *__s*) [inline]

Setting a new buffer.

Parameters

__s	The string to use as a new sequence.

Calls `rdbuf()->str(s).`

Definition at line 481 of file sstream.

4.626.5.55 static bool std::ios_base::sync_with_stdio (bool *__sync* = true) [static], [inherited]

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt1` `html`

4.626.5.56 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits >::pos_type basic_ostream< _CharT, _Traits >::tellp ( ) [inherited]

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out).`

Definition at line 237 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::rdbuf().

4.626.5.57 template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const [inline], [inherited]

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 289 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.626.5.58 template<typename _CharT, typename _Traits> basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (basic_ostream< _CharT, _Traits > * *__tiestr*) `[inline]`, `[inherited]`

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

Definition at line 301 of file basic_ios.h.

4.626.5.59 void std::ios_base::unsetf (fmtflags *__mask*) `[inline]`, `[inherited]`

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

Definition at line 610 of file ios_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

4.626.5.60 template<typename _CharT, typename _Traits> char_type std::basic_ios< _CharT, _Traits >::widen (char *__c*) const `[inline]`, `[inherited]`

Widens characters.

Parameters

__c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

Definition at line 443 of file basic_ios.h.

Referenced by std::endl(), std::basic_ios< char, _Traits >::fill(), std::basic_istream< char >::get(), std::basic_istream< char >::getline(), std::getline(), std::tr2::operator>>(), and std::operator>>().

4.626.5.61 streamsize std::ios_base::width ( ) const [inline], [inherited]

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 644 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), and std::operator>>().

4.626.5.62 streamsize std::ios_base::width (streamsize __wide) [inline], [inherited]

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 653 of file ios_base.h.

4.626.5.63 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::write (const char_type ∗ __s, streamsize __n) [inherited]

Character string insertion.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Returns

∗this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted

- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file ostream.tcc.

References std::basic_ostream< _CharT, _Traits >::_M_write(), and std::ios_base::badbit.

4.626.5.64 static int std::ios_base::xalloc ( ) throw () [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.626.6 Member Data Documentation

4.626.6.1 const fmtflags std::ios_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 310 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.626.6.2 const openmode std::ios_base::app [static], [inherited]

Seek to end before each write.

Definition at line 364 of file ios_base.h.

4.626.6.3 const openmode std::ios_base::ate [static], [inherited]

Open and seek to end immediately after opening.

Definition at line 367 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.626.6.4 const iostate std::ios_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 334 of file ios_base.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::fail(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), std::basic_ostream< _CharT, _Traits >::write(), and std::basic_ostream< _CharT, _Traits >::sentry::∼sentry().

4.626.6.5 const **fmtflags** std::ios_base::basefield `[static]`, `[inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 313 of file ios_base.h.

Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::hex(), std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.626.6.6 const **seekdir** std::ios_base::beg `[static]`, `[inherited]`

Request a seek relative to the beginning of the stream.

Definition at line 396 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

4.626.6.7 const **openmode** std::ios_base::binary `[static]`, `[inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html`.

Definition at line 372 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

4.626.6.8 const **fmtflags** std::ios_base::boolalpha `[static]`, `[inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 258 of file ios_base.h.

Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.626.6.9 const **seekdir** std::ios_base::cur `[static]`, `[inherited]`

Request a seek relative to the current position within the sequence.

Definition at line 399 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

4.626.6.10 const **fmtflags** std::ios_base::dec `[static]`, `[inherited]`

Converts integer input or generates integer output in decimal base.

Definition at line 261 of file ios_base.h.

Referenced by std::dec().

4.626.6.11 const seekdir std::ios_base::end [static], [inherited]

Request a seek relative to the current end of the sequence.

Definition at line 402 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.626.6.12 const iostate std::ios_base::eofbit [static], [inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 337 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::eof(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.626.6.13 const iostate std::ios_base::failbit [static], [inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 342 of file ios_base.h.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::fail(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.626.6.14 const fmtflags std::ios_base::fixed [static], [inherited]

Generate floating-point output in fixed-point notation.

Definition at line 264 of file ios_base.h.

Referenced by std::fixed().

4.626.6.15 const fmtflags std::ios_base::floatfield [static], [inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 316 of file ios_base.h.

Referenced by std::fixed(), and std::scientific().

4.626.6.16 const iostate std::ios_base::goodbit [static], [inherited]

Indicates all is well.

Definition at line 345 of file ios_base.h.

4.626.6.17 const **fmtflags** std::ios_base::hex `[static]`, `[inherited]`

Converts integer input or generates integer output in hexadecimal base.

Definition at line 267 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.626.6.18 const **openmode** std::ios_base::in `[static]`, `[inherited]`

Open for input. Default for `ifstream` and fstream.

Definition at line 375 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.626.6.19 const **fmtflags** std::ios_base::internal `[static]`, `[inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 272 of file ios_base.h.

Referenced by std::internal().

4.626.6.20 const **fmtflags** std::ios_base::left `[static]`, `[inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 276 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.626.6.21 const **fmtflags** std::ios_base::oct `[static]`, `[inherited]`

Converts integer input or generates integer output in octal base.

Definition at line 279 of file ios_base.h.

Referenced by std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.626.6.22 const openmode std::ios_base::out `[static]`, `[inherited]`

Open for output. Default for `ofstream` and fstream.

Definition at line 378 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.626.6.23 const fmtflags std::ios_base::right `[static]`, `[inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 283 of file ios_base.h.

Referenced by std::right().

4.626.6.24 const fmtflags std::ios_base::scientific `[static]`, `[inherited]`

Generates floating-point output in scientific notation.

Definition at line 286 of file ios_base.h.

Referenced by std::scientific().

4.626.6.25 const fmtflags std::ios_base::showbase `[static]`, `[inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 290 of file ios_base.h.

Referenced by std::noshowbase(), and std::showbase().

4.626.6.26 const fmtflags std::ios_base::showpoint `[static]`, `[inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 294 of file ios_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

4.626.6.27 const fmtflags std::ios_base::showpos `[static]`, `[inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 297 of file ios_base.h.

Referenced by std::noshowpos(), and std::showpos().

4.626.6.28 const fmtflags std::ios_base::skipws `[static]`, `[inherited]`

Skips leading white space before certain input operations.

Definition at line 300 of file ios_base.h.

Referenced by std::noskipws(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::skipws().

4.626.6.29 const openmode std::ios_base::trunc `[static]`, `[inherited]`

Open for input. Default for `ofstream`.

Definition at line 381 of file ios_base.h.

4.626.6.30 const fmtflags std::ios_base::unitbuf [static], [inherited]

Flushes output after each output operation.

Definition at line 303 of file ios_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic_ostream< _CharT, _Traits >::sentry::∼sentry().

4.626.6.31 const fmtflags std::ios_base::uppercase [static], [inherited]

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 307 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

4.627.1 Detailed Description

template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>class std::basic_regex< _Ch_type, _Rx_traits >

Objects of specializations of this class represent regular expressions constructed from sequences of character type `_Ch_type`.

Storage for the regular expression is allocated and deallocated as necessary by the member functions of this class.

Definition at line 335 of file regex.h.

4.627.2 Constructor & Destructor Documentation

4.627.2.1 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> std::basic_regex< _Ch_type, _Rx_traits >::basic_regex ( ) `[inline]`

Constructs a basic regular expression that does not match any character sequence.

Definition at line 367 of file regex.h.

4.627.2.2 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> **std::basic_regex**< _Ch_type, _Rx_traits >::**basic_regex** (const _Ch_type * *__p,* flag_type *__f* = `ECMAScript`) `[inline]`, `[explicit]`

Constructs a basic regular expression from the sequence [__p, __p + char_traits<_Ch_type>::length(__p)) interpreted according to the flags in __`f`.

Parameters

__p	A pointer to the start of a C-style null-terminated string containing a regular expression.
__f	Flags indicating the syntax rules and options.

Exceptions

regex_error	if __`p` is not a valid regular expression.

Definition at line 385 of file regex.h.

4.627.2.3 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> **std::basic_regex**< _Ch_type, _Rx_traits >::**basic_regex** (const _Ch_type * *__p,* std::size_t *__len,* flag_type *__f*) `[inline]`

Constructs a basic regular expression from the sequence [p, p + len) interpreted according to the flags in `f`.

Parameters

__p	A pointer to the start of a string containing a regular expression.
__len	The length of the string containing the regular expression.
__f	Flags indicating the syntax rules and options.

Exceptions

regex_error	if __`p` is not a valid regular expression.

Definition at line 403 of file regex.h.

4.627.2.4 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> **std::basic_regex**< _Ch_type, _Rx_traits >::**basic_regex** (const **basic_regex**< _Ch_type, _Rx_traits > & *__rhs*) `[inline]`

Copy-constructs a basic regular expression.

Parameters

__rhs	A `regex` object.

Definition at line 413 of file regex.h.

4.627.2.5 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> **std::basic_regex**< _Ch_type, _Rx_traits >::**basic_regex** (const **basic_regex**< _Ch_type, _Rx_traits > && *__rhs*) `[inline]`, `[noexcept]`

Move-constructs a basic regular expression.

Parameters

__rhs	A `regex` object.

Definition at line 423 of file regex.h.

4.627.2.6 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> template<typename _Ch_traits , typename _Ch_alloc > std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (const std::basic_string< _Ch_type, _Ch_traits, _Ch_alloc > & __s, flag_type __f = `ECMAScript`) `[inline]`, `[explicit]`

Constructs a basic regular expression from the string `s` interpreted according to the flags in `f`.

Parameters

__s	A string containing a regular expression.
__f	Flags indicating the syntax rules and options.

Exceptions

regex_error	if __`s` is not a valid regular expression.

Definition at line 439 of file regex.h.

4.627.2.7 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> template<typename _InputIterator > std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (_InputIterator __first, _InputIterator __last, flag_type __f = `ECMAScript`) `[inline]`

Constructs a basic regular expression from the range [first, last) interpreted according to the flags in `f`.

Parameters

__first	The start of a range containing a valid regular expression.
__last	The end of a range containing a valid regular expression.
__f	The format flags of the regular expression.

Exceptions

regex_error	if [__first, __last) is not a valid regular expression.

Definition at line 461 of file regex.h.

4.627.2.8 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (initializer_list< _Ch_type > __l, flag_type __f = `ECMAScript`) `[inline]`

Constructs a basic regular expression from an initializer list.

Parameters

__l	The initializer list.
__f	The format flags of the regular expression.

Exceptions

regex_error	if __`l` is not a valid regular expression.

Definition at line 475 of file regex.h.

4.627.2.9 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> std::basic_regex< _Ch_type, _Rx_traits >::∼basic_regex ( ) [inline]

Destroys a basic regular expression.

Definition at line 485 of file regex.h.

4.627.3 Member Function Documentation

4.627.3.1 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (const basic_regex< _Ch_type, _Rx_traits > & __rhs) [inline]

the real assignment operator.

Parameters

__rhs	Another regular expression object.

Definition at line 531 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::swap().

Referenced by std::basic_regex< _Ch_type, _Rx_traits >::operator=().

4.627.3.2 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (basic_regex< _Ch_type, _Rx_traits > && __rhs) [inline], [noexcept]

The move-assignment operator.

Parameters

__rhs	Another regular expression object.

Definition at line 544 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::swap().

4.627.3.3 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (const _Ch_type ∗ __p, flag_type __flags = ECMAScript) [inline]

Assigns a new regular expression to a regex object from a C-style null-terminated string containing a regular expression pattern.

Parameters

__p	A pointer to a C-style null-terminated string containing a regular expression pattern.
__flags	Syntax option flags.

Exceptions

regex_error	if __p does not contain a valid regular expression pattern interpreted according to `__flags`. If regex_error is thrown, ∗this remains unchanged.

Definition at line 565 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::assign().

Referenced by std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.627.3.4 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (const _Ch_type * __p, std::size_t __len, flag_type __flags) [inline]

Assigns a new regular expression to a regex object from a C-style string containing a regular expression pattern.

Parameters

__p	A pointer to a C-style string containing a regular expression pattern.
__len	The length of the regular expression pattern string.
__flags	Syntax option flags.

Exceptions

regex_error	if p does not contain a valid regular expression pattern interpreted according to `__flags`. If regex_error is thrown, *this remains unchanged.

Definition at line 582 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::assign().

Referenced by std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.627.3.5 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> template<typename _Ch_typeraits , typename _Alloc > basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (const basic_string< _Ch_type, _Ch_typeraits, _Alloc > & __s, flag_type __flags = `ECMAScript`) [inline]

Assigns a new regular expression to a regex object from a string containing a regular expression pattern.

Parameters

__s	A string containing a regular expression pattern.
__flags	Syntax option flags.

Exceptions

regex_error	if __s does not contain a valid regular expression pattern interpreted according to `__flags`. If regex_error is thrown, *this remains unchanged.

Definition at line 598 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::swap().

4.627.3.6 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> template<typename _InputIterator > basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (_InputIterator __first, _InputIterator __last, flag_type __flags = `ECMAScript`) [inline]

Assigns a new regular expression to a regex object.

Parameters

__first	The start of a range containing a valid regular expression.
__last	The end of a range containing a valid regular expression.
__flags	Syntax option flags.

Exceptions

regex_error	if p does not contain a valid regular expression pattern interpreted according to `__flags`. If regex_error is thrown, the object remains unchanged.

Definition at line 621 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::assign().

Referenced by std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.627.3.7 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (initializer_list< _Ch_type > *__l*, flag_type *__flags* = `ECMAScript`) `[inline]`

Assigns a new regular expression to a regex object.

Parameters

__l	An initializer list representing a regular expression.
__flags	Syntax option flags.

Exceptions

regex_error	if `__l` does not contain a valid regular expression pattern interpreted according to `__flags`. If regex_error is thrown, the object remains unchanged.

Definition at line 637 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::assign().

Referenced by std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.627.3.8 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> flag_type std::basic_regex< _Ch_type, _Rx_traits >::flags ( ) const `[inline]`

Gets the flags used to construct the regular expression or in the last call to assign().

Definition at line 654 of file regex.h.

Referenced by std::basic_regex< _Ch_type, _Rx_traits >::operator=().

4.627.3.9 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> locale_type std::basic_regex< _Ch_type, _Rx_traits >::getloc ( ) const `[inline]`

Gets the locale currently imbued in the regular expression object.

Definition at line 672 of file regex.h.

4.627.3.10 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> locale_type std::basic_regex< _Ch_type, _Rx_traits >::imbue (locale_type *__loc*) `[inline]`

Imbues the regular expression object with the given locale.

Parameters

__loc	A locale.

Definition at line 664 of file regex.h.

4.627.3.11 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> unsigned int **std::basic_regex**< _Ch_type, _Rx_traits >::mark_count ( ) const [inline]

Gets the number of marked subexpressions within the regular expression.

Definition at line 646 of file regex.h.

4.627.3.12 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> **basic_regex**& **std::basic_regex**< _Ch_type, _Rx_traits >::operator= (const **basic_regex**< _Ch_type, _Rx_traits > & *__rhs*) [inline]

Assigns one regular expression to another.

Definition at line 492 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.627.3.13 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> **basic_regex**& **std::basic_regex**< _Ch_type, _Rx_traits >::operator= (**basic_regex**< _Ch_type, _Rx_traits > && *__rhs*) [inline], [noexcept]

Move-assigns one regular expression to another.

Definition at line 499 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.627.3.14 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> **basic_regex**& **std::basic_regex**< _Ch_type, _Rx_traits >::operator= (const _Ch_type * *__p*) [inline]

Replaces a regular expression with a new one constructed from a C-style null-terminated string.

Parameters

__p	A pointer to the start of a null-terminated C-style string containing a regular expression.

Definition at line 510 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::assign(), and std::basic_regex< _Ch_type, _Rx_traits >::flags().

4.627.3.15 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> template<typename _Ch_typeraits , typename _Alloc > **basic_regex**& **std::basic_regex**< _Ch_type, _Rx_traits >::operator= (const **basic_string**< _Ch_type, _Ch_typeraits, _Alloc > & *__s*) [inline]

Replaces a regular expression with a new one constructed from a string.

Parameters

__s	A pointer to a string containing a regular expression.

Definition at line 521 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::assign(), and std::basic_regex< _Ch_type, _Rx_traits >::flags().

4.627.3.16 template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>> void **std::basic_regex**< _Ch_type, _Rx_traits >::swap (**basic_regex**< _Ch_type, _Rx_traits > & *__rhs*) [inline]

Swaps the contents of two regular expression objects.

Parameters

__rhs	Another regular expression object.

Definition at line 682 of file regex.h.

Referenced by std::basic_regex< _Ch_type, _Rx_traits >::assign(), and std::swap().

4.628.1 Detailed Description

template<typename _CharT, typename _Traits>class std::basic_streambuf< _CharT, _Traits >

The actual work of input and output (interface).

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This is a base class. Derived stream buffers each control a pair of character sequences: one for input, and one for output.

Section [27.5.1] of the standard describes the requirements and behavior of stream buffer classes. That section (three paragraphs) is reproduced here, for simplicity and accuracy.

1. Stream buffers can impose various constraints on the sequences they control. Some constraints are:
   - The controlled input sequence can be not readable.
   - The controlled output sequence can be not writable.
   - The controlled sequences can be associated with the contents of other representations for character sequences, such as external files.

   - The controlled sequences can support operations *directly* to or from associated sequences.
   - The controlled sequences can impose limitations on how the program can read characters from a sequence, write characters to a sequence, put characters back into an input sequence, or alter the stream position.

2. Each sequence is characterized by three pointers which, if non-null, all point into the same `charT` array object. The array object represents, at any moment, a (sub)sequence of characters from the sequence. Operations performed on a sequence alter the values stored in these pointers, perform reads and writes directly to or from associated sequences, and alter *the stream position* and conversion state as needed to maintain this subsequence relationship. The three pointers are:

   - the *beginning pointer*, or lowest element address in the array (called *xbeg* here);
   - the *next pointer*, or next element address that is a current candidate for reading or writing (called *xnext* here);
   - the *end pointer*, or first element address beyond the end of the array (called *xend* here).

3. The following semantic constraints shall always apply for any set of three pointers for a sequence, using the pointer names given immediately above:

   - If *xnext* is not a null pointer, then *xbeg* and *xend* shall also be non-null pointers into the same `charT` array, as described above; otherwise, *xbeg* and *xend* shall also be null.
   - If *xnext* is not a null pointer and *xnext* $<$ *xend* for an output sequence, then a *write position* is available. In this case, $*$*xnext* shall be assignable as the next element to write (to put, or to store a character value, into the sequence).
   - If *xnext* is not a null pointer and *xbeg* $<$ *xnext* for an input sequence, then a *putback position* is available. In this case, *xnext*[-1] shall have a defined value and is the next (preceding) element to store a character that is put back into the input sequence.
   - If *xnext* is not a null pointer and *xnext*$<$ *xend* for an input sequence, then a *read position* is available. In this case, $*$*xnext* shall have a defined value and is the next element to read (to get, or to obtain a character value, from the sequence).

4.628.2 Member Typedef Documentation

4.628.2.1 template<typename _CharT, typename _Traits> typedef **basic_streambuf<char_type, traits_type>** **std::basic_streambuf< _CharT, _Traits >::__streambuf_type**

This is a non-standard type.

