1 Todo List

Member __glibcxx_check_insert_range (_Position, _First, _Last)

We would like to be able to check for noninterference of _Position and the range [_First, _Last), but that can't (in general) be done.

Member __glibcxx_check_insert_range_after (_Position, _First, _Last)

We would like to be able to check for noninterference of _Position and the range [_First, _Last), but that can't (in general) be done.

Member __gnu_cxx::distance (_InputIterator __first, _InputIterator __last, _Distance &__n)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::hash_map< _Key, _Tp, _HashFn, _EqualKey, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::hash_multimap< _Key, _Tp, _HashFn, _EqualKey, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::hash_multiset< _Value, _HashFcn, _EqualKey, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::hash_set< _Value, _HashFcn, _EqualKey, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member __gnu_cxx::power (_Tp __x, _Integer __n, _MonoidOperation __monoid_op)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member __gnu_cxx::power (_Tp __x, _Integer __n)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member __gnu_cxx::random_sample (_InputIterator __first, _InputIterator __last, _RandomAccessIterator __out_first, _RandomAccessIterator __out_last)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member __gnu_cxx::random_sample (_InputIterator __first, _InputIterator __last, _RandomAccessIterator __out_first, _RandomAccessIterator __out_last, _RandomNumberGenerator &__rand)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member __gnu_cxx::random_sample_n (_ForwardIterator __first, _ForwardIterator __last, _OutputIterator __out, const _Distance __n)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member __gnu_cxx::random_sample_n (_ForwardIterator __first, _ForwardIterator __last, _OutputIterator __out, const _Distance __n, _RandomNumberGenerator &__rand)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::rb_tree< _Key, _Value, _KeyOfValue, _Compare, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::rope< _CharT, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::slist< _Tp, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::operator-> () const

Make this correct w.r.t. iterators that return proxies

Use addressof() instead of & operator

Member __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::operator-> () const

Make this correct w.r.t. iterators that return proxies

Use addressof() instead of & operator

Class std::basic_string< _CharT, _Traits, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::match_results< _Bi_iter, _Alloc >::format (_Out_iter __out, const char_type *__fmt_first, const char_type *__fmt_last, match_flag_type __flags=regex_constants::format_default) const

Implement this function.

Member std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator!= (const regex_iterator &__rhs)

Implement this function.

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator* ()

Implement this function.

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator++ ()

Implement this function.

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator++ (int)

Implement this function.

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator-> ()

Implement this function.

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator= (const regex_iterator &__rhs)

Implement this function.

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator== (const regex_iterator &__rhs)

Implement this function.

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator ()

Implement this function.

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator (_Bi_iter __a, _Bi_iter __b, const regex_type &__re, regex_constants::match_flag_type __m=regex_constants::match_default)

Implement this function.

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_iterator (const regex_iterator &__rhs)

Implement this function.

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_match (_Bi_iter __s, _Bi_iter __e, match_results< _Bi_iter, _Alloc > &__m, const basic_regex< _Ch_type, _Rx_traits > &__re, regex_constants::match_flag_type __flags=regex_constants::match_default)

Implement this function.

Member std::regex_replace (const basic_string< _Ch_type > &__s, const basic_regex< _Ch_type, _Rx_traits > &__e, const basic_string< _Ch_type > &__fmt, regex_constants::match_flag_type __flags=regex_constants::match_default)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_replace (_Out_iter __out, _Bi_iter __first, _Bi_iter __last, const basic_regex< _Ch_type, _Rx_traits > &__e, const basic_string< _Ch_type > &__fmt, regex_constants::match_flag_type __flags=regex_constants::match_default)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Implement this function.

Implement this function.

Member std::regex_search (const basic_string< _Ch_type, _Ch_traits, _String_allocator > &__s, const basic_regex< _Ch_type, _Rx_traits > &__e, regex_constants::match_flag_type __flags=regex_constants::match_default)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_search (_Bi_iter __first, _Bi_iter __last, const basic_regex< _Ch_type, _Rx_traits > &__re, regex_constants::match_flag_type __flags=regex_constants::match_default)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_search (_Bi_iter __first, _Bi_iter __last, match_results< _Bi_iter, _Alloc > &__m, const basic_regex< _Ch_type, _Rx_traits > &__re, regex_constants::match_flag_type __flags=regex_constants::match_default)

Implement this function.

Member std::regex_search (const _Ch_type *__s, const basic_regex< _Ch_type, _Rx_traits > &__e, regex_constants::match_flag_type __f=regex_constants::match_default)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_search (const _Ch_type *__s, match_results< const _Ch_type *, _Alloc > &__m, const basic_regex< _Ch_type, _Rx_traits > &__e, regex_constants::match_flag_type __f=regex_constants::match_default)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator!= (const regex_token_iterator &__rhs)

Implement this function.

Member std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator* ()

Implement this function.

Member std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator++ (int)

Implement this function.

Member std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator++ ()

Implement this function.

Member std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator-> ()

Implement this function.

Member std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator= (const regex_token_iterator &__rhs)

Implement this function.

Member std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::operator== (const regex_token_iterator &__rhs)

Implement this function.

Member std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator (_Bi_iter __a, _Bi_iter __b, const regex_type &__re, const std::vector< int > &__submatches, regex_constants::match_flag_type __m=regex_constants::match_default)

Implement this function.

Needs documentation! See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html`

Member std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator ()

Implement this function.

Member std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator (_Bi_iter __a, _Bi_iter __b, const regex_type &__re, const int(&__submatches)[_Nm], regex_constants::match_flag_type __m=regex_constants::match_default)

Implement this function.

Needs documentation! See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html`

Member std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator (const regex_token_iterator &__rhs)

Implement this function.

Member std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >::regex_token_iterator (_Bi_iter __a, _Bi_iter __b, const regex_type &__re, int __submatch=0, regex_constants::match_flag_type __m=regex_constants::match_default)

Implement this function.

Needs documentation! See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html`

Member std::regex_traits< _Ch_type >::lookup_classname (_Fwd_iter __first, _Fwd_iter __last, bool __icase=false) const

Implement this function.

Member std::regex_traits< _Ch_type >::lookup_collatename (_Fwd_iter __first, _Fwd_iter __last) const

Implement this function.

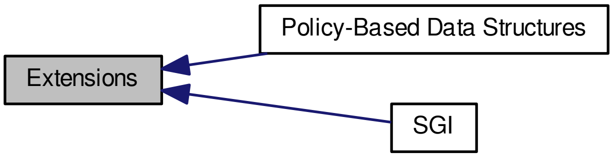
Member std::regex_traits< _Ch_type >::transform_primary (_Fwd_iter __first, _Fwd_iter __last) const

Implement this function.

2 Module Documentation

2.1 Extensions

Collaboration diagram for Extensions:



Modules

- Policy-Based Data Structures
- SGI

Classes

- class __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >

  Template class __versa_string.
  Data structure managing sequences of characters and character-like objects.

2.1.1 Detailed Description

Components generally useful that are not part of any standard.

2.2 SGI

Collaboration diagram for SGI:

Classes

- class __gnu_cxx::binary_compose< _Operation1, _Operation2, _Operation3 >

  An SGI extension .
- struct __gnu_cxx::constant_binary_fun< _Result, _Arg1, _Arg2 >

  An SGI extension .
- struct __gnu_cxx::constant_unary_fun< _Result, _Argument >

  An SGI extension .
- struct __gnu_cxx::constant_void_fun< _Result >

  An SGI extension .
- class __gnu_cxx::hash_map< _Key, _Tp, _HashFn, _EqualKey, _Alloc >
- class __gnu_cxx::hash_multimap< _Key, _Tp, _HashFn, _EqualKey, _Alloc >
- class __gnu_cxx::hash_multiset< _Value, _HashFcn, _EqualKey, _Alloc >
- class __gnu_cxx::hash_set< _Value, _HashFcn, _EqualKey, _Alloc >
- struct __gnu_cxx::project1st< _Arg1, _Arg2 >

  An SGI extension .
- struct __gnu_cxx::project2nd< _Arg1, _Arg2 >

  An SGI extension .
- struct __gnu_cxx::rb_tree< _Key, _Value, _KeyOfValue, _Compare, _Alloc >
- class __gnu_cxx::rope< _CharT, _Alloc >
- struct __gnu_cxx::select1st< _Pair >

  An SGI extension .
- struct __gnu_cxx::select2nd< _Pair >

  An SGI extension .
- class __gnu_cxx::slist< _Tp, _Alloc >
- class __gnu_cxx::subtractive_rng
- struct __gnu_cxx::temporary_buffer< _ForwardIterator, _Tp >
- class __gnu_cxx::unary_compose< _Operation1, _Operation2 >

  An SGI extension .

Functions

2.2.1 Detailed Description

Because libstdc++ based its implementation of the STL subsections of the library on the SGI 3.3 implementation, we inherited their extensions as well.

They are additionally documented in the `online documentation`, a copy of which is also shipped with the library source code (in .../docs/html/documentation.html). You can also read the documentation `on SGI's site`, which is still running even though the code is not maintained.

NB that the following notes are pulled from various comments all over the place, so they may seem stilted.

The `identity_element` functions are not part of the C++ standard; SGI provided them as an extension. Its argument is an operation, and its return value is the identity element for that operation. It is overloaded for addition and multiplication, and you can overload it for your own nefarious operations.

As an extension to the binders, SGI provided composition functors and wrapper functions to aid in their creation. The `unary_compose` functor is constructed from two functions/functors, `f` and `g`. Calling `operator()` with a single argument `x` returns `f`(g(x)). The function `compose1` takes the two functions and constructs a `unary_compose` variable for you.

`binary_compose` is constructed from three functors, `f`, `g1`, and `g2`. Its `operator()` returns `f`(g1(x),g2(x)). The function compose2 takes f, g1, and g2, and constructs the `binary_compose` instance for you. For example, if `f` returns an int, then

```
int answer = (compose2(f,g1,g2))(x);
```

is equivalent to

```
int temp1 = g1(x);
int temp2 = g2(x);
int answer = f(temp1,temp2);
```

But the first form is more compact, and can be passed around as a functor to other algorithms.

As an extension, SGI provided a functor called `identity`. When a functor is required but no operations are desired, this can be used as a pass-through. Its `operator()` returns its argument unchanged.

`select1st` and `select2nd` are extensions provided by SGI. Their `operator()s` take a `std::pair` as an argument, and return either the first member or the second member, respectively. They can be used (especially with the composition functors) to *strip* data from a sequence before performing the remainder of an algorithm.

The `operator()` of the `project1st` functor takes two arbitrary arguments and returns the first one, while `project2nd` returns the second one. They are extensions provided by SGI.

These three functors are each constructed from a single arbitrary variable/value. Later, their `operator()s` completely ignore any arguments passed, and return the stored value.

- `constant_void_fun's operator()` takes no arguments
- `constant_unary_fun's operator()` takes one argument (ignored)
- `constant_binary_fun's operator()` takes two arguments (ignored)

The helper creator functions `constant0`, `constant1`, and `constant2` each take a *result* argument and construct variables of the appropriate functor type.

2.2.2 Function Documentation

2.2.2.1 template<typename _Tp > const _Tp& __gnu_cxx::__median (const _Tp & *__a,* const _Tp & *__b,* const _Tp & *__c*)

Find the median of three values.

Parameters

__a	A value.
__b	A value.
__c	A value.

Returns

One of `a`, `b` or `c`.

If {`l`,m,n} is some convolution of {`a`,b,c} such that `l<=m<=n` then the value returned will be `m`. This is an SGI extension.

Definition at line 546 of file ext/algorithm.

2.2.2.2 template<typename _Tp , typename _Compare > const _Tp& __gnu_cxx::__median (const _Tp & *__a,* const _Tp & *__b,* const _Tp & *__c,* _Compare *__comp*)

Find the median of three values using a predicate for comparison.

Parameters

__a	A value.
__b	A value.
__c	A value.
__comp	A binary predicate.

Returns

One of `a`, `b` or `c`.

If {`l`,m,n} is some convolution of {`a`,b,c} such that `comp(l,m)` and `comp(m,n)` are both true then the value returned will be `m`. This is an SGI extension.

Definition at line 580 of file ext/algorithm.

2.2.2.3 size_t std::_Find_first ( ) const `[noexcept]`

Finds the index of the first "on" bit.

Returns

The index of the first bit set, or size() if not found.

See Also

_Find_next

Definition at line 1354 of file bitset.

2.2.2.4 size_t std::_Find_next (size_t __prev) const [noexcept]

Finds the index of the next "on" bit after prev.

Returns

The index of the next bit set, or size() if not found.

Parameters

__prev	Where to start searching.

See Also

_Find_first

Definition at line 1365 of file bitset.

2.2.2.5 bitset<_Nb>& std::_Unchecked_flip (size_t __pos) [noexcept]

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.

Definition at line 1037 of file bitset.

Referenced by std::flip().

2.2.2.6 bitset<_Nb>& std::_Unchecked_reset (size_t __pos) [noexcept]

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.

Definition at line 1030 of file bitset.

Referenced by std::reset().

2.2.2.7 bitset<_Nb>& std::_Unchecked_set (size_t __pos) [noexcept]

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.

Definition at line 1013 of file bitset.

Referenced by std::set().

2.2.2.8 bitset<_Nb>& std::_Unchecked_set (size_t __pos, int __val) [noexcept]

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.

Definition at line 1020 of file bitset.

2.2.2.9 constexpr bool std::_Unchecked_test (size_t __pos) const [noexcept]

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.

Definition at line 1044 of file bitset.

Referenced by std::test().

2.2.2.10 template<class _Operation1 , class _Operation2 > unary_compose<_Operation1, _Operation2> __gnu_cxx::compose1 (const _Operation1 & __fn1, const _Operation2 & __fn2) [inline]

An SGI extension .

Definition at line 145 of file ext/functional.

2.2.2.11 template<class _Operation1 , class _Operation2 , class _Operation3 > binary_compose<_Operation1, _Operation2, _Operation3> __gnu_cxx::compose2 (const _Operation1 & *__fn1*, const _Operation2 & *__fn2*, const _Operation3 & *__fn3*) `[inline]`

An SGI extension .

Definition at line 172 of file ext/functional.

2.2.2.12 template<class _Result > constant_void_fun<_Result> __gnu_cxx::constant0 (const _Result & *__val*) `[inline]`

An SGI extension .

Definition at line 330 of file ext/functional.

2.2.2.13 template<class _Result > constant_unary_fun<_Result, _Result> __gnu_cxx::constant1 (const _Result & *__val*) `[inline]`

An SGI extension .

Definition at line 336 of file ext/functional.

2.2.2.14 template<class _Result > constant_binary_fun<_Result,_Result,_Result> __gnu_cxx::constant2 (const _Result & *__val*) `[inline]`

An SGI extension .

Definition at line 342 of file ext/functional.

2.2.2.15 template<typename _InputIterator , typename _Size , typename _OutputIterator > pair<_InputIterator, _OutputIterator> __gnu_cxx::copy_n (_InputIterator *__first*, _Size *__count*, _OutputIterator *__result*) `[inline]`

Copies the range [first,first+count) into [result,result+count).

Parameters

__first	An input iterator.
__count	The number of elements to copy.
__result	An output iterator.

Returns

A std::pair composed of first+count and result+count.

This is an SGI extension. This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Definition at line 120 of file ext/algorithm.

References std::__iterator_category().

2.2.2.16 template<typename _InputIterator , typename _Distance > void __gnu_cxx::distance (_InputIterator *__first*, _InputIterator *__last*, _Distance & *__n*) `[inline]`

This is an SGI extension.

Todo Needs documentation! See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html`

Definition at line 105 of file ext/iterator.

References std::__iterator_category().

2.2.2.17 template<class _Tp > _Tp __gnu_cxx::identity_element (std::plus< _Tp >) [inline]

An SGI extension .

Definition at line 87 of file ext/functional.

2.2.2.18 template<class _Tp > _Tp __gnu_cxx::identity_element (std::multiplies< _Tp >) [inline]

An SGI extension .

Definition at line 93 of file ext/functional.

2.2.2.19 template<typename _InputIterator1 , typename _InputIterator2 > int __gnu_cxx::lexicographical_compare_3way (_InputIterator1 *__first1*, _InputIterator1 *__last1*, _InputIterator2 *__first2*, _InputIterator2 *__last2*)

`memcmp` on steroids.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__last2	An input iterator.

Returns

An int, as with `memcmp`.

The return value will be less than zero if the first range is *lexigraphically less than* the second, greater than zero if the second range is *lexigraphically less than* the first, and zero otherwise. This is an SGI extension.

Definition at line 201 of file ext/algorithm.

2.2.2.20 template<typename _Tp , typename _Integer , typename _MonoidOperation > _Tp __gnu_cxx::power (_Tp *__x*, _Integer *__n*, _MonoidOperation *__monoid_op*) [inline]

This is an SGI extension.

Todo Needs documentation! See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html`

Definition at line 113 of file ext/numeric.

Definition at line 267 of file ext/algorithm.

References std::distance(), and std::min().

2.2.2.25 template<typename _ForwardIterator , typename _OutputIterator , typename _Distance , typename _RandomNumberGenerator > _OutputIterator __gnu_cxx::random_sample_n (_ForwardIterator *__first,* _ForwardIterator *__last,* _OutputIterator *__out,* const _Distance *__n,* _RandomNumberGenerator & *__rand*)

This is an SGI extension.

Todo Needs documentation! See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html`

Definition at line 301 of file ext/algorithm.

References std::distance(), and std::min().

2.2.2.26 template<typename _InputIter , typename _Size , typename _ForwardIter > pair<_InputIter, _ForwardIter> __gnu_cxx::uninitialized_copy_n (_InputIter *__first,* _Size *__count,* _ForwardIter *__result*) `[inline]`

Copies the range [first,last) into result.

Parameters

__first	An input iterator.
__count	Length
__result	An output iterator.

Returns

__result + (__first + __count)

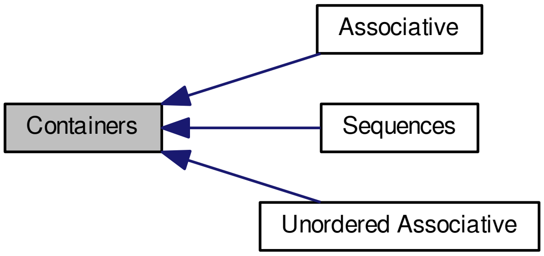
Like copy(), but does not require an initialized output range.

Definition at line 122 of file ext/memory.

References std::__iterator_category().

2.3 Containers

Collaboration diagram for Containers:



Modules

- Associative
- Sequences
- Unordered Associative

Classes

- class std::tr2::dynamic_bitset< _WordT, _Alloc >

  The dynamic_bitset class represents a sequence of bits.
- class std::tr2::dynamic_bitset< _WordT, _Alloc >::reference

2.3.1 Detailed Description

Containers are collections of objects.

A container may hold any type which meets certain requirements, but the type of contained object is chosen at compile time, and all objects in a given container must be of the same type. (Polymorphism is possible by declaring a container of pointers to a base class and then populating it with pointers to instances of derived classes. Variant value types such as the `any` class from `Boost` can also be used.

All contained types must be `Assignable` and `CopyConstructible`. Specific containers may place additional requirements on the types of their contained objects.

Containers manage memory allocation and deallocation themselves when storing your objects. The objects are destroyed when the container is itself destroyed. Note that if you are storing pointers in a container, `delete` is *not* automatically called on the pointers before destroying them.

All containers must meet certain requirements, summarized in `tables`.

The standard containers are further refined into Sequences and Associative Containers. Unordered Associative Containers.

2.4 Sequences

Collaboration diagram for Sequences:

Classes

- struct std::array< _Tp, _Nm >

    A standard container for storing a fixed size sequence of elements.
- class std::basic_string< _CharT, _Traits, _Alloc >

    Managing sequences of characters and character-like objects.
- class std::deque< _Tp, _Alloc >

    A standard container using fixed-size memory allocation and constant-time manipulation of elements at either end.
- class std::forward_list< _Tp, _Alloc >

    A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.
- class std::list< _Tp, _Alloc >

    A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.
- class std::priority_queue< _Tp, _Sequence, _Compare >

    A standard container automatically sorting its contents.
- class std::queue< _Tp, _Sequence >

    A standard container giving FIFO behavior.
- class std::stack< _Tp, _Sequence >

    A standard container giving FILO behavior.
- class std::vector< _Tp, _Alloc >

    A standard container which offers fixed time access to individual elements in any order.
- class std::vector< bool, _Alloc >

    A specialization of vector for booleans which offers fixed time access to individual elements in any order.

2.4.1 Detailed Description

Sequences arrange a collection of objects into a strictly linear order.

The differences between sequences are usually due to one or both of the following:

- memory management
- algorithmic complexity

As an example of the first case, `vector` is required to use a contiguous memory layout, while other sequences such as `deque` are not.

The prime reason for choosing one sequence over another should be based on the second category of differences, algorithmic complexity. For example, if you need to perform many inserts and removals from the middle of a sequence, `list` would be ideal. But if you need to perform constant-time access to random elements of the sequence, then `list` should not be used.

All sequences must meet certain requirements, summarized in `tables`.

2.5 Associative

Collaboration diagram for Associative:

Classes

- class std::map< _Key, _Tp, _Compare, _Alloc >

  A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time.
- class std::multimap< _Key, _Tp, _Compare, _Alloc >

  A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time.
- class std::multiset< _Key, _Compare, _Alloc >

  A standard container made up of elements, which can be retrieved in logarithmic time.
- class std::set< _Key, _Compare, _Alloc >

  A standard container made up of unique keys, which can be retrieved in logarithmic time.

2.5.1 Detailed Description

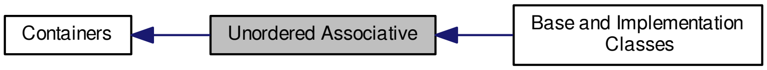
Associative containers allow fast retrieval of data based on keys.

Each container type is parameterized on a `Key` type, and an ordering relation used to sort the elements of the container.

All associative containers must meet certain requirements, summarized in `tables`.

2.6 Unordered Associative

Collaboration diagram for Unordered Associative:



Modules

- Base and Implementation Classes

Classes

- class std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >

  A standard container composed of unique keys (containing at most one of each key value) that associates values of another type with the keys.
- class std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >

  A standard container composed of equivalent keys (possibly containing multiple of each key value) that associates values of another type with the keys.
- class std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >

  A standard container composed of equivalent keys (possibly containing multiple of each key value) in which the elements' keys are the elements themselves.
- class std::unordered_set< _Value, _Hash, _Pred, _Alloc >

  A standard container composed of unique keys (containing at most one of each key value) in which the elements' keys are the elements themselves.

2.6.1 Detailed Description

Unordered associative containers allow fast retrieval of data based on keys.

Each container type is parameterized on a `Key` type, a `Hash` type providing a hashing functor, and an ordering relation used to sort the elements of the container.

All unordered associative containers must meet certain requirements, summarized in `tables`.

2.7 Diagnostics

Collaboration diagram for Diagnostics:

Modules

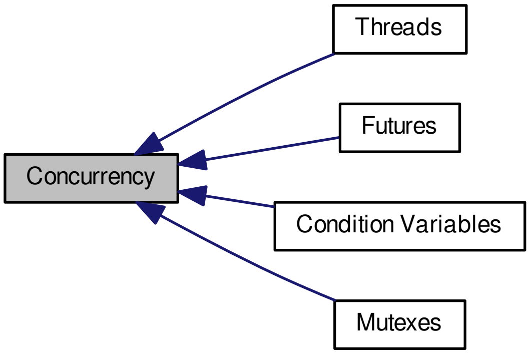
- Exceptions

2.7.1 Detailed Description

Components for error handling, reporting, and diagnostic operations.

2.8 Concurrency

Collaboration diagram for Concurrency:



Modules

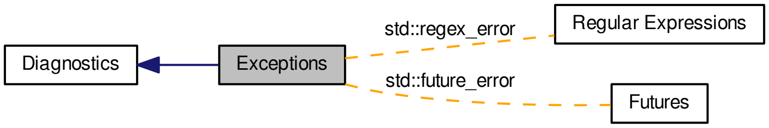
- Condition Variables
- Futures
- Mutexes
- Threads

2.8.1 Detailed Description

Components for concurrent operations, including threads, mutexes, and condition variables.

2.9 Exceptions

Collaboration diagram for Exceptions:



Classes

- class __cxxabiv1::__forced_unwind

    Thrown as part of forced unwinding.
    A magic placeholder class that can be caught by reference to recognize forced unwinding.
- struct __gnu_cxx::forced_error

    Thown by exception safety machinery.
- class __gnu_cxx::recursive_init_error

    Exception thrown by __cxa_guard_acquire.
    6.7[stmt.dcl]/4: If control re-enters the declaration (recursively) while the object is being initialized, the behavior is undefined.
- class std::__exception_ptr::exception_ptr

    An opaque pointer to an arbitrary exception.
- class std::bad_alloc

    Exception possibly thrown by `new`*.*
    `bad_alloc` *(or classes derived from it) is used to report allocation errors from the throwing forms of* `new`*.*
- class std::bad_cast

    Thrown during incorrect typecasting.
    If you attempt an invalid `dynamic_cast` *expression, an instance of this class (or something derived from this class) is thrown.*
- class std::bad_exception
- class std::bad_function_call

    Exception class thrown when class template function's operator() is called with an empty target.
- class std::bad_typeid

    Thrown when a NULL pointer in a `typeid` *expression is used.*
- class std::bad_weak_ptr

    Exception possibly thrown by `shared_ptr`*.*
- class std::domain_error
- class std::exception

    Base class for all library exceptions.
- class std::future_error

    Exception type thrown by futures.
- class std::invalid_argument
- class std::ios_base::failure

These are thrown to indicate problems with io.
27.4.2.1.1 Class ios_base::failure.

- class std::length_error
- class std::logic_error

  One of two subclasses of exception.
- class std::nested_exception

  Exception class with exception_ptr data member.
- class std::out_of_range
- class std::overflow_error
- class std::range_error
- class std::regex_error

  A regular expression exception class.
  The regular expression library throws objects of this class on error.
- class std::runtime_error

  One of two subclasses of exception.
- class std::system_error

  Thrown to indicate error code of underlying system.
- class std::underflow_error

Typedefs

- typedef void($*$ std::terminate_handler)()
- typedef void($*$ std::unexpected_handler)()

Functions

- template<typename _Ex >
  const nested_exception $*$ **std::__get_nested_exception** (const _Ex &__ex)
- template<typename _Ex >
  void **std::__throw_with_nested** (_Ex &&, const nested_exception $*$=0) __attribute__((__noreturn__))
- template<typename _Ex >
  void **std::__throw_with_nested** (_Ex &&,...) __attribute__((__noreturn__))
- void __gnu_cxx::__verbose_terminate_handler ()
- template<typename _Ex >
  exception_ptr std::copy_exception (_Ex __ex) noexcept
- exception_ptr std::current_exception () noexcept
- template<typename _Ex >
  exception_ptr std::make_exception_ptr (_Ex __ex) noexcept
- void std::rethrow_exception (exception_ptr) __attribute__((__noreturn__))
- template<typename _Ex >
  void std::rethrow_if_nested (const _Ex &__ex)
- void std::rethrow_if_nested (const nested_exception &__ex)
- terminate_handler std::set_terminate (terminate_handler) noexcept
- unexpected_handler std::set_unexpected (unexpected_handler) noexcept
- void std::terminate () noexcept __attribute__((__noreturn__))
- template<typename _Ex >
  void std::throw_with_nested (_Ex __ex)
- bool std::uncaught_exception () noexcept __attribute__((__pure__))
- void std::unexpected () __attribute__((__noreturn__))

2.9.1 Detailed Description

Classes and functions for reporting errors via exception classes.

2.9.2 Typedef Documentation

2.9.2.1 typedef void(∗ std::terminate_handler)()

If you write a replacement terminate handler, it must be of this type.

Definition at line 87 of file exception.

2.9.2.2 typedef void(∗ std::unexpected_handler)()

If you write a replacement unexpected handler, it must be of this type.

Definition at line 90 of file exception.

2.9.3 Function Documentation

2.9.3.1 void __gnu_cxx::__verbose_terminate_handler ( )

A replacement for the standard terminate_handler which prints more information about the terminating exception (if any) on stderr.

Call

```
std::set_terminate(__gnu_cxx::__verbose_terminate_handler
      )
```

to use. For more info, see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt02ch06s02.html`

In 3.4 and later, this is on by default.

2.9.3.2 template<typename _Ex > exception_ptr std::copy_exception (_Ex *__ex*) [noexcept]

Obtain an exception_ptr pointing to a copy of the supplied object.

Definition at line 167 of file exception_ptr.h.

References std::current_exception().

2.9.3.3 exception_ptr std::current_exception ( ) [noexcept]

Obtain an exception_ptr to the currently handled exception. If there is none, or the currently handled exception is foreign, return the null value.

Referenced by std::copy_exception().

2.9.3.4 template<typename _Ex > exception_ptr std::make_exception_ptr (_Ex *__ex*) [noexcept]

Obtain an exception_ptr pointing to a copy of the supplied object.

Definition at line 186 of file exception_ptr.h.

2.9.3.5 void std::rethrow_exception (exception_ptr)

Throw the object pointed to by the exception_ptr.

2.9.3.6 template<typename _Ex > void std::rethrow_if_nested (const _Ex & *__ex*) `[inline]`

If `__ex` is derived from nested_exception, `__ex.rethrow_nested()`.

Definition at line 146 of file nested_exception.h.

2.9.3.7 void std::rethrow_if_nested (const nested_exception & *__ex*) `[inline]`

Overload, See N2619.

Definition at line 154 of file nested_exception.h.

2.9.3.8 terminate_handler std::set_terminate (terminate_handler) `[noexcept]`

Takes a new handler function as an argument, returns the old function.

2.9.3.9 unexpected_handler std::set_unexpected (unexpected_handler) `[noexcept]`

Takes a new handler function as an argument, returns the old function.

2.9.3.10 void std::terminate ( ) `[noexcept]`

The runtime will call this function if exception handling must be abandoned for any reason. It can also be called by the user.

2.9.3.11 template<typename _Ex > void std::throw_with_nested (_Ex *__ex*) `[inline]`

If `__ex` is derived from nested_exception, `__ex`. Else, an implementation-defined object derived from both.

Definition at line 136 of file nested_exception.h.

2.9.3.12 bool std::uncaught_exception ( ) `[noexcept]`

[18.6.4]/1: 'Returns true after completing evaluation of a throw-expression until either completing initialization of the exception-declaration in the matching handler or entering `unexpected()` due to the throw; or after entering `terminate()` for any reason other than an explicit call to `terminate()`. [Note: This includes stack unwinding [15.2]. end note]'

2: 'When `uncaught_exception()` is true, throwing an exception can result in a call of `terminate()` (15.5.1).'

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::~sentry().

2.9.3.13 void std::unexpected ( )

The runtime will call this function if an exception is thrown which violates the function's exception specification.

2.10 Time

Collaboration diagram for Time:

Namespaces

2.11.1 Detailed Description

Classes and functions for complex numbers.

2.11.2 Function Documentation

2.11.2.1 template<typename _Tp > _Tp std::abs (const complex< _Tp > & __z) `[inline]`

Return magnitude of *z*.

Definition at line 599 of file complex.

Referenced by std::tr1::fabs(), std::fabs(), std::binomial_distribution< _IntType >::operator()(), and std::poisson_-distribution< _IntType >::operator()().

2.11.2.2 template<typename _Tp > std::complex< _Tp > std::tr1::acosh (const std::complex< _Tp > & __z) [inline]

acosh(__z) [8.1.5].

Definition at line 215 of file tr1/complex.

2.11.2.3 template<typename _Tp > _Tp std::arg (const complex< _Tp > & __z) [inline]

Return phase angle of *z*.

Definition at line 626 of file complex.

Referenced by std::arg().

2.11.2.4 template<typename _Tp > std::complex< _Tp > std::tr1::asinh (const std::complex< _Tp > & __z) [inline]

asinh(__z) [8.1.6].

Definition at line 254 of file tr1/complex.

2.11.2.5 template<typename _Tp > std::complex< _Tp > std::tr1::atanh (const std::complex< _Tp > & __z) [inline]

atanh(__z) [8.1.7].

Definition at line 298 of file tr1/complex.

2.11.2.6 template<typename _Tp > complex< _Tp > std::conj (const complex< _Tp > & __z) [inline]

Return complex conjugate of *z*.

Definition at line 672 of file complex.

2.11.2.7 template<typename _Tp > complex< _Tp > std::cos (const complex< _Tp > & __z) [inline]

Return complex cosine of *z*.

Definition at line 704 of file complex.

Referenced by std::polar().

2.11.2.8 template<typename _Tp > complex< _Tp > std::cosh (const complex< _Tp > & __z) [inline]

Return complex hyperbolic cosine of *z*.

Definition at line 734 of file complex.

2.11.2.9 template<typename _Tp > complex< _Tp > std::exp (const complex< _Tp > & __z) [inline]

Return complex base e exponential of *z*.

Definition at line 760 of file complex.

Referenced by std::pow().

2.11.2.10 template<typename _Tp > std::complex< _Tp > std::tr1::fabs (const std::complex< _Tp > & __z) [inline]

fabs(__z) [8.1.8].

Definition at line 307 of file tr1/complex.

References std::abs().

2.11.2.11 template< typename _Tp > complex< _Tp > std::log (const complex< _Tp > & *__z*) `[inline]`

Return complex natural logarithm of *z*.

Definition at line 787 of file complex.

Referenced by std::generate_canonical(), std::log10(), std::normal_distribution< _RealType >::operator()(), std::gamma_distribution< _RealType >::operator()(), std::binomial_distribution< _IntType >::operator()(), std::poisson_distribution< _IntType >::operator()(), and std::pow().

2.11.2.12 template< typename _Tp > complex< _Tp > std::log10 (const complex< _Tp > & *__z*) `[inline]`

Return complex base 10 logarithm of *z*.

Definition at line 792 of file complex.

References std::log().

2.11.2.13 template< typename _Tp > _Tp std::norm (const complex< _Tp > & *__z*) `[inline]`

Return *z* magnitude squared.

Definition at line 659 of file complex.

Referenced by std::complex< _Tp >::operator/=().

2.11.2.14 template< typename _Tp > constexpr bool std::operator!= (const complex< _Tp > & *__x*, const complex< _Tp > & *__y*) `[inline]`

Return false if *x* is equal to *y*.

Definition at line 474 of file complex.

2.11.2.15 template< typename _Tp > constexpr bool std::operator!= (const complex< _Tp > & *__x*, const _Tp & *__y*) `[inline]`

Return false if *x* is equal to *y*.

Definition at line 479 of file complex.

2.11.2.16 template< typename _Tp > constexpr bool std::operator!= (const _Tp & *__x*, const complex< _Tp > & *__y*) `[inline]`

Return false if *x* is equal to *y*.

Definition at line 484 of file complex.

2.11.2.17 template< typename _Tp > complex<_Tp> std::operator* (const complex< _Tp > & *__x*, const complex< _Tp > & *__y*) `[inline]`

Return new complex value *x* times *y*.

Definition at line 384 of file complex.

2.11.2.18 template< typename _Tp > complex<_Tp> std::operator* (const complex< _Tp > & *__x*, const _Tp & *__y*) `[inline]`

Return new complex value *x* times *y*.

Definition at line 393 of file complex.

2.11.2.19 template<typename _Tp > complex<_Tp> std::operator* (const _Tp & __x, const complex< _Tp > & __y) `[inline]`

Return new complex value *x* times *y*.

Definition at line 402 of file complex.

2.11.2.20 template<typename _Tp > complex< _Tp > & complex< _Tp >::operator*= (const _Tp & __t)

Multiply this complex number by *t*.

Definition at line 243 of file complex.

2.11.2.21 template<typename _Tp > template<typename _Up > complex< _Tp > & complex< _Tp >::operator*= (const complex< _Up > & __z)

Multiply this complex number by *z*.

Definition at line 297 of file complex.

2.11.2.22 template<typename _Tp > complex<_Tp> std::operator+ (const complex< _Tp > & __x, const complex< _Tp > & __y) `[inline]`

Return new complex value *x* plus *y*.

Definition at line 324 of file complex.

2.11.2.23 template<typename _Tp > complex<_Tp> std::operator+ (const complex< _Tp > & __x, const _Tp & __y) `[inline]`

Return new complex value *x* plus *y*.

Definition at line 333 of file complex.

2.11.2.24 template<typename _Tp > complex<_Tp> std::operator+ (const _Tp & __x, const complex< _Tp > & __y) `[inline]`

Return new complex value *x* plus *y*.

Definition at line 342 of file complex.

2.11.2.25 template<typename _Tp > complex<_Tp> std::operator+ (const complex< _Tp > & __x) `[inline]`

Return *x*.

Definition at line 443 of file complex.

2.11.2.26 template<typename _Tp > template<typename _Up > complex< _Tp > & complex< _Tp >::operator+= (const complex< _Up > & __z)

Add *z* to this complex number.

Definition at line 274 of file complex.

2.11.2.27 template<typename _Tp > complex<_Tp> std::operator- (const complex< _Tp > & __x, const complex< _Tp > & __y) `[inline]`

Return new complex value *x* minus *y*.

Definition at line 354 of file complex.

2.11.2.28 template<typename _Tp > complex<_Tp> std::operator- (const complex< _Tp > & __x, const _Tp & __y) [inline]

Return new complex value *x* minus *y*.

Definition at line 363 of file complex.

2.11.2.29 template<typename _Tp > complex<_Tp> std::operator- (const _Tp & __x, const complex< _Tp > & __y) [inline]

Return new complex value *x* minus *y*.

Definition at line 372 of file complex.

2.11.2.30 template<typename _Tp > complex<_Tp> std::operator- (const complex< _Tp > & __x) [inline]

Return complex negation of *x*.

Definition at line 449 of file complex.

2.11.2.31 template<typename _Tp > template<typename _Up > complex< _Tp > & complex< _Tp >::operator-= (const complex< _Up > & __z)

Subtract *z* from this complex number.

Definition at line 285 of file complex.

2.11.2.32 template<typename _Tp > complex<_Tp> std::operator/ (const complex< _Tp > & __x, const complex< _Tp > & __y) [inline]

Return new complex value *x* divided by *y*.

Definition at line 414 of file complex.

2.11.2.33 template<typename _Tp > complex<_Tp> std::operator/ (const complex< _Tp > & __x, const _Tp & __y) [inline]

Return new complex value *x* divided by *y*.

Definition at line 423 of file complex.

2.11.2.34 template<typename _Tp > complex<_Tp> std::operator/ (const _Tp & __x, const complex< _Tp > & __y) [inline]

Return new complex value *x* divided by *y*.

Definition at line 432 of file complex.

2.11.2.35 template<typename _Tp > complex< _Tp > & complex< _Tp >::operator/= (const _Tp & __t)

Divide this complex number by *t*.

Definition at line 253 of file complex.

2.11.2.36 template<typename _Tp > template<typename _Up > complex< _Tp > & complex< _Tp >::operator/= (const complex< _Up > & __z)

Divide this complex number by *z*.

Definition at line 310 of file complex.

References std::norm().

2.11.2.37 template< typename _Tp , typename _CharT , class _Traits > basic_ostream< _CharT, _Traits >& std::operator<< (basic_ostream< _CharT, _Traits > & *__os*, const complex< _Tp > & *__x*)

Insertion operator for complex values.

Definition at line 524 of file complex.

References std::ios_base::flags(), std::basic_ios< _CharT, _Traits >::imbue(), std::ios_base::precision(), and std::basic_ostringstream< _CharT, _Traits, _Alloc >::str().

2.11.2.38 template< typename _Tp > complex< _Tp > & complex< _Tp >::operator= (const _Tp & *__t*)

Assign this complex number to scalar *t*.

Definition at line 233 of file complex.

2.11.2.39 template< typename _Tp > template< typename _Up > complex< _Tp > & complex< _Tp >::operator= (const complex< _Up > & *__z*)

Assign this complex number to complex *z*.

Definition at line 263 of file complex.

2.11.2.40 template< typename _Tp > constexpr bool std::operator== (const complex< _Tp > & *__x*, const complex< _Tp > & *__y*) `[inline]`

Return true if *x* is equal to *y*.

Definition at line 456 of file complex.

2.11.2.41 template< typename _Tp > constexpr bool std::operator== (const complex< _Tp > & *__x*, const _Tp & *__y*) `[inline]`

Return true if *x* is equal to *y*.

Definition at line 461 of file complex.

2.11.2.42 template< typename _Tp > constexpr bool std::operator== (const _Tp & *__x*, const complex< _Tp > & *__y*) `[inline]`

Return true if *x* is equal to *y*.

Definition at line 466 of file complex.

2.11.2.43 template< typename _Tp , typename _CharT , class _Traits > basic_istream< _CharT, _Traits >& std::operator>> (basic_istream< _CharT, _Traits > & *__is*, complex< _Tp > & *__x*)

Extraction operator for complex values.

Definition at line 491 of file complex.

References std::ios_base::failbit, std::basic_istream< _CharT, _Traits >::putback(), and std::basic_ios< _CharT, _Traits >::setstate().

2.11.2.44 template< typename _Tp > complex< _Tp > std::polar (const _Tp & *__rho*, const _Tp & *__theta* = 0) `[inline]`

Return complex with magnitude *rho* and angle *theta*.

Definition at line 667 of file complex.

References std::cos(), and std::sin().

Referenced by std::pow().

2.11.2.45 template< typename _Tp > complex< _Tp > std::pow (const complex< _Tp > & *__x*, const _Tp & *__y*)

Return *x* to the *y'th* power.

Definition at line 989 of file complex.

References std::exp(), std::log(), and std::polar().

Referenced by std::gamma_distribution< _RealType >::operator()(), std::pow(), and std::tr1::pow().

2.11.2.46 template< typename _Tp > complex< _Tp > std::pow (const complex< _Tp > & *__x*, const complex< _Tp > & *__y*) `[inline]`

Return *x* to the *y'th* power.

Definition at line 1028 of file complex.

2.11.2.47 template< typename _Tp > complex< _Tp > std::pow (const _Tp & *__x*, const complex< _Tp > & *__y*) `[inline]`

Return *x* to the *y'th* power.

Definition at line 1034 of file complex.

References std::log(), std::polar(), and std::pow().

2.11.2.48 template< typename _Tp , typename _Up > std::complex< typename __gnu_cxx::__promote_2< _Tp, _Up >::__type> std::tr1::pow (const std::complex< _Tp > & *__x*, const _Up & *__y*) `[inline]`

Additional overloads [8.1.9].

Definition at line 348 of file tr1/complex.

References std::pow().

2.11.2.49 template< typename _Tp > complex< _Tp > std::sin (const complex< _Tp > & *__z*) `[inline]`

Return complex sine of *z*.

Definition at line 822 of file complex.

Referenced by std::polar().

2.11.2.50 template< typename _Tp > complex< _Tp > std::sinh (const complex< _Tp > & *__z*) `[inline]`

Return complex hyperbolic sine of *z*.

Definition at line 852 of file complex.

2.11.2.51 template< typename _Tp > complex< _Tp > std::sqrt (const complex< _Tp > & *__z*) `[inline]`

Return complex square root of *z*.

Definition at line 896 of file complex.

Referenced by std::normal_distribution< _RealType >::operator()(), and std::student_t_distribution< _RealType >::operator()().

2.11.2.52 template<typename _Tp > complex< _Tp > std::tan (const complex< _Tp > & __z) [inline]

Return complex tangent of *z*.

Definition at line 923 of file complex.

2.11.2.53 template<typename _Tp > complex< _Tp > std::tanh (const complex< _Tp > & __z) [inline]

Return complex hyperbolic tangent of *z*.

Definition at line 951 of file complex.

2.12 Condition Variables

Collaboration diagram for Condition Variables:

Classes

- class std::condition_variable

  condition_variable
- class std::condition_variable_any

  condition_variable_any

Enumerations

- enum std::cv_status

2.12.1 Detailed Description

Classes for condition_variable support.

2.12.2 Enumeration Type Documentation

2.12.2.1 enum **std::cv_status**

cv_status

Definition at line 56 of file condition_variable.

2.13 Futures

Collaboration diagram for Futures:

Classes

- class std::future_error

  Exception type thrown by futures.
- struct std::is_error_code_enum< future_errc >

  Specialization.

Enumerations

- enum std::future_errc
- enum std::future_status
- enum std::launch

Functions

- template<typename _Fn , typename... _Args>
  future< typename result_of
  < _Fn(_Args...)>::type > **std::async** (launch __policy, _Fn &&__fn, _Args &&...__args)
- template<typename _Fn , typename... _Args>
  future< typename result_of
  < _Fn(_Args...)>::type > **std::async** (_Fn &&__fn, _Args &&...__args)
- const error_category & std::future_category () noexcept
- error_code std::make_error_code (future_errc __errc) noexcept
- error_condition std::make_error_condition (future_errc __errc) noexcept
- constexpr launch **std::operator&** (launch __x, launch __y)
- launch & **std::operator&=** (launch &__x, launch __y)
- constexpr launch **std::operator^** (launch __x, launch __y)
- launch & **std::operator^=** (launch &__x, launch __y)
- constexpr launch **std::operator|** (launch __x, launch __y)
- launch & **std::operator|=** (launch &__x, launch __y)
- constexpr launch **std::operator~** (launch __x)

2.13.1 Detailed Description

Classes for futures support.

2.13.2 Enumeration Type Documentation

2.13.2.1 enum std::future_errc

Error code for futures.

Definition at line 63 of file future.

2.13.2.2 enum std::future_status

Status code for futures.

Definition at line 162 of file future.

2.13.2.3 enum std::launch

Launch code for futures.

Definition at line 125 of file future.

2.13.3 Function Documentation

2.13.3.1 const error_category& std::future_category ( ) `[noexcept]`

Points to a statically-allocated object derived from error_category.

Referenced by std::make_error_code(), and std::make_error_condition().

2.13.3.2 error_code std::make_error_code (future_errc *__errc*) `[inline]`, `[noexcept]`

Overload for make_error_code.

Definition at line 81 of file future.

References std::future_category().

2.13.3.3 error_condition std::make_error_condition (future_errc *__errc*) `[inline]`, `[noexcept]`

Overload for make_error_condition.

Definition at line 86 of file future.

References std::future_category().

2.14 I/O

Classes

- class __gnu_cxx::stdio_filebuf< _CharT, _Traits >

  Provides a layer of compatibility for C/POSIX.
  This GNU extension provides extensions for working with standard C FILE∗'s and POSIX file descriptors. It must be instantiated by the user with the type of character used in the file stream, e.g., stdio_filebuf<char>.
- class __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >

  Provides a layer of compatibility for C.
  This GNU extension provides extensions for working with standard C FILE∗'s. It must be instantiated by the user with the type of character used in the file stream, e.g., stdio_filebuf<char>.
- class std::basic_filebuf< _CharT, _Traits >

  The actual work of input and output (for files).
- class std::basic_fstream< _CharT, _Traits >

  Controlling input and output for files.
- class std::basic_ifstream< _CharT, _Traits >

  Controlling input for files.
- class std::basic_ofstream< _CharT, _Traits >

  Controlling output for files.
- class std::ios_base

  The base of the I/O class hierarchy.
  This class defines everything that can be defined about I/O that does not depend on the type of characters being input or output. Most people will only see `ios_base` *when they need to specify the full name of the various I/O flags (e.g., the openmodes).*

Typedefs

- typedef basic_filebuf< char > std::filebuf
- typedef basic_fstream< char > std::fstream
- typedef basic_ifstream< char > std::ifstream
- typedef basic_ios< char > std::ios
- typedef basic_iostream< char > std::iostream
- typedef basic_istream< char > std::istream
- typedef basic_istringstream< char > std::istringstream
- typedef basic_ofstream< char > std::ofstream
- typedef basic_ostream< char > std::ostream
- typedef basic_ostringstream< char > std::ostringstream
- typedef basic_streambuf< char > std::streambuf
- typedef basic_stringbuf< char > std::stringbuf
- typedef basic_stringstream< char > std::stringstream
- typedef basic_filebuf< wchar_t > std::wfilebuf
- typedef basic_fstream< wchar_t > std::wfstream
- typedef basic_ifstream< wchar_t > std::wifstream
- typedef basic_ios< wchar_t > std::wios
- typedef basic_iostream< wchar_t > std::wiostream
- typedef basic_istream< wchar_t > std::wistream
- typedef basic_istringstream
  < wchar_t > std::wistringstream
- typedef basic_ofstream< wchar_t > std::wofstream
- typedef basic_ostream< wchar_t > std::wostream

- typedef basic_ostringstream
  < wchar_t > std::wostringstream
- typedef basic_streambuf< wchar_t > std::wstreambuf
- typedef basic_stringbuf< wchar_t > std::wstringbuf
- typedef basic_stringstream
  < wchar_t > std::wstringstream

2.14.1 Detailed Description

Nearly all of the I/O classes are parameterized on the type of characters they read and write. (The major exception is ios_base at the top of the hierarchy.) This is a change from pre-Standard streams, which were not templates.

For ease of use and compatibility, all of the basic_* I/O-related classes are given typedef names for both of the builtin character widths (wide and narrow). The typedefs are the same as the pre-Standard names, for example:

```
typedef basic_ifstream<char>  ifstream;
```

Because properly forward-declaring these classes can be difficult, you should not do it yourself. Instead, include the <iosfwd> header, which contains only declarations of all the I/O classes as well as the typedefs. Trying to forward-declare the typedefs themselves (e.g., `class ostream;`) is not valid ISO C++.

For more specific declarations, see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch24.html`

2.14.2 Typedef Documentation

2.14.2.1 typedef basic_filebuf<char> std::filebuf

Class for `char` file buffers.

Definition at line 154 of file iosfwd.

2.14.2.2 typedef basic_fstream<char> std::fstream

Class for `char` mixed input and output file streams.

Definition at line 163 of file iosfwd.

2.14.2.3 typedef basic_ifstream<char> std::ifstream

Class for `char` input file streams.

Definition at line 157 of file iosfwd.

2.14.2.4 typedef basic_ios<char> std::ios

Base class for `char` streams.

Definition at line 123 of file iosfwd.

2.14.2.5 typedef basic_iostream<char> std::iostream

Base class for `char` mixed input and output streams.

Definition at line 139 of file iosfwd.

2.14.2.6 typedef basic_istream<char> std::istream

Base class for `char` input streams.

Definition at line 133 of file iosfwd.

2.14.2.7 typedef basic_istringstream<char> std::istringstream

Class for `char` input memory streams.

Definition at line 145 of file iosfwd.

2.14.2.8 typedef basic_ofstream<char> std::ofstream

Class for `char` output file streams.

Definition at line 160 of file iosfwd.

2.14.2.9 typedef basic_ostream<char> std::ostream

Base class for `char` output streams.

Definition at line 136 of file iosfwd.

2.14.2.10 typedef basic_ostringstream<char> std::ostringstream

Class for `char` output memory streams.

Definition at line 148 of file iosfwd.

2.14.2.11 typedef basic_streambuf<char> std::streambuf

Base class for `char` buffers.

Definition at line 130 of file iosfwd.

2.14.2.12 typedef basic_stringbuf<char> std::stringbuf

Class for `char` memory buffers.

Definition at line 142 of file iosfwd.

2.14.2.13 typedef basic_stringstream<char> std::stringstream

Class for `char` mixed input and output memory streams.

Definition at line 151 of file iosfwd.

2.14.2.14 typedef basic_filebuf<wchar_t> std::wfilebuf

Class for `wchar_t` file buffers.

Definition at line 194 of file iosfwd.

2.14.2.15 typedef basic_fstream<wchar_t> std::wfstream

Class for `wchar_t` mixed input and output file streams.

Definition at line 203 of file iosfwd.

2.14.2.16 typedef basic_ifstream<wchar_t> std::wifstream

Class for `wchar_t` input file streams.

Definition at line 197 of file iosfwd.

2.14.2.17 typedef basic_ios<wchar_t> std::wios

Base class for `wchar_t` streams.

Definition at line 167 of file iosfwd.

2.14.2.18 typedef basic_iostream<wchar_t> std::wiostream

Base class for `wchar_t` mixed input and output streams.

Definition at line 179 of file iosfwd.

2.14.2.19 typedef basic_istream<wchar_t> std::wistream

Base class for `wchar_t` input streams.

Definition at line 173 of file iosfwd.

2.14.2.20 typedef basic_istringstream<wchar_t> std::wistringstream

Class for `wchar_t` input memory streams.

Definition at line 185 of file iosfwd.

2.14.2.21 typedef basic_ofstream<wchar_t> std::wofstream

Class for `wchar_t` output file streams.

Definition at line 200 of file iosfwd.

2.14.2.22 typedef basic_ostream<wchar_t> std::wostream

Base class for `wchar_t` output streams.

Definition at line 176 of file iosfwd.

2.14.2.23 typedef basic_ostringstream<wchar_t> std::wostringstream

Class for `wchar_t` output memory streams.

Definition at line 188 of file iosfwd.

2.14.2.24 typedef basic_streambuf<wchar_t> std::wstreambuf

Base class for `wchar_t` buffers.

Definition at line 170 of file iosfwd.

2.14.2.25 typedef basic_stringbuf<wchar_t> std::wstringbuf

Class for `wchar_t` memory buffers.

Definition at line 182 of file iosfwd.

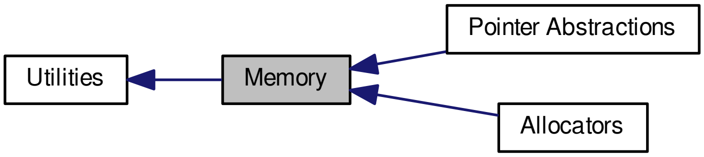
2.14.2.26 typedef basic_stringstream<wchar_t> std::wstringstream

Class for `wchar_t` mixed input and output memory streams.

Definition at line 191 of file iosfwd.

2.15 Memory

Collaboration diagram for Memory:



Modules

- Allocators
- Pointer Abstractions

2.15.1 Detailed Description

Components for memory allocation, deallocation, and management.

2.16 Pointer Abstractions

Collaboration diagram for Pointer Abstractions:

Classes

- struct owner_less< _Tp >

  Primary template owner_less.
- struct std::default_delete< _Tp >

  Primary template, default_delete.
- struct std::default_delete< _Tp[]>

  Specialization, default_delete.
- class std::enable_shared_from_this< _Tp >

  Base class allowing use of member function shared_from_this.
- struct std::hash< shared_ptr< _Tp > >

  std::hash specialization for shared_ptr.
- struct std::hash< unique_ptr< _Tp, _Dp > >

  std::hash specialization for unique_ptr.
- struct std::owner_less< shared_ptr< _Tp > >

  Partial specialization of owner_less for shared_ptr.
- struct std::owner_less< weak_ptr< _Tp > >

  Partial specialization of owner_less for weak_ptr.
- struct std::pointer_traits< _Ptr >

  Uniform interface to all pointer-like types.
- struct std::pointer_traits< _Tp ∗ >

  Partial specialization for built-in pointers.
- class std::shared_ptr< _Tp >

  A smart pointer with reference-counted copy semantics.
- class std::unique_ptr< _Tp, _Dp >

  20.7.1.2 unique_ptr for single objects.
- class std::unique_ptr< _Tp[], _Dp >

  20.7.1.3 unique_ptr for array objects with a runtime length
- class std::weak_ptr< _Tp >

  A smart pointer with weak semantics.

Functions

- template<typename _Tp , typename _Alloc , typename... _Args>
  shared_ptr< _Tp > std::allocate_shared (const _Alloc &__a, _Args &&...__args)

2.16.1 Detailed Description

Smart pointers, etc.

2.16.2 Function Documentation

2.16.2.1 template<typename _Tp , typename _Alloc , typename... _Args> shared_ptr<_Tp> std::allocate_shared (const _Alloc & *__a,* _Args &&... *__args*) [inline]

Create an object that is owned by a shared_ptr.

Parameters

__a	An allocator.
__args	Arguments for the *_Tp* object's constructor.

Returns

A shared_ptr that owns the newly created object.

Exceptions

An	exception thrown from *_Alloc::allocate* or from the constructor of *_Tp*.

A copy of *__a* will be used to allocate memory for the shared_ptr and the new object.

Definition at line 595 of file shared_ptr.h.

2.16.2.2 template<typename _Del , typename _Tp , _Lock_policy _Lp> _Del∗ std::get_deleter (const __shared_ptr< _Tp, _Lp > & *__p*) `[inline]`, `[noexcept]`

2.2.3.10 shared_ptr get_deleter (experimental)

Definition at line 76 of file shared_ptr.h.

2.16.2.3 template<typename _Tp , typename... _Args> shared_ptr<_Tp> std::make_shared (_Args &&... *__args*) `[inline]`

Create an object that is owned by a shared_ptr.

Parameters

__args	Arguments for the *_Tp* object's constructor.

Returns

A shared_ptr that owns the newly created object.

Exceptions

std::bad_alloc,or	an exception thrown from the constructor of *_Tp*.

Definition at line 610 of file shared_ptr.h.

2.16.2.4 template<typename _Ch , typename _Tr , typename _Tp , _Lock_policy _Lp> std::basic_ostream<_Ch, _Tr>& std::operator<< (std::basic_ostream< _Ch, _Tr > & *__os,* const __shared_ptr< _Tp, _Lp > & *__p*) `[inline]`

2.2.3.7 shared_ptr I/O

Definition at line 66 of file shared_ptr.h.

2.17 Mutexes

Collaboration diagram for Mutexes:

Classes

- struct std::adopt_lock_t

  Assume the calling thread has already obtained mutex ownership and manage it.
- struct std::defer_lock_t

  Do not acquire ownership of the mutex.
- class std::lock_guard< _Mutex >

  Scoped lock idiom.
- class std::mutex

  mutex
- struct std::once_flag

  once_flag
- class std::recursive_mutex

  recursive_mutex
- struct std::try_to_lock_t

  Try to acquire ownership of the mutex without blocking.
- class std::unique_lock< _Mutex >

  unique_lock

Functions

- mutex & **std::__get_once_mutex** ()
- void **std::__once_proxy** (void)
- void **std::__set_once_functor_lock_ptr** (unique_lock< mutex > ∗)
- template<typename _Lock >
  unique_lock< _Lock > **std::__try_to_lock** (_Lock &__l)
- template<typename _Callable , typename... _Args>
  void std::call_once (once_flag &__once, _Callable &&__f, _Args &&...__args)
- template<typename _L1 , typename _L2 , typename... _L3>
  void std::lock (_L1 &__l1, _L2 &__l2, _L3 &...__l3)
- template<typename _Mutex >
  void std::swap (unique_lock< _Mutex > &__x, unique_lock< _Mutex > &__y) noexcept
- template<typename _Lock1 , typename _Lock2 , typename... _Lock3>
  int std::try_lock (_Lock1 &__l1, _Lock2 &__l2, _Lock3 &...__l3)

Variables

- function< void()> **std::__once_functor**
- constexpr adopt_lock_t **std::adopt_lock**
- constexpr defer_lock_t **std::defer_lock**
- constexpr try_to_lock_t **std::try_to_lock**

2.17.1 Detailed Description

Classes for mutex support.

2.17.2 Function Documentation

2.17.2.1 template<typename _Callable , typename... _Args> void std::call_once (once_flag & *__once,* _Callable && *__f,* _Args &&... *__args*)

call_once

Definition at line 768 of file mutex.

2.17.2.2 template<typename _L1 , typename _L2 , typename... _L3> void std::lock (_L1 & *__l1,* _L2 & *__l2,* _L3 &... *__l3*)

Generic lock.

Parameters

__l1	Meets Mutex requirements (try_lock() may throw).
__l2	Meets Mutex requirements (try_lock() may throw).
__l3	Meets Mutex requirements (try_lock() may throw).

Exceptions

An	exception thrown by an argument's lock() or try_lock() member.

Postcondition

All arguments are locked.