Definition at line 138 of file streambuf.

4.628.2.2 template<typename _CharT, typename _Traits> typedef _CharT **std::basic_streambuf< _CharT, _Traits >::char_type**

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 129 of file streambuf.

4.628.2.3 template<typename _CharT, typename _Traits> typedef traits_type::int_type **std::basic_streambuf< _CharT, _Traits >::int_type**

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 131 of file streambuf.

4.628.2.4 template<typename _CharT, typename _Traits> typedef traits_type::off_type **std::basic_streambuf**< _CharT, _Traits >**::off_type**

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 133 of file streambuf.

4.628.2.5 template<typename _CharT, typename _Traits> typedef traits_type::pos_type **std::basic_streambuf**< _CharT, _Traits >**::pos_type**

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 132 of file streambuf.

4.628.2.6 template<typename _CharT, typename _Traits> typedef _Traits **std::basic_streambuf**< _CharT, _Traits >**::traits_type**

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 130 of file streambuf.

4.628.3 Constructor & Destructor Documentation

4.628.3.1 template<typename _CharT, typename _Traits> virtual **std::basic_streambuf**< _CharT, _Traits >::∼**basic_streambuf ( )** `[inline]`, `[virtual]`

Destructor deallocates no buffer space.

Definition at line 197 of file streambuf.

4.628.3.2 template<typename _CharT, typename _Traits> **std::basic_streambuf**< _CharT, _Traits >::**basic_streambuf ( )** `[inline]`, `[protected]`

Base constructor.

Only called from derived constructors, and sets up all the buffer data to zero, including the pointers described in the basic_streambuf class description. Note that, as a result,

- the class starts with no read nor write positions available,
- this is not an error

Definition at line 463 of file streambuf.

4.628.4 Member Function Documentation

4.628.4.1 template<typename _CharT, typename _Traits> **char_type**∗ **std::basic_streambuf**< _CharT, _Traits >::eback ( ) const `[inline]`, `[protected]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence

- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 482 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< char_type, traits_type >::sputbackc(), and std::basic_streambuf< char_type, traits_type >::sungetc().

4.628.4.2 template<typename _CharT, typename _Traits> **char_type∗ std::basic_streambuf**< _CharT, _Traits >::egptr ( ) const [inline], [protected]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 488 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_streambuf< char_type, traits_type >::in_avail(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.628.4.3 template<typename _CharT, typename _Traits> **char_type∗ std::basic_streambuf**< _CharT, _Traits >::epptr ( ) const [inline], [protected]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 535 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc().

4.628.4.4 template<typename _CharT, typename _Traits> void **std::basic_streambuf**< _CharT, _Traits >::gbump (int *__n*) [inline], [protected]

Moving the read position.

Parameters

__n	The delta by which to move.

This just advances the read position without returning any data.

Definition at line 498 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), and std::basic_streambuf< char_type, traits_type >::uflow().

4.628.4.5 template<typename _CharT, typename _Traits> **locale std::basic_streambuf**< _CharT, _Traits >::getloc ( ) const `[inline]`

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 226 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubimbue().

4.628.4.6 template<typename _CharT, typename _Traits> **char_type* std::basic_streambuf**< _CharT, _Traits >::gptr ( ) const `[inline]`, `[protected]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 485 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< char_type, traits_type >::in_avail(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), and std::basic_streambuf< char_type, traits_type >::uflow().

4.628.4.7 template<typename _CharT, typename _Traits> virtual void **std::basic_streambuf**< _CharT, _Traits >::imbue (const **locale** & *__loc*) `[inline]`, `[protected]`, `[virtual]`

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.

Definition at line 576 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubimbue().

4.628.4.8 template<typename _CharT, typename _Traits> **streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( )** `[inline]`

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 284 of file streambuf.

4.628.4.9 template<typename _CharT, typename _Traits> virtual **int_type std::basic_streambuf< _CharT, _Traits >::overflow (int_type *__c* =** `traits_type::eof()` **)** `[inline]`, `[protected]`, `[virtual]`

Consumes data from the buffer; writes to the controlled sequence.

Parameters

__c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually *__c*, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *__c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, std::basic_stringbuf< _CharT, _Traits, _Alloc >, and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.

Definition at line 768 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc().

4.628.4.10 template<typename _CharT, typename _Traits> virtual **int_type std::basic_streambuf**< _CharT, _Traits >::pbackfail (**int_type** *__c* = `traits_type::eof()`) `[inline]`, `[protected]`, `[virtual]`

Tries to back up the input sequence.

Parameters

__c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, std::basic_stringbuf< _CharT, _Traits, _Alloc >, and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.

Definition at line 724 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputbackc(), and std::basic_streambuf< char_type, traits_type >::sungetc().

4.628.4.11 template<typename _CharT, typename _Traits> **char_type**∗ **std::basic_streambuf**< _CharT, _Traits >::pbase ( ) const `[inline]`, `[protected]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 529 of file streambuf.

Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.628.4.12 template<typename _CharT, typename _Traits> void **std::basic_streambuf**< _CharT, _Traits >::pbump (int *__n*) `[inline]`, `[protected]`

Moving the write position.

Parameters

__n	The delta by which to move.

This just advances the write position without returning any data.

Definition at line 545 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc().

4.628.4.13 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::pptr ( ) const [inline], [protected]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 532 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.628.4.14 template<typename _CharT, typename _Traits> locale std::basic_streambuf< _CharT, _Traits >::pubimbue (const locale & *__loc*) [inline]

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).

Definition at line 209 of file streambuf.

4.628.4.15 template<typename _CharT, typename _Traits> pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (off_type *__off*, ios_base::seekdir *__way*, ios_base::openmode *__mode* = ios_base::in | ios_base::out) [inline]

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.

Definition at line 251 of file streambuf.

4.628.4.16 template<typename _CharT, typename _Traits> pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (pos_type *__sp*, ios_base::openmode *__mode* = ios_base::in | ios_base::out) [inline]

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.

Definition at line 263 of file streambuf.

4.628.4.17 template<typename _CharT, typename _Traits> basic_streambuf* std::basic_streambuf< _CharT, _Traits >::pubsetbuf (char_type * *__s*, streamsize *__n*) [inline]

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 239 of file streambuf.

4.628.4.18 template<typename _CharT, typename _Traits> int std::basic_streambuf< _CharT, _Traits >::pubsync ( ) [inline]

Calls virtual sync function.

Definition at line 271 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::sync().

4.628.4.19 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( ) [inline]

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 316 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::istreambuf_iterator< _CharT, _Traits >::operator++(), and std::basic_streambuf< char_type, traits_type >::snextc().

4.628.4.20 template<typename _CharT, typename _Traits> virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekoff (off_type , ios_base::seekdir , ios_base::openmode = ios_base::in | ios_base::out) [inline], [protected], [virtual]

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and std::basic_stringbuf< _CharT, _Traits, _Alloc >.

Definition at line 602 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubseekoff().

4.628.4.21 template<typename _CharT, typename _Traits> virtual **pos_type std::basic_streambuf**< _CharT, _Traits >::seekpos (**pos_type** , **ios_base::openmode** = ios_base::in | ios_base::out) `[inline]`, `[protected]`, `[virtual]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and std::basic_stringbuf< _CharT, _Traits, _Alloc >.

Definition at line 614 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubseekpos().

4.628.4.22 template<typename _CharT, typename _Traits> virtual **basic_streambuf<char_type,_Traits>*** **std::basic_streambuf**< _CharT, _Traits >::setbuf (**char_type** * , **streamsize**) `[inline]`, `[protected]`, `[virtual]`

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html` for more on this function.

Note

Base class version does nothing, returns `this`.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and std::basic_stringbuf< _CharT, _Traits, _Alloc >.

Definition at line 591 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubsetbuf().

4.628.4.23 template<typename _CharT, typename _Traits> void **std::basic_streambuf**< _CharT, _Traits >::setg (**char_type** * *__gbeg*, **char_type** * *__gnext*, **char_type** * *__gend*) `[inline]`, `[protected]`

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Definition at line 509 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), and std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.628.4.24 template<typename _CharT, typename _Traits> void std::basic_streambuf< _CharT, _Traits >::setp (char_type ∗ *__pbeg,* char_type ∗ *__pend*) `[inline]`, `[protected]`

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Definition at line 555 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.628.4.25 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sgetc ( ) `[inline]`

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 338 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::basic_streambuf< char_type, traits_type >::snextc().

4.628.4.26 template<typename _CharT, typename _Traits> streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (char_type ∗ *__s,* streamsize *__n*) `[inline]`

Entry point for xsgetn.

Parameters

__s	A buffer area.
__n	A count.

Returns xsgetn(__s,__n). The effect is to fill __*s*[0] through __*s*[__n-1] with characters from the input sequence, if possible.

Definition at line 357 of file streambuf.

4.628.4.27 template<typename _CharT, typename _Traits> virtual **streamsize std::basic_streambuf< _CharT, _Traits >::showmanyc ( )** `[inline]`, `[protected]`, `[virtual]`

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.
The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*
The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and std::basic_stringbuf< _CharT, _Traits, _Alloc >.

Definition at line 649 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::in_avail().

4.628.4.28 template<typename _CharT, typename _Traits> **int_type std::basic_streambuf< _CharT, _Traits >::snextc ( )** `[inline]`

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 298 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.628.4.29 template<typename _CharT, typename _Traits> **int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (char_type *__c*)** `[inline]`

Pushing characters back into the input stream.

Parameters

__c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but *__c* is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be *__c*.

Definition at line 372 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::putback().

4.628.4.30 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sputc (char_type __c) [inline]

Entry point for all single-character output functions.

Parameters

__c	A character to output.

Returns

__c, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *__c* in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Definition at line 424 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), and std::ostreambuf_iterator< _CharT, _Traits >::operator=().

4.628.4.31 template<typename _CharT, typename _Traits> streamsize std::basic_streambuf< _CharT, _Traits >::sputn (const char_type * __s, streamsize __n) [inline]

Entry point for all single-character output functions.

Parameters

__s	A buffer read area.
__n	A count.

One of two public output functions.

Returns xsputn(__s,__n). The effect is to write *__s*[0] through *__s*[__n-1] to the output sequence, if possible.

Definition at line 450 of file streambuf.

4.628.4.32 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sungetc ( ) [inline]

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.

Definition at line 397 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::unget().

4.628.4.33 template<typename _CharT, typename _Traits> virtual int **std::basic_streambuf**< _CharT, _Traits >::sync (void) `[inline]`, `[protected]`, `[virtual]`

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.

Definition at line 627 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubsync().

4.628.4.34 template<typename _CharT, typename _Traits> virtual **int_type std::basic_streambuf**< _CharT, _Traits >::uflow ( ) `[inline]`, `[protected]`, `[virtual]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.

Definition at line 700 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sbumpc().

4.628.4.35 template<typename _CharT, typename _Traits> virtual **int_type std::basic_streambuf**< _CharT, _Traits >::underflow ( ) `[inline]`, `[protected]`, `[virtual]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html`

Note

Base class version does nothing, returns eof().

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, std::basic_stringbuf< _CharT, _Traits, _Alloc >, and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.

Definition at line 687 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sgetc(), and std::basic_streambuf< char_type, traits_type >::uflow().

4.628.4.36 template<typename _CharT , typename _Traits > streamsize basic_streambuf< _CharT, _Traits >::xsgetn (char_type * __s, streamsize __n) `[protected]`, `[virtual]`

Multiple character extraction.

Parameters

__s	A buffer area.
__n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills __*s*[0] through __*s*[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either __*n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.

Definition at line 46 of file streambuf.tcc.

References std::min().

Referenced by std::basic_streambuf< char_type, traits_type >::sgetn().

4.628.4.37 template<typename _CharT , typename _Traits > streamsize basic_streambuf< _CharT, _Traits >::xsputn (const char_type * __s, streamsize __n) `[protected]`, `[virtual]`

Multiple character insertion.

Parameters

__s	A buffer area.
__n	Maximum number of characters to write.

Returns

The number of characters written.

Writes __*s*[0] through __*s*[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.

Definition at line 80 of file streambuf.tcc.

References std::min().

Referenced by std::basic_streambuf< char_type, traits_type >::sputn().

4.629.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>class std::basic_string< _CharT, _Traits, _Alloc >

Managing sequences of characters and character-like objects.

Template Parameters

_CharT	Type of character
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

Meets the requirements of a `container`, a `reversible container`, and a `sequence`. Of the `optional sequence requirements`, only `push_back`, `at`, and `array` access are supported.

Todo Needs documentation! See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html`

Documentation? What's that? Nathan Myers `ncm@cantrip.org`.

A string looks like this:

```
                                     [_Rep]
                                     _M_length
[basic_string<char_type>]            _M_capacity
_M_dataplus                          _M_refcount
_M_p ---------------->               unnamed array of char_type
```

Where the _M_p points to the first character in the string, and you cast it to a pointer-to-_Rep and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: _Rep::_M_data(), and string::_M_rep(); and the allocation function which gets a block of raw bytes and with room enough and constructs a _Rep object at the front.

The reason you want _M_data pointing to the character array and not the _Rep is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the _Rep for the debugger to use, so users can check the actual string length.)

Note that the _Rep object is a POD so that you can have a static *empty string* _Rep object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string _Rep object.

All but the last paragraph is considered pretty conventional for a C++ string implementation.

Definition at line 112 of file basic_string.h.

4.629.2 Constructor & Destructor Documentation

4.629.2.1 template<typename _CharT, typename _Traits, typename _Alloc> **std::basic_string**< _CharT, _Traits, _Alloc >::**basic_string** ( ) `[inline]`

Default constructor creates an empty string.

Definition at line 437 of file basic_string.h.

Referenced by std::basic_string< char >::substr().

4.629.2.2 template<typename _CharT , typename _Traits , typename _Alloc> **std::basic_string**< _CharT, _Traits, _Alloc >::**basic_string** (const _Alloc & *__a*) `[explicit]`

Construct an empty string using allocator *a*.

Definition at line 178 of file basic_string.tcc.

4.629.2.3 template<typename _CharT , typename _Traits , typename _Alloc> **std::basic_string**< _CharT, _Traits, _Alloc >::**basic_string** (const **basic_string**< _CharT, _Traits, _Alloc > & *__str*)

Construct string with copy of value of *str*.

Parameters

__str	Source string.

Definition at line 170 of file basic_string.tcc.

4.629.2.4 template<typename _CharT , typename _Traits , typename _Alloc> **std::basic_string**< _CharT, _Traits, _Alloc >::**basic_string** (const **basic_string**< _CharT, _Traits, _Alloc > & *__str*, size_type *__pos*, size_type *__n* = **npos**)

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__n	Number of characters to copy (default remainder).

Definition at line 184 of file basic_string.tcc.

4.629.2.5 template<typename _CharT , typename _Traits , typename _Alloc> std::basic_string< _CharT, _Traits, _Alloc >::basic_string (const basic_string< _CharT, _Traits, _Alloc > & *__str,* size_type *__pos,* size_type *__n,* const _Alloc & *__a*)

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__n	Number of characters to copy.
__a	Allocator to use.

Definition at line 194 of file basic_string.tcc.

4.629.2.6 template<typename _CharT, typename _Traits , typename _Alloc> std::basic_string< _CharT, _Traits, _Alloc >::basic_string (const _CharT ∗ *__s,* size_type *__n,* const _Alloc & *__a* = `_Alloc()`)

Construct string initialized by a character array.

Parameters

__s	Source character array.
__n	Number of characters to copy.
__a	Allocator to use (default is default allocator).

NB: *__s* must have at least *__n* characters, '\0' has no special meaning.

Definition at line 206 of file basic_string.tcc.

4.629.2.7 template<typename _CharT, typename _Traits , typename _Alloc> std::basic_string< _CharT, _Traits, _Alloc >::basic_string (const _CharT ∗ *__s,* const _Alloc & *__a* = `_Alloc()`)

Construct string as copy of a C string.

Parameters

__s	Source C string.
__a	Allocator to use (default is default allocator).

Definition at line 213 of file basic_string.tcc.

4.629.2.8 template<typename _CharT, typename _Traits , typename _Alloc> std::basic_string< _CharT, _Traits, _Alloc >::basic_string (size_type *__n,* _CharT *__c,* const _Alloc & *__a* = `_Alloc()`)

Construct string as multiple characters.

Parameters

__n	Number of characters.
__c	Character to use.
__a	Allocator to use (default is default allocator).

Definition at line 220 of file basic_string.tcc.

4.629.2.9 template<typename _CharT, typename _Traits, typename _Alloc> **std::basic_string**< _CharT, _Traits, _Alloc >::**basic_string** (**basic_string**< _CharT, _Traits, _Alloc > && *__str*) [inline], [noexcept]

Move construct string.

Parameters

__str	Source string.

The newly-created string contains the exact contents of *__str*. *__str* is a valid, but unspecified string.

Definition at line 507 of file basic_string.h.

4.629.2.10 template<typename _CharT, typename _Traits , typename _Alloc> **std::basic_string**< _CharT, _Traits, _Alloc >::**basic_string** (**initializer_list**< _CharT > *__l*, const _Alloc & *__a* = _Alloc())

Construct string from an initializer list.

Parameters

__l	std::initializer_list of characters.
__a	Allocator to use (default is default allocator).

Definition at line 235 of file basic_string.tcc.

4.629.2.11 template<typename _CharT , typename _Traits , typename _Alloc> template<typename _InputIterator > **std::basic_string**< _CharT, _Traits, _Alloc >::**basic_string** (_InputIterator *__beg*, _InputIterator *__end*, const _Alloc & *__a* = _Alloc())

Construct string as copy of a range.

Parameters

__beg	Start of range.
__end	End of range.
__a	Allocator to use (default is default allocator).

Definition at line 228 of file basic_string.tcc.

4.629.2.12 template<typename _CharT, typename _Traits, typename _Alloc> **std::basic_string**< _CharT, _Traits, _Alloc >::∼**basic_string** ( ) [inline], [noexcept]

Destroy the string instance.

Definition at line 538 of file basic_string.h.

4.629.3 Member Function Documentation

4.629.3.1 template<typename _CharT , typename _Traits , typename _Alloc > **basic_string**< _CharT, _Traits, _Alloc > & **std::basic_string**< _CharT, _Traits, _Alloc >::append (const **basic_string**< _CharT, _Traits, _Alloc > & *__str*)

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

Definition at line 325 of file basic_string.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::size(), and std::size().

Referenced by std::basic_string< char >::append(), std::collate< _CharT >::do_transform(), std::operator+(), std::basic_string< char >::operator+=(), and std::operator>>().

4.629.3.2 template<typename _CharT , typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (const basic_string< _CharT, _Traits, _Alloc > & *__str*, size_type *__pos*, size_type *__n*)

Append a substring.

Parameters

__str	The string to append.
__pos	Index of the first character of str to append.
__n	The number of characters to append.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *__pos* is not a valid index.

This function appends *__n* characters from *__str* starting at *__pos* to this string. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is appended.

Definition at line 342 of file basic_string.tcc.

References std::size().

4.629.3.3 template<typename _CharT, typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (const _CharT ∗ *__s*, size_type *__n*)

Append a C substring.

Parameters

__s	The C string to append.
__n	The number of characters to append.

Returns

Reference to this string.