All arguments are locked via a sequence of calls to lock(), try_lock() and unlock(). If the call exits via an exception any locks that were obtained will be released.

Definition at line 706 of file mutex.

References std::tie().

2.17.2.3 template<typename _Mutex > void std::swap (unique_lock< _Mutex > & *__x,* unique_lock< _Mutex > & *__y*) `[inline]`, `[noexcept]`

Partial specialization for unique_lock objects.

Definition at line 605 of file mutex.

2.17.2.4 template<typename _Lock1 , typename _Lock2 , typename... _Lock3> int std::try_lock (_Lock1 & *__l1,* _Lock2 & *__l2,* _Lock3 &... *__l3*)

Generic try_lock.

Parameters

__l1	Meets Mutex requirements (try_lock() may throw).
__l2	Meets Mutex requirements (try_lock() may throw).
__l3	Meets Mutex requirements (try_lock() may throw).

Returns

> Returns -1 if all try_lock() calls return true. Otherwise returns a 0-based index corresponding to the argument that returned false.

Postcondition

> Either all arguments are locked, or none will be.

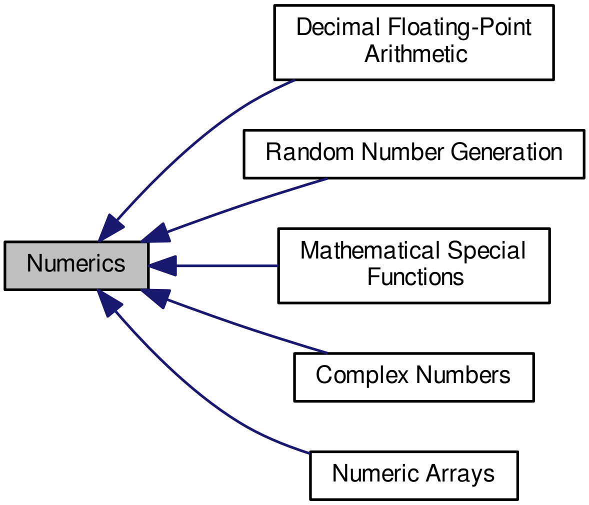
Sequentially calls try_lock() on each argument.

Definition at line 682 of file mutex.

References std::tie().

2.18 Numerics

Collaboration diagram for Numerics:



Modules

- Complex Numbers
- Decimal Floating-Point Arithmetic
- Mathematical Special Functions
- Numeric Arrays
- Random Number Generation

2.18.1 Detailed Description

Components for performing numeric operations. Includes support for for complex number types, random number generation, numeric (n-at-a-time) arrays, generalized numeric algorithms, and special math functions.

2.19 Rational Arithmetic

Collaboration diagram for Rational Arithmetic:

Classes

- struct std::ratio< _Num, _Den >

  Provides compile-time rational arithmetic.
- struct std::ratio_equal< _R1, _R2 >

  ratio_equal
- struct std::ratio_not_equal< _R1, _R2 >

  ratio_not_equal

Typedefs

- template<typename _R1 , typename _R2 >
  using std::ratio_divide = typename __ratio_divide< _R1, _R2 >::type
- template<typename _R1 , typename _R2 >
  using std::ratio_multiply = typename __ratio_multiply< _R1, _R2 >::type
- typedef ratio< num, den > **std::ratio< _Num, _Den >::type**
- typedef ratio< __safe_multiply
  <(_R1::num/__gcd1),(_R2::num/__gcd2)>
  ::value, __safe_multiply
  <(_R1::den/__gcd2),(_R2::den/__gcd1)>
  ::value > **std::__ratio_multiply< _R1, _R2 >::type**
- typedef __ratio_multiply< _R1,
  ratio< _R2::den, _R2::num >
  >::type **std::__ratio_divide< _R1, _R2 >::type**

Variables

- static constexpr uintmax_t **std::__big_add< __hi1, __lo1, __hi2, __lo2 >::__hi**
- static constexpr uintmax_t **std::__big_sub< __hi1, __lo1, __hi2, __lo2 >::__hi**
- static constexpr uintmax_t **std::__big_mul< __x, __y >::__hi**
- static constexpr uintmax_t **std::__big_add< __hi1, __lo1, __hi2, __lo2 >::__lo**
- static constexpr uintmax_t **std::__big_sub< __hi1, __lo1, __hi2, __lo2 >::__lo**
- static constexpr uintmax_t **std::__big_mul< __x, __y >::__lo**
- static constexpr uintmax_t **std::__big_div_impl< __n1, __n0, __d >::__quot**
- static constexpr uintmax_t **std::__big_div< __n1, __n0, __d >::__quot_hi**
- static constexpr uintmax_t **std::__big_div< __n1, __n0, __d >::__quot_lo**

- static constexpr uintmax_t **std::__big_div_impl< __n1, __n0, __d >::__rem**
- static constexpr uintmax_t **std::__big_div< __n1, __n0, __d >::__rem**
- static constexpr intmax_t **std::ratio< _Num, _Den >::den**
- static constexpr intmax_t **std::__ratio_multiply< _R1, _R2 >::den**
- static constexpr intmax_t **std::__ratio_divide< _R1, _R2 >::den**
- static constexpr intmax_t **std::ratio< _Num, _Den >::num**
- static constexpr intmax_t **std::__ratio_multiply< _R1, _R2 >::num**
- static constexpr intmax_t **std::__ratio_divide< _R1, _R2 >::num**
- static const intmax_t **std::__safe_multiply< _Pn, _Qn >::value**

2.19.1 Detailed Description

Compile time representation of finite rational numbers.

2.19.2 Typedef Documentation

2.19.2.1 template<typename _R1 , typename _R2 > using std::ratio_divide = typedef typename __ratio_divide<_R1, _R2>::type

ratio_divide

Definition at line 336 of file ratio.

2.19.2.2 template<typename _R1 , typename _R2 > using std::ratio_multiply = typedef typename __ratio_multiply<_R1, _R2>::type

ratio_multiply

Definition at line 313 of file ratio.

2.20 Threads

Collaboration diagram for Threads:

Namespaces

- namespace std::this_thread

Classes

- struct std::hash< thread::id >

  std::hash specialization for thread::id.
- class std::thread

  thread
- class std::thread::id

  thread::id

Functions

- bool **std::operator!=** (thread::id __x, thread::id __y) noexcept
- template<class _CharT , class _Traits >
  basic_ostream< _CharT, _Traits > & **std::operator<<** (basic_ostream< _CharT, _Traits > &__out, thread::id __id)
- bool **std::operator<=** (thread::id __x, thread::id __y) noexcept
- bool **std::operator>** (thread::id __x, thread::id __y) noexcept
- bool **std::operator>=** (thread::id __x, thread::id __y) noexcept
- void **std::swap** (thread &__x, thread &__y) noexcept

2.20.1 Detailed Description

Classes for thread support.

2.21 Metaprogramming

Collaboration diagram for Metaprogramming:

Classes

- struct __reflection_typelist< _Elements >
- struct common_type< _Tp >

  common_type
- class result_of< _Signature >

  result_of
- struct std::add_const< _Tp >

  add_const
- struct std::add_cv< _Tp >

  add_cv
- struct std::add_lvalue_reference< _Tp >

  add_lvalue_reference
- struct std::add_pointer< _Tp >

  add_pointer
- struct std::add_volatile< _Tp >

  add_volatile
- struct std::aligned_storage< _Len, _Align >

  Alignment type.
- struct std::alignment_of< _Tp >

  alignment_of
- class std::decay< _Tp >

  decay
- struct std::enable_if< bool, _Tp >

  Define a member typedef `type` *only if a boolean constant is true.*
- struct std::has_trivial_copy_assign< _Tp >

  has_trivial_copy_assign (temporary legacy)
- struct std::has_trivial_copy_constructor< _Tp >

  has_trivial_copy_constructor (temporary legacy)
- struct std::has_trivial_default_constructor< _Tp >

  has_trivial_default_constructor (temporary legacy)
- struct std::has_virtual_destructor< _Tp >

  has_virtual_destructor
- struct std::integral_constant< _Tp, __v >

  integral_constant
- struct std::is_abstract< _Tp >

is_abstract

- struct std::is_arithmetic< _Tp >

  is_arithmetic
- struct std::is_array< typename >

  is_array
- struct std::is_assignable< _Tp, _Up >

  is_assignable
- struct std::is_class< _Tp >

  is_class
- struct std::is_compound< _Tp >

  is_compound
- struct std::is_const< typename >

  is_const
- struct std::is_constructible< _Tp, _Args >

  is_constructible
- struct std::is_convertible< _From, _To >

  is_convertible
- struct std::is_copy_assignable< _Tp >

  is_copy_assignable
- struct std::is_copy_constructible< _Tp >

  is_copy_constructible
- struct std::is_default_constructible< _Tp >

  is_default_constructible
- struct std::is_destructible< _Tp >

  is_destructible
- struct std::is_empty< _Tp >

  is_empty
- struct std::is_enum< _Tp >

  is_enum
- struct std::is_floating_point< _Tp >

  is_floating_point
- struct std::is_fundamental< _Tp >

  is_fundamental
- struct std::is_integral< _Tp >

  is_integral
- struct std::is_literal_type< _Tp >

  is_literal_type
- struct std::is_lvalue_reference< typename >

  is_lvalue_reference
- struct std::is_member_function_pointer< _Tp >

  is_member_function_pointer
- struct std::is_member_object_pointer< _Tp >

  is_member_object_pointer
- struct std::is_move_assignable< _Tp >

  is_move_assignable
- struct std::is_move_constructible< _Tp >

  is_move_constructible

- struct std::is_nothrow_assignable< _Tp, _Up >

  is_nothrow_assignable
- struct std::is_nothrow_constructible< _Tp, _Args >

  is_nothrow_constructible
- struct std::is_nothrow_copy_assignable< _Tp >

  is_nothrow_copy_assignable
- struct std::is_nothrow_copy_constructible< _Tp >

  is_nothrow_copy_constructible
- struct std::is_nothrow_default_constructible< _Tp >

  is_nothrow_default_constructible
- struct std::is_nothrow_destructible< _Tp >

  is_nothrow_destructible
- struct std::is_nothrow_move_assignable< _Tp >

  is_nothrow_move_assignable
- struct std::is_nothrow_move_constructible< _Tp >

  is_nothrow_move_constructible
- struct std::is_object< _Tp >

  is_object
- struct std::is_pod< _Tp >

  is_pod
- struct std::is_pointer< _Tp >

  is_pointer
- struct std::is_polymorphic< _Tp >

  is_polymorphic
- struct std::is_reference< _Tp >

  is_reference
- struct std::is_rvalue_reference< typename >

  is_rvalue_reference
- struct std::is_scalar< _Tp >

  is_scalar
- struct std::is_signed< _Tp >

  is_signed
- struct std::is_standard_layout< _Tp >

  is_standard_layout
- struct std::is_trivial< _Tp >

  is_trivial
- struct std::is_trivially_destructible< _Tp >

  is_trivially_constructible (still unimplemented)
- struct std::is_union< _Tp >

  is_union
- struct std::is_unsigned< _Tp >

  is_unsigned
- struct std::is_void< _Tp >

  is_void
- struct std::is_volatile< typename >

  is_volatile
- struct std::make_signed< _Tp >

make_signed
- struct std::make_unsigned< _Tp >

  make_unsigned
- struct std::rank< typename >

  rank
- class std::reference_wrapper< _Tp >

  Primary class template for reference_wrapper.
- struct std::remove_const< _Tp >

  remove_const
- struct std::remove_extent< _Tp >

  remove_extent
- struct std::remove_pointer< _Tp >

  remove_pointer
- struct std::remove_volatile< _Tp >

  remove_volatile
- struct std::tr2::__reflection_typelist< _First, _Rest...>

  Partial specialization.
- struct std::tr2::__reflection_typelist<>

  Specialization for an empty typelist.
- struct std::tr2::bases< _Tp >

  Sequence abstraction metafunctions for manipulating a typelist.
- struct std::tr2::direct_bases< _Tp >

  Enumerate all the direct base classes of a class. Form of a typelist.
- struct std::underlying_type< _Tp >

  The underlying type of an enum.

Typedefs

- template<typename... _Cond>
  using **std::_Require** = typename enable_if< __and_< _Cond...>::value >::type
- typedef integral_constant
  < bool, false > std::false_type
- typedef integral_constant
  < bool, true > std::true_type

Variables

- static constexpr _Tp **std::integral_constant< _Tp, __v >::value**

2.21.1 Detailed Description

Template utilities for compile-time introspection and modification, including type classification traits, type property inspection traits and type transformation traits.

2.21.2 Typedef Documentation

2.21.2.1 typedef integral_constant<bool, false> std::false_type

The type used as a compile-time boolean with false value.

Definition at line 72 of file type_traits.

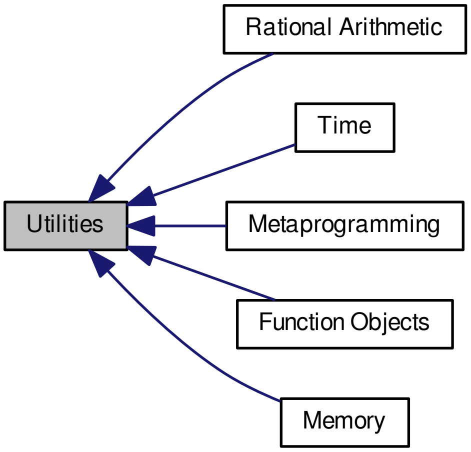
2.21.2.2 typedef integral_constant<bool, true> std::true_type

The type used as a compile-time boolean with true value.

Definition at line 69 of file type_traits.

2.22 Utilities

Collaboration diagram for Utilities:



Modules

- Function Objects
- Memory
- Metaprogramming
- Rational Arithmetic
- Time

Classes

- struct _Tuple_impl< _Idx, _Elements >
- struct std::_Tuple_impl< _Idx >
- struct std::_Tuple_impl< _Idx, _Head, _Tail...>
- struct std::pair< _T1, _T2 >

  Struct holding two objects of arbitrary type.
- struct std::piecewise_construct_t

  piecewise_construct_t
- class std::tuple< _Elements >

  Primary class template, tuple.
- class std::tuple< _T1, _T2 >

  Partial specialization, 2-element tuple. Includes construction and assignment from a pair.
- struct std::tuple_element< 0, tuple< _Head, _Tail...> >
- struct std::tuple_element< __i, tuple< _Head, _Tail...> >
- struct std::tuple_size< tuple< _Elements...> >

class tuple_size

- struct std::type_index

  Class type_index
  The class type_index provides a simple wrapper for type_info which can be used as an index type in associative containers (23.6) and in unordered associative containers (23.7).
- struct std::uses_allocator< tuple< _Types...>, _Alloc >

  Partial specialization for tuples.
- struct tuple_element< __i, _Tp >

  Gives the type of the ith element of a given tuple type.
- struct tuple_size< _Tp >

  Finds the size of a given tuple type.

Typedefs

- template<typename _Tp >
  using **std::__empty_not_final** = typename conditional< __is_final(_Tp), false_type, __is_empty_non_tuple< _Tp >>::type

2.22.1 Detailed Description

Components deemed generally useful. Includes pair, tuple, forward/move helpers, ratio, function object, metaprogramming and type traits, time, date, and memory functions.

2.22.2 Function Documentation

2.22.2.1 template<typename _Tp > _Tp∗ std::__addressof (_Tp & __r) [inline], [noexcept]

Same as C++11 std::addressof.

Definition at line 47 of file move.h.

Referenced by std::addressof(), std::begin(), std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::data(), std::end(), std::forward_list< _Tp, _Alloc >::remove(), and std::list< _Tp, _Alloc >::remove().

2.22.2.2 template<typename _Tp > _Tp∗ std::addressof (_Tp & __r) [inline], [noexcept]

Returns the actual address of the object or function referenced by r, even in the presence of an overloaded operator&.

Parameters

__r	Reference to an object or function.

Returns

The actual address.

Definition at line 135 of file move.h.

References std::__addressof().

Referenced by std::pointer_traits< _Tp ∗ >::pointer_to().

2.22.2.3 template<typename _Tp > add_rvalue_reference< _Tp >::type std::declval ( ) [inline], [noexcept]

Utility to simplify expressions used in unevaluated operands.

Definition at line 1869 of file type_traits.

2.22.2.4 template<typename _Tp > constexpr _Tp&& std::forward (typename std::remove_reference< _Tp >::type & __t) [noexcept]

Forward an lvalue.

Returns

The parameter cast to the specified type.

This function is used to implement "perfect forwarding".

Definition at line 76 of file move.h.

2.22.2.5 template<typename _Tp > constexpr _Tp&& std::forward (typename std::remove_reference< _Tp >::type && __t) [noexcept]

Forward an rvalue.

Returns

The parameter cast to the specified type.

This function is used to implement "perfect forwarding".

Definition at line 87 of file move.h.

2.22.2.6 template<class _T1 , class _T2 > constexpr pair<typename __decay_and_strip<_T1>::__type, typename __decay_and_strip<_T2>::__type> std::make_pair (_T1 && __x, _T2 && __y)

A convenience wrapper for creating a pair from two objects.

Parameters

__x	The first object.
__y	The second object.

Returns

A newly-constructed pair<> object of the appropriate type.

The standard requires that the objects be passed by reference-to-const, but LWG issue #181 says they should be passed by const value. We follow the LWG by default.

Definition at line 276 of file stl_pair.h.

Referenced by __gnu_parallel::__find_template(), __gnu_debug::__get_distance(), __gnu_parallel::__parallel_merge_advance(), __gnu_parallel::__parallel_sort_qsb(), __gnu_parallel::__qsb_local_sort_with_helping(), __gnu_parallel::__find_if_selector::_M_sequential_algorithm(), __gnu_parallel::__adjacent_find_selector::_M_sequential_algorithm(), __gnu_parallel::__find_first_of_selector< _FIterator >::_M_sequential_algorithm(), std::minmax_element(), __gnu_parallel::multiseq_partition(), __gnu_parallel::multiseq_selection(), __gnu_parallel::parallel_multiway_merge(), __gnu_parallel::parallel_sort_mwms_pu(), and __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::valid_prefix().

2.22.2.7 template<typename _Tp > constexpr std::remove_reference<_Tp>::type&& std::move (_Tp && __t) [noexcept]

Convert a value to an rvalue.

Parameters

__t	A thing of arbitrary type.

Returns

The parameter cast to an rvalue-reference to allow moving it.

Definition at line 101 of file move.h.

2.22.2.8 template<typename _Tp > constexpr conditional<__move_if_noexcept_cond<_Tp>::value, const _Tp&, _Tp&&>::type std::move_if_noexcept (_Tp & __x) [inline], [noexcept]

Conditionally convert a value to an rvalue.

Parameters

__x	A thing of arbitrary type.

Returns

The parameter, possibly cast to an rvalue-reference.

Same as std::move unless the type's move constructor could throw and the type is copyable, in which case an lvalue-reference is returned instead.

Definition at line 121 of file move.h.

2.22.2.9 template<class _T1 , class _T2 > constexpr bool std::operator!= (const pair< _T1, _T2 > & __x, const pair< _T1, _T2 > & __y) [inline]

Uses `operator==` to find the result.

Definition at line 227 of file stl_pair.h.

2.22.2.10 template<class _T1 , class _T2 > constexpr bool std::operator< (const pair< _T1, _T2 > & __x, const pair< _T1, _T2 > & __y) [inline]

`http://gcc.gnu.org/onlinedocs/libstdc++/manual/utilities.html`

Definition at line 220 of file stl_pair.h.

References std::pair< _T1, _T2 >::first.

2.22.2.11 template<class _T1 , class _T2 > constexpr bool std::operator<= (const pair< _T1, _T2 > & __x, const pair< _T1, _T2 > & __y) [inline]

Uses `operator<` to find the result.

Definition at line 239 of file stl_pair.h.

2.22.2.12 template< class _T1 , class _T2 > constexpr bool std::operator== (const pair< _T1, _T2 > & *__x*, const pair< _T1, _T2 > & *__y*) [inline]

Two pairs of the same type are equal iff their members are equal.

Definition at line 214 of file stl_pair.h.

References std::pair< _T1, _T2 >::first, and std::pair< _T1, _T2 >::second.

2.22.2.13 template< class _T1 , class _T2 > constexpr bool std::operator> (const pair< _T1, _T2 > & *__x*, const pair< _T1, _T2 > & *__y*) [inline]

Uses `operator<` to find the result.

Definition at line 233 of file stl_pair.h.

2.22.2.14 template< class _T1 , class _T2 > constexpr bool std::operator>= (const pair< _T1, _T2 > & *__x*, const pair< _T1, _T2 > & *__y*) [inline]

Uses `operator<` to find the result.

Definition at line 245 of file stl_pair.h.

2.22.2.15 template< class _T1 , class _T2 > void std::swap (pair< _T1, _T2 > & *__x*, pair< _T1, _T2 > & *__y*) [inline], [noexcept]

See std::pair::swap().

Definition at line 254 of file stl_pair.h.

2.22.2.16 template< typename _Tp > void std::swap (_Tp & *__a*, _Tp & *__b*) const [inline], [noexcept]

Swaps two values.

Parameters

__a	A thing of arbitrary type.
__b	Another thing of arbitrary type.

Returns

Nothing.

2.22.2.17 template< typename _Tp , size_t _Nm> void std::swap (_Tp(&) *__a[_Nm]*, _Tp(&) *__b[_Nm]*) [inline], [noexcept]

Swap the contents of two arrays.

2.22.2.18 template< typename... _Elements> void std::swap (tuple< _Elements...> & *__x*, tuple< _Elements...> & *__y*) [inline], [noexcept]

swap

Definition at line 1048 of file tuple.

2.22.2.19 template< typename... _Elements> tuple< _Elements&...> std::tie (_Elements &... *__args*) [inline], [noexcept]

tie

Definition at line 1042 of file tuple.

Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::lock(), and std::try_lock().

2.22.2.20 template<typename... _Tpls, typename = typename enable_if<__and_<__is_tuple_like<_Tpls>...>::value>::type> constexpr auto std::tuple_cat (_Tpls &&... *__tpls*) -> typename __tuple_cat_result<_Tpls...>::__type

tuple_cat

Definition at line 1030 of file tuple.

2.22.3 Variable Documentation

2.22.3.1 constexpr piecewise_construct_t std::piecewise_construct

piecewise_construct

Definition at line 79 of file stl_pair.h.

Referenced by std::map< _Key, _Tp, _Compare, _Alloc >::operator[ ]().

2.23 Numeric Arrays

Collaboration diagram for Numeric Arrays:

Classes

- class std::gslice

  Class defining multi-dimensional subset of an array.
- class std::gslice_array< _Tp >

  Reference to multi-dimensional subset of an array.
- class std::indirect_array< _Tp >

  Reference to arbitrary subset of an array.
- class std::mask_array< _Tp >

  Reference to selected subset of an array.
- class std::slice

  Class defining one-dimensional subset of an array.
- class std::slice_array< _Tp >

  Reference to one-dimensional subset of an array.
- class std::valarray< _Tp >

  Smart array designed to support numeric processing.

Macros

- #define **_DEFINE_BINARY_OPERATOR**(_Op, _Name)
- #define **_DEFINE_VALARRAY_AUGMENTED_ASSIGNMENT**(_Op, _Name)
- #define **_DEFINE_VALARRAY_EXPR_AUGMENTED_ASSIGNMENT**(_Op, _Name)

2.23.1 Detailed Description

Classes and functions for representing and manipulating arrays of elements.

2.23.2 Function Documentation

2.23.2.1 std::gslice::gslice ( ) `[inline]`

Construct an empty slice.

Definition at line 149 of file gslice.h.

2.23.2.2 std::gslice::gslice (size_t *__o*, const valarray< size_t > & *__l*, const valarray< size_t > & *__s*) `[inline]`

Construct a slice.

Constructs a slice with as many dimensions as the length of the *l* and *s* arrays.

Parameters

__o	Offset in array of first element.
__l	Array of dimension lengths.
__s	Array of dimension strides between array elements.

Definition at line 153 of file gslice.h.

2.23.2.3 std::gslice::gslice (const gslice & *__g*) `[inline]`

Copy constructor.

Definition at line 158 of file gslice.h.

2.23.2.4 template<typename _Tp > gslice_array< _Tp >::gslice_array (const gslice_array< _Tp > & *__a*) `[inline]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 143 of file gslice_array.h.

2.23.2.5 template<typename _Tp > indirect_array< _Tp >::indirect_array (const indirect_array< _Tp > & *__a*) `[inline]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 143 of file indirect_array.h.

2.23.2.6 template<typename _Tp > mask_array< _Tp >::mask_array (const mask_array< _Tp > & *a*) `[inline]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 139 of file mask_array.h.

2.23.2.7 std::slice::slice ( ) `[inline]`

Construct an empty slice.

Definition at line 90 of file slice_array.h.

2.23.2.8 std::slice::slice (size_t *__o*, size_t *__d*, size_t *__s*) `[inline]`

Construct a slice.

Parameters

__o	Offset in array of first element.
__d	Number of elements in slice.
__s	Stride between array elements.

Definition at line 94 of file slice_array.h.

2.23.2.9 template<typename _Tp > slice_array< _Tp >::slice_array (const slice_array< _Tp > & *a*) `[inline]`

Copy constructor. Both slices refer to the same underlying array.

Definition at line 207 of file slice_array.h.

2.23.2.10 template<typename _Tp > valarray< _Tp >::valarray ( ) `[inline]`

Construct an empty array.

Definition at line 605 of file valarray.

2.23.2.11 template<typename _Tp > valarray< _Tp >::valarray (size_t *__n*) [inline], [explicit]

Construct an array with *n* elements.

Definition at line 609 of file valarray.

2.23.2.12 template<typename _Tp> valarray< _Tp >::valarray (const _Tp & *__t*, size_t *__n*) [inline]

Construct an array with *n* elements initialized to *t*.

Definition at line 615 of file valarray.

2.23.2.13 template<typename _Tp> valarray< _Tp >::valarray (const valarray< _Tp > & *__v*) [inline]

Copy constructor.

Definition at line 630 of file valarray.

2.23.2.14 template<typename _Tp> valarray< _Tp >::valarray (valarray< _Tp > && *__v*) [inline], [noexcept]

Move constructor.

Definition at line 638 of file valarray.

2.23.2.15 template<typename _Tp> valarray< _Tp >::valarray (const slice_array< _Tp > & *__sa*) [inline]

Construct an array with the same size and values in *sa*.

Definition at line 648 of file valarray.

2.23.2.16 template<typename _Tp> valarray< _Tp >::valarray (const gslice_array< _Tp > & *__ga*) [inline]

Construct an array with the same size and values in *ga*.

Definition at line 657 of file valarray.

2.23.2.17 template<typename _Tp> valarray< _Tp >::valarray (const mask_array< _Tp > & *__ma*) [inline]

Construct an array with the same size and values in *ma*.

Definition at line 668 of file valarray.

2.23.2.18 template<typename _Tp> valarray< _Tp >::valarray (const indirect_array< _Tp > & *__ia*) [inline]

Construct an array with the same size and values in *ia*.

Definition at line 677 of file valarray.

2.23.2.19 template<typename _Tp> valarray< _Tp >::valarray (initializer_list< _Tp > *__l*) [inline]

Construct an array with an initializer_list of values.

Definition at line 687 of file valarray.

2.23.2.20 std::gslice::~gslice ( ) [inline]

Destructor.

Definition at line 163 of file gslice.h.

2.23.2.21 template<class _Tp> _Expr< _ValFunClos< _ValArray, _Tp >, _Tp > valarray< _Tp >::apply (_Tp *func_Tp*) const [inline]

Apply a function to the array.

Returns a new valarray with elements assigned to the result of applying func to the corresponding element of this array. The new array has the same size as this one.

Parameters

func	Function of Tp returning Tp to apply.

Returns

New valarray with transformed elements.

Definition at line 1036 of file valarray.

2.23.2.22 template<class _Tp> _Expr< _RefFunClos< _ValArray, _Tp >, _Tp > valarray< _Tp >::apply (_Tp *funcconst _Tp &*) const [inline]

Apply a function to the array.

Returns a new valarray with elements assigned to the result of applying func to the corresponding element of this array. The new array has the same size as this one.

Parameters

func	Function of const Tp& returning Tp to apply.

Returns

New valarray with transformed elements.

Definition at line 1044 of file valarray.

2.23.2.23 template<class _Tp > _Tp* std::begin (valarray< _Tp > & *__va*) [inline]

Return an iterator pointing to the first element of the valarray.

Parameters

__va	valarray.

Definition at line 1183 of file valarray.

References std::__addressof().

2.23.2.24 template<class _Tp > const _Tp* std::begin (const valarray< _Tp > & *__va*) [inline]

Return an iterator pointing to the first element of the const valarray.

Parameters

__va	valarray.

Definition at line 1193 of file valarray.

References std::__addressof().

2.23.2.25 template< class _Tp > valarray< _Tp > valarray< _Tp >::cshift (int __n) const [inline]

Return a rotated array.

A new valarray is constructed as a copy of this array with elements in shifted positions. For an element with index i, the new position is (i - n) % size(). The new valarray has the same size as the current one. Elements that are shifted beyond the array bounds are shifted into the other end of the array. No elements are lost.

Positive arguments shift toward index 0, wrapping around the top. Negative arguments shift towards the top, wrapping around to 0.

Parameters

__n	Number of element positions to rotate.

Returns

New valarray with elements in shifted positions.

Definition at line 962 of file valarray.

2.23.2.26 template< class _Tp > _Tp* std::end (valarray< _Tp > & __va) [inline]

Return an iterator pointing to one past the last element of the valarray.

Parameters

__va	valarray.

Definition at line 1203 of file valarray.

References std::__addressof(), and std::valarray< _Tp >::size().

2.23.2.27 template< class _Tp > const _Tp* std::end (const valarray< _Tp > & __va) [inline]

Return an iterator pointing to one past the last element of the const valarray.

Parameters

__va	valarray.

Definition at line 1213 of file valarray.

References std::__addressof(), and std::valarray< _Tp >::size().

2.23.2.28 template< typename _Tp > _Tp valarray< _Tp >::max ( ) const [inline]

Return the maximum element using operator<().

Definition at line 1028 of file valarray.

References std::max_element().

2.23.2.29 template< typename _Tp > _Tp valarray< _Tp >::min ( ) const [inline]

Return the minimum element using operator<().

Definition at line 1020 of file valarray.

References std::min_element().

2.23.2.30 template<typename _Tp > valarray< _Tp >::template _UnaryOp< __logical_not >::_Rt valarray< _Tp >::operator! ( ) const [inline]

Return a new valarray by applying unary ! to each element.

Definition at line 1063 of file valarray.

2.23.2.31 template<typename _Tp > void gslice_array< _Tp >::operator%= (const valarray< _Tp > & __v) const [inline]

Modulo slice elements by corresponding elements of *v*.

Definition at line 202 of file gslice_array.h.

2.23.2.32 template<typename _Tp > void mask_array< _Tp >::operator%= (const valarray< _Tp > & __v) const [inline]

Modulo slice elements by corresponding elements of *v*.

Definition at line 192 of file mask_array.h.

2.23.2.33 template<typename _Tp > void indirect_array< _Tp >::operator%= (const valarray< _Tp > & __v) const [inline]

Modulo slice elements by corresponding elements of *v*.

Definition at line 196 of file indirect_array.h.

2.23.2.34 template<typename _Tp > void slice_array< _Tp >::operator%= (const valarray< _Tp > & __v) const [inline]

Modulo slice elements by corresponding elements of *v*.

Definition at line 258 of file slice_array.h.

2.23.2.35 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator%= (const _Tp & __t) [inline]

Set each element e of array to e % *t*.

Definition at line 1090 of file valarray.

2.23.2.36 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator%= (const valarray< _Tp > & __v) [inline]

Modulo elements of array by corresponding elements of *v*.

Definition at line 1090 of file valarray.

2.23.2.37 template<typename _Tp > void gslice_array< _Tp >::operator&= (const valarray< _Tp > & __v) const [inline]

Logical and slice elements with corresponding elements of *v*.

Definition at line 206 of file gslice_array.h.

2.23.2.38 template<typename _Tp > void mask_array< _Tp >::operator&= (const valarray< _Tp > & __v) const [inline]

Logical and slice elements with corresponding elements of *v*.

Definition at line 196 of file mask_array.h.

2.23.2.39 template<typename _Tp > void indirect_array< _Tp >::operator&= (const valarray< _Tp > & __v) const [inline]

Logical and slice elements with corresponding elements of *v*.

Definition at line 200 of file indirect_array.h.

2.23.2.40 template<typename _Tp > void slice_array< _Tp >::operator&= (const valarray< _Tp > & __v) const [inline]

Logical and slice elements with corresponding elements of *v*.

Definition at line 262 of file slice_array.h.

2.23.2.41 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator&= (const _Tp & __t) [inline]

Set each element e of array to e & *t*.

Definition at line 1092 of file valarray.

2.23.2.42 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator&= (const valarray< _Tp > & __v) [inline]

Logical and corresponding elements of *v* with elements of array.

Definition at line 1092 of file valarray.

2.23.2.43 template<typename _Tp > void gslice_array< _Tp >::operator*= (const valarray< _Tp > & __v) const [inline]

Multiply slice elements by corresponding elements of *v*.

Definition at line 200 of file gslice_array.h.

2.23.2.44 template<typename _Tp > void mask_array< _Tp >::operator*= (const valarray< _Tp > & __v) const [inline]

Multiply slice elements by corresponding elements of *v*.

Definition at line 190 of file mask_array.h.

2.23.2.45 template<typename _Tp > void indirect_array< _Tp >::operator*= (const valarray< _Tp > & __v) const [inline]

Multiply slice elements by corresponding elements of *v*.

Definition at line 194 of file indirect_array.h.

2.23.2.46 template<typename _Tp > void slice_array< _Tp >::operator*= (const valarray< _Tp > & __v) const [inline]

Multiply slice elements by corresponding elements of *v*.

Definition at line 256 of file slice_array.h.

2.23.2.47 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator*= (const _Tp & __t) [inline]

Multiply each element of array by *t*.

Definition at line 1088 of file valarray.

2.23.2.48 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator*= (const valarray< _Tp > & __v) [inline]

Multiply elements of array by corresponding elements of *v*.

Definition at line 1088 of file valarray.

2.23.2.49 template<typename _Tp > valarray< _Tp >::template _UnaryOp< __unary_plus >::_Rt valarray< _Tp >::operator+ ( ) const [inline]

Return a new valarray by applying unary + to each element.

Definition at line 1060 of file valarray.

2.23.2.50 template<typename _Tp > void gslice_array< _Tp >::operator+= (const valarray< _Tp > & __v) const [inline]

Add corresponding elements of *v* to slice elements.

Definition at line 203 of file gslice_array.h.

2.23.2.51 template<typename _Tp > void mask_array< _Tp >::operator+= (const valarray< _Tp > & __v) const [inline]

Add corresponding elements of *v* to slice elements.

Definition at line 193 of file mask_array.h.

2.23.2.52 template<typename _Tp > void indirect_array< _Tp >::operator+= (const valarray< _Tp > & __v) const [inline]

Add corresponding elements of *v* to slice elements.

Definition at line 197 of file indirect_array.h.

2.23.2.53 template<typename _Tp > void slice_array< _Tp >::operator+= (const valarray< _Tp > & __v) const [inline]

Add corresponding elements of *v* to slice elements.

Definition at line 259 of file slice_array.h.

2.23.2.54 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator+= (const _Tp & __t) [inline]

Add *t* to each element of array.

Definition at line 1086 of file valarray.

2.23.2.55 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator+= (const valarray< _Tp > & __v) [inline]

Add corresponding elements of *v* to elements of array.

Definition at line 1086 of file valarray.

2.23.2.56 template<typename _Tp > valarray< _Tp >::template _UnaryOp< __negate >::_Rt valarray< _Tp >::operator- ( ) const [inline]

Return a new valarray by applying unary - to each element.

Definition at line 1061 of file valarray.

2.23.2.57 template<typename _Tp > void gslice_array< _Tp >::operator-= (const valarray< _Tp > & __v) const [inline]

Subtract corresponding elements of *v* from slice elements.

Definition at line 204 of file gslice_array.h.

2.23.2.58 template<typename _Tp > void mask_array< _Tp >::operator-= (const valarray< _Tp > & __v) const [inline]

Subtract corresponding elements of *v* from slice elements.

Definition at line 194 of file mask_array.h.

2.23.2.59 template<typename _Tp > void indirect_array< _Tp >::operator-= (const valarray< _Tp > & __v) const [inline]

Subtract corresponding elements of *v* from slice elements.

Definition at line 198 of file indirect_array.h.

2.23.2.60 template<typename _Tp > void slice_array< _Tp >::operator-= (const valarray< _Tp > & __v) const [inline]

Subtract corresponding elements of *v* from slice elements.

Definition at line 260 of file slice_array.h.

2.23.2.61 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator-= (const _Tp & __t) [inline]

Subtract *t* to each element of array.

Definition at line 1087 of file valarray.

2.23.2.62 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator-= (const valarray< _Tp > & __v) [inline]

Subtract corresponding elements of *v* from elements of array.

Definition at line 1087 of file valarray.

2.23.2.63 template<typename _Tp > void gslice_array< _Tp >::operator/= (const valarray< _Tp > & __v) const [inline]

Divide slice elements by corresponding elements of *v*.

Definition at line 201 of file gslice_array.h.

2.23.2.64 template<typename _Tp > void mask_array< _Tp >::operator/= (const valarray< _Tp > & __v) const [inline]

Divide slice elements by corresponding elements of *v*.

Definition at line 191 of file mask_array.h.

2.23.2.65 template<typename _Tp > void indirect_array< _Tp >::operator/= (const valarray< _Tp > & __v) const [inline]

Divide slice elements by corresponding elements of *v*.

Definition at line 195 of file indirect_array.h.

2.23.2.66 template<typename _Tp > void slice_array< _Tp >::operator/= (const valarray< _Tp > & __v) const [inline]

Divide slice elements by corresponding elements of *v*.

Definition at line 257 of file slice_array.h.

2.23.2.67 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator/= (const _Tp & __t) [inline]

Divide each element of array by *t*.

Definition at line 1089 of file valarray.

2.23.2.68 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator/= (const valarray< _Tp > & __v) [inline]

Divide elements of array by corresponding elements of *v*.

Definition at line 1089 of file valarray.

2.23.2.69 template<typename _Tp > void gslice_array< _Tp >::operator<<= (const valarray< _Tp > & __v) const [inline]

Left shift slice elements by corresponding elements of *v*.

Definition at line 208 of file gslice_array.h.

2.23.2.70 template<typename _Tp > void mask_array< _Tp >::operator<<= (const valarray< _Tp > & __v) const [inline]

Left shift slice elements by corresponding elements of *v*.

Definition at line 198 of file mask_array.h.

2.23.2.71 template<typename _Tp > void indirect_array< _Tp >::operator<<= (const valarray< _Tp > & __v) const [inline]

Left shift slice elements by corresponding elements of *v*.

Definition at line 202 of file indirect_array.h.

2.23.2.72 template<typename _Tp > void slice_array< _Tp >::operator<<= (const valarray< _Tp > & __v) const [inline]

Left shift slice elements by corresponding elements of *v*.

Definition at line 264 of file slice_array.h.

2.23.2.73 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator<<= (const _Tp & __t) [inline]

Left shift each element e of array by *t* bits.

Definition at line 1094 of file valarray.

2.23.2.74 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator<<= (const valarray< _Tp > & __v) [inline]

Left shift elements of array by corresponding elements of *v*.

Definition at line 1094 of file valarray.

2.23.2.75 template<typename _Tp > gslice_array< _Tp > & gslice_array< _Tp >::operator= (const gslice_array< _Tp > & __a) [inline]

Assignment operator. Assigns slice elements to corresponding elements of *a*.

Definition at line 148 of file gslice_array.h.

2.23.2.76 template<typename _Tp > indirect_array< _Tp > & indirect_array< _Tp >::operator= (const indirect_array< _Tp > & __a) [inline]

Assignment operator. Assigns elements to corresponding elements of *a*.

Definition at line 154 of file indirect_array.h.

2.23.2.77 template<typename _Tp > mask_array< _Tp > & mask_array< _Tp >::operator= (const mask_array< _Tp > & __a) [inline]

Assignment operator. Assigns elements to corresponding elements of *a*.

Definition at line 149 of file mask_array.h.

2.23.2.78 template<typename _Tp > void gslice_array< _Tp >::operator= (const valarray< _Tp > & __v) const [inline]

Assign slice elements to corresponding elements of *v*.

Definition at line 166 of file gslice_array.h.

References std::valarray< _Tp >::size().

2.23.2.79 template<typename _Tp > void indirect_array< _Tp >::operator= (const valarray< _Tp > & __v) const [inline]

Assign slice elements to corresponding elements of *v*.

Definition at line 168 of file indirect_array.h.

2.23.2.80 gslice & std::gslice::operator= (const gslice & __g) [inline]

Assignment operator.

Definition at line 170 of file gslice.h.

2.23.2.81 template<typename _Tp > void gslice_array< _Tp >::operator= (const _Tp & __t) const [inline]

Assign all slice elements to *t*.

Definition at line 158 of file gslice_array.h.

2.23.2.82 template<typename _Tp > void mask_array< _Tp >::operator= (const _Tp & __t) const [inline]

Assign all slice elements to *t*.

Definition at line 158 of file mask_array.h.

2.23.2.83 template<typename _Tp > void indirect_array< _Tp >::operator= (const _Tp & __t) const [inline]

Assign all slice elements to *t*.

Definition at line 163 of file indirect_array.h.

2.23.2.84 template<typename _Tp > slice_array< _Tp > & slice_array< _Tp >::operator= (const slice_array< _Tp > & __a) [inline]

Assignment operator. Assigns slice elements to corresponding elements of *a*.

Definition at line 215 of file slice_array.h.

2.23.2.85 template<typename _Tp > void slice_array< _Tp >::operator= (const valarray< _Tp > & __v) const [inline]

Assign slice elements to corresponding elements of *v*.

Definition at line 229 of file slice_array.h.

2.23.2.86 template<typename _Tp > void slice_array< _Tp >::operator= (const _Tp & __t) const [inline]

Assign all slice elements to *t*.

Definition at line 224 of file slice_array.h.

2.23.2.87 template<typename _Tp> valarray< _Tp > & valarray< _Tp >::operator= (const valarray< _Tp > & __v) [inline]

Assign elements to an array.

Assign elements of array to values in *v*.

Parameters

__v	Valarray to get values from.

Definition at line 708 of file valarray.

2.23.2.88 template<typename _Tp> valarray< _Tp > & valarray< _Tp >::operator= (valarray< _Tp > && __v) [inline], [noexcept]

Move assign elements to an array.

Move assign elements of array to values in *v*.

Parameters

__v	Valarray to get values from.

Definition at line 732 of file valarray.

2.23.2.89 template<typename _Tp> valarray< _Tp > & valarray< _Tp >::operator= (const _Tp & __t) [inline]

Assign elements to a value.

Assign all elements of array to *t*.

Parameters

__t	Value for elements.

Definition at line 772 of file valarray.

2.23.2.90 template<typename _Tp> valarray< _Tp > & valarray< _Tp >::operator= (const slice_array< _Tp > & __sa) [inline]

Assign elements to an array subset.

Assign elements of array to values in *sa*. Results are undefined if *sa* does not have the same size as this array.

Parameters

__sa	Array slice to get values from.

Definition at line 780 of file valarray.

2.23.2.91 template<typename _Tp> valarray< _Tp > & valarray< _Tp >::operator= (const gslice_array< _Tp > & __ga) [inline]

Assign elements to an array subset.

Assign elements of array to values in *ga*. Results are undefined if *ga* does not have the same size as this array.

Parameters

__ga	Array slice to get values from.

Definition at line 790 of file valarray.

References std::valarray< _Tp >::size().

2.23.2.92 template<typename _Tp> valarray< _Tp > & valarray< _Tp >::operator= (const mask_array< _Tp > & __ma) [inline]

Assign elements to an array subset.

Assign elements of array to values in *ma*. Results are undefined if *ma* does not have the same size as this array.

Parameters

__ma	Array slice to get values from.

Definition at line 800 of file valarray.

2.23.2.93 template<typename _Tp> valarray< _Tp > & valarray< _Tp >::operator= (const indirect_array< _Tp > & __ia) [inline]

Assign elements to an array subset.

Assign elements of array to values in *ia*. Results are undefined if *ia* does not have the same size as this array.

Parameters

__ia	Array slice to get values from.

Definition at line 810 of file valarray.

2.23.2.94 template<typename _Tp> valarray< _Tp > & valarray< _Tp >::operator= (initializer_list< _Tp > __l) [inline]

Assign elements to an initializer_list.

Assign elements of array to values in *__l*. Results are undefined if *__l* does not have the same size as this array.

Parameters

__l	initializer_list to get values from.

Definition at line 748 of file valarray.

2.23.2.95 template<typename _Tp > void gslice_array< _Tp >::operator>>= (const valarray< _Tp > & __v) const [inline]

Right shift slice elements by corresponding elements of *v*.

Definition at line 209 of file gslice_array.h.

2.23.2.96 template<typename _Tp > void mask_array< _Tp >::operator>>= (const valarray< _Tp > & __v) const [inline]

Right shift slice elements by corresponding elements of *v*.

Definition at line 199 of file mask_array.h.

2.23.2.97 template<typename _Tp > void indirect_array< _Tp >::operator>>= (const valarray< _Tp > & __v) const [inline]

Right shift slice elements by corresponding elements of *v*.

Definition at line 203 of file indirect_array.h.

2.23.2.98 template< typename _Tp > void slice_array< _Tp >::operator>>= (const valarray< _Tp > & __v) const [inline]

Right shift slice elements by corresponding elements of *v*.

Definition at line 265 of file slice_array.h.

2.23.2.99 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator>>= (const _Tp & __t) [inline]

Right shift each element e of array by *t* bits.

Definition at line 1095 of file valarray.

2.23.2.100 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator>>= (const valarray< _Tp > & __v) [inline]

Right shift elements of array by corresponding elements of *v*.

Definition at line 1095 of file valarray.

2.23.2.101 template< typename _Tp > _Tp & valarray< _Tp >::operator[] (size_t __i) [inline]

Return a reference to the i'th array element.

Parameters

__i	Index of element to return.

Returns

Reference to the i'th element.

Definition at line 576 of file valarray.

2.23.2.102 template< typename _Tp > _Expr< _SClos< _ValArray, _Tp >, _Tp > valarray< _Tp >::operator[] (slice __s) const [inline]

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the slice argument. The new valarray has the same size as the input slice.

See Also

slice.

Parameters

__s	The source slice.

Returns

New valarray containing elements in *__s*.

Definition at line 829 of file valarray.

2.23.2.103 template< typename _Tp > slice_array< _Tp > valarray< _Tp >::operator[] (slice __s) [inline]

Return a reference to an array subset.

Returns a new valarray containing the elements of the array indicated by the slice argument. The new valarray has the same size as the input slice.

See Also

slice.

Parameters

__s	The source slice.

Returns

New valarray containing elements in *__s*.

Definition at line 837 of file valarray.

2.23.2.104 template< typename _Tp > _Expr< _GClos< _ValArray, _Tp >, _Tp > valarray< _Tp >::operator[] (const gslice & __s) const [inline]

Return an array subset.

Returns a slice_array referencing the elements of the array indicated by the slice argument.

See Also

gslice.

Parameters

__s	The source slice.

Returns

Slice_array referencing elements indicated by *__s*.

Definition at line 842 of file valarray.

2.23.2.105 template< typename _Tp > gslice_array< _Tp > valarray< _Tp >::operator[] (const gslice & __s) [inline]

Return a reference to an array subset.

Returns a new valarray containing the elements of the array indicated by the gslice argument. The new valarray has the same size as the input gslice.

See Also

gslice.

Parameters

__s	The source gslice.

Returns

New valarray containing elements in *__s*.

Definition at line 851 of file valarray.

2.23.2.106 template<typename _Tp > valarray< _Tp > valarray< _Tp >::operator[] (const valarray< bool > & *__m*) const [inline]

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the argument. The input is a valarray of bool which represents a bitmask indicating which elements should be copied into the new valarray. Each element of the array is added to the return valarray if the corresponding element of the argument is true.

Parameters

__m	The valarray bitmask.

Returns

New valarray containing elements indicated by *__m*.

Definition at line 859 of file valarray.

References std::valarray< _Tp >::size().

2.23.2.107 template<typename _Tp > mask_array< _Tp > valarray< _Tp >::operator[] (const valarray< bool > & *__m*) [inline]

Return a reference to an array subset.

Returns a new mask_array referencing the elements of the array indicated by the argument. The input is a valarray of bool which represents a bitmask indicating which elements are part of the subset. Elements of the array are part of the subset if the corresponding element of the argument is true.

Parameters

__m	The valarray bitmask.

Returns

New valarray containing elements indicated by *__m*.

Definition at line 871 of file valarray.

References std::valarray< _Tp >::size().

2.23.2.108 template<typename _Tp > _Expr< _IClos< _ValArray, _Tp >, _Tp > valarray< _Tp >::operator[] (const valarray< size_t > & *__i*) const [inline]

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the argument. The elements in the argument are interpreted as the indices of elements of this valarray to copy to the return valarray.

Parameters

__i	The valarray element index list.

Returns

New valarray containing elements in *__s*.

Definition at line 882 of file valarray.

2.23.2.109 template< typename _Tp > indirect_array< _Tp > valarray< _Tp >::operator[] (const valarray< size_t > & *__i*) [inline]

Return a reference to an array subset.

Returns an indirect_array referencing the elements of the array indicated by the argument. The elements in the argument are interpreted as the indices of elements of this valarray to include in the subset. The returned indirect_array refers to these elements.

Parameters

__i	The valarray element index list.

Returns

Indirect_array referencing elements in *__i*.

Definition at line 890 of file valarray.

References std::valarray< _Tp >::size().

2.23.2.110 template< typename _Tp > void gslice_array< _Tp >::operator^= (const valarray< _Tp > & *__v*) const [inline]

Logical xor slice elements with corresponding elements of *v*.

Definition at line 205 of file gslice_array.h.

2.23.2.111 template< typename _Tp > void mask_array< _Tp >::operator^= (const valarray< _Tp > & *__v*) const [inline]

Logical xor slice elements with corresponding elements of *v*.

Definition at line 195 of file mask_array.h.

2.23.2.112 template< typename _Tp > void indirect_array< _Tp >::operator^= (const valarray< _Tp > & *__v*) const [inline]

Logical xor slice elements with corresponding elements of *v*.

Definition at line 199 of file indirect_array.h.

2.23.2.113 template< typename _Tp > void slice_array< _Tp >::operator^= (const valarray< _Tp > & *__v*) const [inline]

Logical xor slice elements with corresponding elements of *v*.

Definition at line 261 of file slice_array.h.

2.23.2.114 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator^= (const _Tp & __t) `[inline]`

Set each element e of array to e ^ *t*.

Definition at line 1091 of file valarray.

2.23.2.115 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator^= (const valarray< _Tp > & __v) `[inline]`

Logical xor corresponding elements of *v* with elements of array.

Definition at line 1091 of file valarray.

2.23.2.116 template<typename _Tp > void gslice_array< _Tp >::operator|= (const valarray< _Tp > & __v) const `[inline]`

Logical or slice elements with corresponding elements of *v*.

Definition at line 207 of file gslice_array.h.

2.23.2.117 template<typename _Tp > void mask_array< _Tp >::operator|= (const valarray< _Tp > & __v) const `[inline]`

Logical or slice elements with corresponding elements of *v*.

Definition at line 197 of file mask_array.h.

2.23.2.118 template<typename _Tp > void indirect_array< _Tp >::operator|= (const valarray< _Tp > & __v) const `[inline]`

Logical or slice elements with corresponding elements of *v*.

Definition at line 201 of file indirect_array.h.

2.23.2.119 template<typename _Tp > void slice_array< _Tp >::operator|= (const valarray< _Tp > & __v) const `[inline]`

Logical or slice elements with corresponding elements of *v*.

Definition at line 263 of file slice_array.h.

2.23.2.120 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator|= (const _Tp & __t) `[inline]`

Set each element e of array to e | *t*.

Definition at line 1093 of file valarray.

2.23.2.121 template<class _Tp> valarray< _Tp > & valarray< _Tp >::operator|= (const valarray< _Tp > & __v) `[inline]`

Logical or corresponding elements of *v* with elements of array.

Definition at line 1093 of file valarray.

2.23.2.122 template<typename _Tp > valarray< _Tp >::template _UnaryOp< __bitwise_not >::_Rt valarray< _Tp >::operator∼ ( ) const `[inline]`

Return a new valarray by applying unary ∼ to each element.

Definition at line 1062 of file valarray.

2.23.2.123 template<class _Tp> void valarray< _Tp >::resize (size_t __size, _Tp __c = `_Tp()`) `[inline]`

Resize array.

Resize this array to *size* and set all elements to *c*. All references and iterators are invalidated.

Parameters

__size	New array size.
__c	New value for all elements.

Definition at line 1003 of file valarray.

2.23.2.124 template<class _Tp > valarray< _Tp > valarray< _Tp >::shift (int __n) const [inline]

Return a shifted array.

A new valarray is constructed as a copy of this array with elements in shifted positions. For an element with index i, the new position is i - n. The new valarray has the same size as the current one. New elements without a value are set to 0. Elements whose new position is outside the bounds of the array are discarded.

Positive arguments shift toward index 0, discarding elements [0, n). Negative arguments discard elements from the top of the array.

Parameters

__n	Number of element positions to shift.

Returns

New valarray with elements in shifted positions.

Definition at line 921 of file valarray.

2.23.2.125 size_t std::slice::size ( ) const [inline]

Return size of slice.

Definition at line 102 of file slice_array.h.

2.23.2.126 valarray< size_t > std::gslice::size ( ) const [inline]

Return array of sizes of slice dimensions.

Definition at line 139 of file gslice.h.

2.23.2.127 template<class _Tp > size_t valarray< _Tp >::size ( ) const [inline]

Return the number of elements in array.

Definition at line 908 of file valarray.

Referenced by std::end(), std::gslice_array< _Tp >::operator=(), std::valarray< _Tp >::operator=(), and std::valarray< _Tp >::operator[]().

2.23.2.128 size_t std::slice::start ( ) const [inline]

Return array offset of first slice element.

Definition at line 98 of file slice_array.h.

2.23.2.129 size_t std::gslice::start ( ) const [inline]

Return array offset of first slice element.

Definition at line 135 of file gslice.h.

2.23.2.130 size_t std::slice::stride ( ) const [inline]

Return array stride of slice.

Definition at line 106 of file slice_array.h.

2.23.2.131 valarray< size_t > std::gslice::stride ( ) const [inline]

Return array of array strides for each dimension.

Definition at line 143 of file gslice.h.

2.23.2.132 template<class _Tp > _Tp valarray< _Tp >::sum ( ) const [inline]

Return the sum of all elements in the array.

Accumulates the sum of all elements into a Tp using +=. The order of adding the elements is unspecified.

Definition at line 913 of file valarray.

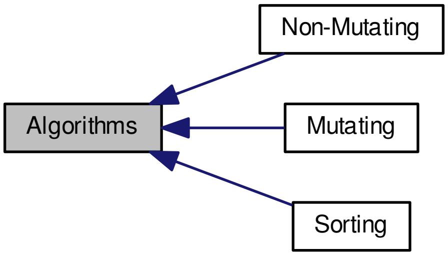
2.23.2.133 template<class _Tp> void valarray< _Tp >::swap (valarray< _Tp > & __v) [inline], [noexcept]

Swap.

Definition at line 899 of file valarray.

2.24 Algorithms

Collaboration diagram for Algorithms:



Modules

- Mutating
- Non-Mutating
- Sorting

2.24.1 Detailed Description

Components for performing algorithmic operations. Includes non-modifying sequence, modifying (mutating) sequence, sorting, searching, merge, partition, heap, set, minima, maxima, and permutation operations.

2.25 Mutating

Collaboration diagram for Mutating:

2.25.1 Detailed Description

2.25.2 Function Documentation

2.25.2.1 template<typename _II , typename _OI > _OI std::copy (_II *__first,* _II *__last,* _OI *__result*) [inline]

Copies the range [first,last) into result.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.

Returns

result + (first - last)

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling). Result may not be contained within [first,last); the copy_backward function should be used instead.

Note that the end of the output range is permitted to be contained within [first,last).

Definition at line 450 of file stl_algobase.h.

2.25.2.2 template<typename _BI1 , typename _BI2 > _BI2 std::copy_backward (_BI1 *__first,* _BI1 *__last,* _BI2 *__result*) [inline]

Copies the range [first,last) into result.

Parameters

__first	A bidirectional iterator.
__last	A bidirectional iterator.
__result	A bidirectional iterator.

Returns

result - (first - last)

The function has the same effect as copy, but starts at the end of the range and works its way to the start, returning the start of the result. This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Result may not be in the range [first,last). Use copy instead. Note that the start of the output range may overlap [first,last).

Definition at line 619 of file stl_algobase.h.

2.25.2.3 template<typename _InputIterator , typename _OutputIterator , typename _Predicate > _OutputIterator std::copy_if (_InputIterator *__first,* _InputIterator *__last,* _OutputIterator *__result,* _Predicate *__pred*)

Copy the elements of a sequence for which a predicate is true.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.
__pred	A predicate.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range [__first,__last) for which __`pred` returns true to the range beginning at __`result`.

copy_if() is stable, so the relative order of elements that are copied is unchanged.

Definition at line 974 of file stl_algo.h.

2.25.2.4 template<typename _InputIterator , typename _Size , typename _OutputIterator > _OutputIterator std::copy_n (_InputIterator *__first,* _Size *__n,* _OutputIterator *__result*) `[inline]`

Copies the range [first,first+n) into [result,result+n).

Parameters

__first	An input iterator.
__n	The number of elements to copy.
__result	An output iterator.

Returns

result+n.

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Definition at line 1037 of file stl_algo.h.

References std::__iterator_category().

2.25.2.5 template<typename _ForwardIterator , typename _Tp > void std::fill (_ForwardIterator *__first,* _ForwardIterator *__last,* const _Tp & *__value*) `[inline]`

Fills the range [first,last) with copies of value.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__value	A reference-to-const of arbitrary type.

Returns

Nothing.

This function fills a range with copies of the same value. For char types filling contiguous areas of memory, this becomes an inline call to `memset` or `wmemset`.

Definition at line 721 of file stl_algobase.h.

2.25.2.6 template<typename _OI , typename _Size , typename _Tp > _OI std::fill_n (_OI *__first,* _Size *__n,* const _Tp & *__value*) `[inline]`

Fills the range [first,first+n) with copies of value.

Parameters

__first	An output iterator.
__n	The count of copies to perform.
__value	A reference-to-const of arbitrary type.

Returns

The iterator at first+n.

This function fills a range with copies of the same value. For char types filling contiguous areas of memory, this becomes an inline call to `memset` or @ wmemset.

_GLIBCXX_RESOLVE_LIB_DEFECTS DR 865. More algorithms that throw away information

Definition at line 781 of file stl_algobase.h.

2.25.2.7 template<typename _ForwardIterator , typename _Generator > void std::generate (_ForwardIterator *__first,* _ForwardIterator *__last,* _Generator *__gen*)

Assign the result of a function object to each value in a sequence.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__gen	A function object taking no arguments and returning std::iterator_traits<_ForwardIterator>::value_type

Returns

generate() returns no value.

Performs the assignment `*i` = `__gen()` for each `i` in the range [__first,__last).

Definition at line 5071 of file stl_algo.h.

2.25.2.8 template<typename _OutputIterator , typename _Size , typename _Generator > _OutputIterator std::generate_n (_OutputIterator *__first,* _Size *__n,* _Generator *__gen*)

Assign the result of a function object to each value in a sequence.