Definition at line 298 of file basic_string.tcc.

References std::size().

4.629.3.4 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::append (const _CharT * __s) [inline]

Append a C string.

Parameters

__s	The C string to append.

Returns

Reference to this string.

Definition at line 1006 of file basic_string.h.

4.629.3.5 template<typename _CharT, typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (size_type __n, _CharT __c)

Append multiple characters.

Parameters

__n	The number of characters to append.
__c	The character to use.

Returns

Reference to this string.

Appends __n copies of __c to this string.

Definition at line 281 of file basic_string.tcc.

References std::size().

4.629.3.6 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::append (initializer_list< _CharT > __l) [inline]

Append an initializer_list of characters.

Parameters

__l	The initializer_list of characters to append.

Returns

Reference to this string.

Definition at line 1030 of file basic_string.h.

Referenced by std::basic_string< char >::append().

4.629.3.7 template<typename _CharT, typename _Traits, typename _Alloc> template<class _InputIterator > **basic_string**& **std::basic_string**< _CharT, _Traits, _Alloc >::append (_InputIterator *__first,* _InputIterator *__last*) `[inline]`

Append a range of characters.

Parameters

__first	Iterator referencing the first character to append.
__last	Iterator marking the end of the range.

Returns

Reference to this string.

Appends characters in the range [__first,__last) to this string.

Definition at line 1044 of file basic_string.h.

4.629.3.8 template<typename _CharT , typename _Traits , typename _Alloc > **basic_string**< _CharT, _Traits, _Alloc > & **std::basic_string**< _CharT, _Traits, _Alloc >::assign (const **basic_string**< _CharT, _Traits, _Alloc > & *__str*)

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

Definition at line 243 of file basic_string.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::get_allocator().

Referenced by std::basic_string< char >::assign(), std::basic_string< char >::operator=(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.629.3.9 template<typename _CharT, typename _Traits, typename _Alloc> **basic_string**& **std::basic_string**< _CharT, _Traits, _Alloc >::assign (**basic_string**< _CharT, _Traits, _Alloc > && *__str*) `[inline]`

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

This function sets this string to the exact contents of *__str*. *__str* is a valid, but unspecified string.

Definition at line 1079 of file basic_string.h.

4.629.3.10 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (const basic_string< _CharT, _Traits, _Alloc > & __str, size_type __pos, size_type __n) [inline]

Set value to a substring of a string.

Parameters

__str	The string to use.
__pos	Index of the first character of str.
__n	Number of characters to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *pos* is not a valid index.

This function sets this string to the substring of *__str* consisting of *__n* characters at *__pos*. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is used.

Definition at line 1100 of file basic_string.h.

Referenced by std::basic_string< char >::assign().

4.629.3.11 template<typename _CharT, typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::assign (const _CharT * __s, size_type __n)

Set value to a C substring.

Parameters

__s	The C string to use.
__n	Number of characters to use.

Returns

Reference to this string.

This function sets the value of this string to the first *__n* characters of *__s*. If *__n* is is larger than the number of available characters in *__s*, the remainder of *__s* is used.

Definition at line 259 of file basic_string.tcc.

References std::size().

4.629.3.12 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (const _CharT * __s) [inline]

Set value to contents of a C string.

Parameters

__s	The C string to use.

Returns

Reference to this string.

This function sets the value of this string to the value of *__s*. The data is copied, so there is no dependence on *__s* once the function returns.

Definition at line 1128 of file basic_string.h.

4.629.3.13 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (size_type *__n*, _CharT *__c*) [inline]

Set value to multiple characters.

Parameters

__n	Length of the resulting string.
__c	The character to use.

Returns

Reference to this string.

This function sets the value of this string to *__n* copies of character *__c*.

Definition at line 1144 of file basic_string.h.

4.629.3.14 template<typename _CharT, typename _Traits, typename _Alloc> template<class _InputIterator > basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (_InputIterator *__first*, _InputIterator *__last*) [inline]

Set value to a range of characters.

Parameters

__first	Iterator referencing the first character to append.
__last	Iterator marking the end of the range.

Returns

Reference to this string.

Sets value of string to characters in the range [__first,__last).

Definition at line 1157 of file basic_string.h.

4.629.3.15 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (initializer_list< _CharT > *__l*) [inline]

Set value to an initializer_list of characters.

Parameters

__l	The initializer_list of characters to assign.

Returns

Reference to this string.

Definition at line 1167 of file basic_string.h.

Referenced by std::basic_string< char >::assign().

4.629.3.16 template<typename _CharT, typename _Traits, typename _Alloc> const_reference std::basic_string< _CharT, _Traits, _Alloc >::at (size_type __n) const [inline]

Provides access to the data contained in the string.

Parameters

__n	The index of the character to access.

Returns

Read-only (const) reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.

Definition at line 864 of file basic_string.h.

4.629.3.17 template<typename _CharT, typename _Traits, typename _Alloc> reference std::basic_string< _CharT, _Traits, _Alloc >::at (size_type __n) [inline]

Provides access to the data contained in the string.

Parameters

__n	The index of the character to access.

Returns

Read/write reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails. Success results in unsharing the string.

Definition at line 883 of file basic_string.h.

4.629.3.18 template<typename _CharT, typename _Traits, typename _Alloc> reference std::basic_string< _CharT, _Traits, _Alloc >::back ( ) [inline]

Returns a read/write reference to the data at the last element of the string.

Definition at line 913 of file basic_string.h.

4.629.3.19 template<typename _CharT, typename _Traits, typename _Alloc> const_reference **std::basic_string**< _CharT, _Traits, _Alloc >::back ( ) const [inline]

Returns a read-only (constant) reference to the data at the last element of the string.

Definition at line 921 of file basic_string.h.

4.629.3.20 template<typename _CharT, typename _Traits, typename _Alloc> iterator **std::basic_string**< _CharT, _Traits, _Alloc >::begin ( ) [inline], [noexcept]

Returns a read/write iterator that points to the first character in the string. Unshares the string.

Definition at line 605 of file basic_string.h.

Referenced by std::basic_string< char >::crend(), std::regex_match(), std::regex_replace(), std::regex_search(), and std::basic_string< char >::rend().

4.629.3.21 template<typename _CharT, typename _Traits, typename _Alloc> const_iterator **std::basic_string**< _CharT, _Traits, _Alloc >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first character in the string.

Definition at line 616 of file basic_string.h.

4.629.3.22 template<typename _CharT, typename _Traits, typename _Alloc> const _CharT* **std::basic_string**< _CharT, _Traits, _Alloc >::c_str ( ) const [inline], [noexcept]

Return const pointer to null-terminated contents.

This is a handle to internal data. Do not modify or dire things may happen.

Definition at line 1800 of file basic_string.h.

Referenced by std::collate< _CharT >::do_compare(), std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::collate< _CharT >::do_transform(), std::basic_filebuf< char_type, traits_type >::open(), and std::operator==().

4.629.3.23 template<typename _CharT, typename _Traits, typename _Alloc> size_type **std::basic_string**< _CharT, _Traits, _Alloc >::capacity ( ) const [inline], [noexcept]

Returns the total number of characters that the string can hold before needing to allocate more memory.

Definition at line 776 of file basic_string.h.

Referenced by std::basic_string< char >::push_back(), and std::basic_string< char >::shrink_to_fit().

4.629.3.24 template<typename _CharT, typename _Traits, typename _Alloc> const_iterator **std::basic_string**< _CharT, _Traits, _Alloc >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first character in the string.

Definition at line 680 of file basic_string.h.

4.629.3.25 template<typename _CharT, typename _Traits, typename _Alloc> const_iterator **std::basic_string**< _CharT, _Traits, _Alloc >::cend ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 688 of file basic_string.h.

4.629.3.26 template<typename _CharT, typename _Traits, typename _Alloc> void **std::basic_string**< _CharT, _Traits, _Alloc >::clear ( ) `[inline]`, `[noexcept]`

Erases the string, making it empty.

Definition at line 803 of file basic_string.h.

Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::setbuf().

4.629.3.27 template<typename _CharT, typename _Traits, typename _Alloc> int **std::basic_string**< _CharT, _Traits, _Alloc >::compare (const **basic_string**< _CharT, _Traits, _Alloc > & *__str*) const `[inline]`

Compare to a string.

Parameters

__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *__str*, 0 if their values are equivalent, or > 0 if this string is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of size() and str.size(). The function then compares the two strings by calling traits::compare(data(), str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 2225 of file basic_string.h.

Referenced by std::sub_match< _Bi_iter >::compare(), std::operator<(), std::operator<=(), std::operator==(), std::operator>(), and std::operator>=().

4.629.3.28 template<typename _CharT , typename _Traits , typename _Alloc > int **std::basic_string**< _CharT, _Traits, _Alloc >::compare (size_type *__pos*, size_type *__n*, const **basic_string**< _CharT, _Traits, _Alloc > & *__str*) const

Compare substring to a string.

Parameters

__pos	Index of first character of substring.
__n	Number of characters in substring.
__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n* characters starting at *__pos*. Returns an integer < 0 if the substring is ordered before *__str*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__str.size()*. The function then compares the two strings by calling traits::compare(substring.data(),str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 916 of file basic_string.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::data(), std::min(), and std::basic_string< _CharT, _Traits, _Alloc >::size().

4.629.3.29 template<typename _CharT , typename _Traits , typename _Alloc > int std::basic_string< _CharT, _Traits, _Alloc >::compare (size_type *__pos1,* size_type *__n1,* const basic_string< _CharT, _Traits, _Alloc > & *__str,* size_type *__pos2,* size_type *__n2*) const

Compare substring to a substring.

Parameters

__pos1	Index of first character of substring.
__n1	Number of characters in substring.
__str	String to compare against.
__pos2	Index of first character of substring of str.
__n2	Number of characters in substring of str.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos1*. Form the substring of *__str* from the *__n2* characters starting at *__pos2*. Returns an integer < 0 if this substring is ordered before the substring of *__str*, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of *__str*. Determines the effective length rlen of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 931 of file basic_string.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::data(), and std::min().

4.629.3.30 template<typename _CharT, typename _Traits , typename _Alloc > int std::basic_string< _CharT, _Traits, _Alloc >::compare (const _CharT * *__s*) const

Compare to a C string.

Parameters

__s	C string to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *__s*, 0 if their values are equivalent, or > 0 if this string is ordered after *__s*. Determines the effective length rlen of the strings to compare as the smallest of size() and the length of a string constructed from *__s*. The function then compares the two strings by calling traits::compare(data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 949 of file basic_string.tcc.

References std::min(), and std::size().

4.629.3.31 template<typename _CharT, typename _Traits , typename _Alloc > int std::basic_string< _CharT, _Traits, _Alloc >::compare (size_type *__pos,* size_type *__n1,* const _CharT * *__s*) const

Compare substring to a C string.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	C string to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *pos*. Returns an integer < 0 if the substring is ordered before *__s*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and the length of a string constructed from *__s*. The function then compares the two string by calling traits::compare(substring.data(),__s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 964 of file basic_string.tcc.

References std::min().

4.629.3.32 template<typename _CharT, typename _Traits , typename _Alloc > int std::basic_string< _CharT, _Traits, _Alloc >::compare (size_type *__pos,* size_type *__n1,* const _CharT ∗ *__s,* size_type *__n2*) const

Compare substring against a character array.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	character array to compare against.
__n2	Number of characters of s.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos*. Form a string from the first *__n2* characters of *__s*. Returns an integer < 0 if this substring is ordered before the string from *__s*, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__n2*. The function then compares the two strings by calling traits::compare(substring.data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: s must have at least n2 characters, '\0' has no special meaning.

Definition at line 980 of file basic_string.tcc.

References std::min().

4.629.3.33 template<typename _CharT, typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc >::copy (_CharT ∗ *__s,* size_type *__n,* size_type *__pos =* 0) const

Copy substring into C string.

Parameters

__s	C string to copy value into.
__n	Number of characters to copy.
__pos	Index of first character to copy.

Returns

Number of characters actually copied

Exceptions

std::out_of_range	If __pos > size().

Copies up to *__n* characters starting at *__pos* into the C string *__s*. If *__pos* is greater than size(), out_of_range is thrown.

Definition at line 723 of file basic_string.tcc.

4.629.3.34 template<typename _CharT, typename _Traits, typename _Alloc> const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::crbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 697 of file basic_string.h.

4.629.3.35 template<typename _CharT, typename _Traits, typename _Alloc> const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::crend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 706 of file basic_string.h.

4.629.3.36 template<typename _CharT, typename _Traits, typename _Alloc> const _CharT* std::basic_string< _CharT, _Traits, _Alloc >::data ( ) const [inline], [noexcept]

Return const pointer to contents.

This is a handle to internal data. Do not modify or dire things may happen.

Definition at line 1810 of file basic_string.h.

Referenced by std::basic_string< char >::compare(), std::basic_string< _CharT, _Traits, _Alloc >::compare(), std::collate< _CharT >::do_compare(), std::collate< _CharT >::do_transform(), std::basic_string< char >::find(), std::basic_string< char >::find_first_not_of(), std::basic_string< char >::find_last_of(), std::match_results< _FwdIterT, _Alloc >::format(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::str(), and std::regex_traits< _Ch_type >::transform().

4.629.3.37 template<typename _CharT, typename _Traits, typename _Alloc> bool std::basic_string< _CharT, _Traits, _Alloc >::empty ( ) const [inline], [noexcept]

Returns true if the string is empty. Equivalent to `*this == ""`.

Definition at line 811 of file basic_string.h.

Referenced by std::tr2::operator>>(), and std::operator>>().

4.629.3.38 template<typename _CharT, typename _Traits, typename _Alloc> iterator std::basic_string< _CharT, _Traits, _Alloc >::end ( ) [inline], [noexcept]

Returns a read/write iterator that points one past the last character in the string. Unshares the string.

Definition at line 624 of file basic_string.h.

Referenced by std::basic_string< char >::crbegin(), std::basic_string< char >::rbegin(), std::regex_match(), std::regex_replace(), and std::regex_search().

4.629.3.39 template<typename _CharT, typename _Traits, typename _Alloc> const_iterator std::basic_string< _CharT, _Traits, _Alloc >::end ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 635 of file basic_string.h.

4.629.3.40 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::erase (size_type __pos = 0, size_type __n = npos) [inline]

Remove characters.

Parameters

__pos	Index of first character to remove (default 0).
__n	Number of characters to remove (default remainder).

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* is beyond the end of this string.

Removes *__n* characters from this string starting at *__pos*. The length of the string is reduced by *__n*. If there are < *__n* characters to remove, the remainder of the string is truncated. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1362 of file basic_string.h.

Referenced by std::getline(), std::operator>>(), and std::basic_string< char >::pop_back().

4.629.3.41 template<typename _CharT, typename _Traits, typename _Alloc> iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (iterator __position) [inline]

Remove one character.

Parameters

__position	Iterator referencing the character to remove.

Returns

iterator referencing same location after removal.

Removes the character at *__position* from this string. The value of the string doesn't change if an error is thrown.

Definition at line 1378 of file basic_string.h.

4.629.3.42 template<typename _CharT , typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc >::iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (iterator __first, iterator __last)

Remove a range of characters.

Parameters

__first	Iterator referencing the first character to remove.
__last	Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

Definition at line 391 of file basic_string.tcc.

4.629.3.43 template<typename _CharT, typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc >::find (const _CharT * *__s*, size_type *__pos*, size_type *__n*) const

Find position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search from.
__n	Number of characters from *s* to search for.

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

Definition at line 737 of file basic_string.tcc.

References std::size().

Referenced by std::basic_string< char >::find(), and std::basic_string< char >::find_first_of().

4.629.3.44 template<typename _CharT, typename _Traits, typename _Alloc> size_type std::basic_string< _CharT, _Traits, _Alloc >::find (const basic_string< _CharT, _Traits, _Alloc > & *__str*, size_type *__pos* = 0) const [inline], [noexcept]

Find position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.

Definition at line 1846 of file basic_string.h.

Referenced by std::basic_string< char >::find().

4.629.3.45 template<typename _CharT, typename _Traits, typename _Alloc> size_type std::basic_string< _CharT, _Traits, _Alloc >::find (const _CharT ∗ __s, size_type __pos = 0) const [inline]

Find position of a C string.

Parameters

__s	C string to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for the value of *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

Definition at line 1861 of file basic_string.h.

4.629.3.46 template<typename _CharT, typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc >::find (_CharT __c, size_type __pos = 0) const [noexcept]

Find position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

Definition at line 760 of file basic_string.tcc.

References std::size().

4.629.3.47 template<typename _CharT, typename _Traits, typename _Alloc> size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (const basic_string< _CharT, _Traits, _Alloc > & __str, size_type __pos = 0) const [inline], [noexcept]

Find position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

Definition at line 2079 of file basic_string.h.

Referenced by std::basic_string< char >::find_first_not_of().

4.629.3.48 template<typename _CharT, typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (const _CharT * __s, size_type __pos, size_type __n) const

Find position of a character not in C substring.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search from.
__n	Number of characters from __s to consider.

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

Definition at line 852 of file basic_string.tcc.

References std::size().

Find position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

Definition at line 864 of file basic_string.tcc.

References std::size().

Find last position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

Definition at line 2142 of file basic_string.h.

Referenced by std::basic_string< char >::find_last_not_of().

4.629.3.62 template< typename _CharT, typename _Traits, typename _Alloc> size_type **std::basic_string**< _CharT, _Traits, _Alloc >::find_last_of (_CharT *__c*, size_type *__pos* = **npos**) const [inline], [noexcept]

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

Note: equivalent to rfind(__c, __pos).

Definition at line 2065 of file basic_string.h.

4.629.3.63 template< typename _CharT, typename _Traits, typename _Alloc> reference **std::basic_string**< _CharT, _Traits, _Alloc >::front ( ) [inline]

Returns a read/write reference to the data at the first element of the string.

Definition at line 897 of file basic_string.h.

4.629.3.64 template< typename _CharT, typename _Traits, typename _Alloc> const_reference **std::basic_string**< _CharT, _Traits, _Alloc >::front ( ) const [inline]

Returns a read-only (constant) reference to the data at the first element of the string.

Definition at line 905 of file basic_string.h.

4.629.3.65 template< typename _CharT, typename _Traits, typename _Alloc> allocator_type **std::basic_string**< _CharT, _Traits, _Alloc >::get_allocator ( ) const [inline], [noexcept]

Return copy of allocator used to construct this string.

Definition at line 1817 of file basic_string.h.

Referenced by std::basic_string< _CharT, _Traits, _Alloc >::assign(), std::basic_string< char >::basic_string(), std::basic_string< _CharT, _Traits, _Alloc >::swap(), and std::basic_string< char >::∼basic_string().

4.629.3.66 template<typename _CharT, typename _Traits, typename _Alloc> void std::basic_string< _CharT, _Traits, _Alloc >::insert (iterator *__p*, size_type *__n*, _CharT *__c*) `[inline]`

Insert multiple characters.

Parameters

__p	Iterator referencing location in string to insert at.
__n	Number of characters to insert
__c	The character to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts *__n* copies of character *__c* starting at the position referenced by iterator *__p*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1185 of file basic_string.h.

Referenced by std::basic_string< char >::insert().