Parameters

__first	A forward iterator.
__n	The length of the sequence.
__gen	A function object taking no arguments and returning std::iterator_traits<_ForwardIterator>::value_type

Returns

The end of the sequence, __`first+__n`

Performs the assignment `*i` = __`gen()` for each `i` in the range [__first,__first+__n).

_GLIBCXX_RESOLVE_LIB_DEFECTS DR 865. More algorithms that throw away information

Definition at line 5102 of file stl_algo.h.

2.25.2.9 template<typename _InputIterator , typename _Predicate > bool std::is_partitioned (_InputIterator *__first,* _InputIterator *__last,* _Predicate *__pred*) `[inline]`

Checks whether the sequence is partitioned.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

True if the range [__first,__last) is partioned by __`pred`, i.e. if all elements that satisfy __`pred` appear before those that do not.

Definition at line 826 of file stl_algo.h.

References std::find_if_not(), and std::none_of().

2.25.2.10 template<typename _ForwardIterator1 , typename _ForwardIterator2 > void std::iter_swap (_ForwardIterator1 *__a,* _ForwardIterator2 *__b*) `[inline]`

Swaps the contents of two iterators.

Parameters

__a	An iterator.
__b	Another iterator.

Returns

Nothing.

This function swaps the values pointed to by two iterators, not the iterators themselves.

Definition at line 119 of file stl_algobase.h.

Referenced by std::__merge_without_buffer(), std::__move_median_first(), std::__partition(), std::__reverse(), std::__rotate(), std::__unguarded_partition(), std::next_permutation(), std::prev_permutation(), std::random_shuffle(), std::shuffle(), and std::swap_ranges().

2.25.2.11 template<typename _II , typename _OI > _OI std::move (_II __first, _II __last, _OI __result) [inline]

Moves the range [first,last) into result.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.

Returns

result + (first - last)

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling). Result may not be contained within [first,last); the move_backward function should be used instead.

Note that the end of the output range is permitted to be contained within [first,last).

Definition at line 483 of file stl_algobase.h.

2.25.2.12 template<typename _BI1 , typename _BI2 > _BI2 std::move_backward (_BI1 __first, _BI1 __last, _BI2 __result) [inline]

Moves the range [first,last) into result.

Parameters

__first	A bidirectional iterator.
__last	A bidirectional iterator.
__result	A bidirectional iterator.

Returns

result - (first - last)

The function has the same effect as move, but starts at the end of the range and works its way to the start, returning the start of the result. This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Result may not be in the range (first,last]. Use move instead. Note that the start of the output range may overlap [first,last).

Definition at line 655 of file stl_algobase.h.

2.25.2.13 template<typename _ForwardIterator , typename _Predicate > _ForwardIterator std::partition (_ForwardIterator __first, _ForwardIterator __last, _Predicate __pred) [inline]

Move elements for which a predicate is true to the beginning of a sequence.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__pred	A predicate functor.

Returns

An iterator `middle` such that `__pred(i)` is true for each iterator `i` in the range [__first,middle) and false for each `i` in the range [middle,__last).

`__pred` must not modify its operand. `partition()` does not preserve the relative ordering of elements in each group, use `stable_partition()` if this is needed.

Definition at line 5274 of file stl_algo.h.

References std::__iterator_category(), and std::__partition().

2.25.2.14 template<typename _InputIterator , typename _OutputIterator1 , typename _OutputIterator2 , typename _Predicate > pair<_OutputIterator1, _OutputIterator2> std::partition_copy (_InputIterator *__first*, _InputIterator *__last*, _OutputIterator1 *__out_true*, _OutputIterator2 *__out_false*, _Predicate *__pred*)

Copy the elements of a sequence to separate output sequences depending on the truth value of a predicate.

Parameters

__first	An input iterator.
__last	An input iterator.
__out_true	An output iterator.
__out_false	An output iterator.
__pred	A predicate.

Returns

A pair designating the ends of the resulting sequences.

Copies each element in the range [__first,__last) for which `__pred` returns true to the range beginning at `out_true` and each element for which `__pred` returns false to `__out_false`.

Definition at line 1066 of file stl_algo.h.

2.25.2.15 template<typename _ForwardIterator , typename _Predicate > _ForwardIterator std::partition_point (_ForwardIterator *__first*, _ForwardIterator *__last*, _Predicate *__pred*)

Find the partition point of a partitioned range.

Parameters

__first	An iterator.
__last	Another iterator.
__pred	A predicate.

Returns

An iterator `mid` such that `all_of(__first, mid, __pred)` and `none_of(mid, __last, __pred)` are both true.

Definition at line 844 of file stl_algo.h.

References std::advance(), and std::distance().

2.25.2.16 template<typename _RandomAccessIterator > void std::random_shuffle (_RandomAccessIterator *__first,* _RandomAccessIterator *__last*) `[inline]`

Randomly shuffle the elements of a sequence.

Parameters

__first	A forward iterator.
__last	A forward iterator.

Returns

Nothing.

Reorder the elements in the range [__first,__last) using a random distribution, so that every possible ordering of the sequence is equally likely.

Definition at line 5210 of file stl_algo.h.

References std::iter_swap().

2.25.2.17 template<typename _RandomAccessIterator , typename _RandomNumberGenerator > void std::random_shuffle (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _RandomNumberGenerator && *__rand*)

Shuffle the elements of a sequence using a random number generator.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__rand	The RNG functor or function.

Returns

Nothing.

Reorders the elements in the range [__first,__last) using `__rand` to provide a random distribution. Calling `__rand(N)` for a positive integer `N` should return a randomly chosen integer from the range [0,N).

Definition at line 5238 of file stl_algo.h.

References std::iter_swap().

2.25.2.18 template<typename _ForwardIterator , typename _Tp > _ForwardIterator std::remove (_ForwardIterator *__first,* _ForwardIterator *__last,* const _Tp & *__value*)

Remove elements from a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__value	The value to be removed.

Returns

An iterator designating the end of the resulting sequence.

All elements equal to `__value` are removed from the range [__first,__last).

remove() is stable, so the relative order of elements that are not removed is unchanged.

Elements between the end of the resulting sequence and `__last` are still present, but their value is unspecified.

Definition at line 1115 of file stl_algo.h.

2.25.2.19 template<typename _InputIterator , typename _OutputIterator , typename _Tp > _OutputIterator std::remove_copy (_InputIterator *__first,* _InputIterator *__last,* _OutputIterator *__result,* const _Tp & *__value*)

Copy a sequence, removing elements of a given value.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.
__value	The value to be removed.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range [__first,__last) not equal to `__value` to the range beginning at `__result`. remove_copy() is stable, so the relative order of elements that are copied is unchanged.

Definition at line 897 of file stl_algo.h.

2.25.2.20 template<typename _InputIterator , typename _OutputIterator , typename _Predicate > _OutputIterator std::remove_copy_if (_InputIterator *__first,* _InputIterator *__last,* _OutputIterator *__result,* _Predicate *__pred*)

Copy a sequence, removing elements for which a predicate is true.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.
__pred	A predicate.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range [__first,__last) for which `__pred` returns false to the range beginning at `__result`.

remove_copy_if() is stable, so the relative order of elements that are copied is unchanged.

Definition at line 935 of file stl_algo.h.

2.25.2.21 template<typename _ForwardIterator , typename _Predicate > _ForwardIterator std::remove_if (_ForwardIterator *__first,* _ForwardIterator *__last,* _Predicate *__pred*)

Remove elements from a sequence using a predicate.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__pred	A predicate.

Returns

An iterator designating the end of the resulting sequence.

All elements for which `__pred` returns true are removed from the range [__first,__last).

remove_if() is stable, so the relative order of elements that are not removed is unchanged.

Elements between the end of the resulting sequence and `__last` are still present, but their value is unspecified.

Definition at line 1158 of file stl_algo.h.

2.25.2.22 template<typename _ForwardIterator , typename _Tp > void std::replace (_ForwardIterator *__first,* _ForwardIterator *__last,* const _Tp & *__old_value,* const _Tp & *__new_value*)

Replace each occurrence of one value in a sequence with another value.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__old_value	The value to be replaced.
__new_value	The replacement value.

Returns

replace() returns no value.

For each iterator `i` in the range [__first,__last) if `*i` == `__old_value` then the assignment `*i` = `__new_value` is performed.

Definition at line 5007 of file stl_algo.h.

2.25.2.23 template<typename _InputIterator , typename _OutputIterator , typename _Predicate , typename _Tp > _OutputIterator std::replace_copy_if (_InputIterator *__first,* _InputIterator *__last,* _OutputIterator *__result,* _Predicate *__pred,* const _Tp & *__new_value*)

Copy a sequence, replacing each value for which a predicate returns true with another value.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.
__pred	A predicate.
__new_value	The replacement value.

Returns

The end of the output sequence, `__result`+(__last-__first).

Copies each element in the range [__first,__last) to the range [__result,__result+(__last-__first)) replacing elements for which `__pred` returns true with `__new_value`.

Definition at line 3945 of file stl_algo.h.

2.25.2.24 template<typename _ForwardIterator , typename _Predicate , typename _Tp > void std::replace_if (_ForwardIterator *__first*, _ForwardIterator *__last*, _Predicate *__pred*, const _Tp & *__new_value*)

Replace each value in a sequence for which a predicate returns true with another value.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__pred	A predicate.
__new_value	The replacement value.

Returns

replace_if() returns no value.

For each iterator `i` in the range [__first,__last) if `__pred(*i)` is true then the assignment `*i` = `__new_value` is performed.

Definition at line 5039 of file stl_algo.h.

2.25.2.25 template<typename _BidirectionalIterator > void std::reverse (_BidirectionalIterator *__first*, _BidirectionalIterator *__last*) `[inline]`

Reverse a sequence.

Parameters

__first	A bidirectional iterator.
__last	A bidirectional iterator.

Returns

reverse() returns no value.

Reverses the order of the elements in the range [__first,__last), so that the first element becomes the last etc. For every `i` such that `0<=i<=`(__last-__first)/2), `reverse()` swaps *(__first+i) and *(__last-(i+1))

Definition at line 1466 of file stl_algo.h.

References std::__iterator_category(), and std::__reverse().

Referenced by std::next_permutation(), and std::prev_permutation().

2.25.2.26 template<typename _BidirectionalIterator , typename _OutputIterator > _OutputIterator std::reverse_copy (_BidirectionalIterator *__first*, _BidirectionalIterator *__last*, _OutputIterator *__result*)

Copy a sequence, reversing its elements.

Parameters

__first	A bidirectional iterator.
__last	A bidirectional iterator.
__result	An output iterator.

Returns

An iterator designating the end of the resulting sequence.

Copies the elements in the range [__first,__last) to the range [__result,__result+(__last-__first)) such that the order of the elements is reversed. For every `i` such that `0<=i<=`(__last-__first), `reverse_copy()` performs the assignment ∗(__result+(__last-__first)-1-i) = ∗(__first+i). The ranges [__first,__last) and [__result,__result+(__last-__first)) must not overlap.

Definition at line 1493 of file stl_algo.h.

2.25.2.27 template<typename _ForwardIterator > void std::rotate (_ForwardIterator *__first,* _ForwardIterator *__middle,* _ForwardIterator *__last*) `[inline]`

Rotate the elements of a sequence.

Parameters

__first	A forward iterator.
__middle	A forward iterator.
__last	A forward iterator.

Returns

Nothing.

Rotates the elements of the range [__first,__last) by (__middle - __first) positions so that the element at `__middle` is moved to `__first`, the element at `__middle+1` is moved to `__first+1` and so on for each element in the range [__first,__last).

This effectively swaps the ranges [__first,__middle) and [__middle,__last).

Performs ∗(__first+(n+(__last-__middle))%(__last-__first))=∗(__first+n) for each `n` in the range [0,__last-__first).

Definition at line 1699 of file stl_algo.h.

References std::__rotate().

Referenced by std::__inplace_stable_partition(), std::__merge_without_buffer(), std::__rotate_adaptive(), and std::__stable_partition_adaptive().

2.25.2.28 template<typename _ForwardIterator , typename _OutputIterator > _OutputIterator std::rotate_copy (_ForwardIterator *__first,* _ForwardIterator *__middle,* _ForwardIterator *__last,* _OutputIterator *__result*)

Copy a sequence, rotating its elements.

Parameters

__first	A forward iterator.
__middle	A forward iterator.
__last	A forward iterator.
__result	An output iterator.

Returns

An iterator designating the end of the resulting sequence.

Copies the elements of the range [__first,__last) to the range beginning at

Returns

, rotating the copied elements by (__middle-__first) positions so that the element at `__middle` is moved to `__result`, the element at `__middle+1` is moved to `__result+1` and so on for each element in the range [__first,__last).

Performs ∗(__result+(n+(__last-__middle))%(__last-__first))=∗(__first+n) for each `n` in the range [0,__last-__first).

Definition at line 1735 of file stl_algo.h.

2.25.2.29 template<typename _RandomAccessIterator , typename _UniformRandomNumberGenerator > void std::shuffle (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _UniformRandomNumberGenerator && *__g*)

Shuffle the elements of a sequence using a uniform random number generator.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__g	A UniformRandomNumberGenerator (26.5.1.3).

Returns

Nothing.

Reorders the elements in the range [__first,__last) using `__g` to provide random numbers.

Definition at line 4390 of file stl_algo.h.

References std::iter_swap().

2.25.2.30 template<typename _ForwardIterator , typename _Predicate > _ForwardIterator std::stable_partition (_ForwardIterator *__first,* _ForwardIterator *__last,* _Predicate *__pred*)

Move elements for which a predicate is true to the beginning of a sequence, preserving relative ordering.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__pred	A predicate functor.

Returns

An iterator `middle` such that `__pred(i)` is true for each iterator `i` in the range [first,middle) and false for each `i` in the range [middle,last).

Performs the same function as `partition()` with the additional guarantee that the relative ordering of elements in each group is preserved, so any two elements `x` and `y` in the range [__first,__last) such that `__pred(x)==__pred(y)` will have the same relative ordering after calling `stable_partition()`.

Definition at line 1914 of file stl_algo.h.

References std::__find_if_not(), std::__inplace_stable_partition(), std::__stable_partition_adaptive(), std::_Temporary_buffer< _ForwardIterator, _Tp >::begin(), std::_Temporary_buffer< _ForwardIterator, _Tp >::requested_size(), and std::_Temporary_buffer< _ForwardIterator, _Tp >::size().

2.25.2.31 template<typename _ForwardIterator1 , typename _ForwardIterator2 > _ForwardIterator2 std::swap_ranges (_ForwardIterator1 *__first1*, _ForwardIterator1 *__last1*, _ForwardIterator2 *__first2*)

Swap the elements of two sequences.

Parameters

__first1	A forward iterator.
__last1	A forward iterator.
__first2	A forward iterator.

Returns

An iterator equal to `first2+`(last1-first1).

Swaps each element in the range [first1,last1) with the corresponding element in the range [first2,(last1-first1)). The ranges must not overlap.

Definition at line 165 of file stl_algobase.h.

References std::iter_swap().

Referenced by std::__rotate().

2.25.2.32 template<typename _InputIterator , typename _OutputIterator , typename _UnaryOperation > _OutputIterator std::transform (_InputIterator *__first*, _InputIterator *__last*, _OutputIterator *__result*, _UnaryOperation *__unary_op*)

Perform an operation on a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.
__unary_op	A unary operator.

Returns

An output iterator equal to ___`result+`(__last-__first).

Applies the operator to each element in the input range and assigns the results to successive elements of the output sequence. Evaluates ∗(__result+N)=unary_op(∗(__first+N)) for each `N` in the range [0,__last-__first).

`unary_op` must not alter its argument.

Definition at line 4938 of file stl_algo.h.

2.25.2.33 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _BinaryOperation > _OutputIterator std::transform (_InputIterator1 *__first1*, _InputIterator1 *__last1*, _InputIterator2 *__first2*, _OutputIterator *__result*, _BinaryOperation *__binary_op*)

Perform an operation on corresponding elements of two sequences.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__result	An output iterator.
__binary_op	A binary operator.

Returns

An output iterator equal to `result+`(last-first).

Applies the operator to the corresponding elements in the two input ranges and assigns the results to successive elements of the output sequence. Evaluates $*$(__result+N)=__binary_op($*$(__first1+N),$*$(__first2+N)) for each `N` in the range [0,__last1-__first1).

`binary_op` must not alter either of its arguments.

Definition at line 4975 of file stl_algo.h.

2.25.2.34 template<typename _ForwardIterator > _ForwardIterator std::unique (_ForwardIterator *__first,* _ForwardIterator *__last*)

Remove consecutive duplicate values from a sequence.

Parameters

__first	A forward iterator.
__last	A forward iterator.

Returns

An iterator designating the end of the resulting sequence.

Removes all but the first element from each group of consecutive values that compare equal. unique() is stable, so the relative order of elements that are not removed is unchanged. Elements between the end of the resulting sequence and `__last` are still present, but their value is unspecified.

Definition at line 1198 of file stl_algo.h.

2.25.2.35 template<typename _ForwardIterator , typename _BinaryPredicate > _ForwardIterator std::unique (_ForwardIterator *__first,* _ForwardIterator *__last,* _BinaryPredicate *__binary_pred*)

Remove consecutive values from a sequence using a predicate.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__binary_pred	A binary predicate.

Returns

An iterator designating the end of the resulting sequence.

Removes all but the first element from each group of consecutive values for which `__binary_pred` returns true. unique() is stable, so the relative order of elements that are not removed is unchanged. Elements between the end of the resulting sequence and `__last` are still present, but their value is unspecified.

Definition at line 1238 of file stl_algo.h.

2.25.2.36 template<typename _InputIterator , typename _OutputIterator > _OutputIterator std::unique_copy (_InputIterator *__first,* _InputIterator *__last,* _OutputIterator *__result*) `[inline]`

Copy a sequence, removing consecutive duplicate values.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range [__first,__last) to the range beginning at `__result`, except that only the first element is copied from groups of consecutive elements that compare equal. unique_copy() is stable, so the relative order of elements that are copied is unchanged.

_GLIBCXX_RESOLVE_LIB_DEFECTS DR 241. Does unique_copy() require CopyConstructible and Assignable?

_GLIBCXX_RESOLVE_LIB_DEFECTS DR 538. 241 again: Does unique_copy() require CopyConstructible and Assignable?

Definition at line 5139 of file stl_algo.h.

References std::__iterator_category(), and std::__unique_copy().

2.25.2.37 template<typename _InputIterator , typename _OutputIterator , typename _BinaryPredicate > _OutputIterator std::unique_copy (_InputIterator *__first,* _InputIterator *__last,* _OutputIterator *__result,* _BinaryPredicate *__binary_pred*) `[inline]`

Copy a sequence, removing consecutive values using a predicate.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.
__binary_pred	A binary predicate.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range [__first,__last) to the range beginning at `__result`, except that only the first element is copied from groups of consecutive elements for which `__binary_pred` returns true. unique_copy() is stable, so the relative order of elements that are copied is unchanged.

_GLIBCXX_RESOLVE_LIB_DEFECTS DR 241. Does unique_copy() require CopyConstructible and Assignable?

Definition at line 5179 of file stl_algo.h.

References std::__iterator_category(), and std::__unique_copy().

2.26.1 Detailed Description

2.26.2 Function Documentation

2.26.2.1 template<typename _ForwardIterator > _ForwardIterator std::adjacent_find (_ForwardIterator *__first*, _ForwardIterator *__last*)

Find two adjacent values in a sequence that are equal.

Parameters

__first	A forward iterator.
__last	A forward iterator.

Returns

The first iterator `i` such that `i` and `i+1` are both valid iterators in [__first,__last) and such that `*i` == *(i+1), or `__last` if no such iterator exists.

Definition at line 4581 of file stl_algo.h.

2.26.2.2 template<typename _ForwardIterator , typename _BinaryPredicate > _ForwardIterator std::adjacent_find (_ForwardIterator *__first*, _ForwardIterator *__last*, _BinaryPredicate *__binary_pred*)

Find two adjacent values in a sequence using a predicate.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__binary_pred	A binary predicate.

Returns

> The first iterator `i` such that `i` and `i+1` are both valid iterators in [__first,__last) and such that `__binary_pred`(∗i,∗(i+1)) is true, or `__last` if no such iterator exists.

Definition at line 4613 of file stl_algo.h.

2.26.2.3 template<typename _InputIterator , typename _Predicate > bool std::all_of (_InputIterator *__first*, _InputIterator *__last*, _Predicate *__pred*) `[inline]`

Checks that a predicate is true for all the elements of a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

> True if the check is true, false otherwise.

Returns true if `__pred` is true for each element in the range [__first,__last), and false otherwise.

Definition at line 753 of file stl_algo.h.

References std::find_if_not().

2.26.2.4 template<typename _InputIterator , typename _Predicate > bool std::any_of (_InputIterator *__first*, _InputIterator *__last*, _Predicate *__pred*) `[inline]`

Checks that a predicate is false for at least an element of a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

> True if the check is true, false otherwise.

Returns true if an element exists in the range [__first,__last) such that `__pred` is true, and false otherwise.

Definition at line 788 of file stl_algo.h.

References std::none_of().

2.26.2.5 template<typename _InputIterator , typename _Tp > iterator_traits<_InputIterator>::difference_type std::count (_InputIterator *__first,* _InputIterator *__last,* const _Tp & *__value*)

Count the number of copies of a value in a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__value	The value to be counted.

Returns

The number of iterators `i` in the range [__first,__last) for which `*i` == __`value`

Definition at line 4645 of file stl_algo.h.

2.26.2.6 template<typename _InputIterator , typename _Predicate > iterator_traits<_InputIterator>::difference_type std::count_if (_InputIterator *__first,* _InputIterator *__last,* _Predicate *__pred*)

Count the elements of a sequence for which a predicate is true.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

The number of iterators `i` in the range [__first,__last) for which __`pred(*i)` is true.

Definition at line 4670 of file stl_algo.h.

Referenced by std::is_permutation().

2.26.2.7 template<typename _IIter1 , typename _IIter2 , typename _BinaryPredicate > bool std::equal (_IIter1 *__first1,* _IIter1 *__last1,* _IIter2 *__first2,* _BinaryPredicate *__binary_pred*) `[inline]`

Tests a range for element-wise equality.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__binary_pred	A binary predicate functor.

Returns

A boolean true or false.

This compares the elements of two ranges using the binary_pred parameter, and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1053 of file stl_algobase.h.

2.26.2.8 template<typename _II1 , typename _II2 > bool std::equal (_II1 *__first1,* _II1 *__last1,* _II2 *__first2*) `[inline]`

Tests a range for element-wise equality.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.

Returns

A boolean true or false.

This compares the elements of two ranges using == and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1021 of file stl_algobase.h.

Referenced by std::operator==().

2.26.2.9 template<typename _InputIterator , typename _Tp > _InputIterator std::find (_InputIterator *__first,* _InputIterator *__last,* const _Tp & *__val*) `[inline]`

Find the first occurrence of a value in a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__val	The value to find.

Returns

The first iterator `i` in the range [__first,__last) such that `*i` == `__val`, or `__last` if no such iterator exists.

Definition at line 4455 of file stl_algo.h.

References std::__find(), and std::__iterator_category().

2.26.2.10 template<typename _ForwardIterator1 , typename _ForwardIterator2 > _ForwardIterator1 std::find_end (_ForwardIterator1 *__first1,* _ForwardIterator1 *__last1,* _ForwardIterator2 *__first2,* _ForwardIterator2 *__last2*) `[inline]`

Find last matching subsequence in a sequence.

Parameters

__first1	Start of range to search.
__last1	End of range to search.
__first2	Start of sequence to match.
__last2	End of sequence to match.

Returns

> The last iterator `i` in the range [__first1,__last1-(__last2-__first2)) such that ∗(i+N) == ∗(__first2+N) for each `N` in the range [0,__last2-__first2), or `__last1` if no such iterator exists.

Searches the range [__first1,__last1) for a sub-sequence that compares equal value-by-value with the sequence given by [__first2,__last2) and returns an iterator to the __first element of the sub-sequence, or `__last1` if the sub-sequence is not found. The sub-sequence will be the last such subsequence contained in [__first,__last1).

Because the sub-sequence must lie completely within the range [__first1,__last1) it must start at a position less than `__last1-(`__last2-__first2) where `__last2-__first2` is the length of the sub-sequence. This means that the returned iterator `i` will be in the range [__first1,__last1-(__last2-__first2))

Definition at line 671 of file stl_algo.h.

References std::__iterator_category().

2.26.2.11 template<typename _ForwardIterator1 , typename _ForwardIterator2 , typename _BinaryPredicate > _ForwardIterator1 std::find_end (_ForwardIterator1 *__first1,* _ForwardIterator1 *__last1,* _ForwardIterator2 *__first2,* _ForwardIterator2 *__last2,* _BinaryPredicate *__comp*) `[inline]`

Find last matching subsequence in a sequence using a predicate.

Parameters

__first1	Start of range to search.
__last1	End of range to search.
__first2	Start of sequence to match.
__last2	End of sequence to match.
__comp	The predicate to use.

Returns

> The last iterator `i` in the range [__first1,__last1-(__last2-__first2)) such that `predicate`(∗(i+N), (__first2+N)) is true for each `N` in the range [0,__last2-__first2), or `__last1` if no such iterator exists.

Searches the range [__first1,__last1) for a sub-sequence that compares equal value-by-value with the sequence given by [__first2,__last2) using comp as a predicate and returns an iterator to the first element of the sub-sequence, or `__last1` if the sub-sequence is not found. The sub-sequence will be the last such subsequence contained in [__first,__last1).

Because the sub-sequence must lie completely within the range [__first1,__last1) it must start at a position less than `__last1-(`__last2-__first2) where `__last2-__first2` is the length of the sub-sequence. This means that the returned iterator `i` will be in the range [__first1,__last1-(__last2-__first2))

Definition at line 719 of file stl_algo.h.

References std::__iterator_category().

2.26.2.12 template<typename _InputIterator , typename _ForwardIterator > _InputIterator std::find_first_of (_InputIterator *__first1,* _InputIterator *__last1,* _ForwardIterator *__first2,* _ForwardIterator *__last2*)

Find element from a set in a sequence.

Parameters

__first1	Start of range to search.
__last1	End of range to search.
__first2	Start of match candidates.
__last2	End of match candidates.

Returns

> The first iterator `i` in the range [__first1,__last1) such that $*$`i` == $*$(i2) such that i2 is an iterator in [__first2,__last2), or `___last1` if no such iterator exists.

Searches the range [__first1,__last1) for an element that is equal to some element in the range [__first2,__last2). If found, returns an iterator in the range [__first1,__last1), otherwise returns `___last1`.

Definition at line 4509 of file stl_algo.h.

2.26.2.13 template<typename _InputIterator , typename _ForwardIterator , typename _BinaryPredicate > _InputIterator std::find_first_of (_InputIterator *__first1,* _InputIterator *__last1,* _ForwardIterator *__first2,* _ForwardIterator *__last2,* _BinaryPredicate *__comp*)

Find element from a set in a sequence using a predicate.

Parameters

__first1	Start of range to search.
__last1	End of range to search.
__first2	Start of match candidates.
__last2	End of match candidates.
__comp	Predicate to use.

Returns

> The first iterator `i` in the range [__first1,__last1) such that `comp(`$*$i, $*$(i2)) is true and i2 is an iterator in [__first2,__last2), or `___last1` if no such iterator exists.

Searches the range [__first1,__last1) for an element that is equal to some element in the range [__first2,__last2). If found, returns an iterator in the range [__first1,__last1), otherwise returns `___last1`.

Definition at line 4550 of file stl_algo.h.

2.26.2.14 template<typename _InputIterator , typename _Predicate > _InputIterator std::find_if (_InputIterator *__first,* _InputIterator *__last,* _Predicate *__pred*) `[inline]`

Find the first element in a sequence for which a predicate is true.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

> The first iterator `i` in the range [__first,__last) such that `__pred(*i)` is true, or `__last` if no such iterator exists.

Definition at line 4479 of file stl_algo.h.

References std::__find_if(), and std::__iterator_category().

2.26.2.15 template<typename _InputIterator , typename _Predicate > _InputIterator std::find_if_not (_InputIterator *__first,* _InputIterator *__last,* _Predicate *__pred*) `[inline]`

Find the first element in a sequence for which a predicate is false.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

> The first iterator `i` in the range [__first,__last) such that __`pred(*i)` is false, or __`last` if no such iterator exists.

Definition at line 803 of file stl_algo.h.

References std::__find_if_not().

Referenced by std::all_of(), and std::is_partitioned().

2.26.2.16 template<typename _InputIterator , typename _Function > _Function std::for_each (_InputIterator *__first*, _InputIterator *__last*, _Function *__f*)

Apply a function to every element of a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__f	A unary function object.

Returns

> __`f` (std::move(__`f`) in C++0x).

Applies the function object __`f` to each element in the range [first,last). __`f` must not modify the order of the sequence. If __`f` has a return value it is ignored.

Definition at line 4434 of file stl_algo.h.

2.26.2.17 template<typename _ForwardIterator1 , typename _ForwardIterator2 > bool std::is_permutation (_ForwardIterator1 *__first1*, _ForwardIterator1 *__last1*, _ForwardIterator2 *__first2*)

Checks whether a permutaion of the second sequence is equal to the first sequence.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.

Returns

> true if there exists a permutation of the elements in the range [__first2, __first2 + (__last1 - __first1)), beginning with ForwardIterator2 begin, such that equal(__first1, __last1, begin) returns true; otherwise, returns false.

Definition at line 4294 of file stl_algo.h.

References std::advance(), std::count(), and std::distance().

2.26.2.18 template<typename _ForwardIterator1 , typename _ForwardIterator2 , typename _BinaryPredicate > bool std::is_permutation (_ForwardIterator1 *__first1,* _ForwardIterator1 *__last1,* _ForwardIterator2 *__first2,* _BinaryPredicate *__pred*)

Checks whether a permutation of the second sequence is equal to the first sequence.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__pred	A binary predicate.

Returns

> true if there exists a permutation of the elements in the range [__first2, __first2 + (__last1 - __first1)), beginning with ForwardIterator2 begin, such that equal(__first1, __last1, __begin, __pred) returns true; otherwise, returns false.