4.629.3.67 template<typename _CharT, typename _Traits, typename _Alloc> template<class _InputIterator > void std::basic_string< _CharT, _Traits, _Alloc >::insert (iterator *__p*, _InputIterator *__beg*, _InputIterator *__end*) `[inline]`

Insert a range of characters.

Parameters

__p	Iterator referencing location in string to insert at.
__beg	Start of range.
__end	End of range.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts characters in range [__beg,__end). If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1202 of file basic_string.h.

4.629.3.68 template<typename _CharT, typename _Traits, typename _Alloc> void std::basic_string< _CharT, _Traits, _Alloc >::insert (iterator *__p*, initializer_list< _CharT > *__l*) `[inline]`

Insert an initializer_list of characters.

Parameters

__p	Iterator referencing location in string to insert at.
__l	The initializer_list of characters to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Definition at line 1213 of file basic_string.h.

4.629.3.69 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (size_type __pos1, const basic_string< _CharT, _Traits, _Alloc > & __str) [inline]

Insert value of a string.

Parameters

__pos1	Iterator referencing location in string to insert at.
__str	The string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts value of *__str* starting at *__pos1*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1233 of file basic_string.h.

Referenced by std::basic_string< char >::insert().

4.629.3.70 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (size_type __pos1, const basic_string< _CharT, _Traits, _Alloc > & __str, size_type __pos2, size_type __n) [inline]

Insert a substring.

Parameters

__pos1	Iterator referencing location in string to insert at.
__str	The string to insert.
__pos2	Start of characters in str to insert.
__n	Number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *pos1* > size() or *__pos2* > *str.size()*.

Starting at *pos1*, insert *__n* character of *__str* beginning with *__pos2*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos1* is beyond the end of this string or *__pos2* is beyond the end of *__str*, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1255 of file basic_string.h.

Referenced by std::basic_string< char >::insert().

4.629.3.71 template<typename _CharT, typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::insert (size_type *__pos,* const _CharT * *__s,* size_type *__n*)

Insert a C substring.

Parameters

__pos	Iterator referencing location in string to insert at.
__s	The C string to insert.
__n	The number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts the first *__n* characters of *__s* starting at *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 360 of file basic_string.tcc.

4.629.3.72 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (size_type *__pos,* const _CharT * *__s*) [inline]

Insert a C string.

Parameters

__pos	Iterator referencing location in string to insert at.
__s	The C string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *pos* is beyond the end of this string.

Inserts the first *n* characters of *__s* starting at *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1296 of file basic_string.h.

4.629.3.73 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (size_type __pos, size_type __n, _CharT __c) [inline]

Insert multiple characters.

Parameters

__pos	Index in string to insert at.
__n	Number of characters to insert
__c	The character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts *__n* copies of character *__c* starting at index *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* > length(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1319 of file basic_string.h.

4.629.3.74 template<typename _CharT, typename _Traits, typename _Alloc> iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (iterator __p, _CharT __c) [inline]

Insert one character.

Parameters

__p	Iterator referencing position in string to insert at.
__c	The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts character *__c* at position referenced by *__p*. If adding character causes the length to exceed max_size(), length_error is thrown. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1337 of file basic_string.h.

4.629.3.75 template<typename _CharT, typename _Traits, typename _Alloc> size_type std::basic_string< _CharT, _Traits, _Alloc >::length ( ) const [inline], [noexcept]

Returns the number of characters in the string, not including any null-termination.

Definition at line 721 of file basic_string.h.

Referenced by std::collate< _CharT >::do_compare(), and std::collate< _CharT >::do_transform().

4.629.3.76 template<typename _CharT, typename _Traits, typename _Alloc> size_type std::basic_string< _CharT, _Traits, _Alloc >::max_size ( ) const [inline], [noexcept]

Returns the size() of the largest possible string.

Definition at line 726 of file basic_string.h.

Referenced by std::getline(), and std::operator>>().

4.629.3.77 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator+= (const basic_string< _CharT, _Traits, _Alloc > & __str) [inline]

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

Definition at line 932 of file basic_string.h.

4.629.3.78 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator+= (const _CharT * __s) [inline]

Append a C string.

Parameters

__s	The C string to append.

Returns

Reference to this string.

Definition at line 941 of file basic_string.h.

4.629.3.79 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator+= (_CharT __c) [inline]

Append a character.

Parameters

__c	The character to append.

Returns

Reference to this string.

Definition at line 950 of file basic_string.h.

4.629.3.80 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator+= (initializer_list< _CharT > __l) [inline]

Append an initializer_list of characters.

Parameters

__l	The initializer_list of characters to be appended.

Returns

Reference to this string.

Definition at line 963 of file basic_string.h.

4.629.3.81 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator= (const basic_string< _CharT, _Traits, _Alloc > & __str) [inline]

Assign the value of *str* to this string.

Parameters

__str	Source string.

Definition at line 546 of file basic_string.h.

4.629.3.82 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator= (const _CharT * __s) [inline]

Copy contents of *s* into this string.

Parameters

__s	Source null-terminated string.

Definition at line 554 of file basic_string.h.

4.629.3.83 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator= (_CharT __c) [inline]

Set value to string of length 1.

Parameters

__c	Source character.

Assigning to a character makes this string length 1 and (∗this)[0] == *c*.

Definition at line 565 of file basic_string.h.

4.629.3.84 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator= (basic_string< _CharT, _Traits, _Alloc > && __str) [inline]

Move assign the value of *str* to this string.

Parameters

__str	Source string.

The contents of *str* are moved into this string (without copying). *str* is a valid, but unspecified string.

Definition at line 580 of file basic_string.h.

4.629.3.85 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator= (initializer_list< _CharT > *__l*) [inline]

Set value to string constructed from initializer list.

Parameters

__l	std::initializer_list.

Definition at line 592 of file basic_string.h.

4.629.3.86 template<typename _CharT, typename _Traits, typename _Alloc> const_reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (size_type *__pos*) const [inline]

Subscript access to the data contained in the string.

Parameters

__pos	The index of the character to access.

Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)

Definition at line 826 of file basic_string.h.

Referenced by std::basic_string< char >::back(), and std::basic_string< char >::front().

4.629.3.87 template<typename _CharT, typename _Traits, typename _Alloc> reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (size_type *__pos*) [inline]

Subscript access to the data contained in the string.

Parameters

__pos	The index of the character to access.

Returns

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().) Unshares the string.

Definition at line 843 of file basic_string.h.

4.629.3.88 template<typename _CharT, typename _Traits, typename _Alloc> void std::basic_string< _CharT, _Traits, _Alloc >::pop_back ( ) [inline]

Remove the last character.

The string must be non-empty.

Definition at line 1407 of file basic_string.h.

4.629.3.89 template<typename _CharT, typename _Traits, typename _Alloc> void std::basic_string< _CharT, _Traits, _Alloc >::push_back (_CharT *__c*) [inline]

Append a single character.

Parameters

__c	Character to append.

Definition at line 1052 of file basic_string.h.

Referenced by std::collate< _CharT >::do_transform(), std::basic_string< char >::operator+=(), std::tr2::operator>>(), std::operator>>(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow().

4.629.3.90 template<typename _CharT, typename _Traits, typename _Alloc> reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin ( ) [inline], [noexcept]

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 644 of file basic_string.h.

4.629.3.91 template<typename _CharT, typename _Traits, typename _Alloc> const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 653 of file basic_string.h.

4.629.3.92 template<typename _CharT, typename _Traits, typename _Alloc> reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend ( ) [inline], [noexcept]

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

Definition at line 662 of file basic_string.h.

4.629.3.93 template<typename _CharT, typename _Traits, typename _Alloc> const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 671 of file basic_string.h.

4.629.3.94 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (size_type *__pos*, size_type *__n*, const basic_string< _CharT, _Traits, _Alloc > & *__str*) [inline]

Replace characters with value from another string.

Parameters

__pos	Index of first character to replace.
__n	Number of characters to be replaced.
__str	String to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* is beyond the end of this string.
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos+__n) from this string. In place, the value of *__str* is inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1429 of file basic_string.h.

Referenced by std::basic_string< char >::append(), std::basic_string< char >::assign(), std::basic_string< char >::insert(), and std::basic_string< char >::replace().

4.629.3.95 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (size_type *__pos1,* size_type *__n1,* const basic_string< _CharT, _Traits, _Alloc > & *__str,* size_type *__pos2,* size_type *__n2*) [inline]

Replace characters with value from another string.

Parameters

__pos1	Index of first character to replace.
__n1	Number of characters to be replaced.
__str	String to insert.
__pos2	Index of first character of str to use.
__n2	Number of characters from str to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos1* > size() or *__pos2* > __str.size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos1,__pos1 + n) from this string. In place, the value of *__str* is inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1451 of file basic_string.h.

Referenced by std::basic_string< char >::replace().

4.629.3.96 template<typename _CharT, typename _Traits , typename _Alloc > **basic_string**< _CharT, _Traits, _Alloc > & **std::basic_string**< _CharT, _Traits, _Alloc >::replace (size_type *__pos,* size_type *__n1,* const _CharT * *__s,* size_type *__n2*)

Replace characters with value of a C substring.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__s	C string to insert.
__n2	Number of characters from *s* to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos1* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos + __n1) from this string. In place, the first __*n2* characters of __*s* are inserted, or all of __*s* if __*n2* is too large. If __*pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 414 of file basic_string.tcc.

4.629.3.97 template<typename _CharT, typename _Traits, typename _Alloc> **basic_string& std::basic_string**< _CharT, _Traits, _Alloc >::replace (size_type *__pos,* size_type *__n1,* const _CharT * *__s*) `[inline]`

Replace characters with value of a C string.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__s	C string to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos + __n1) from this string. In place, the characters of __*s* are inserted. If __*pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1496 of file basic_string.h.

4.629.3.98 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (size_type *__pos,* size_type *__n1,* size_type *__n2,* _CharT *__c*) [inline]

Replace characters with multiple characters.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__n2	Number of characters to insert.
__c	Character to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [pos,pos + n1) from this string. In place, *__n2* copies of *__c* are inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1520 of file basic_string.h.

4.629.3.99 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (iterator *__i1,* iterator *__i2,* const basic_string< _CharT, _Traits, _Alloc > & *__str*) [inline]

Replace range of characters with string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__str	String value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the value of *__str* is inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1538 of file basic_string.h.

Referenced by std::basic_string< char >::replace().

4.629.3.100 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (iterator *__i1,* iterator *__i2,* const _CharT * *__s,* size_type *__n*) [inline]

Replace range of characters with C substring.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__s	C string value to insert.
__n	Number of characters from s to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the first __*n* characters of __*s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1557 of file basic_string.h.

4.629.3.101 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (iterator *__i1,* iterator *__i2,* const _CharT * *__s*) [inline]

Replace range of characters with C string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__s	C string value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the characters of __*s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1578 of file basic_string.h.

4.629.3.102 template<typename _CharT, typename _Traits, typename _Alloc> basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (iterator *__i1,* iterator *__i2,* size_type *__n,* _CharT *__c*) [inline]

Replace range of characters with multiple characters.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__n	Number of characters to insert.
__c	Character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, *__n* copies of *__c* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1599 of file basic_string.h.

4.629.3.103 template< typename _CharT, typename _Traits, typename _Alloc > template< class _InputIterator > basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (iterator *__i1*, iterator *__i2*, _InputIterator *__k1*, _InputIterator *__k2*) `[inline]`

Replace range of characters with range.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__k1	Iterator referencing start of range to insert.
__k2	Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1623 of file basic_string.h.

4.629.3.104 template< typename _CharT, typename _Traits, typename _Alloc > basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (iterator *__i1*, iterator *__i2*, initializer_list< _CharT > *__l*) `[inline]`

Replace range of characters with initializer_list.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__l	The initializer_list of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1692 of file basic_string.h.

Referenced by std::basic_string< char >::replace().

4.629.3.105 template<typename _CharT , typename _Traits , typename _Alloc > void **std::basic_string**< _CharT, _Traits, _Alloc >::reserve (size_type *__res_arg* = `0`)

Attempt to preallocate enough memory for specified number of characters.

Parameters

__res_arg	Number of characters required.

Exceptions

std::length_error	If *__res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than max_size(), length_error is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Definition at line 502 of file basic_string.tcc.

References std::size().

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::tr2::operator>>(), std::operator>>(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_string< char >::push_back(), and std::basic_string< char >::shrink_to_fit().

4.629.3.106 template<typename _CharT, typename _Traits , typename _Alloc > void **std::basic_string**< _CharT, _Traits, _Alloc >::resize (size_type *__n*, _CharT *__c*)

Resizes the string to the specified number of characters.

Parameters

__n	Number of characters the string should contain.
__c	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to *__c*.

Definition at line 640 of file basic_string.tcc.

References std::size().

Referenced by std::money_get< _CharT, _InIter >::do_get().

4.629.3.107 template<typename _CharT, typename _Traits, typename _Alloc> void **std::basic_string**< _CharT, _Traits, _Alloc >::resize (size_type *__n*) `[inline]`

Resizes the string to the specified number of characters.

Parameters

__n	Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.

Definition at line 753 of file basic_string.h.

Referenced by std::basic_string< char >::resize().

4.629.3.108 template<typename _CharT, typename _Traits, typename _Alloc> size_type **std::basic_string**< _CharT, _Traits, _Alloc >::rfind (const **basic_string**< _CharT, _Traits, _Alloc > & *__str,* size_type *__pos* = **npos**) const `[inline]`, `[noexcept]`

Find last position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.

Definition at line 1891 of file basic_string.h.

Referenced by std::basic_string< char >::find_last_of(), and std::basic_string< char >::rfind().

Find last position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

Definition at line 778 of file basic_string.tcc.

References std::min(), and std::size().

Find last position of a C string.

Parameters

__s	C string to locate.
__pos	Index of character to start search at (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the value of *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

Definition at line 1921 of file basic_string.h.

4.629.3.111 template<typename _CharT, typename _Traits , typename _Alloc > **basic_string**< _CharT, _Traits, _Alloc >::size_type **std::basic_string**< _CharT, _Traits, _Alloc >::rfind (_CharT *__c*, size_type *__pos* = **npos**) const [noexcept]

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

Definition at line 799 of file basic_string.tcc.

References std::size().

4.629.3.112 template<typename _CharT, typename _Traits, typename _Alloc> void **std::basic_string**< _CharT, _Traits, _Alloc >::shrink_to_fit ( ) [inline]

4.629.3.114 template<typename _CharT, typename _Traits, typename _Alloc> basic_string std::basic_string< _CharT, _Traits, _Alloc >::substr (size_type __pos = 0, size_type __n = npos) const [inline]

Get a substring.

Parameters

__pos	Index of first character (default 0).
__n	Number of characters in substring (default remainder).

Returns

The new string.

Exceptions

std::out_of_range	If __pos > size().

Construct and return a new string using the *__n* characters starting at *__pos*. If the string is too short, use the remainder of the characters. If *__pos* is beyond the end of the string, out_of_range is thrown.

Definition at line 2206 of file basic_string.h.

4.629.3.115 template<typename _CharT , typename _Traits , typename _Alloc > void std::basic_string< _CharT, _Traits, _Alloc >::swap (basic_string< _CharT, _Traits, _Alloc > & __s)

Swap contents with another string.

Parameters

__s	String to swap with.

Exchanges the contents of this string with that of *__s* in constant time.

Definition at line 519 of file basic_string.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::get_allocator().

Referenced by std::basic_string< char >::assign(), std::basic_string< char >::operator=(), and std::swap().

4.630.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>class std::basic_stringbuf< _CharT, _Traits, _Alloc >

The actual work of input and output (for std::string).

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a `std::basic_string`. (Paraphrased from [27.7.1]/1.)

For this class, open modes (of type `ios_base::openmode`) have `in` set if the input sequence can be read, and `out` set if the output sequence can be written.

Definition at line 64 of file sstream.

4.630.2 Constructor & Destructor Documentation

4.630.2.1 template<typename _CharT, typename _Traits, typename _Alloc> std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf (ios_base::openmode *__mode* = ios_base::in | ios_base::out) `[inline]`, `[explicit]`

Starts with an empty string buffer.

Parameters

__mode	Whether the buffer can read, or write, or both.

The default constructor initializes the parent class using its own default ctor.

Definition at line 98 of file sstream.

4.630.2.2 template<typename _CharT, typename _Traits, typename _Alloc> std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf (const __string_type & *__str*, ios_base::openmode *__mode* = ios_base::in | ios_base::out) `[inline]`, `[explicit]`

Starts with an existing string buffer.

Parameters

__str	A string to copy as a starting buffer.
__mode	Whether the buffer can read, or write, or both.

This constructor initializes the parent class using its own default ctor.

Definition at line 111 of file sstream.

4.630.3 Member Function Documentation

4.630.3.1 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 482 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< char_type, traits_type >::sputbackc(), and std::basic_streambuf< char_type, traits_type >::sungetc().

4.630.3.2 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 488 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_streambuf< char_type, traits_type >::in_avail(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.630.3.3 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence

- epptr() returns the end pointer for the output sequence

Definition at line 535 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc().

4.630.3.4 template<typename _CharT, typename _Traits> void **std::basic_streambuf**< _CharT, _Traits >::gbump (int *__n*) `[inline]`, `[protected]`, `[inherited]`

Moving the read position.

Parameters

__n	The delta by which to move.

This just advances the read position without returning any data.

Definition at line 498 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), and std::basic_streambuf< char_type, traits_type >::uflow().

4.630.3.5 template<typename _CharT, typename _Traits> locale **std::basic_streambuf**< _CharT, _Traits >::getloc ( ) const `[inline]`, `[inherited]`

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 226 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubimbue().

4.630.3.6 template<typename _CharT, typename _Traits> char_type* **std::basic_streambuf**< _CharT, _Traits >::gptr ( ) const `[inline]`, `[protected]`, `[inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 485 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< char_type, traits_type >::in_avail(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), and std::basic_streambuf< char_type, traits_type >::uflow().

4.630.3.7 template<typename _CharT, typename _Traits> virtual void **std::basic_streambuf**< _CharT, _Traits >::imbue (const **locale** & *__loc*) [inline], [protected], [virtual], [inherited]

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.

Definition at line 576 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubimbue().

4.630.3.8 template<typename _CharT, typename _Traits> **streamsize std::basic_streambuf**< _CharT, _Traits >::in_avail ( ) [inline], [inherited]

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 284 of file streambuf.

4.630.3.9 template<class _CharT , class _Traits , class _Alloc > **basic_stringbuf**< _CharT, _Traits, _Alloc >::int_type **basic_stringbuf**< _CharT, _Traits, _Alloc >::overflow (int_type *__c* = `traits_type::eof()`) [protected], [virtual]

Consumes data from the buffer; writes to the controlled sequence.

Parameters

__c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually __*c*, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if __*c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 80 of file sstream.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::assign(), std::max(), std::min(), std::ios_base::out, std::basic_string< _CharT, _Traits, _Alloc >::push_back(), and std::basic_string< _CharT, _Traits, _Alloc >::reserve().

4.630.3.10 template<class _CharT , class _Traits , class _Alloc > **basic_stringbuf**< _CharT, _Traits, _Alloc >::int_type **basic_stringbuf**< _CharT, _Traits, _Alloc >::pbackfail (int_type *__c* = `traits_type::eof()`) `[protected]`, `[virtual]`

Tries to back up the input sequence.

Parameters

__c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 46 of file sstream.tcc.

References std::ios_base::out.

4.630.3.11 template<typename _CharT, typename _Traits> char_type* **std::basic_streambuf**< _CharT, _Traits >::pbase ( ) const `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 529 of file streambuf.

Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.630.3.12 template<typename _CharT, typename _Traits> void **std::basic_streambuf**< _CharT, _Traits >::pbump (int *__n*) [inline], [protected], [inherited]

Moving the write position.

Parameters

__n	The delta by which to move.

This just advances the write position without returning any data.

Definition at line 545 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc().

4.630.3.13 template<typename _CharT, typename _Traits> char_type* **std::basic_streambuf**< _CharT, _Traits >::pptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 532 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.630.3.14 template<typename _CharT, typename _Traits> **locale std::basic_streambuf**< _CharT, _Traits >::pubimbue (const **locale** & *__loc*) [inline], [inherited]

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).

Definition at line 209 of file streambuf.

4.630.3.15 template<typename _CharT, typename _Traits> pos_type **std::basic_streambuf**< _CharT, _Traits >::pubseekoff (**off_type** *__off*, **ios_base::seekdir** *__way*, **ios_base::openmode** *__mode* = **ios_base::in** \| **ios_base::out**) [inline], [inherited]

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.

Definition at line 251 of file streambuf.

4.630.3.16 template<typename _CharT, typename _Traits> pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (pos_type *__sp*, ios_base::openmode *__mode* = ios_base::in | ios_base::out) [inline], [inherited]

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.

Definition at line 263 of file streambuf.

4.630.3.17 template<typename _CharT, typename _Traits> basic_streambuf* std::basic_streambuf< _CharT, _Traits >::pubsetbuf (char_type * *__s*, streamsize *__n*) [inline], [inherited]

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 239 of file streambuf.

4.630.3.18 template<typename _CharT, typename _Traits> int std::basic_streambuf< _CharT, _Traits >::pubsync ( ) [inline], [inherited]

Calls virtual sync function.

Definition at line 271 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::sync().

4.630.3.19 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 316 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::istreambuf_iterator< _CharT, _Traits >::operator++(), and std::basic_streambuf< char_type, traits_type >::snextc().

4.630.3.20 template<class _CharT , class _Traits , class _Alloc > basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff (off_type , ios_base::seekdir , ios_base::openmode = ios_base::in | ios_base::out) [protected], [virtual]

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 149 of file sstream.tcc.

References std::ios_base::cur, std::ios_base::end, std::ios_base::in, and std::ios_base::out.

4.630.3.21 template<class _CharT , class _Traits , class _Alloc > basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos (pos_type , ios_base::openmode = ios_base::in | ios_base::out) [protected], [virtual]

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 197 of file sstream.tcc.

References std::ios_base::in, and std::ios_base::out.

4.630.3.22 template<typename _CharT, typename _Traits, typename _Alloc> virtual __streambuf_type* std::basic_stringbuf< _CharT, _Traits, _Alloc >::setbuf (char_type * __s, streamsize __n) [inline], [protected], [virtual]

Manipulates the buffer.

Parameters

__s	Pointer to a buffer area.
__n	Size of *__s*.

Returns

`this`

If no buffer has already been created, and both *__s* and *__n* are non-zero, then `__s` is used as a buffer; see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html` for more.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 202 of file sstream.

References std::basic_string< _CharT, _Traits, _Alloc >::clear().

4.630.3.23 template<typename _CharT, typename _Traits> void **std::basic_streambuf**< _CharT, _Traits >::setg (**char_type** ∗ *__gbeg,* **char_type** ∗ *__gnext,* **char_type** ∗ *__gend*) `[inline]`, `[protected]`, `[inherited]`

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

> *__gbeg* == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Definition at line 509 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), and std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.630.3.24 template<typename _CharT, typename _Traits> void **std::basic_streambuf**< _CharT, _Traits >::setp (**char_type** ∗ *__pbeg,* **char_type** ∗ *__pend*) `[inline]`, `[protected]`, `[inherited]`

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

> *__pbeg* == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Definition at line 555 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.630.3.25 template<typename _CharT, typename _Traits> int_type **std::basic_streambuf**< _CharT, _Traits >::sgetc ( ) `[inline]`, `[inherited]`

Getting the next character.

Returns

> The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 338 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::basic_streambuf< char_type, traits_type >::snextc().

4.630.3.26 template<typename _CharT, typename _Traits> streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (char_type * __s, streamsize __n) [inline], [inherited]

Entry point for xsgetn.

Parameters

__s	A buffer area.
__n	A count.

Returns xsgetn(__s,__n). The effect is to fill *__s*[0] through *__s*[__n-1] with characters from the input sequence, if possible.

Definition at line 357 of file streambuf.

4.630.3.27 template<typename _CharT, typename _Traits, typename _Alloc> virtual streamsize std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc ( ) [inline], [protected], [virtual]

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.
The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*
The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 170 of file sstream.

References std::basic_stringbuf< _CharT, _Traits, _Alloc >::_M_mode, std::basic_streambuf< _CharT, _Traits >::egptr(), std::basic_streambuf< _CharT, _Traits >::gptr(), and std::ios_base::in.

4.630.3.28 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::snextc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 298 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.630.3.29 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (char_type __c) [inline], [inherited]

Pushing characters back into the input stream.

Parameters

__c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but *__c* is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be *__c*.

Definition at line 372 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::putback().

4.630.3.30 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sputc (char_type __c) [inline], [inherited]

Entry point for all single-character output functions.

Parameters

__c	A character to output.

Returns

__c, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *__c* in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Definition at line 424 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), and std::ostreambuf_iterator< _CharT, _Traits >::operator=().

4.630.3.31 template<typename _CharT, typename _Traits> streamsize std::basic_streambuf< _CharT, _Traits >::sputn (const char_type * __s, streamsize __n) [inline], [inherited]

Entry point for all single-character output functions.

Parameters

__s	A buffer read area.
__n	A count.

One of two public output functions.

Returns xsputn(__s,__n). The effect is to write *__s*[0] through *__s*[__n-1] to the output sequence, if possible.

Definition at line 450 of file streambuf.

4.630.3.32 template<typename _CharT, typename _Traits, typename _Alloc> **__string_type std::basic_stringbuf**< _CharT, _Traits, _Alloc >::str ( ) const `[inline]`

Copying out the string buffer.

Returns

A copy of one of the underlying sequences.

If the buffer is only created in input mode, the underlying character sequence is equal to the input sequence; otherwise, it is equal to the output sequence. [27.7.1.2]/1

Definition at line 126 of file sstream.

References std::basic_streambuf< _CharT, _Traits >::egptr(), std::basic_streambuf< _CharT, _Traits >::pbase(), and std::basic_streambuf< _CharT, _Traits >::pptr().

4.630.3.33 template<typename _CharT, typename _Traits, typename _Alloc> void **std::basic_stringbuf**< _CharT, _Traits, _Alloc >::str (const **__string_type** & *__s*) `[inline]`

Setting a new buffer.

Parameters

__s	The string to use as a new sequence.

Deallocates any previous stored sequence, then copies *s* to use as a new one.

Definition at line 150 of file sstream.

References std::basic_stringbuf< _CharT, _Traits, _Alloc >::_M_mode, std::basic_string< _CharT, _Traits, _Alloc >::assign(), std::basic_string< _CharT, _Traits, _Alloc >::data(), and std::basic_string< _CharT, _Traits, _Alloc >::size().

4.630.3.34 template<typename _CharT, typename _Traits> int_type **std::basic_streambuf**< _CharT, _Traits >::sungetc ( ) `[inline]`, `[inherited]`

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.

Definition at line 397 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::unget().

4.630.3.35 template<typename _CharT, typename _Traits> virtual int **std::basic_streambuf**< _CharT, _Traits >::sync (void) `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.

Definition at line 627 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubsync().

4.630.3.36 template<typename _CharT, typename _Traits> virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( ) `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.

Definition at line 700 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sbumpc().

4.630.3.37 template<class _CharT , class _Traits , class _Alloc > basic_stringbuf< _CharT, _Traits, _Alloc >::int_type basic_stringbuf< _CharT, _Traits, _Alloc >::underflow ( ) `[protected]`, `[virtual]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html`

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 131 of file sstream.tcc.

References std::ios_base::in.

4.630.3.38 template<typename _CharT , typename _Traits > streamsize basic_streambuf< _CharT, _Traits >::xsgetn (char_type ∗ *__s*, streamsize *__n*) `[protected]`, `[virtual]`, `[inherited]`

Multiple character extraction.

Parameters

__s	A buffer area.
__n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills __*s*[0] through __*s*[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either __*n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.

Definition at line 46 of file streambuf.tcc.

References std::min().

Referenced by std::basic_streambuf< char_type, traits_type >::sgetn().

4.630.3.39 template<typename _CharT , typename _Traits > **streamsize basic_streambuf< _CharT, _Traits >::xsputn (const char_type * *__s*, streamsize *__n*)** `[protected]`, `[virtual]`, `[inherited]`

Multiple character insertion.

Parameters

__s	A buffer area.
__n	Maximum number of characters to write.

Returns

The number of characters written.

Writes __*s*[0] through __*s*[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.

Definition at line 80 of file streambuf.tcc.

References std::min().

Extractors

All the `operator>>` *functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.*

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

Inserters

All the `operator<<` *functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.*

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

4.631.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>class std::basic_stringstream< _CharT, _Traits, _Alloc >

Controlling input and output for std::string.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

This class supports reading from and writing to objects of type std::basic_string, using the inherited functions from std::basic_iostream. To control the associated sequence, an instance of std::basic_stringbuf is used, which this page refers to as `sb`.

Definition at line 502 of file sstream.

4.631.2 Member Typedef Documentation

4.631.2.1 template<typename _CharT, typename _Traits> typedef **num_put**<_CharT, **ostreambuf_iterator**<_CharT, _Traits> > **std::basic_ios**< _CharT, _Traits >::**__num_put_type** `[inherited]`

These are non-standard types.

Definition at line 88 of file basic_ios.h.

4.631.2.2 typedef void(∗ std::ios_base::event_callback)(**event** __e, **ios_base** &__b, int __i) `[inherited]`

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ∼ios().

Definition at line 436 of file ios_base.h.

4.631.2.3 typedef _Ios_Fmtflags std::ios_base::fmtflags `[inherited]`

This is a bitmask type.

`_Ios_Fmtflags` `is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 255 of file ios_base.h.

4.631.2.4 typedef _Ios_Iostate std::ios_base::iostate `[inherited]`

This is a bitmask type.

`_Ios_Iostate` `is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 330 of file ios_base.h.

4.631.2.5 typedef _Ios_Openmode std::ios_base::openmode `[inherited]`

This is a bitmask type.

`_Ios_Openmode` `is` implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 361 of file ios_base.h.

4.631.2.6 typedef _Ios_Seekdir std::ios_base::seekdir `[inherited]`

This is an enumerated type.

`_Ios_Seekdir` `is` implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

Definition at line 393 of file ios_base.h.

4.631.3 Member Enumeration Documentation

4.631.3.1 enum std::ios_base::event `[inherited]`

The set of events that may be passed to an event callback.

erase_event is used during ∼ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().

Definition at line 419 of file ios_base.h.

4.631.4 Constructor & Destructor Documentation

4.631.4.1 template<typename _CharT , typename _Traits , typename _Alloc > **std::basic_stringstream**< _CharT, _Traits, _Alloc >::**basic_stringstream (ios_base::openmode** *__m* = **ios_base::out | ios_base::in)** `[inline]`, `[explicit]`

Default constructor starts with an empty string buffer.

Parameters

__m	Whether the buffer can read, or write, or both.

Initializes `sb` using the mode from `__m`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 537 of file sstream.

References std::basic_ios< _CharT, _Traits >::init().

4.631.4.2 template<typename _CharT , typename _Traits , typename _Alloc > **std::basic_stringstream**< _CharT, _Traits, _Alloc >::**basic_stringstream (const __string_type &** *__str*, **ios_base::openmode** *__m* = **ios_base::out | ios_base::in)** `[inline]`, `[explicit]`

Starts with an existing string buffer.

Parameters

__str	A string to copy as a starting buffer.
__m	Whether the buffer can read, or write, or both.

Initializes `sb` using *__str* and `__m`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

Definition at line 553 of file sstream.

References std::basic_ios< _CharT, _Traits >::init().

4.631.4.3 template<typename _CharT , typename _Traits , typename _Alloc > **std::basic_stringstream**< _CharT, _Traits, _Alloc >::~**basic_stringstream ( )** `[inline]`

The destructor does nothing.

The buffer is deallocated by the stringbuf object, not the formatting stream.

Definition at line 564 of file sstream.

4.631.5 Member Function Documentation

4.631.5.1 const **locale**& std::ios_base::_M_getloc ( ) const `[inline]`, `[inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 706 of file ios_base.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::time_put< _CharT, _OutIter >::do_put(), std::num_put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::put().

4.631.5.2 template<typename _CharT, typename _Traits> void **std::basic_ostream**< _CharT, _Traits >::_M_write (const char_type * *__s*, **streamsize** *__n*) [inline], [inherited]

Core write functionality, without sentry.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Definition at line 311 of file ostream.

Referenced by std::basic_ostream< _CharT, _Traits >::write().

4.631.5.3 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::bad ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 205 of file basic_ios.h.

4.631.5.4 template<typename _CharT , typename _Traits > void **basic_ios**< _CharT, _Traits >::clear (**iostate** *__state* = **goodbit**) [inherited]

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic_ios.tcc.

Referenced by std::basic_ios< char, _Traits >::exceptions(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.631.5.5 template<typename _CharT , typename _Traits > **basic_ios**< _CharT, _Traits > & **basic_ios**< _CharT, _Traits >::copyfmt (const **basic_ios**< _CharT, _Traits > & *__rhs*) [inherited]

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().

Definition at line 63 of file basic_ios.tcc.

References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.631.5.6 template<typename _CharT, typename _Traits> bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

Definition at line 184 of file basic_ios.h.

4.631.5.7 template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Definition at line 216 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.631.5.8 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::exceptions (iostate *__except*) [inline], [inherited]

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (
      __gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 251 of file basic_ios.h.

4.631.5.9 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::fail ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

Definition at line 195 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::operator void ∗(), std::basic_ios< char, _Traits >::operator!(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::regex_traits< _Ch_type >::value().

4.631.5.10 template<typename _CharT, typename _Traits> char_type **std::basic_ios**< _CharT, _Traits >::fill ( ) const `[inline]`, `[inherited]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

Definition at line 364 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< char, _Traits >::fill().

4.631.5.11 template<typename _CharT, typename _Traits> char_type **std::basic_ios**< _CharT, _Traits >::fill (**char_type** *__ch*) `[inline]`, `[inherited]`

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

Definition at line 384 of file basic_ios.h.

4.631.5.12 fmtflags std::ios_base::flags ( ) const [inline], [inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 551 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::operator>>(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.631.5.13 fmtflags std::ios_base::flags (fmtflags *__fmtfl*) [inline], [inherited]

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.

Definition at line 562 of file ios_base.h.

4.631.5.14 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::flush ( ) [inherited]

Synchronizing the stream buffer.

Returns

∗this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.

Definition at line 211 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::flush().

4.631.5.15 template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline], [inherited]

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

4.631.5.16 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::int_type basic_istream< _CharT, _Traits >::get (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 236 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.631.5.17 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (char_type & __c) [inherited]

Simple extraction.

Parameters

__c	The character in which to store data.

Returns

∗this

Tries to extract a character and store it in *__c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 272 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.631.5.18 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (char_type ∗ __s, streamsize __n, char_type __delim) [inherited]

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 309 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.631.5.19 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (char_type ∗ *__s*, streamsize *__n*) `[inline]`, `[inherited]`

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *s*.

Returns

∗this

Returns `get`(__s,__n,widen('\n')).

Definition at line 354 of file istream.

4.631.5.20 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::get (__streambuf_type & *__sb*, char_type *__delim*) `[inherited]`

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

Definition at line 356 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), std::basic_streambuf< _CharT, _Traits >::snextc(), and std::basic_streambuf< _CharT, _Traits >::sputc().

4.631.5.21 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::get (__streambuf_type & *__sb*) [inline], [inherited]

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

∗this

Returns `get`(__sb,widen('\n')).

Definition at line 387 of file istream.

4.631.5.22 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::getline (char_type ∗ *__s*, streamsize *__n*, char_type *__delim*) [inherited]

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

∗this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Definition at line 400 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.631.5.23 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::getline (char_type ∗ *__s*, streamsize *__n*) [inline], [inherited]

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.

Returns

∗this

Returns `getline`(__s,__n,widen('\n')).

Definition at line 427 of file istream.

Referenced by std::basic_istream< char >::getline().

4.631.5.24 locale std::ios_base::getloc ( ) const [inline], [inherited]

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Definition at line 695 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), std::operator>>(), and std::ws().

4.631.5.25 template<typename _CharT, typename _Traits> bool **std::basic_ios**< _CharT, _Traits >::good ( ) const `[inline]`, `[inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.

Definition at line 174 of file basic_ios.h.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.631.5.26 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::ignore (**streamsize** *__n*, int_type *__delim*) `[inherited]`

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

∗this

Extracts characters and throws them away until one of the following happens:

- if *__n* `!= std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

Definition at line 555 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.631.5.27 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::ignore (**streamsize** *__n*) `[inherited]`

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 493 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_streambuf< _CharT, _Traits >::sgetc(), and std::basic_streambuf< _CharT, _Traits >::snextc().

4.631.5.28 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::ignore (void) `[inherited]`

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

Definition at line 460 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_streambuf< _CharT, _Traits >::sbumpc(), and std::basic_ios< _CharT, _Traits >::setstate().

4.631.5.29 template<typename _CharT , typename _Traits > **locale basic_ios**< _CharT, _Traits >::imbue (const locale & *__loc*) `[inherited]`

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

Definition at line 114 of file basic_ios.tcc.

References std::ios_base::imbue().

Referenced by std::operator<<().

4.631.5.30 template<typename _CharT, typename _Traits> void **basic_ios**< _CharT, _Traits >::init (**basic_streambuf**< _CharT, _Traits > * *__sb*) `[protected]`, `[inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Definition at line 126 of file basic_ios.tcc.

Referenced by std::basic_fstream< _CharT, _Traits >::basic_fstream(), std::basic_ifstream< _CharT, _Traits >::basic_ifstream(), std::basic_ios< char, _Traits >::basic_ios(), std::basic_istream< char >::basic_istream(), std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream(), std::basic_ofstream< _CharT, _Traits >::basic_ofstream(), std::basic_ostream< char >::basic_ostream(), std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream(), and std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream().

4.631.5.31 long& std::ios_base::iword (int *__ix*) [inline], [inherited]

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 741 of file ios_base.h.