Definition at line 4340 of file stl_algo.h.

References std::advance(), std::bind(), std::count_if(), and std::distance().

2.26.2.19 template<typename _InputIterator1 , typename _InputIterator2 > pair<_InputIterator1, _InputIterator2> std::mismatch (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2*)

Finds the places in ranges which don't match.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.

Returns

> A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using == and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1160 of file stl_algobase.h.

2.26.2.20 template<typename _InputIterator1 , typename _InputIterator2 , typename _BinaryPredicate > pair<_InputIterator1, _InputIterator2> std::mismatch (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _BinaryPredicate *__binary_pred*)

Finds the places in ranges which don't match.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__binary_pred	A binary predicate functor.

Returns

A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using the binary_pred parameter, and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1198 of file stl_algobase.h.

2.26.2.21 template<typename _InputIterator , typename _Predicate > bool std::none_of (_InputIterator *__first,* _InputIterator *__last,* _Predicate *__pred*) `[inline]`

Checks that a predicate is false for all the elements of a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

True if the check is true, false otherwise.

Returns true if `__pred` is false for each element in the range [__first,__last), and false otherwise.

Definition at line 770 of file stl_algo.h.

Referenced by std::any_of(), and std::is_partitioned().

2.26.2.22 template<typename _ForwardIterator1 , typename _ForwardIterator2 > _ForwardIterator1 std::search (_ForwardIterator1 *__first1,* _ForwardIterator1 *__last1,* _ForwardIterator2 *__first2,* _ForwardIterator2 *__last2*)

Search a sequence for a matching sub-sequence.

Parameters

__first1	A forward iterator.
__last1	A forward iterator.
__first2	A forward iterator.
__last2	A forward iterator.

Returns

The first iterator `i` in the range [__first1,__last1-(__last2-__first2)) such that ∗(i+N) == ∗(__first2+N) for each `N` in the range [0,__last2-__first2), or `__last1` if no such iterator exists.

Searches the range [__first1,__last1) for a sub-sequence that compares equal value-by-value with the sequence given by [__first2,__last2) and returns an iterator to the first element of the sub-sequence, or `__last1` if the sub-sequence is not found.

Because the sub-sequence must lie completely within the range [__first1,__last1) it must start at a position less than `__last1-(`__last2-__first2) where `__last2-__first2` is the length of the sub-sequence.

This means that the returned iterator `i` will be in the range [__first1,__last1-(__last2-__first2))

Definition at line 4712 of file stl_algo.h.

2.26.2.23 template<typename _ForwardIterator1 , typename _ForwardIterator2 , typename _BinaryPredicate > _ForwardIterator1 std::search (_ForwardIterator1 *__first1,* _ForwardIterator1 *__last1,* _ForwardIterator2 *__first2,* _ForwardIterator2 *__last2,* _BinaryPredicate *__predicate*)

Search a sequence for a matching sub-sequence using a predicate.

Parameters

__first1	A forward iterator.
__last1	A forward iterator.
__first2	A forward iterator.
__last2	A forward iterator.
__predicate	A binary predicate.

Returns

> The first iterator `i` in the range [__first1,__last1-(__last2-__first2)) such that `__predicate`(∗(i+N),∗(__first2+N)) is true for each `N` in the range [0,__last2-__first2), or `__last1` if no such iterator exists.

Searches the range [__first1,__last1) for a sub-sequence that compares equal value-by-value with the sequence given by [__first2,__last2), using `__predicate` to determine equality, and returns an iterator to the first element of the sub-sequence, or `__last1` if no such iterator exists.

> search(_ForwardIter1, _ForwardIter1, _ForwardIter2, _ForwardIter2)

Definition at line 4784 of file stl_algo.h.

2.26.2.24 template<typename _ForwardIterator , typename _Integer , typename _Tp > _ForwardIterator std::search_n (_ForwardIterator *__first,* _ForwardIterator *__last,* _Integer *__count,* const _Tp & *__val*)

Search a sequence for a number of consecutive values.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__count	The number of consecutive values.
__val	The value to find.

Returns

> The first iterator `i` in the range [__first,__last-__count) such that ∗(i+N) == `__val` for each `N` in the range [0,__count), or `__last` if no such iterator exists.

Searches the range [__first,__last) for `count` consecutive elements equal to `__val`.

Definition at line 4858 of file stl_algo.h.

References std::__iterator_category(), and std::__search_n().

2.26.2.25 template<typename _ForwardIterator , typename _Integer , typename _Tp , typename _BinaryPredicate > _ForwardIterator std::search_n (_ForwardIterator *__first,* _ForwardIterator *__last,* _Integer *__count,* const _Tp & *__val,* _BinaryPredicate *__binary_pred*)

Search a sequence for a number of consecutive values using a predicate.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__count	The number of consecutive values.
__val	The value to find.
__binary_pred	A binary predicate.

Returns

> The first iterator `i` in the range [__first,__last-__count) such that __`binary_pred`(∗(i+N),__val) is true for each `N` in the range [0,__count), or __`last` if no such iterator exists.

Searches the range [__first,__last) for __`count` consecutive elements for which the predicate returns true.

Definition at line 4896 of file stl_algo.h.

References std::__iterator_category(), and std::__search_n().

2.27.1 Detailed Description

2.27.2 Function Documentation

2.27.2.1 template<typename _BidirectionalIterator > void std::inplace_merge (_BidirectionalIterator *__first,* _BidirectionalIterator *__middle,* _BidirectionalIterator *__last*)

Merges two sorted ranges in place.

Parameters

__first	An iterator.
__middle	Another iterator.
__last	Another iterator.

Returns

Nothing.

Merges two sorted and consecutive ranges, [__first,__middle) and [__middle,__last), and puts the result in [__first,__last). The output will be sorted. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

If enough additional memory is available, this takes (__last-__first)-1 comparisons. Otherwise an NlogN algorithm is used, where N is distance(__first,__last).

Definition at line 3177 of file stl_algo.h.

References std::__merge_adaptive(), std::__merge_without_buffer(), std::_Temporary_buffer< _ForwardIterator, _Tp >::begin(), std::distance(), and std::_Temporary_buffer< _ForwardIterator, _Tp >::size().

2.27.2.2 template<typename _BidirectionalIterator , typename _Compare > void std::inplace_merge (_BidirectionalIterator *__first,* _BidirectionalIterator *__middle,* _BidirectionalIterator *__last,* _Compare *__comp*)

Merges two sorted ranges in place.

Parameters

__first	An iterator.
__middle	Another iterator.
__last	Another iterator.
__comp	A functor to use for comparisons.

Returns

Nothing.

Merges two sorted and consecutive ranges, [__first,__middle) and [middle,last), and puts the result in [__first,__last). The output will be sorted. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

If enough additional memory is available, this takes (__last-__first)-1 comparisons. Otherwise an NlogN algorithm is used, where N is distance(__first,__last).

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 3232 of file stl_algo.h.

References std::__merge_adaptive(), std::__merge_without_buffer(), std::_Temporary_buffer< _ForwardIterator, _Tp >::begin(), std::distance(), and std::_Temporary_buffer< _ForwardIterator, _Tp >::size().

2.27.2.3 template<typename _ForwardIterator > bool std::is_sorted (_ForwardIterator *__first,* _ForwardIterator *__last*) `[inline]`

Determines whether the elements of a sequence are sorted.

Parameters

__first	An iterator.
__last	Another iterator.

Returns

True if the elements are sorted, false otherwise.

Definition at line 3975 of file stl_algo.h.

References std::is_sorted_until().

2.27.2.4 template<typename _ForwardIterator , typename _Compare > bool std::is_sorted (_ForwardIterator *__first,* _ForwardIterator *__last,* _Compare *__comp*) `[inline]`

Determines whether the elements of a sequence are sorted according to a comparison functor.

Parameters

__first	An iterator.
__last	Another iterator.
__comp	A comparison functor.

Returns

True if the elements are sorted, false otherwise.

Definition at line 3989 of file stl_algo.h.

References std::is_sorted_until().

2.27.2.5 template<typename _ForwardIterator > _ForwardIterator std::is_sorted_until (_ForwardIterator *__first,* _ForwardIterator *__last*)

Determines the end of a sorted sequence.

Parameters

__first	An iterator.
__last	Another iterator.

Returns

An iterator pointing to the last iterator i in [__first, __last) for which the range [__first, i) is sorted.

Definition at line 4003 of file stl_algo.h.

2.27.2.6 template<typename _ForwardIterator , typename _Compare > _ForwardIterator std::is_sorted_until (_ForwardIterator *__first,* _ForwardIterator *__last,* _Compare *__comp*)

Determines the end of a sorted sequence using comparison functor.

Parameters

__first	An iterator.
__last	Another iterator.
__comp	A comparison functor.

Returns

An iterator pointing to the last iterator i in [__first, __last) for which the range [__first, i) is sorted.

Definition at line 4032 of file stl_algo.h.

Referenced by std::is_sorted().

2.27.2.7 template<typename _II1 , typename _II2 > bool std::lexicographical_compare (_II1 *__first1,* _II1 *__last1,* _II2 *__first2,* _II2 *__last2*) `[inline]`

Performs **dictionary** comparison on ranges.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__last2	An input iterator.

Returns

A boolean true or false.

Returns true if the sequence of elements defined by the range [first1,last1) is lexicographically less than the sequence of elements defined by the range [first2,last2). Returns false otherwise. (Quoted from [25.3.8]/1.) If the iterators are all character pointers, then this is an inline call to `memcmp`.

Definition at line 1084 of file stl_algobase.h.

2.27.2.8 template<typename _II1 , typename _II2 , typename _Compare > bool std::lexicographical_compare (_II1 *__first1,* _II1 *__last1,* _II2 *__first2,* _II2 *__last2,* _Compare *__comp*)

Performs **dictionary** comparison on ranges.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__last2	An input iterator.
__comp	A comparison functor.

Returns

A boolean true or false.

The same as the four-parameter `lexicographical_compare`, but uses the comp parameter instead of <.

Definition at line 1120 of file stl_algobase.h.

Referenced by std::operator<().

2.27.2.9 template<typename _Tp > const _Tp & std::max (const _Tp & *__a,* const _Tp & *__b*) `[inline]`

This does what you think it does.

Parameters

__a	A thing of arbitrary type.
__b	Another thing of arbitrary type.

Returns

The greater of the parameters.

This is the simple classic generic implementation. It will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 216 of file stl_algobase.h.

Referenced by __gnu_parallel::__parallel_nth_element(), std::_Deque_base< _Tp, _Alloc >::_M_initialize_map(), std::deque< _Tp, _Alloc >::_M_reallocate_map(), std::discard_block_engine< _RandomNumberEngine, __p, __r >::max(), std::shuffle_order_engine< _RandomNumberEngine, __k >::max(), __gnu_parallel::multiseq_partition(), __gnu_parallel::multiseq_selection(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow().

2.27.2.10 template<typename _Tp , typename _Compare > const _Tp & std::max (const _Tp & *__a,* const _Tp & *__b,* _Compare *__comp*) `[inline]`

This does what you think it does.

Parameters

__a	A thing of arbitrary type.
__b	Another thing of arbitrary type.
__comp	A comparison functor.

Returns

The greater of the parameters.

This will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 260 of file stl_algobase.h.

2.27.2.11 template<typename _ForwardIterator > _ForwardIterator std::max_element (_ForwardIterator *__first,* _ForwardIterator *__last*)

Return the maximum element in a range.

Parameters

__first	Start of range.
__last	End of range.

Returns

Iterator referencing the first instance of the largest value.

Definition at line 6298 of file stl_algo.h.

2.27.2.12 template<typename _ForwardIterator , typename _Compare > _ForwardIterator std::max_element (_ForwardIterator *__first,* _ForwardIterator *__last,* _Compare *__comp*)

Return the maximum element in a range using comparison functor.

Parameters

__first	Start of range.
__last	End of range.
__comp	Comparison functor.

Returns

Iterator referencing the first instance of the largest value according to __comp.

Definition at line 6326 of file stl_algo.h.

Referenced by std::valarray< _Tp >::max().

2.27.2.13 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator > _OutputIterator std::merge (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _InputIterator2 *__last2,* _OutputIterator *__result*)

Merges two sorted ranges.

Parameters

__first1	An iterator.
__first2	Another iterator.
__last1	Another iterator.
__last2	Another iterator.
__result	An iterator pointing to the end of the merged range.

Returns

An iterator pointing to the first element *not less than val*.

Merges the ranges [__first1,__last1) and [__first2,__last2) into the sorted range [__result, __result + (__last1-__first1) + (__last2-__first2)). Both input ranges must be sorted, and the output range must not overlap with either of the input ranges. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

Definition at line 5540 of file stl_algo.h.

2.27.2.14 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare > _OutputIterator std::merge (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _InputIterator2 *__last2,* _OutputIterator *__result,* _Compare *__comp*)

Merges two sorted ranges.

Parameters

__first1	An iterator.
__first2	Another iterator.
__last1	Another iterator.
__last2	Another iterator.
__result	An iterator pointing to the end of the merged range.
__comp	A functor to use for comparisons.

Returns

An iterator pointing to the first element "not less than" *val*.

Merges the ranges [__first1,__last1) and [__first2,__last2) into the sorted range [__result, __result + (__last1-__first1) + (__last2-__first2)). Both input ranges must be sorted, and the output range must not overlap with either of the input ranges. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 5604 of file stl_algo.h.

2.27.2.15 template<typename _Tp > const _Tp & std::min (const _Tp & *__a,* const _Tp & *__b*) `[inline]`

This does what you think it does.

Parameters

__a	A thing of arbitrary type.
__b	Another thing of arbitrary type.

Returns

The lesser of the parameters.

This is the simple classic generic implementation. It will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 193 of file stl_algobase.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), __gnu_parallel::__parallel_sort_qs_divide(), __gnu_profile::__report(), __gnu_parallel::__search_template(), __gnu_parallel::__sequential_random_shuffle(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare(), std::basic_string< char >::compare(), std::basic_string< _CharT, _Traits, _Alloc >::compare(), std::generate_canonical(), std::discard_block_engine< _RandomNumberEngine, __p, __r >::min(), std::shuffle_order_engine< _RandomNumberEngine, __k >::min(), __gnu_parallel::multiseq_partition(), __gnu_parallel::multiseq_selection(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), __gnu_cxx::random_sample_n(), std::basic_istream< _CharT, _Traits >::readsome(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind(), std::basic_string< _CharT, _Traits, _Alloc >::rfind(), std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_streambuf< _CharT, _Traits >::xsgetn(), std::basic_filebuf< _CharT, _Traits >::xsputn(), and std::basic_streambuf< _CharT, _Traits >::xsputn().

2.27.2.16 template<typename _Tp , typename _Compare > const _Tp & std::min (const _Tp & *__a,* const _Tp & *__b,* _Compare *__comp*) [inline]

This does what you think it does.

Parameters

__a	A thing of arbitrary type.
__b	Another thing of arbitrary type.
__comp	A comparison functor.

Returns

The lesser of the parameters.

This will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.

Definition at line 239 of file stl_algobase.h.

2.27.2.17 template<typename _ForwardIterator > _ForwardIterator std::min_element (_ForwardIterator *__first,* _ForwardIterator *__last*)

Return the minimum element in a range.

Parameters

__first	Start of range.
__last	End of range.

Returns

Iterator referencing the first instance of the smallest value.

Definition at line 6242 of file stl_algo.h.

2.27.2.18 template<typename _ForwardIterator , typename _Compare > _ForwardIterator std::min_element (_ForwardIterator *__first,* _ForwardIterator *__last,* _Compare *__comp*)

Return the minimum element in a range using comparison functor.

Parameters

__first	Start of range.
__last	End of range.
__comp	Comparison functor.

Returns

Iterator referencing the first instance of the smallest value according to __comp.

Definition at line 6270 of file stl_algo.h.

Referenced by std::valarray< _Tp >::min().

2.27.2.19 template<typename _Tp > pair< const _Tp &, const _Tp & > std::minmax (const _Tp & *__a*, const _Tp & *__b*) [inline]

Determines min and max at once as an ordered pair.

Parameters

__a	A thing of arbitrary type.
__b	Another thing of arbitrary type.

Returns

A pair(__b, __a) if __b is smaller than __a, pair(__a, __b) otherwise.

Definition at line 4062 of file stl_algo.h.

2.27.2.20 template<typename _Tp , typename _Compare > pair< const _Tp &, const _Tp & > std::minmax (const _Tp & *__a*, const _Tp & *__b*, _Compare *__comp*) [inline]

Determines min and max at once as an ordered pair.

Parameters

__a	A thing of arbitrary type.
__b	Another thing of arbitrary type.
__comp	A comparison functor .

Returns

A pair(__b, __a) if __b is smaller than __a, pair(__a, __b) otherwise.

Definition at line 4082 of file stl_algo.h.

2.27.2.21 template<typename _ForwardIterator > pair<_ForwardIterator, _ForwardIterator> std::minmax_element (_ForwardIterator *__first*, _ForwardIterator *__last*)

Return a pair of iterators pointing to the minimum and maximum elements in a range.

Parameters

__first	Start of range.
__last	End of range.

Returns

make_pair(m, M), where m is the first iterator i in [__first, __last) such that no other element in the range is smaller, and where M is the last iterator i in [__first, __last) such that no other element in the range is larger.

Definition at line 4101 of file stl_algo.h.

References std::make_pair().

2.27.2.22 template<typename _ForwardIterator , typename _Compare > pair<_ForwardIterator, _ForwardIterator> std::minmax_element (_ForwardIterator *__first,* _ForwardIterator *__last,* _Compare *__comp*)

Return a pair of iterators pointing to the minimum and maximum elements in a range.

Parameters

__first	Start of range.
__last	End of range.
__comp	Comparison functor.

Returns

> make_pair(m, M), where m is the first iterator i in [__first, __last) such that no other element in the range is smaller, and where M is the last iterator i in [__first, __last) such that no other element in the range is larger.

Definition at line 4177 of file stl_algo.h.

References std::make_pair().

2.27.2.23 template<typename _BidirectionalIterator > bool std::next_permutation (_BidirectionalIterator *__first,* _BidirectionalIterator *__last*)

Permute range into the next *dictionary* ordering.

Parameters

__first	Start of range.
__last	End of range.

Returns

> False if wrapped to first permutation, true otherwise.

Treats all permutations of the range as a set of *dictionary* sorted sequences. Permutes the current sequence into the next one of this set. Returns true if there are more sequences to generate. If the sequence is the largest of the set, the smallest is generated and false returned.

Definition at line 3677 of file stl_algo.h.

References std::iter_swap(), and std::reverse().

2.27.2.24 template<typename _BidirectionalIterator , typename _Compare > bool std::next_permutation (_BidirectionalIterator *__first,* _BidirectionalIterator *__last,* _Compare *__comp*)

Permute range into the next *dictionary* ordering using comparison functor.

Parameters

__first	Start of range.
__last	End of range.
__comp	A comparison functor.

Returns

False if wrapped to first permutation, true otherwise.

Treats all permutations of the range [__first,__last) as a set of *dictionary* sorted sequences ordered by `__comp`. Permutes the current sequence into the next one of this set. Returns true if there are more sequences to generate. If the sequence is the largest of the set, the smallest is generated and false returned.

Definition at line 3734 of file stl_algo.h.

References std::iter_swap(), and std::reverse().

2.27.2.25 template<typename _RandomAccessIterator > void std::nth_element (_RandomAccessIterator *__first,* _RandomAccessIterator *__nth,* _RandomAccessIterator *__last*) `[inline]`

Sort a sequence just enough to find a particular position.

Parameters

__first	An iterator.
__nth	Another iterator.
__last	Another iterator.

Returns

Nothing.

Rearranges the elements in the range [__first,__last) so that `*__nth` is the same element that would have been in that position had the whole sequence been sorted. The elements either side of `*__nth` are not completely sorted, but for any iterator *i* in the range [__first,__nth) and any iterator *j* in the range [__nth,__last) it holds that $*j < *i$ is false.

Definition at line 5384 of file stl_algo.h.

References std::__lg().

2.27.2.26 template<typename _RandomAccessIterator , typename _Compare > void std::nth_element (_RandomAccessIterator *__first,* _RandomAccessIterator *__nth,* _RandomAccessIterator *__last,* _Compare *__comp*) `[inline]`

Sort a sequence just enough to find a particular position using a predicate for comparison.

Parameters

__first	An iterator.
__nth	Another iterator.
__last	Another iterator.
__comp	A comparison functor.

Returns

Nothing.

Rearranges the elements in the range [__first,__last) so that `*__nth` is the same element that would have been in that position had the whole sequence been sorted. The elements either side of `*__nth` are not completely sorted, but for any iterator *i* in the range [__first,__nth) and any iterator *j* in the range [__nth,__last) it holds that `__comp(*j,*i)` is false.

Definition at line 5423 of file stl_algo.h.

References std::__lg().

2.27.2.27 template<typename _RandomAccessIterator > void std::partial_sort (_RandomAccessIterator *__first,* _RandomAccessIterator *__middle,* _RandomAccessIterator *__last*) [inline]

Sort the smallest elements of a sequence.

Parameters

__first	An iterator.
__middle	Another iterator.
__last	Another iterator.

Returns

Nothing.

Sorts the smallest (__middle-__first) elements in the range [first,last) and moves them to the range [__first,__middle). The order of the remaining elements in the range [__middle,__last) is undefined. After the sort if *i* and *j* are iterators in the range [__first,__middle) such that i precedes j and *k* is an iterator in the range [__middle,__last) then ∗j<∗i and ∗k<∗i are both false.

Definition at line 5308 of file stl_algo.h.

References std::__heap_select(), and std::sort_heap().

2.27.2.28 template<typename _RandomAccessIterator , typename _Compare > void std::partial_sort (_RandomAccessIterator *__first,* _RandomAccessIterator *__middle,* _RandomAccessIterator *__last,* _Compare *__comp*) [inline]

Sort the smallest elements of a sequence using a predicate for comparison.

Parameters

__first	An iterator.
__middle	Another iterator.
__last	Another iterator.
__comp	A comparison functor.

Returns

Nothing.

Sorts the smallest (__middle-__first) elements in the range [__first,__last) and moves them to the range [__first,__middle). The order of the remaining elements in the range [__middle,__last) is undefined. After the sort if *i* and *j* are iterators in the range [__first,__middle) such that i precedes j and *k* is an iterator in the range [__middle,__last) then ∗__`comp`(j,∗i) and __`comp(*k,*i)` are both false.

Definition at line 5347 of file stl_algo.h.

References std::__heap_select(), and std::sort_heap().

2.27.2.29 template<typename _InputIterator , typename _RandomAccessIterator > _RandomAccessIterator std::partial_sort_copy (_InputIterator *__first,* _InputIterator *__last,* _RandomAccessIterator *__result_first,* _RandomAccessIterator *__result_last*)

Copy the smallest elements of a sequence.

Parameters

__first	An iterator.
__last	Another iterator.
__result_first	A random-access iterator.
__result_last	Another random-access iterator.

Returns

An iterator indicating the end of the resulting sequence.

Copies and sorts the smallest N values from the range [__first,__last) to the range beginning at `___result_first`, where the number of elements to be copied, `N`, is the smaller of (__last-__first) and (__result_last-__result_first). After the sort if *i* and *j* are iterators in the range [__result_first,__result_first+N) such that i precedes j then ∗j<∗i is false. The value returned is `___result_first+N`.

Definition at line 1998 of file stl_algo.h.

References std::make_heap(), and std::sort_heap().

2.27.2.30 template<typename _InputIterator , typename _RandomAccessIterator , typename _Compare > _RandomAccessIterator std::partial_sort_copy (_InputIterator *__first,* _InputIterator *__last,* _RandomAccessIterator *__result_first,* _RandomAccessIterator *__result_last,* _Compare *__comp*)

Copy the smallest elements of a sequence using a predicate for comparison.

Parameters

__first	An input iterator.
__last	Another input iterator.
__result_first	A random-access iterator.
__result_last	Another random-access iterator.
__comp	A comparison functor.

Returns

An iterator indicating the end of the resulting sequence.

Copies and sorts the smallest N values from the range [__first,__last) to the range beginning at `result_first`, where the number of elements to be copied, `N`, is the smaller of (__last-__first) and (__result_last-__result_first). After the sort if *i* and *j* are iterators in the range [__result_first,__result_first+N) such that i precedes j then `___comp(*j,*i)` is false. The value returned is `___result_first+N`.

Definition at line 2064 of file stl_algo.h.

References std::make_heap(), and std::sort_heap().

2.27.2.31 template<typename _BidirectionalIterator > bool std::prev_permutation (_BidirectionalIterator *__first,* _BidirectionalIterator *__last*)

Permute range into the previous *dictionary* ordering.

Parameters

__first	Start of range.
__last	End of range.

Returns

False if wrapped to last permutation, true otherwise.

Treats all permutations of the range as a set of *dictionary* sorted sequences. Permutes the current sequence into the previous one of this set. Returns true if there are more sequences to generate. If the sequence is the smallest of the set, the largest is generated and false returned.

Definition at line 3790 of file stl_algo.h.

References std::iter_swap(), and std::reverse().

2.27.2.32 template<typename _BidirectionalIterator , typename _Compare > bool std::prev_permutation (_BidirectionalIterator *__first,* _BidirectionalIterator *__last,* _Compare *__comp*)

Permute range into the previous *dictionary* ordering using comparison functor.

Parameters

__first	Start of range.
__last	End of range.
__comp	A comparison functor.

Returns

False if wrapped to last permutation, true otherwise.

Treats all permutations of the range [__first,__last) as a set of *dictionary* sorted sequences ordered by `__comp`. Permutes the current sequence into the previous one of this set. Returns true if there are more sequences to generate. If the sequence is the smallest of the set, the largest is generated and false returned.

Definition at line 3847 of file stl_algo.h.

References std::iter_swap(), and std::reverse().

2.27.2.33 template<typename _RandomAccessIterator > void std::sort (_RandomAccessIterator *__first,* _RandomAccessIterator *__last*) [inline]

Sort the elements of a sequence.

Parameters

__first	An iterator.
__last	Another iterator.

Returns

Nothing.

Sorts the elements in the range [__first,__last) in ascending order, such that for each iterator *i* in the range [__first,__last-1), ∗(i+1)<∗i is false.

The relative ordering of equivalent elements is not preserved, use `stable_sort()` if this is needed.

Definition at line 5461 of file stl_algo.h.

References std::__final_insertion_sort(), std::__introsort_loop(), and std::__lg().

2.27.2.34 template<typename _RandomAccessIterator , typename _Compare > void std::sort (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Compare *__comp*) `[inline]`

Sort the elements of a sequence using a predicate for comparison.

Parameters

__first	An iterator.
__last	Another iterator.
__comp	A comparison functor.

Returns

Nothing.

Sorts the elements in the range [__first,__last) in ascending order, such that `__comp`(∗(i+1),∗i) is false for every iterator *i* in the range [__first,__last-1).

The relative ordering of equivalent elements is not preserved, use `stable_sort()` if this is needed.

Definition at line 5497 of file stl_algo.h.

References std::__final_insertion_sort(), std::__introsort_loop(), and std::__lg().

2.27.2.35 template<typename _RandomAccessIterator > void std::stable_sort (_RandomAccessIterator *__first,* _RandomAccessIterator *__last*) `[inline]`

Sort the elements of a sequence, preserving the relative order of equivalent elements.

Parameters

__first	An iterator.
__last	Another iterator.

Returns

Nothing.

Sorts the elements in the range [__first,__last) in ascending order, such that for each iterator `i` in the range [__first,__last-1), ∗(i+1)<∗i is false.

The relative ordering of equivalent elements is preserved, so any two elements `x` and `y` in the range [__first,__last) such that `x<y` is false and `y<x` is false will have the same relative ordering after calling `stable_sort()`.

Definition at line 5663 of file stl_algo.h.

References std::__inplace_stable_sort(), std::_Temporary_buffer< _ForwardIterator, _Tp >::begin(), and std::_Temporary_buffer< _ForwardIterator, _Tp >::size().

2.27.2.36 template<typename _RandomAccessIterator , typename _Compare > void std::stable_sort (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Compare *__comp*) `[inline]`

Sort the elements of a sequence using a predicate for comparison, preserving the relative order of equivalent elements.

Parameters

__first	An iterator.
__last	Another iterator.
__comp	A comparison functor.

Returns

Nothing.

Sorts the elements in the range [__first,__last) in ascending order, such that for each iterator `i` in the range [__first,__last-1), ___`comp`(∗(i+1),∗i) is false.

The relative ordering of equivalent elements is preserved, so any two elements `x` and `y` in the range [__first,__last) such that ___`comp(x,y)` is false and ___`comp(y,x)` is false will have the same relative ordering after calling `stable_sort()`.

Definition at line 5705 of file stl_algo.h.

References std::__inplace_stable_sort(), std::_Temporary_buffer< _ForwardIterator, _Tp >::begin(), and std::_Temporary_buffer< _ForwardIterator, _Tp >::size().

2.28.1 Detailed Description

These algorithms are common set operations performed on sequences that are already sorted. The number of comparisons will be linear.

2.28.2 Function Documentation

2.28.2.1 template<typename _InputIterator1 , typename _InputIterator2 > bool std::includes (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _InputIterator2 *__last2*)

Determines whether all elements of a sequence exists in a range.

Parameters

__first1	Start of search range.
__last1	End of search range.
__first2	Start of sequence
__last2	End of sequence.

Returns

True if each element in [__first2,__last2) is contained in order within [__first1,__last1). False otherwise.

This operation expects both [__first1,__last1) and [__first2,__last2) to be sorted. Searches for the presence of each element in [__first2,__last2) within [__first1,__last1). The iterators over each range only move forward, so this is a linear algorithm. If an element in [__first2,__last2) is not found before the search iterator reaches `__last2`, false is returned.

Definition at line 3572 of file stl_algo.h.

2.28.2.2 template<typename _InputIterator1 , typename _InputIterator2 , typename _Compare > bool std::includes (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _InputIterator2 *__last2,* _Compare *__comp*)

Determines whether all elements of a sequence exists in a range using comparison.