4.631.5.32 template<typename _CharT, typename _Traits> char std::basic_ios< _CharT, _Traits >::narrow (char_type *__c*, char *__dfault*) const [inline], [inherited]

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)
```

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 224 of file ostream.

4.631.5.49 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long double __f) `[inline]`, `[inherited]`

Floating point arithmetic inserters.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 232 of file ostream.

4.631.5.50 template<typename _CharT, typename _Traits> __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (const void * *__p*) [inline], [inherited]

Pointer arithmetic inserters.

Parameters

__p	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 245 of file ostream.

4.631.5.51 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::operator<< (__streambuf_type * *__sb*) [inherited]

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

Definition at line 120 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 175 of file istream.

4.631.5.58 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::operator>> (int & __n) [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 159 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::failbit, std::num_get< _CharT, _InIter >::get(), std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::setstate().

4.631.5.59 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned int & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 182 of file istream.

4.631.5.60 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (long & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 186 of file istream.

4.631.5.61 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned long & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 190 of file istream.

4.631.5.62 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (long long & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 195 of file istream.

4.631.5.63 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned long long & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

__n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 199 of file istream.

4.631.5.64 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (float & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 214 of file istream.

4.631.5.65 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (double & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 218 of file istream.

4.631.5.66 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (long double & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

__f	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 222 of file istream.

4.631.5.67 template<typename _CharT, typename _Traits> __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (void *& __p) [inline], [inherited]

Basic arithmetic extractors.

Parameters

__p	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Definition at line 235 of file istream.

4.631.5.68 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::operator>> (__streambuf_type * __sb) [inherited]

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If __`sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the __`sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

Definition at line 204 of file istream.tcc.

References std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.631.5.69 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::int_type basic_istream< _CharT, _Traits >::peek (void) [inherited]

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

Definition at line 620 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.631.5.70 streamsize std::ios_base::precision ( ) const [inline], [inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Definition at line 621 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::operator<<().

4.631.5.71 streamsize std::ios_base::precision (streamsize __prec) [inline], [inherited]

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 630 of file ios_base.h.

4.631.5.72 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::put (char_type __c) [inherited]

Simple insertion.

Parameters

__c	The character to insert.

Returns

∗this

Tries to insert `__c`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 149 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by std::endl(), and std::ends().

4.631.5.73 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::putback (char_type __c) [inherited]

Unextracting a single character.

Parameters

__c	The character to push back into the input stream.

Returns

∗this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 711 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sputbackc().

Referenced by std::operator>>().

4.631.5.74 void∗& std::ios_base::pword (int __ix) [inline], [inherited]

Access to void pointer array.

Parameters

__ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

Definition at line 762 of file ios_base.h.

4.631.5.75 template<typename _CharT, typename _Traits> basic_streambuf< _CharT, _Traits > ∗ basic_ios< _CharT, _Traits >::rdbuf (basic_streambuf< _CharT, _Traits > ∗ __sb) [inherited]

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;

foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.631.5.76 template<typename _CharT , typename _Traits , typename _Alloc > __stringbuf_type∗ std::basic_stringstream< _CharT, _Traits, _Alloc >::rdbuf ( ) const [inline]

Accessing the underlying buffer.

Returns

The current basic_stringbuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

Definition at line 575 of file sstream.

4.631.5.77 template<typename _CharT, typename _Traits> iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Definition at line 131 of file basic_ios.h.

Referenced by std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::eof(), std::basic_ios< char, _Traits >::fail(), std::basic_ios< char, _Traits >::good(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< char, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.631.5.78 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & basic_istream< _CharT, _Traits >::read (char_type * __s, streamsize __n) [inherited]

Extraction without delimiters.

Parameters

__s	A character array.
__n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 650 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.631.5.79 template<typename _CharT , typename _Traits > streamsize basic_istream< _CharT, _Traits >::readsome (char_type * __s, streamsize __n) [inherited]

Extraction until the buffer is exhausted, but no more.

Parameters

__s	A character array.
__n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

Definition at line 679 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::goodbit, std::min(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.631.5.80 void std::ios_base::register_callback (**event_callback** *__fn,* int *__index*) `[inherited]`

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.631.5.81 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::seekg (pos_type *__pos*) `[inherited]`

Changing the current read position.

Parameters

__pos	A file position object.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 845 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), and std::basic_ios< _CharT, _Traits >::setstate().

4.631.5.82 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::seekg (off_type *__off*, **ios_base::seekdir** *__dir*) `[inherited]`

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 884 of file istream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::in, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), and std::basic_ios< _CharT, _Traits >::setstate().

4.631.5.83 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::seekp (pos_type *__pos*) `[inherited]`

Changing the current write position.

Parameters

__pos	A file position object.

Returns

∗this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

Definition at line 258 of file ostream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.631.5.84 template<typename _CharT , typename _Traits > **basic_ostream**< _CharT, _Traits > & **basic_ostream**< _CharT, _Traits >::seekp (off_type *__off*, **ios_base::seekdir** *__dir*) `[inherited]`

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

$*$this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.

Definition at line 290 of file ostream.tcc.

References std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::failbit, std::ios_base::goodbit, std::ios_base::out, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.631.5.85 fmtflags std::ios_base::setf (fmtflags *__fmtfl*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Definition at line 578 of file ios_base.h.

Referenced by std::dec(), std::fixed(), std::hex(), std::left(), std::oct(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

4.631.5.86 fmtflags std::ios_base::setf (fmtflags *__fmtfl,* fmtflags *__mask*) `[inline]`, `[inherited]`

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* `&` *mask*. An example mask is `ios_base::adjustfield`.

Definition at line 595 of file ios_base.h.

4.631.5.87 template<typename _CharT, typename _Traits> void std::basic_ios< _CharT, _Traits >::setstate (iostate *__state*) `[inline]`, `[inherited]`

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.

Definition at line 151 of file basic_ios.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::tr2::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.631.5.88 template<typename _CharT , typename _Traits , typename _Alloc > __string_type std::basic_stringstream< _CharT, _Traits, _Alloc >::str ( ) const [inline]

Copying out the string buffer.

Returns

`rdbuf()->str()`

Definition at line 583 of file sstream.

4.631.5.89 template<typename _CharT , typename _Traits , typename _Alloc > void std::basic_stringstream< _CharT, _Traits, _Alloc >::str (const __string_type & __s) [inline]

Setting a new buffer.

Parameters

__s	The string to use as a new sequence.

Calls `rdbuf()->str(s)`.

Definition at line 593 of file sstream.

4.631.5.90 template<typename _CharT , typename _Traits > int basic_istream< _CharT, _Traits >::sync (void) [inherited]

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 781 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::goodbit, std::basic_streambuf< _CharT, _Traits >::pubsync(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

4.631.5.91 static bool std::ios_base::sync_with_stdio (bool *__sync* = `true`) `[static]`, `[inherited]`

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt1` `html`

4.631.5.92 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::pos_type basic_istream< _CharT, _Traits >::tellg (void) `[inherited]`

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

Definition at line 817 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::in, and std::basic_ios< _CharT, _Traits >::rdbuf().

4.631.5.93 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits >::pos_type basic_ostream< _CharT, _Traits >::tellp ( ) `[inherited]`

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.

Definition at line 237 of file ostream.tcc.

References std::ios_base::badbit, std::ios_base::cur, std::basic_ios< _CharT, _Traits >::fail(), std::ios_base::out, and std::basic_ios< _CharT, _Traits >::rdbuf().

4.631.5.94 template<typename _CharT, typename _Traits> **basic_ostream**<_CharT, _Traits>* **std::basic_ios**< _CharT, _Traits >::tie ( ) const `[inline]`, `[inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Definition at line 289 of file basic_ios.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.631.5.95 template<typename _CharT, typename _Traits> **basic_ostream**<_CharT, _Traits>* **std::basic_ios**< _CharT, _Traits >::tie (**basic_ostream**< _CharT, _Traits > * *__tiestr*) `[inline]`, `[inherited]`

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

Definition at line 301 of file basic_ios.h.

4.631.5.96 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & **basic_istream**< _CharT, _Traits >::unget (void) `[inherited]`

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 746 of file istream.tcc.

References std::basic_istream< _CharT, _Traits >::_M_gcount, std::ios_base::badbit, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::rdstate(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_streambuf< _CharT, _Traits >::sungetc().

4.631.5.97 void std::ios_base::unsetf (**fmtflags** *__mask*) [inline], [inherited]

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.

Definition at line 610 of file ios_base.h.

Referenced by std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), and std::nouppercase().

4.631.5.98 template<typename _CharT, typename _Traits> char_type **std::basic_ios**< _CharT, _Traits >::widen (char *__c*) const [inline], [inherited]

Widens characters.

Parameters

__c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional l10n notes are at `http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html`

Definition at line 443 of file basic_ios.h.

Referenced by std::endl(), std::basic_ios< char, _Traits >::fill(), std::basic_istream< char >::get(), std::basic_istream< char >::getline(), std::getline(), std::tr2::operator>>(), and std::operator>>().

4.631.5.99 **streamsize** std::ios_base::width ( ) const [inline], [inherited]

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Definition at line 644 of file ios_base.h.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_put< _CharT, _OutIter >::do_put(), and std::operator>>().

4.631.5.100 **streamsize** std::ios_base::width (**streamsize** *__wide*) [inline], [inherited]

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 653 of file ios_base.h.

4.631.5.101 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & basic_ostream< _CharT, _Traits >::write (const char_type * __s, streamsize __n) [inherited]

Character string insertion.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Returns

*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 183 of file ostream.tcc.

References std::basic_ostream< _CharT, _Traits >::_M_write(), and std::ios_base::badbit.

4.631.5.102 static int std::ios_base::xalloc ( ) throw () [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.631.6 Member Data Documentation

4.631.6.1 template<typename _CharT, typename _Traits> streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]

The number of characters extracted in the previous unformatted function; see gcount().

Definition at line 82 of file istream.

Referenced by std::basic_istream< char >::gcount(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::unget(), and std::basic_istream< char >::~basic_istream().

4.631.6.2 const fmtflags std::ios_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Definition at line 310 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.631.6.3 const openmode std::ios_base::app [static], [inherited]

Seek to end before each write.

Definition at line 364 of file ios_base.h.

4.631.6.4 const openmode std::ios_base::ate [static], [inherited]

Open and seek to end immediately after opening.

Definition at line 367 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.631.6.5 const iostate std::ios_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Definition at line 334 of file ios_base.h.

Referenced by std::basic_ostream< char >::_M_write(), std::basic_ios< char, _Traits >::bad(), std::basic_ios< char, _Traits >::fail(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_ostream< _CharT, _Traits >::tellp(), std::basic_istream< _CharT, _Traits >::unget(), std::basic_ostream< _CharT, _Traits >::write(), and std::basic_ostream< _CharT, _Traits >::sentry::~sentry().

4.631.6.6 const fmtflags std::ios_base::basefield [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Definition at line 313 of file ios_base.h.

Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::hex(), std::oct(), and std::basic_ostream<

_CharT, _Traits >::operator<<().

4.631.6.7 const seekdir std::ios_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.

Definition at line 396 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos().

4.631.6.8 const openmode std::ios_base::binary [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch27s02.html`.

Definition at line 372 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::showmanyc().

4.631.6.9 const fmtflags std::ios_base::boolalpha [static], [inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 258 of file ios_base.h.

Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.631.6.10 const seekdir std::ios_base::cur [static], [inherited]

Request a seek relative to the current position within the sequence.

Definition at line 399 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_filebuf< _CharT, _Traits >::seekoff(), std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp().

4.631.6.11 const fmtflags std::ios_base::dec [static], [inherited]

Converts integer input or generates integer output in decimal base.

Definition at line 261 of file ios_base.h.

Referenced by std::dec().

4.631.6.12 const seekdir std::ios_base::end [static], [inherited]

Request a seek relative to the current end of the sequence.

Definition at line 402 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.631.6.13 const iostate std::ios_base::eofbit [static], [inherited]

Indicates that an input operation reached the end of an input sequence.

Definition at line 337 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time-

_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::eof(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.631.6.14 const **iostate** std::ios_base::failbit `[static]`, `[inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 342 of file ios_base.h.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< char, _Traits >::fail(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_fstream< _CharT, _Traits >::open(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.631.6.15 const **fmtflags** std::ios_base::fixed `[static]`, `[inherited]`

Generate floating-point output in fixed-point notation.

Definition at line 264 of file ios_base.h.

Referenced by std::fixed().

4.631.6.16 const **fmtflags** std::ios_base::floatfield `[static]`, `[inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 316 of file ios_base.h.

Referenced by std::fixed(), and std::scientific().

4.631.6.17 const **iostate** std::ios_base::goodbit `[static]`, `[inherited]`

Indicates all is well.

Definition at line 345 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::basic_istream< _CharT, _Traits >::operator>>(), std::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.631.6.18 const fmtflags std::ios_base::hex `[static]`, `[inherited]`

Converts integer input or generates integer output in hexadecimal base.

Definition at line 267 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.631.6.19 const openmode std::ios_base::in `[static]`, `[inherited]`

Open for input. Default for `ifstream` and fstream.

Definition at line 375 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_istream< _CharT, _Traits >::tellg(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), std::basic_filebuf< _CharT, _Traits >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.631.6.20 const fmtflags std::ios_base::internal `[static]`, `[inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 272 of file ios_base.h.

Referenced by std::internal().

4.631.6.21 const fmtflags std::ios_base::left `[static]`, `[inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 276 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.631.6.22 const fmtflags std::ios_base::oct `[static]`, `[inherited]`

Converts integer input or generates integer output in octal base.

Definition at line 279 of file ios_base.h.

Referenced by std::oct(), and std::basic_ostream< _CharT, _Traits >::operator<<().

4.631.6.23 const openmode std::ios_base::out `[static]`, `[inherited]`

Open for output. Default for `ofstream` and fstream.

Definition at line 378 of file ios_base.h.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer(), std::basic_ofstream< _CharT, _Traits >::open(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_ostream< _CharT, _Traits >::tellp(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.631.6.24 const fmtflags std::ios_base::right `[static]`, `[inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Definition at line 283 of file ios_base.h.

Referenced by std::right().

4.631.6.25 const **fmtflags** std::ios_base::scientific `[static], [inherited]`

Generates floating-point output in scientific notation.

Definition at line 286 of file ios_base.h.

Referenced by std::scientific().

4.631.6.26 const **fmtflags** std::ios_base::showbase `[static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Definition at line 290 of file ios_base.h.

Referenced by std::noshowbase(), and std::showbase().

4.631.6.27 const **fmtflags** std::ios_base::showpoint `[static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Definition at line 294 of file ios_base.h.

Referenced by std::noshowpoint(), and std::showpoint().

4.631.6.28 const **fmtflags** std::ios_base::showpos `[static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Definition at line 297 of file ios_base.h.

Referenced by std::noshowpos(), and std::showpos().

4.631.6.29 const **fmtflags** std::ios_base::skipws `[static], [inherited]`

Skips leading white space before certain input operations.

Definition at line 300 of file ios_base.h.

Referenced by std::noskipws(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::skipws().

4.631.6.30 const **openmode** std::ios_base::trunc `[static], [inherited]`

Open for input. Default for `ofstream`.

Definition at line 381 of file ios_base.h.

4.631.6.31 const **fmtflags** std::ios_base::unitbuf `[static], [inherited]`

Flushes output after each output operation.

Definition at line 303 of file ios_base.h.

Referenced by std::nounitbuf(), std::unitbuf(), and std::basic_ostream< _CharT, _Traits >::sentry::∼sentry().

4.631.6.32 const **fmtflags** std::ios_base::uppercase `[static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Definition at line 307 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

4.632.1 Detailed Description

A Bernoulli random number distribution.

Generates a sequence of true and false values with likelihood p that true will come up and $(1-p)$ that false will appear.

Definition at line 3572 of file random.h.

4.632.2 Member Typedef Documentation

4.632.2.1 typedef bool **std::bernoulli_distribution::result_type**

The type of the range of the distribution.

Definition at line 3576 of file random.h.

4.632.3 Constructor & Destructor Documentation

4.632.3.1 std::bernoulli_distribution::bernoulli_distribution (double *__p* = `0.5`) `[inline]`, `[explicit]`

Constructs a Bernoulli distribution with likelihood `p`.

Parameters

__p	[IN] The likelihood of a true result being returned. Must be in the interval $[0,1]$.

Definition at line 3609 of file random.h.

4.632.4 Member Function Documentation

4.632.4.1 **result_type** std::bernoulli_distribution::max ( ) const `[inline]`

Returns the least upper bound value of the distribution.

Definition at line 3659 of file random.h.

References std::numeric_limits< _Tp >::max().

4.632.4.2 **result_type** std::bernoulli_distribution::min ( ) const `[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 3652 of file random.h.

References std::numeric_limits< _Tp >::min().

4.632.4.3 template<typename _UniformRandomNumberGenerator > **result_type** std::bernoulli_distribution::operator() (_UniformRandomNumberGenerator & *__urng*) `[inline]`

Generating functions.

Definition at line 3667 of file random.h.

References operator()().

Referenced by operator()().

4.632.4.4 double std::bernoulli_distribution::p ( ) const `[inline]`

Returns the `p` parameter of the distribution.

Definition at line 3630 of file random.h.

4.632.4.5 **param_type** std::bernoulli_distribution::param ( ) const `[inline]`

Returns the parameter set of the distribution.

Definition at line 3637 of file random.h.

Referenced by std::operator>>().

4.632.4.6 void std::bernoulli_distribution::param (const param_type & __param) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 3645 of file random.h.

4.632.4.7 void std::bernoulli_distribution::reset ( ) [inline]

Resets the distribution state.

Does nothing for a Bernoulli distribution.

Definition at line 3624 of file random.h.

4.632.5 Friends And Related Function Documentation

4.632.5.1 bool operator== (const bernoulli_distribution & *__d1*, const bernoulli_distribution & *__d2*) [friend]

Return true if two Bernoulli distributions have the same parameters.

Definition at line 3709 of file random.h.

The documentation for this class was generated from the following files:

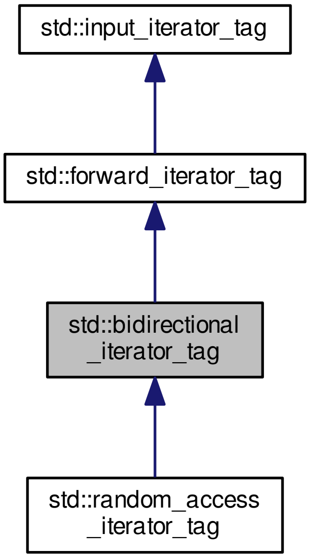
4.634 std::bidirectional_iterator_tag Struct Reference

Inheritance diagram for std::bidirectional_iterator_tag:



4.634.1 Detailed Description

Bidirectional iterators support a superset of forward iterator operations.

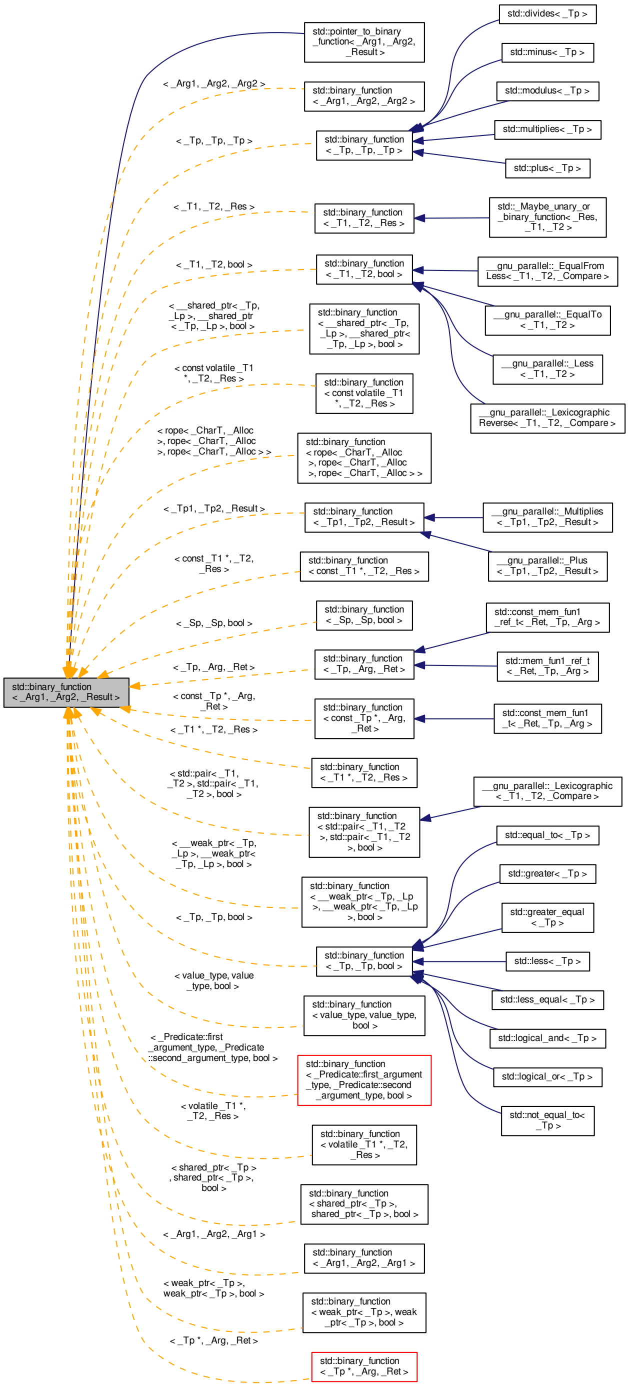
Definition at line 99 of file stl_iterator_base_types.h.

The documentation for this struct was generated from the following file:

- stl_iterator_base_types.h

4.635 std::binary_function< _Arg1, _Arg2, _Result > Struct Template Reference

Inheritance diagram for std::binary_function< _Arg1, _Arg2, _Result >:



Public Types

- typedef _Arg1 first_argument_type
- typedef _Result result_type
- typedef _Arg2 second_argument_type

4.635.1 Detailed Description

template<typename _Arg1, typename _Arg2, typename _Result>struct std::binary_function< _Arg1, _Arg2, _Result >

This is one of the functor base classes.

Definition at line 114 of file stl_function.h.

4.635.2 Member Typedef Documentation

4.635.2.1 template<typename _Arg1, typename _Arg2, typename _Result> typedef _Arg1 std::binary_function< _Arg1, _Arg2, _Result >::first_argument_type

`first_argument_type` is the type of the first argument

Definition at line 117 of file stl_function.h.

4.635.2.2 template<typename _Arg1, typename _Arg2, typename _Result> typedef _Result std::binary_function< _Arg1, _Arg2, _Result >::result_type

`result_type` is the return type

Definition at line 123 of file stl_function.h.

4.635.2.3 template<typename _Arg1, typename _Arg2, typename _Result> typedef _Arg2 std::binary_function< _Arg1, _Arg2, _Result >::second_argument_type

`second_argument_type` is the type of the second argument

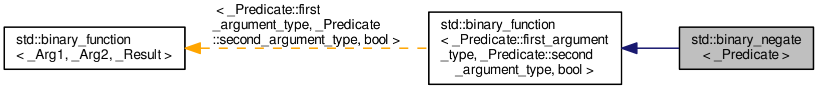
Definition at line 120 of file stl_function.h.

The documentation for this struct was generated from the following file:

- stl_function.h

4.636 std::binary_negate< _Predicate > Class Template Reference

Inheritance diagram for std::binary_negate< _Predicate >:



Public Types

- typedef
  _Predicate::first_argument_type first_argument_type

4.639.1 Detailed Description

template<typename _IntType = int>class std::binomial_distribution< _IntType >

A discrete binomial random number distribution.

The formula for the binomial probability density function is $p(i|t,p) = \binom{t}{i} p^i (1 - p)^{t - i}$ where t and p are the parameters of the distribution.

Definition at line 3777 of file random.h.

4.639.2 Member Typedef Documentation

4.639.2.1 template<typename _IntType = int> typedef _IntType **std::binomial_distribution**< _IntType >::**result_type**

The type of the range of the distribution.

Definition at line 3780 of file random.h.

4.639.3 Member Function Documentation

4.639.3.1 template<typename _IntType = int> **result_type std::binomial_distribution**< _IntType >::max ( ) const `[inline]`

Returns the least upper bound value of the distribution.

Definition at line 3887 of file random.h.

4.639.3.2 template<typename _IntType = int> **result_type std::binomial_distribution**< _IntType >::min ( ) const `[inline]`

Returns the greatest lower bound value of the distribution.

Definition at line 3880 of file random.h.

4.639.3.3 template<typename _IntType = int> template<typename _UniformRandomNumberGenerator > **result_type std::binomial_distribution**< _IntType >::operator() (_UniformRandomNumberGenerator & *__urng*) `[inline]`

Generating functions.

Definition at line 3895 of file random.h.

References std::binomial_distribution< _IntType >::operator()().

Referenced by std::binomial_distribution< _IntType >::operator()().

4.639.3.4 template<typename _IntType > template<typename _UniformRandomNumberGenerator > **binomial_distribution**< _IntType >::**result_type std::binomial_distribution**< _IntType >::operator() (_UniformRandomNumberGenerator & *__urng*, const **param_type** & *__param*)

A rejection algorithm when $t * p >= 8$ and a simple waiting time method - the second in the referenced book - otherwise. NB: The former is available only if _GLIBCXX_USE_C99_MATH_TR1 is defined.

Reference: Devroye, L. Non-Uniform Random Variates Generation. Springer-Verlag, New York, 1986, Ch. X, Sect. 4 (+ Errata!).

Definition at line 1685 of file bits/random.tcc.

References std::abs(), std::numeric_limits< _Tp >::epsilon(), std::log(), and std::numeric_limits< _Tp >::max().

4.639.3.5 template<typename _IntType = int> double **std::binomial_distribution**< _IntType >::p ( ) const `[inline]`

Returns the distribution `p` parameter.

Definition at line 3858 of file random.h.

4.639.3.6 template<typename _IntType = int> **param_type std::binomial_distribution**< _IntType >::param ( ) const `[inline]`

Returns the parameter set of the distribution.

Definition at line 3865 of file random.h.

4.639.3.7 template<typename _IntType = int> void **std::binomial_distribution**< _IntType >::param (const **param_type** & *__param*) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 3873 of file random.h.

4.639.3.8 template<typename _IntType = int> void **std::binomial_distribution**< _IntType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 3844 of file random.h.

References std::normal_distribution< _RealType >::reset().

4.639.3.9 template<typename _IntType = int> _IntType **std::binomial_distribution**< _IntType >::t ( ) const [inline]

Returns the distribution `t` parameter.

Definition at line 3851 of file random.h.

4.639.4 Friends And Related Function Documentation

4.639.4.1 template<typename _IntType = int> template<typename _IntType1 , typename _CharT , typename _Traits > **std::basic_ostream**<_CharT, _Traits>& operator<< (**std::basic_ostream**< _CharT, _Traits > & *__os,* const **std::binomial_distribution**< _IntType1 > & *__x*) [friend]

Inserts a binomial_distribution random number distribution `__x` into the output stream `__os`.

Parameters

__os	An output stream.
__x	A binomial_distribution random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

4.639.4.2 template<typename _IntType = int> bool operator== (const **binomial_distribution**< _IntType > & *__d1,* const **binomial_distribution**< _IntType > & *__d2*) [friend]

Return true if two binomial distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 3931 of file random.h.

4.639.4.3 template<typename _IntType = int> template<typename _IntType1 , typename _CharT , typename _Traits > **std::basic_istream**<_CharT, _Traits>& operator>> (**std::basic_istream**< _CharT, _Traits > & *__is,* **std::binomial_distribution**< _IntType1 > & *__x*) [friend]

Extracts a binomial_distribution random number distribution `__x` from the input stream `__is`.

Parameters

__is	An input stream.
__x	A binomial_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

4.643.1 Detailed Description

template<class _CharT>struct std::char_traits< _CharT >

Basis for explicit traits specializations.

Note

> For any given actual character type, this definition is probably wrong. Since this is just a thin wrapper around __gnu_cxx::char_traits, it is possible to achieve a more appropriate definition by specializing __gnu_cxx::char_traits.

See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt05ch13s03.html` for advice on how to make use of this class for *unusual* character types. Also, check out include/ext/pod_char_traits.h.

4.647.3.4 template<typename _RealType = double> **param_type std::chi_squared_distribution**< _RealType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 2777 of file random.h.

4.647.3.5 template<typename _RealType = double> void **std::chi_squared_distribution**< _RealType >::param (const **param_type** & *__param*) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 2785 of file random.h.

4.647.3.6 template<typename _RealType = double> void **std::chi_squared_distribution**< _RealType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 2763 of file random.h.

References std::gamma_distribution< _RealType >::reset().

4.647.4 Friends And Related Function Documentation

4.647.4.1 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& operator<< (std::basic_ostream< _CharT, _Traits > & *__os*, const std::chi_squared_distribution< _RealType1 > & *__x*) [friend]

Inserts a chi_squared_distribution random number distribution `__x` into the output stream `__os`.

Parameters

__os	An output stream.
__x	A chi_squared_distribution random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

4.647.4.2 template<typename _RealType = double> bool operator== (const chi_squared_distribution< _RealType > & *__d1*, const chi_squared_distribution< _RealType > & *__d2*) [friend]

Return true if two Chi-squared distributions have the same parameters and the sequences that would be generated are equal.

Definition at line 2858 of file random.h.

4.647.4.3 template<typename _RealType = double> template<typename _RealType1 , typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & *__is*, std::chi_squared_distribution< _RealType1 > & *__x*) [friend]

Extracts a chi_squared_distribution random number distribution `__x` from the input stream `__is`.

Parameters

__is	An input stream.
__x	A chi_squared_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

4.654.1 Detailed Description

template<typename _InternT, typename _ExternT, typename _StateT>class std::codecvt< _InternT, _ExternT, _StateT >

Primary class template codecvt.

NB: Generic, mostly useless implementation.

Definition at line 276 of file codecvt.h.

4.654.2 Member Function Documentation

4.654.2.1 template<typename _InternT , typename _ExternT , typename _StateT > virtual result std::codecvt< _InternT, _ExternT, _StateT >::do_out (state_type & *__state,* const intern_type * *__from,* const intern_type * *__from_end,* const intern_type *& *__from_next,* extern_type * *__to,* extern_type * *__to_end,* extern_type *& *__to_next*) const [protected], [virtual]

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See Also

out for more information.

Implements std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >.

4.654.2.2 template<typename _InternT, typename _ExternT, typename _StateT> result **std::__codecvt_abstract_base**< _InternT, _ExternT, _StateT >::in (state_type & *__state,* const extern_type ∗ *__from,* const extern_type ∗ *__from_end,* const extern_type ∗& *__from_next,* intern_type ∗ *__to,* intern_type ∗ *__to_end,* intern_type ∗& *__to_next*) const [inline], [inherited]

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 196 of file codecvt.h.

4.654.2.3 template<typename _InternT, typename _ExternT, typename _StateT> result **std::__codecvt_abstract_base**< _InternT, _ExternT, _StateT >::out (state_type & *__state,* const intern_type ∗ *__from,* const intern_type ∗ *__from_end,* const intern_type ∗& *__from_next,* extern_type ∗ *__to,* extern_type ∗ *__to_end,* extern_type ∗& *__to_next*) const [inline], [inherited]

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 116 of file codecvt.h.

4.654.2.4 template<typename _InternT, typename _ExternT, typename _StateT> result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::unshift (state_type & *__state,* extern_type ∗ *__to,* extern_type ∗ *__to_end,* extern_type ∗& *__to_next*) const [inline], [inherited]

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 155 of file codecvt.h.

The documentation for this class was generated from the following file:

4.655.1 Detailed Description

template<typename _InternT, typename _ExternT>class std::codecvt< _InternT, _ExternT, encoding_state >

codecvt<InternT, _ExternT, encoding_state> specialization.

Definition at line 230 of file codecvt_specializations.h.

4.655.2 Member Function Documentation

4.655.2.1 template<typename _InternT , typename _ExternT > codecvt_base::result std::codecvt< _InternT, _ExternT, encoding_state >::do_out (state_type & *__state*, const intern_type ∗ *__from*, const intern_type ∗ *__from_end*, const intern_type ∗& *__from_next*, extern_type ∗ *__to*, extern_type ∗ *__to_end*, extern_type ∗& *__to_next*) const `[protected]`, `[virtual]`

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See Also

out for more information.

Implements std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >.

Definition at line 306 of file codecvt_specializations.h.

4.655.2.2 result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::in (state_type & *__state*, const extern_type ∗ *__from*, const extern_type ∗ *__from_end*, const extern_type ∗& *__from_next*, intern_type ∗ *__to*, intern_type ∗ *__to_end*, intern_type ∗& *__to_next*) const `[inline]`, `[inherited]`

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 196 of file codecvt.h.

4.655.2.3 result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::out (state_type & *__state,* const intern_type ∗ *__from,* const intern_type ∗ *__from_end,* const intern_type ∗& *__from_next,* extern_type ∗ *__to,* extern_type ∗ *__to_end,* extern_type ∗& *__to_next*) const [inline], [inherited]

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 116 of file codecvt.h.

References std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::do_out().

4.655.2.4 result **std::__codecvt_abstract_base**< _InternT, _ExternT, **encoding_state** >::unshift (**state_type** & *__state*, **extern_type** ∗ *__to*, **extern_type** ∗ *__to_end*, **extern_type** ∗& *__to_next*) const [inline], [inherited]

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

4.656.1 Detailed Description

template<>class std::codecvt< char, char, mbstate_t >

class codecvt<char, char, mbstate_t> specialization.

Definition at line 340 of file codecvt.h.

4.656.2 Member Function Documentation

4.656.2.1 virtual result std::codecvt< char, char, mbstate_t >::do_out (state_type & *__state,* const intern_type * *__from,* const intern_type * *__from_end,* const intern_type *& *__from_next,* extern_type * *__to,* extern_type * *__to_end,* extern_type *& *__to_next*) const [protected], [virtual]

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See Also

out for more information.

Implements std::__codecvt_abstract_base< char, char, mbstate_t >.

4.656.2.2 result std::__codecvt_abstract_base< char , char , mbstate_t >::in (state_type & *__state,* const extern_type * *__from,* const extern_type * *__from_end,* const extern_type *& *__from_next,* intern_type * *__to,* intern_type * *__to_end,* intern_type *& *__to_next*) const [inline], [inherited]

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 196 of file codecvt.h.

4.656.2.3 result **std::__codecvt_abstract_base**< char , char , mbstate_t >::out (state_type & *__state,* const intern_type ∗ *__from,* const intern_type ∗ *__from_end,* const intern_type ∗& *__from_next,* extern_type ∗ *__to,* extern_type ∗ *__to_end,* extern_type ∗& *__to_next*) const [inline], [inherited]

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 116 of file codecvt.h.

4.656.2.4 result **std::__codecvt_abstract_base**< char , char , mbstate_t >::unshift (state_type & *__state,* extern_type ∗ *__to,* extern_type ∗ *__to_end,* extern_type ∗& *__to_next*) const [inline], [inherited]

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 155 of file codecvt.h.

4.660.1 Detailed Description

template<typename _CharT>class std::collate< _CharT >

Facet for localized string comparison.

This facet encapsulates the code to compare strings in a localized manner.

The collate template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the collate facet.

Definition at line 584 of file locale_classes.h.

4.660.2.2 template<typename _CharT> typedef basic_string<_CharT> std::collate< _CharT >::string_type

Public typedefs.

Definition at line 591 of file locale_classes.h.

4.660.3 Constructor & Destructor Documentation

4.660.3.1 template<typename _CharT> std::collate< _CharT >::collate (size_t *__refs* = 0) [inline], [explicit]

Constructor performs initialization.

This is the constructor provided by the standard.

Parameters

__refs	Passed to the base facet class.

Definition at line 611 of file locale_classes.h.

4.660.3.2 template<typename _CharT> std::collate< _CharT >::collate (__c_locale *__cloc*, size_t *__refs* = 0) [inline], [explicit]

Internal constructor. Not for general use.

This is a constructor for use by the library itself to set up new locales.

Parameters

__cloc	The C locale.
__refs	Passed to the base facet class.

Definition at line 625 of file locale_classes.h.

4.660.3.3 template<typename _CharT> virtual std::collate< _CharT >::~collate ( ) [inline], [protected], [virtual]

Destructor.

Definition at line 688 of file locale_classes.h.

4.660.4 Member Function Documentation

4.660.4.1 template<typename _CharT> int std::collate< _CharT >::compare (const _CharT * *__lo1*, const _CharT * *__hi1*, const _CharT * *__lo2*, const _CharT * *__hi2*) const [inline]

Compare two strings.

This function compares two strings and returns the result by calling collate::do_compare().

Parameters

__lo1	Start of string 1.
__hi1	End of string 1.
__lo2	Start of string 2.
__hi2	End of string 2.

Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 642 of file locale_classes.h.

4.660.4.2 template<typename _CharT> int std::collate< _CharT >::do_compare (const _CharT * *__lo1*, const _CharT * *__hi1*, const _CharT * *__lo2*, const _CharT * *__hi2*) const [protected], [virtual]

Compare two strings.

This function is a hook for derived classes to change the value returned.

See Also

compare().

Parameters

__lo1	Start of string 1.
__hi1	End of string 1.
__lo2	Start of string 2.
__hi2	End of string 2.

Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 161 of file locale_classes.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::c_str(), std::basic_string< _CharT, _Traits, _Alloc >::data(), and std::basic_string< _CharT, _Traits, _Alloc >::length().

4.660.4.3 template<typename _CharT> long std::collate< _CharT >::do_hash (const _CharT * __lo, const _CharT * __hi) const [protected], [virtual]

Return hash of a string.

This function computes and returns a hash on the input string. This function is a hook for derived classes to change the value returned.

Parameters

__lo	Start of string.
__hi	End of string.

Returns

Hash value.

Definition at line 256 of file locale_classes.tcc.

4.660.4.4 template<typename _CharT> collate< _CharT >::string_type std::collate< _CharT >::do_transform (const _CharT * __lo, const _CharT * __hi) const [protected], [virtual]

Transform string to comparable form.

This function is a hook for derived classes to change the value returned.

Parameters

__lo	Start.
__hi	End.

Returns

transformed string.

Definition at line 200 of file locale_classes.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::append(), std::basic_string< _CharT, _Traits, _Alloc >::c_str(), std::basic_string< _CharT, _Traits, _Alloc >::data(), std::basic_string< _CharT, _Traits, _Alloc >::length(), and std::basic_string< _CharT, _Traits, _Alloc >::push_back().

4.660.4.5 template<typename _CharT> long **std::collate< _CharT >::hash** (const _CharT * *__lo*, const _CharT * *__hi*) const `[inline]`

Return hash of a string.

This function computes and returns a hash on the input string. It does so by returning collate::do_hash().

Parameters

__lo	Start of string.
__hi	End of string.

Returns

Hash value.

Definition at line 675 of file locale_classes.h.

4.660.4.6 template<typename _CharT> **string_type std::collate< _CharT >::transform** (const _CharT * *__lo*, const _CharT * *__hi*) const `[inline]`