Parameters

__first1	Start of search range.
__last1	End of search range.
__first2	Start of sequence
__last2	End of sequence.
__comp	Comparison function to use.

Returns

True if each element in [__first2,__last2) is contained in order within [__first1,__last1) according to comp. False otherwise.

This operation expects both [__first1,__last1) and [__first2,__last2) to be sorted. Searches for the presence of each element in [__first2,__last2) within [__first1,__last1), using comp to decide. The iterators over each range only move forward, so this is a linear algorithm. If an element in [__first2,__last2) is not found before the search iterator reaches `__last2`, false is returned.

Definition at line 3623 of file stl_algo.h.

2.28.2.3 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator > _OutputIterator std::set_difference (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _InputIterator2 *__last2,* _OutputIterator *__result*)

Return the difference of two sorted ranges.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in the first range but not the second in order to the output range. Iterators increment for each range. When the current element of the first range is less than the second, that element is copied and the iterator advances. If the current element of the second range is less, the iterator advances, but no element is copied. If an element is contained in both ranges, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 6001 of file stl_algo.h.

2.28.2.4 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare > _OutputIterator std::set_difference (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _InputIterator2 *__last2,* _OutputIterator *__result,* _Compare *__comp*)

Return the difference of two sorted ranges using comparison functor.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.
__comp	The comparison functor.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in the first range but not the second in order to the output range. Iterators increment for each range. When the current element of the first range is less than the second according to `__comp`, that element is copied and the iterator advances. If the current element of the second range is less, no element is copied and the iterator advances. If an element is contained in both ranges according to `__comp`, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 6062 of file stl_algo.h.

2.28.2.5 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator > _OutputIterator std::set_intersection (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _InputIterator2 *__last2,* _OutputIterator *__result*)

Return the intersection of two sorted ranges.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in both ranges in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that iterator advances. If an element is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5886 of file stl_algo.h.

2.28.2.6 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare > _OutputIterator std::set_intersection (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _InputIterator2 *__last2,* _OutputIterator *__result,* _Compare *__comp*)

Return the intersection of two sorted ranges using comparison functor.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.
__comp	The comparison functor.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in both ranges in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to `__comp`, that iterator advances. If an element is contained in both ranges according to `__comp`, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5943 of file stl_algo.h.

2.28.2.7 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator > _OutputIterator std::set_symmetric_difference (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _InputIterator2 *__last2,* _OutputIterator *__result*)

Return the symmetric difference of two sorted ranges.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in one range but not the other in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that element is copied and the iterator advances. If an element is contained in both ranges, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 6120 of file stl_algo.h.

2.28.2.8 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare > _OutputIterator std::set_symmetric_difference (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _InputIterator2 *__last2,* _OutputIterator *__result,* _Compare *__comp*)

Return the symmetric difference of two sorted ranges using comparison functor.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.
__comp	The comparison functor.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in one range but not the other in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to `comp`, that element is copied and the iterator advances. If an element is contained in both ranges according to `__comp`, no elements are copied and both ranges advance. The output range may not overlap either input range.

Definition at line 6186 of file stl_algo.h.

2.28.2.9 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator > _OutputIterator std::set_union (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _InputIterator2 *__last2,* _OutputIterator *__result*)

Return the union of two sorted ranges.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in each range in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that element is copied and the iterator advanced. If an element is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5752 of file stl_algo.h.

2.28.2.10 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare > _OutputIterator std::set_union (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _InputIterator2 *__last2,* _OutputIterator *__result,* _Compare *__comp*)

Return the union of two sorted ranges using a comparison functor.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.
__comp	The comparison functor.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in each range in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to `__comp`, that element is copied and the iterator advanced. If an equivalent element according to `__comp` is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5819 of file stl_algo.h.

2.29 Binary Search

Collaboration diagram for Binary Search:

Functions

  _ForwardIterator std::upper_bound (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__val)
- template<typename _ForwardIterator , typename _Tp , typename _Compare >
  _ForwardIterator std::upper_bound (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__val, _Compare __comp)

2.29.1 Detailed Description

These algorithms are variations of a classic binary search, and all assume that the sequence being searched is already sorted.

The number of comparisons will be logarithmic (and as few as possible). The number of steps through the sequence will be logarithmic for random-access iterators (e.g., pointers), and linear otherwise.

The LWG has passed Defect Report 270, which notes: *The proposed resolution reinterprets binary search. Instead of thinking about searching for a value in a sorted range, we view that as an important special case of a more general algorithm: searching for the partition point in a partitioned range. We also add a guarantee that the old wording did not: we ensure that the upper bound is no earlier than the lower bound, that the pair returned by equal_range is a valid range, and that the first part of that pair is the lower bound.*

The actual effect of the first sentence is that a comparison functor passed by the user doesn't necessarily need to induce a strict weak ordering relation. Rather, it partitions the range.

2.29.2 Function Documentation

2.29.2.1 template<typename _ForwardIterator , typename _Tp > bool std::binary_search (_ForwardIterator *__first,* _ForwardIterator *__last,* const _Tp & *__val*)

Determines whether an element exists in a range.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.

Returns

True if `__val` (or its equivalent) is in [`__first`,`__last`].

Note that this does not actually return an iterator to `__val`. For that, use std::find or a container's specialized find member functions.

Definition at line 2720 of file stl_algo.h.

References std::lower_bound().

2.29.2.2 template<typename _ForwardIterator , typename _Tp , typename _Compare > bool std::binary_search (_ForwardIterator *__first,* _ForwardIterator *__last,* const _Tp & *__val,* _Compare *__comp*)

Determines whether an element exists in a range.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.
__comp	A functor to use for comparisons.

Returns

True if `__val` (or its equivalent) is in [__first,__last].

Note that this does not actually return an iterator to `__val`. For that, use std::find or a container's specialized find member functions.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2753 of file stl_algo.h.

References std::lower_bound().

2.29.2.3 template<typename _ForwardIterator , typename _Tp > pair<_ForwardIterator, _ForwardIterator> std::equal_range (_ForwardIterator *__first,* _ForwardIterator *__last,* const _Tp & *__val*)

Finds the largest subrange in which `__val` could be inserted at any place in it without changing the ordering.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.

Returns

An pair of iterators defining the subrange.

This is equivalent to

```
std::make_pair(lower_bound(__first, __last, __val),
               upper_bound(__first, __last, __val))
```

but does not actually call those functions.

Definition at line 2597 of file stl_algo.h.

References std::advance(), std::distance(), std::lower_bound(), and std::upper_bound().

2.29.2.4 template<typename _ForwardIterator , typename _Tp , typename _Compare > pair<_ForwardIterator, _ForwardIterator> std::equal_range (_ForwardIterator *__first,* _ForwardIterator *__last,* const _Tp & *__val,* _Compare *__comp*)

Finds the largest subrange in which `__val` could be inserted at any place in it without changing the ordering.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.
__comp	A functor to use for comparisons.

Returns

An pair of iterators defining the subrange.

This is equivalent to

```
std::make_pair(lower_bound(__first, __last, __val, __comp),
               upper_bound(__first, __last, __val, __comp))
```

but does not actually call those functions.

Definition at line 2659 of file stl_algo.h.

References std::advance(), std::distance(), std::lower_bound(), and std::upper_bound().

2.29.2.5 template<typename _ForwardIterator , typename _Tp > _ForwardIterator std::lower_bound (_ForwardIterator *__first,* _ForwardIterator *__last,* const _Tp & *__val*)

Finds the first position in which *val* could be inserted without changing the ordering.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.

Returns

An iterator pointing to the first element *not less than val*, or end() if every element is less than *val*.

Definition at line 943 of file stl_algobase.h.

References std::advance(), and std::distance().

Referenced by std::__merge_adaptive(), std::__merge_without_buffer(), std::binary_search(), and std::equal_range().

2.29.2.6 template<typename _ForwardIterator , typename _Tp , typename _Compare > _ForwardIterator std::lower_bound (_ForwardIterator *__first*, _ForwardIterator *__last*, const _Tp & *__val*, _Compare *__comp*)

Finds the first position in which `__val` could be inserted without changing the ordering.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.
__comp	A functor to use for comparisons.

Returns

An iterator pointing to the first element *not less than* `__val`, or end() if every element is less than `__val`.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2448 of file stl_algo.h.

References std::advance(), and std::distance().

2.29.2.7 template<typename _ForwardIterator , typename _Tp > _ForwardIterator std::upper_bound (_ForwardIterator *__first*, _ForwardIterator *__last*, const _Tp & *__val*)

Finds the last position in which `__val` could be inserted without changing the ordering.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.

Returns

An iterator pointing to the first element greater than `__val`, or end() if no elements are greater than `__val`.

Definition at line 2495 of file stl_algo.h.

References std::advance(), and std::distance().

2.29.2.8 template<typename _ForwardIterator , typename _Tp , typename _Compare > _ForwardIterator std::upper_bound (_ForwardIterator *__first*, _ForwardIterator *__last*, const _Tp & *__val*, _Compare *__comp*)

Finds the last position in which `__val` could be inserted without changing the ordering.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.
__comp	A functor to use for comparisons.

Returns

An iterator pointing to the first element greater than `__val`, or end() if no elements are greater than `__val`.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2544 of file stl_algo.h.

References std::advance(), and std::distance().

Referenced by std::__merge_adaptive(), std::__merge_without_buffer(), and std::equal_range().

2.30 Allocators

Collaboration diagram for Allocators:

Classes

- struct __gnu_cxx::__alloc_traits< _Alloc >

  Uniform interface to C++98 and C++0x allocators.
- class __gnu_cxx::__mt_alloc< _Tp, _Poolp >

  This is a fixed size (power of 2) allocator which - when compiled with thread support - will maintain one freelist per size per thread plus a global one. Steps are taken to limit the per thread freelist sizes (by returning excess back to the global list). Further details: `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt12ch32.html`.
- class __gnu_cxx::__pool_alloc< _Tp >

  Allocator using a memory pool with a single lock.
- class __gnu_cxx::_ExtPtr_allocator< _Tp >

  An example allocator which uses a non-standard pointer type.
  This allocator specifies that containers use a 'relative pointer' as it's pointer type. (See ext/pointer.h) Memory allocation in this example is still performed using std::allocator.
- class __gnu_cxx::array_allocator< _Tp, _Array >

  An allocator that uses previously allocated memory. This memory can be externally, globally, or otherwise allocated.
- class __gnu_cxx::bitmap_allocator< _Tp >

  Bitmap Allocator, primary template.
- class __gnu_cxx::debug_allocator< _Alloc >

  A meta-allocator with debugging bits, as per [20.4].
  This is precisely the allocator defined in the C++ Standard.
- class __gnu_cxx::malloc_allocator< _Tp >

  An allocator that uses malloc.
  This is precisely the allocator defined in the C++ Standard.
- class __gnu_cxx::new_allocator< _Tp >

  An allocator that uses global new, as per [20.4].
  This is precisely the allocator defined in the C++ Standard.
- class __gnu_cxx::throw_allocator_base< _Tp, _Cond >

  Allocator class with logging and exception generation control. Intended to be used as an allocator_type in templatized code.
  Note: Deallocate not allowed to throw.
- class std::allocator< void >

  allocator<void> specialization.
- struct std::allocator_traits< _Alloc >

  Uniform interface to all allocator types.
- struct uses_allocator< typename, typename >

  Declare uses_allocator so it can be specialized in <queue> etc.

Typedefs

- template<typename _Tp >
  using std::__allocator_base = __gnu_cxx::new_allocator< _Tp >

Functions

- template<typename _Alloc >
  auto **std::__do_outermost** (_Alloc &__a, _Alloc ∗) -> decltype(__a.outer_allocator())
- template<typename _Alloc >
  _Alloc & **std::__do_outermost** (_Alloc &__a,...)
- template<typename _Alloc >
  auto **std::__outermost** (_Alloc &__a) -> decltype(__do_outermost(__a,&__a))
- template<typename _T1 , typename _T2 >
  bool **std::operator!=** (const allocator< _T1 > &, const allocator< _T2 > &)
- template<typename _Tp >
  bool **std::operator!=** (const allocator< _Tp > &, const allocator< _Tp > &)
- template<typename _OutA1 , typename _OutA2 , typename... _InA>
  bool **std::operator!=** (const scoped_allocator_adaptor< _OutA1, _InA...> &__a, const scoped_allocator_adaptor< _OutA2, _InA...> &__b) noexcept
- template<typename _T1 , typename _T2 >
  bool **std::operator==** (const allocator< _T1 > &, const allocator< _T2 > &)
- template<typename _Tp >
  bool **std::operator==** (const allocator< _Tp > &, const allocator< _Tp > &)
- template<typename _OutA1 , typename _OutA2 , typename... _InA>
  bool **std::operator==** (const scoped_allocator_adaptor< _OutA1, _InA...> &__a, const scoped_allocator_adaptor< _OutA2, _InA...> &__b) noexcept

2.30.1 Detailed Description

Classes encapsulating memory operations.

2.30.2 Typedef Documentation

2.30.2.1 template<typename _Tp > using std::__allocator_base = typedef __gnu_cxx::new_allocator<_Tp>

An alias to the base class for std::allocator.

Used to set the std::allocator base class to __gnu_cxx::new_allocator.

Template Parameters

_Tp	Type of allocated object.

Definition at line 48 of file c++allocator.h.

2.31 Atomics

Classes

- struct std::__atomic_base< _PTp $*$ >

  Partial specialization for pointer types.
- struct std::__atomic_flag_base

  Base type for atomic_flag.
- struct std::atomic< _Tp >

  Generic atomic type, primary class template.
- struct std::atomic< _Tp $*$ >

  Partial specialization for pointer types.
- struct std::atomic< bool >

  Explicit specialization for bool.
- struct std::atomic< char >

  Explicit specialization for char.
- struct std::atomic< char16_t >

  Explicit specialization for char16_t.
- struct std::atomic< char32_t >

  Explicit specialization for char32_t.
- struct std::atomic< int >

  Explicit specialization for int.
- struct std::atomic< long >

  Explicit specialization for long.
- struct std::atomic< long long >

  Explicit specialization for long long.
- struct std::atomic< short >

  Explicit specialization for short.
- struct std::atomic< signed char >

  Explicit specialization for signed char.
- struct std::atomic< unsigned char >

  Explicit specialization for unsigned char.
- struct std::atomic< unsigned int >

  Explicit specialization for unsigned int.
- struct std::atomic< unsigned long >

  Explicit specialization for unsigned long.
- struct std::atomic< unsigned long long >

  Explicit specialization for unsigned long long.
- struct std::atomic< unsigned short >

  Explicit specialization for unsigned short.
- struct std::atomic< wchar_t >

  Explicit specialization for wchar_t.
- struct std::atomic_bool

  atomic_bool
- struct std::atomic_flag

  atomic_flag

Macros

- #define ATOMIC_BOOL_LOCK_FREE
- #define **ATOMIC_CHAR16_T_LOCK_FREE**
- #define **ATOMIC_CHAR32_T_LOCK_FREE**
- #define **ATOMIC_CHAR_LOCK_FREE**

2.31.1 Detailed Description

Components for performing atomic operations.

2.31.2 Macro Definition Documentation

2.31.2.1 #define ATOMIC_BOOL_LOCK_FREE

Lock-free property.

0 indicates that the types are never lock-free. 1 indicates that the types are sometimes lock-free. 2 indicates that the types are always lock-free.

Definition at line 49 of file atomic_lockfree_defines.h.

2.31.3 Typedef Documentation

2.31.3.1 typedef __atomic_base<char> std::atomic_char

atomic_char

Definition at line 117 of file atomic_base.h.

2.31.3.2 typedef __atomic_base<char16_t> std::atomic_char16_t

atomic_char16_t

Definition at line 156 of file atomic_base.h.

2.31.3.3 typedef __atomic_base< char32_t > std::atomic_char32_t

atomic_char32_t

Definition at line 159 of file atomic_base.h.

2.31.3.4 typedef __atomic_base<int> std::atomic_int

atomic_int

Definition at line 135 of file atomic_base.h.

2.31.3.5 typedef __atomic_base<int_fast16_t> std::atomic_int_fast16_t

atomic_int_fast16_t

Definition at line 197 of file atomic_base.h.

2.31.3.6 typedef __atomic_base<int_fast32_t> std::atomic_int_fast32_t

atomic_int_fast32_t

Definition at line 203 of file atomic_base.h.

2.31.3.7 typedef __atomic_base<int_fast64_t> std::atomic_int_fast64_t

atomic_int_fast64_t

Definition at line 209 of file atomic_base.h.

2.31.3.8 typedef __atomic_base<int_fast8_t> std::atomic_int_fast8_t

atomic_int_fast8_t

Definition at line 191 of file atomic_base.h.

2.31.3.9 typedef __atomic_base<int_least16_t> std::atomic_int_least16_t

atomic_int_least16_t

Definition at line 172 of file atomic_base.h.

2.31.3.10 typedef __atomic_base<int_least32_t> std::atomic_int_least32_t

atomic_int_least32_t

Definition at line 178 of file atomic_base.h.

2.31.3.11 typedef __atomic_base<int_least64_t> std::atomic_int_least64_t

atomic_int_least64_t

Definition at line 184 of file atomic_base.h.

2.31.3.12 typedef __atomic_base<int_least8_t> std::atomic_int_least8_t

atomic_int_least8_t

Definition at line 166 of file atomic_base.h.

2.31.3.13 typedef __atomic_base<intmax_t> std::atomic_intmax_t

atomic_intmax_t

Definition at line 225 of file atomic_base.h.

2.31.3.14 typedef __atomic_base<intptr_t> std::atomic_intptr_t

atomic_intptr_t

Definition at line 216 of file atomic_base.h.

2.31.3.15 typedef __atomic_base<long long> std::atomic_llong

atomic_llong

Definition at line 147 of file atomic_base.h.

2.31.3.16 typedef __atomic_base<long> std::atomic_long

atomic_long

Definition at line 141 of file atomic_base.h.

2.31.3.17 typedef __atomic_base<ptrdiff_t> std::atomic_ptrdiff_t

atomic_ptrdiff_t

Definition at line 231 of file atomic_base.h.

2.31.3.18 typedef __atomic_base<signed char> std::atomic_schar

atomic_schar

Definition at line 123 of file atomic_base.h.

2.31.3.19 typedef __atomic_base<short> std::atomic_short

atomic_short

Definition at line 129 of file atomic_base.h.

2.31.3.20 typedef __atomic_base<size_t> std::atomic_size_t

atomic_size_t

2.32 Hashes

Collaboration diagram for Hashes:

Classes

- struct hash< _Tp >

  Primary class template hash.
- struct std::hash< _Tp * >

  Partial specializations for pointer types.
- struct std::hash< bool >

  Explicit specialization for bool.
- struct std::hash< char >

  Explicit specialization for char.
- struct std::hash< char16_t >

  Explicit specialization for char16_t.
- struct std::hash< char32_t >

  Explicit specialization for char32_t.
- struct std::hash< double >

  Specialization for double.
- struct std::hash< float >

  Specialization for float.
- struct std::hash< int >

  Explicit specialization for int.
- struct std::hash< long >

  Explicit specialization for long.
- struct std::hash< long double >

  Specialization for long double.
- struct std::hash< long long >

  Explicit specialization for long long.
- struct std::hash< short >

  Explicit specialization for short.
- struct std::hash< signed char >

  Explicit specialization for signed char.
- struct std::hash< unsigned char >

  Explicit specialization for unsigned char.
- struct std::hash< unsigned int >

  Explicit specialization for unsigned int.

- struct std::hash< unsigned long >

  Explicit specialization for unsigned long.
- struct std::hash< unsigned long long >

  Explicit specialization for unsigned long long.
- struct std::hash< unsigned short >

  Explicit specialization for unsigned short.
- struct std::hash< wchar_t >

  Explicit specialization for wchar_t.

Macros

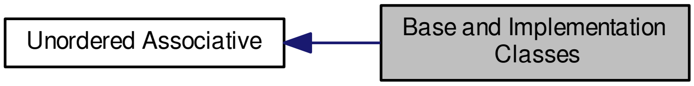
- #define **_Cxx_hashtable_define_trivial_hash**(_Tp)

2.32.1 Detailed Description

Hashing functors taking a variable type and returning a `std::size_t`.

2.33 Base and Implementation Classes

Collaboration diagram for Base and Implementation Classes:



Classes

- struct _Equal_helper< _Key, _Value, _ExtractKey, _Equal, _HashCodeType, __cache_hash_code >
- struct _Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys >
- struct _Hash_code_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >
- struct _Hash_node< _Value, _Cache_hash_code >
- struct _Hashtable_ebo_helper< _Nm, _Tp, __use_ebo >
- struct _Insert< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Constant_iterators, _Unique_keys >
- struct _Local_iterator_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >
- struct _Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits >
- struct std::__detail::_Before_begin< _NodeAlloc >
- struct std::__detail::_Default_ranged_hash

  Default ranged hash function H. In principle it should be a function object composed from objects of type H1 and H2 such that h(k, N) = h2(h1(k), N), but that would mean making extra copies of h1 and h2. So instead we'll just use a tag to tell class template hashtable to do that composition.
- struct std::__detail::_Equal_helper< _Key, _Value, _ExtractKey, _Equal, _HashCodeType, false >

  Specialization.
- struct std::__detail::_Equal_helper< _Key, _Value, _ExtractKey, _Equal, _HashCodeType, true >

  Specialization.
- struct std::__detail::_Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false >

  Specialization.
- struct std::__detail::_Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true >

  Specialization.
- struct std::__detail::_Equality_base
- struct std::__detail::_Hash_code_base< _Key, _Value, _ExtractKey, _H1, _H2, _Default_ranged_hash, false >

  Specialization: hash function and range-hashing function, no caching of hash codes. Provides typedef and accessor required by C++ 11.
- struct std::__detail::_Hash_code_base< _Key, _Value, _ExtractKey, _H1, _H2, _Default_ranged_hash, true >

  Specialization: hash function and range-hashing function, caching hash codes. H is provided but ignored. Provides typedef and accessor required by C++ 11.
- struct std::__detail::_Hash_code_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, false >

Specialization: ranged hash function, no caching hash codes. H1 and H2 are provided but ignored. We define a dummy hash code type.

- struct std::__detail::_Hash_node< _Value, false >
- struct std::__detail::_Hash_node< _Value, true >
- struct std::__detail::_Hash_node_base
- struct std::__detail::_Hashtable_ebo_helper< _Nm, _Tp, false >

  Specialization not using EBO.
- struct std::__detail::_Hashtable_ebo_helper< _Nm, _Tp, true >

  Specialization using EBO.
- struct std::__detail::_Hashtable_traits< _Cache_hash_code, _Constant_iterators, _Unique_keys >
- struct std::__detail::_Insert< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false, _Unique_keys >

  Specialization.
- struct std::__detail::_Insert< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true, false >

  Specialization.
- struct std::__detail::_Insert< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true, true >

  Specialization.
- struct std::__detail::_Insert_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits >
- struct std::__detail::_Local_const_iterator< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __constant_iterators, __cache >

  local const_iterators
- struct std::__detail::_Local_iterator< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __constant_iterators, __cache >

  local iterators
- struct std::__detail::_Local_iterator_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, false >

  Specialization.
- struct std::__detail::_Local_iterator_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, true >

  Specialization.
- struct std::__detail::_Map_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys >
- struct std::__detail::_Map_base< _Key, _Pair, _Alloc, _Select1st, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false >

  Partial specialization, __unique_keys set to false.
- struct std::__detail::_Map_base< _Key, _Pair, _Alloc, _Select1st, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true >

  Partial specialization, __unique_keys set to true.
- struct std::__detail::_Mod_range_hashing

  Default range hashing function: use division to fold a large number into the range [0, N).
- struct std::__detail::_Node_const_iterator< _Value, __constant_iterators, __cache >

  Node const_iterators, used to iterate through all the hashtable.
- struct std::__detail::_Node_iterator< _Value, __constant_iterators, __cache >

  Node iterators, used to iterate through all the hashtable.
- struct std::__detail::_Node_iterator_base< _Value, _Cache_hash_code >

  Base class for node iterators.
- struct std::__detail::_Prime_rehash_policy

  Default value for rehash policy. Bucket size is (usually) the smallest prime that keeps the load factor small enough.

- struct std::__detail::_Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _Prime_rehash_policy, _Traits >

  Specialization.
- class std::_Hashtable< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits >

Functions

- template<class _Iterator >
  std::iterator_traits

2.33.1 Detailed Description

2.34 Locales

Classes

- class std::codecvt< _InternT, _ExternT, _StateT >

  Primary class template codecvt.
  NB: Generic, mostly useless implementation.
- class std::ctype< _CharT >

  Primary class template ctype facet.
  This template class defines classification and conversion functions for character sets. It wraps cctype functionality. Ctype gets used by streams for many I/O operations.
- class std::ctype< char >

  The ctype<char> specialization.
  This class defines classification and conversion functions for the char type. It gets used by char streams for many I/O operations. The char specialization provides a number of optimizations as well.
- class std::ctype< wchar_t >

  The ctype<wchar_t> specialization.
  This class defines classification and conversion functions for the wchar_t type. It gets used by wchar_t streams for many I/O operations. The wchar_t specialization provides a number of optimizations as well.
- class std::locale

  Container class for localization functionality.
  The locale class is first a class wrapper for C library locales. It is also an extensible container for user-defined localization. A locale is a collection of facets that implement various localization features such as money, time, and number printing.
- class std::locale::facet

  Localization functionality base class.
  The facet class is the base class for a localization feature, such as money, time, and number printing. It provides common support for facets and reference management.
- class std::locale::id

  Facet ID class.
  The ID class provides facets with an index used to identify them. Every facet class must define a public static member locale::id, or be derived from a facet that provides this member, otherwise the facet cannot be used in a locale. The locale::id ensures that each class type gets a unique identifier.
- class std::messages< _CharT >

  Primary class template messages.
  This facet encapsulates the code to retrieve messages from message catalogs. The only thing defined by the standard for this facet is the interface. All underlying functionality is implementation-defined.
- struct std::messages_base

  Messages facet base class providing catalog typedef.
- class std::money_base

  Money format ordering data.
  This class contains an ordered array of 4 fields to represent the pattern for formatting a money amount. Each field may contain one entry from the part enum. symbol, sign, and value must be present and the remaining field must contain either none or space.
- class std::money_get< _CharT, _InIter >

  Primary class template money_get.
  This facet encapsulates the code to parse and return a monetary amount from a string.
- class std::money_put< _CharT, _OutIter >

  Primary class template money_put.
  This facet encapsulates the code to format and output a monetary amount.
- class std::moneypunct< _CharT, _Intl >

  Primary class template moneypunct.
  This facet encapsulates the punctuation, grouping and other formatting features of money amount string representations.

- class std::num_get< _CharT, _InIter >

  Primary class template num_get.
  This facet encapsulates the code to parse and return a number from a string. It is used by the istream numeric extraction operators.
- class std::num_put< _CharT, _OutIter >

  Primary class template num_put.
  This facet encapsulates the code to convert a number to a string. It is used by the ostream numeric insertion operators.
- class std::numpunct< _CharT >

  Primary class template numpunct.
  This facet stores several pieces of information related to printing and scanning numbers, such as the decimal point character. It takes a template parameter specifying the char type. The numpunct facet is used by streams for many I/O operations involving numbers.
- class std::time_base

  Time format ordering data.
  This class provides an enum representing different orderings of time: day, month, and year.
- class std::time_get< _CharT, _InIter >

  Primary class template time_get.
  This facet encapsulates the code to parse and return a date or time from a string. It is used by the istream numeric extraction operators.
- class std::time_put< _CharT, _OutIter >

  Primary class template time_put.
  This facet encapsulates the code to format and output dates and times according to formats used by strftime().

Functions

- template<typename _Facet >
  bool std::has_facet (const locale &__loc) throw ()
- template<typename _Facet >
  const _Facet & std::use_facet (const locale &__loc)

2.34.1 Detailed Description

Classes and functions for internationalization and localization.

2.34.2 Function Documentation

2.34.2.1 template<typename _Facet > bool std::has_facet (const locale & *__loc*) throw ()

Test for the presence of a facet.

has_facet tests the locale argument for the presence of the facet type provided as the template parameter. Facets derived from the facet parameter will also return true.

Template Parameters

_Facet	The facet type to test the presence of.

Parameters

__loc	The locale to test.

Returns

true if `__loc` contains a facet of type _Facet, else false.

Definition at line 104 of file locale_classes.tcc.

2.34.2.2 template<typename _Facet > const _Facet & std::use_facet (const locale & *__loc*)

Return a facet.

use_facet looks for and returns a reference to a facet of type Facet where Facet is the template parameter. If has_facet(locale) is true, there is a suitable facet to return. It throws std::bad_cast if the locale doesn't contain a facet of type Facet.

Template Parameters

_Facet	The facet type to access.

Parameters

__loc	The locale to use.

Returns

Reference to facet of type Facet.

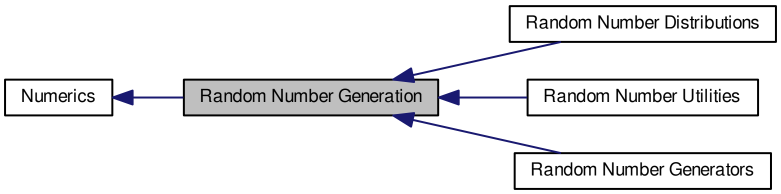
Exceptions

std::bad_cast	if `__loc` doesn't contain a facet of type _Facet.

Definition at line 132 of file locale_classes.tcc.

2.35 Random Number Generation

Collaboration diagram for Random Number Generation:



Modules

- Random Number Distributions
- Random Number Generators
- Random Number Utilities

Namespaces

- namespace std::__detail

Functions

- template<typename _RealType , size_t __bits, typename _UniformRandomNumberGenerator >
  _RealType std::generate_canonical (_UniformRandomNumberGenerator &__g)

2.35.1 Detailed Description

A facility for generating random numbers on selected distributions.