Transform string to comparable form.

This function is a wrapper for strxfrm functionality. It takes the input string and returns a modified string that can be directly compared to other transformed strings. In the C locale, this function just returns a copy of the input string. In some other locales, it may replace two chars with one, change a char for another, etc. It does so by returning collate::do_transform().

Parameters

__lo	Start of string.
__hi	End of string.

Returns

Transformed string_type.

Definition at line 661 of file locale_classes.h.

4.660.5 Member Data Documentation

4.660.5.1 template<typename _CharT> **locale::id std::collate< _CharT >::id** `[static]`

Numpunct facet id.

Definition at line 601 of file locale_classes.h.

The documentation for this class was generated from the following files:

- locale_classes.h
- locale_classes.tcc

Public typedefs.

Definition at line 764 of file locale_classes.h.

4.661.3 Member Function Documentation

4.661.3.1 template<typename _CharT> int std::collate< _CharT >::compare (const _CharT ∗ *__lo1,* const _CharT ∗ *__hi1,* const _CharT ∗ *__lo2,* const _CharT ∗ *__hi2*) const [inline], [inherited]

Compare two strings.

This function compares two strings and returns the result by calling collate::do_compare().

Parameters

__lo1	Start of string 1.
__hi1	End of string 1.
__lo2	Start of string 2.
__hi2	End of string 2.

Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 642 of file locale_classes.h.

4.661.3.2 template<typename _CharT> int std::collate< _CharT >::do_compare (const _CharT * *__lo1*, const _CharT * *__hi1*, const _CharT * *__lo2*, const _CharT * *__hi2*) const `[protected]`, `[virtual]`, `[inherited]`

Compare two strings.

This function is a hook for derived classes to change the value returned.

See Also

compare().

Parameters

__lo1	Start of string 1.
__hi1	End of string 1.
__lo2	Start of string 2.
__hi2	End of string 2.

Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 161 of file locale_classes.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::c_str(), std::basic_string< _CharT, _Traits, _Alloc >::data(), and std::basic_string< _CharT, _Traits, _Alloc >::length().

4.661.3.3 template<typename _CharT> long std::collate< _CharT >::do_hash (const _CharT * *__lo*, const _CharT * *__hi*) const `[protected]`, `[virtual]`, `[inherited]`

Return hash of a string.

This function computes and returns a hash on the input string. This function is a hook for derived classes to change the value returned.

Parameters

__lo	Start of string.
__hi	End of string.

Returns

Hash value.

Definition at line 256 of file locale_classes.tcc.

4.661.3.4 template<typename _CharT> collate< _CharT >::string_type std::collate< _CharT >::do_transform (const _CharT * __lo, const _CharT * __hi) const [protected], [virtual], [inherited]

Transform string to comparable form.

This function is a hook for derived classes to change the value returned.

Parameters

__lo	Start.
__hi	End.

Returns

transformed string.

Definition at line 200 of file locale_classes.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::append(), std::basic_string< _CharT, _Traits, _Alloc >::c_str(), std::basic_string< _CharT, _Traits, _Alloc >::data(), std::basic_string< _CharT, _Traits, _Alloc >::length(), and std::basic_string< _CharT, _Traits, _Alloc >::push_back().

4.661.3.5 template<typename _CharT> long std::collate< _CharT >::hash (const _CharT * __lo, const _CharT * __hi) const [inline], [inherited]

Return hash of a string.

This function computes and returns a hash on the input string. It does so by returning collate::do_hash().

Parameters

__lo	Start of string.
__hi	End of string.

Returns

Hash value.

Definition at line 675 of file locale_classes.h.

4.661.3.6 template<typename _CharT> string_type std::collate< _CharT >::transform (const _CharT * __lo, const _CharT * __hi) const [inline], [inherited]

Transform string to comparable form.

This function is a wrapper for strxfrm functionality. It takes the input string and returns a modified string that can be directly compared to other transformed strings. In the C locale, this function just returns a copy of the input string. In some other locales, it may replace two chars with one, change a char for another, etc. It does so by returning collate::do_transform().

Parameters

__lo	Start of string.
__hi	End of string.

Returns

Transformed string_type.

Definition at line 661 of file locale_classes.h.

4.673.1 Detailed Description

template<typename _CharT>class std::ctype< _CharT >

Primary class template ctype facet.

This template class defines classification and conversion functions for character sets. It wraps cctype functionality. Ctype gets used by streams for many I/O operations.

This template provides the protected virtual functions the developer will have to replace in a derived class or specialization to make a working facet. The public functions that access them are defined in __ctype_abstract_base, to allow for implementation flexibility. See ctype<wchar_t> for an example. The functions are documented in __ctype_abstract_base.

Note: implementations are provided for all the protected virtual functions, but will likely not be useful.

Definition at line 605 of file locale_facets.h.

4.673.2 Member Function Documentation

4.673.2.1 template<typename _CharT> virtual bool std::ctype< _CharT >::do_is (mask *__m*, char_type *__c*) const [protected], [virtual]

Test char_type classification.

This function finds a mask M for *c* and compares it to mask *m*.

do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__c	The char_type to find the mask of.
__m	The mask to compare against.

Returns

(M & __m) != 0.

Implements std::__ctype_abstract_base< _CharT >.

4.673.2.2 template<typename _CharT> virtual const char_type∗ std::ctype< _CharT >::do_is (const char_type ∗ *__lo*, const char_type ∗ *__hi*, mask ∗ *__vec*) const [protected], [virtual]

Return a mask array.

This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.

do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.673.2.3 template<typename _CharT> virtual char std::ctype< _CharT >::do_narrow (char_type *__c,* char *__dfault*) const [protected], [virtual]

Narrow char_type to char.

This virtual function converts the argument to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead.

do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char_type to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Implements std::__ctype_abstract_base< _CharT >.

Referenced by std::ctype< char >::narrow().

4.673.2.4 template<typename _CharT> virtual const char_type* std::ctype< _CharT >::do_narrow (const char_type * *__lo,* const char_type * *__hi,* char *__dfault,* char * *__to*) const [protected], [virtual]

Narrow char_type array to char.

This virtual function converts each char_type in the range [__lo,__hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, *__dfault* is used instead.

do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.673.2.5 template<typename _CharT> virtual const **char_type**∗ **std::ctype**< _CharT >::do_scan_is (mask *__m,* const **char_type** ∗ *__lo,* const **char_type** ∗ *__hi*) const [protected], [virtual]

Find char_type matching mask.

This function searches for and returns the first char_type c in [__lo,__hi) for which is(__m,c) is true.

do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

__m	The mask to compare against.
__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

Pointer to a matching char_type if found, else *__hi*.

Implements std::__ctype_abstract_base< _CharT >.

4.673.2.6 template<typename _CharT> virtual const **char_type**∗ **std::ctype**< _CharT >::do_scan_not (mask *__m,* const **char_type** ∗ *__lo,* const **char_type** ∗ *__hi*) const [protected], [virtual]

Find char_type not matching mask.

This function searches for and returns a pointer to the first char_type c of [lo,hi) for which is(m,c) is false.

do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

__m	The mask to compare against.
__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

Pointer to a non-matching char_type if found, else *__hi*.

Implements std::__ctype_abstract_base< _CharT >.

4.673.2.7 template<typename _CharT> virtual **char_type std::ctype**< _CharT >::do_tolower (**char_type** *__c*) const [protected], [virtual]

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

__c	The char_type to convert.

Returns

The lowercase char_type if convertible, else *__c*.

Implements std::__ctype_abstract_base< _CharT >.

Referenced by std::ctype< char >::tolower().

4.673.2.8 template<typename _CharT> virtual const **char_type*** **std::ctype**< _CharT >::do_tolower (**char_type** * *__lo,* const **char_type** * *__hi*) const [protected], [virtual]

Convert array to lowercase.

This virtual function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched.

do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.673.2.9 template<typename _CharT> virtual **char_type std::ctype**< _CharT >::do_toupper (**char_type** *__c*) const [protected], [virtual]

Convert to uppercase.

This virtual function converts the char_type argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

__c	The char_type to convert.

Returns

The uppercase char_type if convertible, else *__c*.

Implements std::__ctype_abstract_base< _CharT >.

Referenced by std::ctype< char >::toupper().

4.673.2.10 template<typename _CharT> virtual const char_type∗ std::ctype< _CharT >::do_toupper (char_type ∗ *__lo*, const char_type ∗ *__hi*) const [protected], [virtual]

Convert array to uppercase.

This virtual function converts each char_type in the range [__lo,__hi) to uppercase if possible. Other elements remain untouched.

do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.673.2.11 template<typename _CharT> virtual char_type std::ctype< _CharT >::do_widen (char *__c*) const [protected], [virtual]

Widen char.

This virtual function converts the char to char_type using the simplest reasonable transformation.

do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char to convert.

Returns

The converted char_type

Implements std::__ctype_abstract_base< _CharT >.

Referenced by std::ctype< char >::widen().

4.673.2.12 template<typename _CharT> virtual const char∗ std::ctype< _CharT >::do_widen (const char ∗ *__lo,* const char ∗ *__hi,* char_type ∗ *__to*) const [protected], [virtual]

Widen char array.

This function converts each char in the input to char_type using the simplest reasonable transformation.

do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start range.
__hi	Pointer to end of range.
__to	Pointer to the destination array.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.673.2.13 template<typename _CharT> bool std::__ctype_abstract_base< _CharT >::is (mask *__m,* char_type *__c*) const [inline], [inherited]

Test char_type classification.

This function finds a mask M for *__c* and compares it to mask *__m*. It does so by returning the value of ctype<char_type>::do_is().

Parameters

__c	The char_type to compare the mask of.
__m	The mask to compare against.

Returns

(M & __m) != 0.

Definition at line 162 of file locale_facets.h.

Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.673.2.14 template<typename _CharT> const char_type∗ std::__ctype_abstract_base< _CharT >::is (const char_type ∗ *__lo,* const char_type ∗ *__hi,* mask ∗ *__vec*) const [inline], [inherited]

Return a mask array.

This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of ctype<char_type>::do_is().

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__*hi*.

Definition at line 179 of file locale_facets.h.

4.673.2.15 template<typename _CharT> char std::__ctype_abstract_base< _CharT >::narrow (char_type *__c*, char *__dfault*) const [inline], [inherited]

Narrow char_type to char.

This function converts the char_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning ctype<char_type>::do_narrow(__c).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char_type to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Definition at line 324 of file locale_facets.h.

Referenced by std::time_put< _CharT, _OutIter >::put().

4.673.2.16 template<typename _CharT> const char_type* std::__ctype_abstract_base< _CharT >::narrow (const char_type * *__lo*, const char_type * *__hi*, char *__dfault*, char * *__to*) const [inline], [inherited]

Narrow array to char array.

This function converts each char_type in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char_type in the input that cannot be converted, *dfault* is used instead. It does so by returning ctype<char_type>::do_narrow(__lo, __hi, __dfault, __to).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__*hi*.

Definition at line 346 of file locale_facets.h.

4.673.2.17 template<typename _CharT> const char_type* std::__ctype_abstract_base< _CharT >::scan_is (mask *__m*, const char_type * *__lo*, const char_type * *__hi*) const [inline], [inherited]

Find char_type matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true. It does so by returning ctype<char_type>::do_scan_is().

Parameters

__m	The mask to compare against.
__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

Pointer to matching char_type if found, else *__hi*.

Definition at line 195 of file locale_facets.h.

4.673.2.18 template<typename _CharT> const **char_type*** **std::__ctype_abstract_base**< _CharT >::scan_not (mask *__m*, const **char_type** * *__lo*, const **char_type** * *__hi*) const [inline], [inherited]

Find char_type not matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is false. It does so by returning ctype<char_type>::do_scan_not().

Parameters

__m	The mask to compare against.
__lo	Pointer to first char in range.
__hi	Pointer to end of range.

Returns

Pointer to non-matching char if found, else *__hi*.

Definition at line 211 of file locale_facets.h.

4.673.2.19 template<typename _CharT> **char_type std::__ctype_abstract_base**< _CharT >::tolower (**char_type** *__c*) const [inline], [inherited]

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_tolower(c).

Parameters

__c	The char_type to convert.

Returns

The lowercase char_type if convertible, else *__c*.

Definition at line 254 of file locale_facets.h.

4.673.2.20 template<typename _CharT> const **char_type*** **std::__ctype_abstract_base**< _CharT >::tolower (**char_type** * *__lo*, const **char_type** * *__hi*) const [inline], [inherited]

Convert array to lowercase.

This function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_tolower(__lo, __hi).

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

Definition at line 269 of file locale_facets.h.

4.673.2.21 template<typename _CharT> char_type std::__ctype_abstract_base< _CharT >::toupper (char_type *__c*) const [inline], [inherited]

Convert to uppercase.

This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_toupper().

Parameters

__c	The char_type to convert.

Returns

The uppercase char_type if convertible, else *__c*.

Definition at line 225 of file locale_facets.h.

4.673.2.22 template<typename _CharT> const char_type* std::__ctype_abstract_base< _CharT >::toupper (char_type * *__lo*, const char_type * *__hi*) const [inline], [inherited]

Convert array to uppercase.

This function converts each char_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_toupper(lo, hi).

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

Definition at line 240 of file locale_facets.h.

4.673.2.23 template<typename _CharT> char_type std::__ctype_abstract_base< _CharT >::widen (char *__c*) const [inline], [inherited]

Widen char to char_type.

This function converts the char argument to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char to convert.

Returns

The converted char_type.

Definition at line 286 of file locale_facets.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_put< _CharT, _OutIter >::do_put(), std::money_put< _CharT, _OutIter >::do_put(), std::tr2::operator<<(), and std::operator<<().

4.673.2.24 template<typename _CharT> const char* **std::__ctype_abstract_base< _CharT >::widen** (const char * *__lo*, const char * *__hi*, **char_type** * *__to*) const [inline], [inherited]

Widen array to char_type.

This function converts each char in the input to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 305 of file locale_facets.h.

4.673.3 Member Data Documentation

4.673.3.1 template<typename _CharT> **locale::id std::ctype< _CharT >::id** [static]

4.674.1 Detailed Description

template<>class std::ctype< char >

The ctype<char> specialization.

This class defines classification and conversion functions for the char type. It gets used by char streams for many I/O operations. The char specialization provides a number of optimizations as well.

Definition at line 674 of file locale_facets.h.

4.674.2 Member Typedef Documentation

4.674.2.1 typedef char std::ctype< char >::char_type

Typedef for the template parameter char.

Definition at line 679 of file locale_facets.h.

4.674.3 Constructor & Destructor Documentation

4.674.3.1 std::ctype< char >::ctype (const mask * __table = 0, bool __del = false, size_t __refs = 0) [explicit]

Constructor performs initialization.

This is the constructor provided by the standard.

Parameters

__table	If non-zero, table is used as the per-char mask. Else classic_table() is used.
__del	If true, passes ownership of table to this facet.
__refs	Passed to the base facet class.

4.674.3.2 std::ctype< char >::ctype (__c_locale __cloc, const mask * __table = 0, bool __del = false, size_t __refs = 0) [explicit]

Constructor performs static initialization.

This constructor is used to construct the initial C locale facet.

Parameters

__cloc	Handle to C locale data.
__table	If non-zero, table is used as the per-char mask.
__del	If true, passes ownership of table to this facet.
__refs	Passed to the base facet class.

4.674.3.3 virtual std::ctype< char >::~ctype ( ) [protected], [virtual]

Destructor.

This function deletes table() if *del* was true in the constructor.

4.674.4 Member Function Documentation

4.674.4.1 static const mask∗ std::ctype< char >::classic_table ( ) throw () [static]

Returns a pointer to the C locale mask table.

4.674.4.2 virtual char std::ctype< char >::do_narrow (char_type __c, char __dfault) const [inline], [protected], [virtual]

Narrow char.

This virtual function converts the char to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. For an underived ctype<char> facet, *c* will be returned unchanged.

do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Definition at line 1124 of file locale_facets.h.

4.674.4.3 virtual const char_type∗ std::ctype< char >::do_narrow (const char_type ∗ __lo, const char_type ∗ __hi, char __dfault, char ∗ __to) const [inline], [protected], [virtual]

Narrow char array to char array.

This virtual function converts each char in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, *dfault* is used instead. For an underived ctype<char> facet, the argument will be copied unchanged.

do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 1150 of file locale_facets.h.

4.674.4.4 virtual char_type std::ctype< char >::do_tolower (char_type __c) const [protected], [virtual]

Convert to lowercase.

This virtual function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

__c	The char to convert.

Returns

The lowercase char if convertible, else *__c*.

4.674.4.5 virtual const **char_type**∗ **std::ctype**< char >::do_tolower (**char_type** ∗ *__lo*, const **char_type** ∗ *__hi*) const [protected], [virtual]

Convert array to lowercase.

This virtual function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

__lo	Pointer to first char in range.
__hi	Pointer to end of range.

Returns

__hi.

4.674.4.6 virtual **char_type** **std::ctype**< char >::do_toupper (**char_type** *__c*) const [protected], [virtual]

Convert to uppercase.

This virtual function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

__c	The char to convert.

Returns

The uppercase char if convertible, else *__c*.

4.674.4.7 virtual const **char_type**∗ **std::ctype**< char >::do_toupper (**char_type** ∗ *__lo*, const **char_type** ∗ *__hi*) const [protected], [virtual]

Convert array to uppercase.

This virtual function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.

do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

4.674.4.8 virtual char_type std::ctype< char >::do_widen (char *__c*) const [inline], [protected], [virtual]

Widen char.

This virtual function converts the char to char using the simplest reasonable transformation. For an underived ctype<char> facet, the argument will be returned unchanged.

do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char to convert.

Returns

The converted character.

Definition at line 1075 of file locale_facets.h.

4.674.4.9 virtual const char* std::ctype< char >::do_widen (const char * *__lo*, const char * *__hi*, char_type * *__to*) const [inline], [protected], [virtual]

Widen char array.

This function converts each char in the range [lo,hi) to char using the simplest reasonable transformation. For an underived ctype<char> facet, the argument will be copied unchanged.

do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 1098 of file locale_facets.h.

4.674.4.10 bool std::ctype< char >::is (mask *__m*, char *__c*) const [inline]

Test char classification.

This function compares the mask table[c] to *__m*.

Parameters

__c	The char to compare the mask of.
__m	The mask to compare against.

Returns

True if __m & table[__c] is true, false otherwise.

Definition at line 43 of file ctype_inline.h.

4.674.4.11 const char * std::ctype< char >::is (const char * *__lo*, const char * *__hi*, mask * *__vec*) const [inline]

Return a mask array.

This function finds the mask for each char in the range [lo, hi) and successively writes it to vec. vec must have as many elements as the char array.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Definition at line 48 of file ctype_inline.h.