2.35.2 Function Documentation

2.35.2.1 template<typename _RealType , size_t __bits, typename _UniformRandomNumberGenerator > _RealType std::generate_canonical (_UniformRandomNumberGenerator & *__g*)

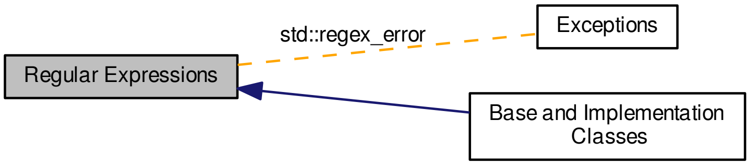
A function template for converting the output of a (integral) uniform random number generator to a floatng point result in the range [0-1).

Definition at line 3462 of file bits/random.tcc.

References std::log(), and std::min().

2.36 Regular Expressions

Collaboration diagram for Regular Expressions:



Modules

- Base and Implementation Classes

Namespaces

- namespace std::regex_constants

Classes

- class std::basic_regex< _Ch_type, _Rx_traits >
- class std::match_results< _Bi_iter, _Alloc >

  The results of a match or search operation.
- class std::regex_error

  A regular expression exception class.
  The regular expression library throws objects of this class on error.
- class std::regex_iterator< _Bi_iter, _Ch_type, _Rx_traits >
- class std::regex_token_iterator< _Bi_iter, _Ch_type, _Rx_traits >
- struct std::regex_traits< _Ch_type >

  Class regex_traits. Describes aspects of a regular expression.
- class std::sub_match< _BiIter >

Typedefs

- template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc >
  using **std::__sub_match_string** = basic_string< typename iterator_traits< _Bi_iter >::value_type, _Ch_traits, _Ch_alloc >
- typedef match_results< const

2.36.1 Detailed Description

A facility for performing regular expression pattern matching.

2.36.2 Typedef Documentation

2.36.2.1 typedef regex_token_iterator<const char*> std::cregex_token_iterator

Token iterator for C-style NULL-terminated strings.

Definition at line 2469 of file regex.h.

2.36.2.2 typedef sub_match<const char*> std::csub_match

Standard regex submatch over a C-style null-terminated string.

Definition at line 834 of file regex.h.

2.36.2.3 typedef basic_regex<char> std::regex

Standard regular expressions.

Definition at line 706 of file regex.h.

2.36.2.4 typedef regex_token_iterator<string::const_iterator> std::sregex_token_iterator

Token iterator for standard strings.

Definition at line 2472 of file regex.h.

2.36.2.5 typedef sub_match<string::const_iterator> std::ssub_match

Standard regex submatch over a standard string.

Definition at line 837 of file regex.h.

2.36.2.6 typedef regex_token_iterator<const wchar_t*> std::wcregex_token_iterator

Token iterator for C-style NULL-terminated wide strings.

Definition at line 2476 of file regex.h.

2.36.2.7 typedef sub_match<const wchar_t*> std::wcsub_match

Regex submatch over a C-style null-terminated wide string.

Definition at line 841 of file regex.h.

2.36.2.8 typedef basic_regex<wchar_t> std::wregex

Standard wide-character regular expressions.

Definition at line 710 of file regex.h.

2.36.2.9 typedef regex_token_iterator<wstring::const_iterator> std::wsregex_token_iterator

Token iterator for standard wide-character strings.

Definition at line 2479 of file regex.h.

2.36.2.10 typedef sub_match<wstring::const_iterator> std::wssub_match

Regex submatch over a standard wide string.

Definition at line 844 of file regex.h.

2.36.3 Function Documentation

2.36.3.1 template<typename _Ch_type > bool std::regex_traits< _Ch_type >::isctype (_Ch_type __c, char_class_type __f) const

Determines if `c` is a member of an identified class.

Parameters

__c	a character.
__f	a class type (as returned from lookup_classname).

Returns

true if the character `__c` is a member of the classification represented by `__f`, false otherwise.

Exceptions

std::bad_cast	if the current locale does not have a ctype facet.

Definition at line 280 of file regex.h.

2.36.3.2 template<typename _BiIter > bool std::operator!= (const sub_match< _BiIter > & __lhs, const sub_match< _BiIter > & __rhs) `[inline]`

Tests the inequivalence of two regular expression submatches.

Parameters

__lhs	First regular expression submatch.
__rhs	Second regular expression submatch.

Returns

true if __*lhs* is not equivalent to __*rhs*, false otherwise.

Definition at line 868 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.3 template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool std::operator!= (const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & *__lhs*, const sub_match< _Bi_iter > & *__rhs*) `[inline]`

Tests the inequivalence of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* is not equivalent to *__rhs*, false otherwise.

Definition at line 943 of file regex.h.

2.36.3.4 template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool std::operator!= (const sub_match< _Bi_iter > & *__lhs*, const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & *__rhs*) `[inline]`

Tests the inequivalence of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if *__lhs* is not equivalent to *__rhs*, false otherwise.

Definition at line 1017 of file regex.h.

2.36.3.5 template<typename _Bi_iter > bool std::operator!= (typename iterator_traits< _Bi_iter >::value_type const * *__lhs*, const sub_match< _Bi_iter > & *__rhs*) `[inline]`

Tests the inequivalence of an iterator value and a regular expression submatch.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if *__lhs* is not equivalent to *__rhs*, false otherwise.

Definition at line 1091 of file regex.h.

2.36.3.6 template<typename _Bi_iter > bool std::operator!= (const sub_match< _Bi_iter > & *__lhs*, typename iterator_traits< _Bi_iter >::value_type const * *__rhs*) `[inline]`

Tests the inequivalence of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A pointer to a string.

Returns

true if *__lhs* is not equivalent to *__rhs*, false otherwise.

Definition at line 1165 of file regex.h.

2.36.3.7 template< typename _Bi_iter > bool std::operator!= (typename iterator_traits< _Bi_iter >::value_type const & *__lhs,* const sub_match< _Bi_iter > & *__rhs*) [inline]

Tests the inequivalence of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* is not equivalent to *__rhs*, false otherwise.

Definition at line 1242 of file regex.h.

2.36.3.8 template< typename _Bi_iter > bool std::operator!= (const sub_match< _Bi_iter > & *__lhs,* typename iterator_traits< _Bi_iter >::value_type const & *__rhs*) [inline]

Tests the inequivalence of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A const string reference.

Returns

true if *__lhs* is not equivalent to *__rhs*, false otherwise.

Definition at line 1322 of file regex.h.

2.36.3.9 template< typename _Bi_iter , class _Alloc > bool std::operator!= (const match_results< _Bi_iter, _Alloc > & *__m1,* const match_results< _Bi_iter, _Alloc > & *__m2*) [inline]

Compares two match_results for inequality.

Returns

true if the two objects do not refer to the same match, false otherwise.

Definition at line 1834 of file regex.h.

2.36.3.10 template< typename _BiIter > bool std::operator< (const sub_match< _BiIter > & *__lhs*, const sub_match< _BiIter > & *__rhs*) `[inline]`

Tests the ordering of two regular expression submatches.

Parameters

__lhs	First regular expression submatch.
__rhs	Second regular expression submatch.

Returns

true if *__lhs* precedes *__rhs*, false otherwise.

Definition at line 879 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.11 template< typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool std::operator< (const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & *__lhs*, const sub_match< _Bi_iter > & *__rhs*) `[inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* precedes *__rhs*, false otherwise.

Definition at line 955 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.12 template< typename _Bi_iter , class _Ch_traits , class _Ch_alloc > bool std::operator< (const sub_match< _Bi_iter > & *__lhs*, const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & *__rhs*) `[inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if __*lhs* precedes __*rhs*, false otherwise.

Definition at line 1029 of file regex.h.

References std::basic_string< _CharT, _Traits, _Alloc >::compare().

2.36.3.13 template< typename _Bi_iter > bool std::operator< (typename iterator_traits< _Bi_iter >::value_type const * __*lhs*, const sub_match< _Bi_iter > & __*rhs*) `[inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

__*lhs*	A string.
__*rhs*	A regular expression submatch.

Returns

true if __*lhs* precedes __*rhs*, false otherwise.

Definition at line 1103 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.14 template< typename _Bi_iter > bool std::operator< (const sub_match< _Bi_iter > & __*lhs*, typename iterator_traits< _Bi_iter >::value_type const * __*rhs*) `[inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

__*lhs*	A regular expression submatch.
__*rhs*	A string.

Returns

true if __*lhs* precedes __*rhs*, false otherwise.

Definition at line 1177 of file regex.h.

2.36.3.15 template< typename _Bi_iter > bool std::operator< (typename iterator_traits< _Bi_iter >::value_type const & __*lhs*, const sub_match< _Bi_iter > & __*rhs*) `[inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

__*lhs*	A string.
__*rhs*	A regular expression submatch.

Returns

true if __*lhs* precedes __*rhs*, false otherwise.

Definition at line 1254 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.16 template<typename _Bi_iter > bool std::operator< (const sub_match< _Bi_iter > & __lhs, typename iterator_traits< _Bi_iter >::value_type const & __rhs) [inline]

Tests the ordering of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A const string reference.

Returns

true if *__lhs* precedes *__rhs*, false otherwise.

Definition at line 1334 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.17 template<typename _Ch_type , typename _Ch_traits , typename _Bi_iter > basic_ostream<_Ch_type, _Ch_traits>& std::operator<< (basic_ostream< _Ch_type, _Ch_traits > & __os, const sub_match< _Bi_iter > & __m) [inline]

Inserts a matched string into an output stream.

Parameters

__os	The output stream.
__m	A submatch string.

Returns

the output stream with the submatch string inserted.

Definition at line 1388 of file regex.h.

References std::sub_match< _BiIter >::str().

2.36.3.18 template<typename _BiIter > bool std::operator<= (const sub_match< _BiIter > & __lhs, const sub_match< _BiIter > & __rhs) [inline]

Tests the ordering of two regular expression submatches.

Parameters

__lhs	First regular expression submatch.
__rhs	Second regular expression submatch.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 890 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.19 template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool std::operator<= (const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & *__lhs*, const sub_match< _Bi_iter > & *__rhs*) [inline]

Tests the ordering of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 991 of file regex.h.

2.36.3.20 template<typename _Bi_iter , class _Ch_traits , class _Ch_alloc > bool std::operator<= (const sub_match< _Bi_iter > & *__lhs*, const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & *__rhs*) [inline]

Tests the ordering of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 1065 of file regex.h.

2.36.3.21 template<typename _Bi_iter > bool std::operator<= (typename iterator_traits< _Bi_iter >::value_type const * *__lhs*, const sub_match< _Bi_iter > & *__rhs*) [inline]

Tests the ordering of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 1139 of file regex.h.

2.36.3.22 template<typename _Bi_iter > bool std::operator<= (const sub_match< _Bi_iter > & *__lhs*, typename iterator_traits< _Bi_iter >::value_type const * *__rhs*) [inline]

Tests the ordering of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 1213 of file regex.h.

2.36.3.23 template< typename _Bi_iter > bool std::operator<= (typename iterator_traits< _Bi_iter >::value_type const & *__lhs*, const sub_match< _Bi_iter > & *__rhs*) [inline]

Tests the ordering of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 1293 of file regex.h.

2.36.3.24 template< typename _Bi_iter > bool std::operator<= (const sub_match< _Bi_iter > & *__lhs*, typename iterator_traits< _Bi_iter >::value_type const & *__rhs*) [inline]

Tests the ordering of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A const string reference.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 1373 of file regex.h.

2.36.3.25 template< typename _BiIter > bool std::operator== (const sub_match< _BiIter > & *__lhs*, const sub_match< _BiIter > & *__rhs*) [inline]

Tests the equivalence of two regular expression submatches.

Parameters

__lhs	First regular expression submatch.
__rhs	Second regular expression submatch.

Returns

true if *__lhs* is equivalent to *__rhs*, false otherwise.

Definition at line 857 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.26 template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool std::operator== (const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & *__lhs*, const sub_match< _Bi_iter > & *__rhs*) [inline]

Tests the equivalence of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* is equivalent to *__rhs*, false otherwise.

Definition at line 930 of file regex.h.

References std::basic_string< _CharT, _Traits, _Alloc >::c_str(), and std::sub_match< _BiIter >::compare().

2.36.3.27 template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool std::operator== (const sub_match< _Bi_iter > & *__lhs*, const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & *__rhs*) [inline]

Tests the equivalence of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if *__lhs* is equivalent to *__rhs*, false otherwise.

Definition at line 1004 of file regex.h.

References std::basic_string< _CharT, _Traits, _Alloc >::c_str(), and std::sub_match< _BiIter >::compare().

2.36.3.28 template<typename _Bi_iter > bool std::operator== (typename iterator_traits< _Bi_iter >::value_type const ∗ *__lhs*, const sub_match< _Bi_iter > & *__rhs*) [inline]

Tests the equivalence of a C string and a regular expression submatch.

Parameters

__lhs	A C string.
__rhs	A regular expression submatch.

Returns

true if __*lhs* is equivalent to __*rhs*, false otherwise.

Definition at line 1078 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.29 template<typename _Bi_iter > bool std::operator== (const sub_match< _Bi_iter > & __*lhs*, typename iterator_traits< _Bi_iter >::value_type const * __*rhs*) [inline]

Tests the equivalence of a regular expression submatch and a string.

Parameters

__*lhs*	A regular expression submatch.
__*rhs*	A pointer to a string?

Returns

true if __*lhs* is equivalent to __*rhs*, false otherwise.

Definition at line 1152 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.30 template<typename _Bi_iter > bool std::operator== (typename iterator_traits< _Bi_iter >::value_type const & __*lhs*, const sub_match< _Bi_iter > & __*rhs*) [inline]

Tests the equivalence of a string and a regular expression submatch.

Parameters

__*lhs*	A string.
__*rhs*	A regular expression submatch.

Returns

true if __*lhs* is equivalent to __*rhs*, false otherwise.

Definition at line 1226 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.31 template<typename _Bi_iter > bool std::operator== (const sub_match< _Bi_iter > & __*lhs*, typename iterator_traits< _Bi_iter >::value_type const & __*rhs*) [inline]

Tests the equivalence of a regular expression submatch and a string.

Parameters

__*lhs*	A regular expression submatch.
__*rhs*	A const string reference.

Returns

true if *__lhs* is equivalent to *__rhs*, false otherwise.

Definition at line 1306 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.32 template<typename _Bi_iter , typename _Alloc > bool std::operator== (const match_results< _Bi_iter, _Alloc > & *__m1,* const match_results< _Bi_iter, _Alloc > & *__m2*) [inline]

Compares two match_results for equality.

Returns

true if the two objects refer to the same match, false otherwise.

Definition at line 1810 of file regex.h.

References std::match_results< _Bi_iter, _Alloc >::begin(), std::match_results< _Bi_iter, _Alloc >::empty(), std::match_results< _Bi_iter, _Alloc >::end(), std::equal(), std::match_results< _Bi_iter, _Alloc >::prefix(), std::match_results< _Bi_iter, _Alloc >::ready(), std::match_results< _Bi_iter, _Alloc >::size(), and std::match_results< _Bi_iter, _Alloc >::suffix().

2.36.3.33 template<typename _BiIter > bool std::operator> (const sub_match< _BiIter > & *__lhs,* const sub_match< _BiIter > & *__rhs*) [inline]

Tests the ordering of two regular expression submatches.

Parameters

__lhs	First regular expression submatch.
__rhs	Second regular expression submatch.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 912 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.34 template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool std::operator> (const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & *__lhs,* const sub_match< _Bi_iter > & *__rhs*) [inline]

Tests the ordering of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 967 of file regex.h.

2.36.3.35 template<typename _Bi_iter , class _Ch_traits , class _Ch_alloc > bool std::operator> (const sub_match< _Bi_iter > & __lhs, const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __rhs) [inline]

Tests the ordering of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 1041 of file regex.h.

2.36.3.36 template<typename _Bi_iter > bool std::operator> (typename iterator_traits< _Bi_iter >::value_type const * __lhs, const sub_match< _Bi_iter > & __rhs) [inline]

Tests the ordering of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 1115 of file regex.h.

2.36.3.37 template<typename _Bi_iter > bool std::operator> (const sub_match< _Bi_iter > & __lhs, typename iterator_traits< _Bi_iter >::value_type const * __rhs) [inline]

Tests the ordering of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 1189 of file regex.h.

2.36.3.38 template<typename _Bi_iter > bool std::operator> (typename iterator_traits< _Bi_iter >::value_type const & __lhs, const sub_match< _Bi_iter > & __rhs) [inline]

Tests the ordering of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 1269 of file regex.h.

2.36.3.39 template< typename _Bi_iter > bool std::operator> (const sub_match< _Bi_iter > & *__lhs,* typename iterator_traits< _Bi_iter >::value_type const & *__rhs*) `[inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A const string reference.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 1349 of file regex.h.

2.36.3.40 template< typename _BiIter > bool std::operator>= (const sub_match< _BiIter > & *__lhs,* const sub_match< _BiIter > & *__rhs*) `[inline]`

Tests the ordering of two regular expression submatches.

Parameters

__lhs	First regular expression submatch.
__rhs	Second regular expression submatch.

Returns

true if *__lhs* does not precede *__rhs*, false otherwise.

Definition at line 901 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.36.3.41 template< typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool std::operator>= (const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & *__lhs,* const sub_match< _Bi_iter > & *__rhs*) `[inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if __*lhs* does not precede __*rhs*, false otherwise.

Definition at line 979 of file regex.h.

2.36.3.42 template<typename _Bi_iter , class _Ch_traits , class _Ch_alloc > bool std::operator>= (const sub_match< _Bi_iter > & __*lhs*, const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __*rhs*) `[inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

__*lhs*	A regular expression submatch.
__*rhs*	A string.

Returns

true if __*lhs* does not precede __*rhs*, false otherwise.

Definition at line 1053 of file regex.h.

2.36.3.43 template<typename _Bi_iter > bool std::operator>= (typename iterator_traits< _Bi_iter >::value_type const * __*lhs*, const sub_match< _Bi_iter > & __*rhs*) `[inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

__*lhs*	A string.
__*rhs*	A regular expression submatch.

Returns

true if __*lhs* does not precede __*rhs*, false otherwise.

Definition at line 1127 of file regex.h.

2.36.3.44 template<typename _Bi_iter > bool std::operator>= (const sub_match< _Bi_iter > & __*lhs*, typename iterator_traits< _Bi_iter >::value_type const * __*rhs*) `[inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

__*lhs*	A regular expression submatch.
__*rhs*	A string.

Returns

true if __*lhs* does not precede __*rhs*, false otherwise.

Definition at line 1201 of file regex.h.

2.36.3.45 template< typename _Bi_iter > bool std::operator>= (typename iterator_traits< _Bi_iter >::value_type const & __*lhs*, const sub_match< _Bi_iter > & __*rhs*) `[inline]`

Tests the ordering of a string and a regular expression submatch.

Parameters

__*lhs*	A string.
__*rhs*	A regular expression submatch.

Returns

true if __*lhs* does not precede __*rhs*, false otherwise.

Definition at line 1281 of file regex.h.

2.36.3.46 template< typename _Bi_iter > bool std::operator>= (const sub_match< _Bi_iter > & __*lhs*, typename iterator_traits< _Bi_iter >::value_type const & __*rhs*) `[inline]`

Tests the ordering of a regular expression submatch and a string.

Parameters

__*lhs*	A regular expression submatch.
__*rhs*	A const string reference.

Returns

true if __*lhs* does not precede __*rhs*, false otherwise.

Definition at line 1361 of file regex.h.

2.36.3.47 template< typename _Bi_iter , typename _Alloc , typename _Ch_type , typename _Rx_traits > bool std::regex_match (_Bi_iter __*s*, _Bi_iter __*e*, match_results< _Bi_iter, _Alloc > & __*m*, const basic_regex< _Ch_type, _Rx_traits > & __*re*, regex_constants::match_flag_type __*flags* = `regex_constants::match_default`)

Determines if there is a match between the regular expression `e` and all of the character sequence [first, last).

Parameters

__*s*	Start of the character sequence to match.
__*e*	One-past-the-end of the character sequence to match.
__*m*	The match results.
__*re*	The regular expression.
__*flags*	Controls how the regular expression is matched.

Return values

true	A match exists.
false	Otherwise.

Exceptions

an	exception of type regex_error.

Todo Implement this function.

Definition at line 1878 of file regex.h.

Referenced by std::regex_match().

2.36.3.48 template<typename _Bi_iter , typename _Ch_type , typename _Rx_traits > bool std::regex_match (_Bi_iter *__first,* _Bi_iter *__last,* const basic_regex< _Ch_type, _Rx_traits > & *__re,* regex_constants::match_flag_type *__flags =* `regex_constants::match_default`)

Indicates if there is a match between the regular expression `e` and all of the character sequence [first, last).

Parameters

__first	Beginning of the character sequence to match.
__last	One-past-the-end of the character sequence to match.
__re	The regular expression.
__flags	Controls how the regular expression is matched.

Return values

true	A match exists.
false	Otherwise.

Exceptions

an	exception of type regex_error.

Definition at line 1909 of file regex.h.

References std::regex_match().

2.36.3.49 template<typename _Ch_type , typename _Alloc , typename _Rx_traits > bool std::regex_match (const _Ch_type * *__s,* match_results< const _Ch_type *, _Alloc > & *__m,* const basic_regex< _Ch_type, _Rx_traits > & *__re,* regex_constants::match_flag_type *__f =* `regex_constants::match_default`) `[inline]`

Determines if there is a match between the regular expression `e` and a C-style null-terminated string.

Parameters

__s	The C-style null-terminated string to match.
__m	The match results.
__re	The regular expression.
__f	Controls how the regular expression is matched.

Return values

true	A match exists.
false	Otherwise.

Exceptions

an	exception of type regex_error.

Definition at line 1934 of file regex.h.

References std::regex_match().

2.36.3.50 template< typename _Ch_traits , typename _Ch_alloc , typename _Alloc , typename _Ch_type , typename _Rx_traits > bool std::regex_match (const basic_string< _Ch_type, _Ch_traits, _Ch_alloc > & *__s*, match_results< typename basic_string< _Ch_type, _Ch_traits, _Ch_alloc >::const_iterator, _Alloc > & *__m*, const basic_regex< _Ch_type, _Rx_traits > & *__re*, regex_constants::match_flag_type *__flags* = `regex_constants::match_default`) `[inline]`

Determines if there is a match between the regular expression `e` and a string.

Parameters

__s	The string to match.
__m	The match results.
__re	The regular expression.
__flags	Controls how the regular expression is matched.

Return values

true	A match exists.
false	Otherwise.

Exceptions

an	exception of type regex_error.

Definition at line 1958 of file regex.h.

References std::basic_string< _CharT, _Traits, _Alloc >::begin(), std::basic_string< _CharT, _Traits, _Alloc >::end(), and std::regex_match().

Todo Needs documentation! See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html`

Parameters

__out	
__first	
__last	
__e	
__fmt	
__flags	

Returns

out

Exceptions

an	exception of type regex_error.

Todo Implement this function.

Definition at line 2162 of file regex.h.

Referenced by std::regex_replace().

2.36.3.54 template<typename _Rx_traits , typename _Ch_type > basic_string<_Ch_type> std::regex_replace (const basic_string< _Ch_type > & *__s,* const basic_regex< _Ch_type, _Rx_traits > & *__e,* const basic_string< _Ch_type > & *__fmt,* regex_constants::match_flag_type *__flags* = `regex_constants::match_default`) `[inline]`

Todo Needs documentation! See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation-_style.html`

Parameters

__s	
__e	
__fmt	
__flags	

Returns

a copy of string `s` with replacements.

Exceptions

an	exception of type regex_error.

Definition at line 2182 of file regex.h.

Swaps the contents of two regular expression objects.

Parameters

__lhs	First regular expression.
__rhs	Second regular expression.

Definition at line 722 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::swap().

2.36.3.62 template<typename _Bi_iter , typename _Alloc > void std::swap (match_results< _Bi_iter, _Alloc > & *__lhs,* match_results< _Bi_iter, _Alloc > & *__rhs*) [inline]

Swaps two match results.

Parameters

__lhs	A match result.
__rhs	A match result.

The contents of the two match_results objects are swapped.

Definition at line 1848 of file regex.h.

References std::match_results< _Bi_iter, _Alloc >::swap().

2.36.3.63 template<typename _Ch_type > int std::regex_traits< _Ch_type >::value (_Ch_type *__ch,* int *__radix*) const

Converts a digit to an int.

Parameters

__ch	a character representing a digit.
__radix	the radix if the numeric conversion (limited to 8, 10, or 16).

Returns

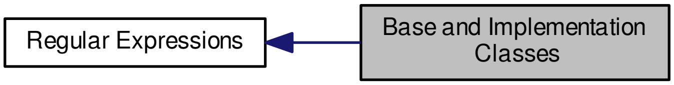
> the value represented by the digit __ch in base radix if the character __ch is a valid digit in base radix; otherwise returns -1.

Definition at line 314 of file regex.h.

References std::basic_ios< _CharT, _Traits >::fail(), std::hex(), and std::oct().

2.37 Base and Implementation Classes

Collaboration diagram for Base and Implementation Classes:



Classes

- class std::__detail::_Automaton

  Base class for, um, automata. Could be an NFA or a DFA. Your choice.
- struct std::__detail::_CharMatcher< _InIterT, _TraitsT >

  Matches a single character.
- class std::__detail::_Compiler< _InIter, _TraitsT >

  Builds an NFA from an input iterator interval.
- struct std::__detail::_EndTagger< _FwdIterT, _TraitsT >

  End state tag.
- class std::__detail::_Grep_matcher

  Executes a regular expression NFA/DFA over a range using a variant of the parallel execution algorithm featured in the grep utility, modified to use Laurikari tags.
- class std::__detail::_Nfa

  struct _Nfa
- struct std::__detail::_PatternCursor

  ABC for pattern matching.
- struct std::__detail::_RangeMatcher< _InIterT, _TraitsT >

  Matches a character range (bracket expression)
- struct std::__detail::_Results

  Provides a generic facade for a templated match_results.
- class std::__detail::_Scanner< _InputIterator >

  struct _Scanner. Scans an input range for regex tokens.
- struct std::__detail::_Scanner_base

  Base class for scanner.
- class std::__detail::_SpecializedCursor< _FwdIterT >

  Provides a cursor into the specific target string.
- class std::__detail::_SpecializedResults< _FwdIterT, _Alloc >

  A _Results facade specialized for wrapping a templated match_results.
- struct std::__detail::_StartTagger< _FwdIterT, _TraitsT >

  Start state tag.
- struct std::__detail::_State

  struct _State
- class std::__detail::_StateSeq

  Describes a sequence of one or more _State, its current start and end(s). This structure contains fragments of an NFA during construction.

Typedefs

- typedef std::shared_ptr
  < _Automaton > std::__detail::_AutomatonPtr
- typedef std::function< bool(const
  _PatternCursor &)> std::__detail::_Matcher
- typedef int std::__detail::_StateIdT
- typedef std::set< _StateIdT > std::__detail::_StateSet
- typedef std::stack< _StateIdT,
  std::vector< _StateIdT > > std::__detail::_StateStack
- typedef std::function< void(const
  _PatternCursor &, _Results &)> std::__detail::_Tagger

Enumerations

- enum std::__detail::_Opcode {
  _S_opcode_unknown, **_S_opcode_alternative**, **_S_opcode_subexpr_begin**, **_S_opcode_subexpr_end**, **_S_opcode_match**, **_S_opcode_accept** }

Functions

- **std::__detail::_Compiler< _InIter, _TraitsT >::_Compiler** (const _InIter &__b, const _InIter &__e, _TraitsT &__traits, _FlagT __flags)
- **std::__detail::_SpecializedResults< _FwdIterT, _Alloc >::_SpecializedResults** (const _Automaton::_SizeT __size, const _SpecializedCursor< _FwdIterT > &__cursor, match_results< _FwdIterT, _Alloc > &__m)
- template<typename _InIter , typename _TraitsT >
  _AutomatonPtr **std::__detail::__compile** (const _InIter &__b, const _InIter &__e, _TraitsT &__t, regex_constants::syntax_option_type __f)
- template<typename _FwdIterT >
  _SpecializedCursor< _FwdIterT > **std::__detail::__cursor** (const _FwdIterT &__b, const _FwdIterT __e)
- bool std::__detail::_AnyMatcher (const _PatternCursor &)
- void **std::__detail::_Scanner< _InputIterator >::_M_advance** ()
- void **std::__detail::_SpecializedResults< _FwdIterT, _Alloc >::_M_set_pos** (int __i, int __j, const _PatternCursor &__pc)

Variables

- static const _StateIdT std::__detail::_S_invalid_state_id

2.37.1 Detailed Description

2.37.2 Typedef Documentation

2.37.2.1 typedef std::shared_ptr<_Automaton> std::__detail::_AutomatonPtr

Generic shared pointer to an automaton.

Definition at line 62 of file regex_nfa.h.

2.37.2.2 typedef std::function<bool (const _PatternCursor&)> std::__detail::_Matcher

Indicates if current state matches cursor current.

Definition at line 120 of file regex_nfa.h.

2.37.2.3 typedef int std::__detail::_StateIdT

Identifies a state in the NFA.

Definition at line 195 of file regex_nfa.h.

2.37.2.4 typedef std::set<_StateIdT> std::__detail::_StateSet

The Grep Matcher works on sets of states. Here are sets of states.

Definition at line 251 of file regex_nfa.h.

2.37.2.5 typedef std::stack<_StateIdT, std::vector<_StateIdT> > std::__detail::_StateStack

A stack of states used in evaluating the NFA.

Definition at line 105 of file regex_grep_matcher.h.

2.37.2.6 typedef std::function<void (const _PatternCursor&, _Results&)> std::__detail::_Tagger

Tags current state (for subexpr begin/end).

Definition at line 84 of file regex_nfa.h.

2.37.3 Enumeration Type Documentation

2.37.3.1 enum std::__detail::_Opcode

Operation codes that define the type of transitions within the base NFA that represents the regular expression.

Definition at line 66 of file regex_nfa.h.

2.37.4 Function Documentation

2.37.4.1 bool std::__detail::_AnyMatcher (const _PatternCursor &) `[inline]`

Matches any character.

Definition at line 124 of file regex_nfa.h.

2.37.5 Variable Documentation

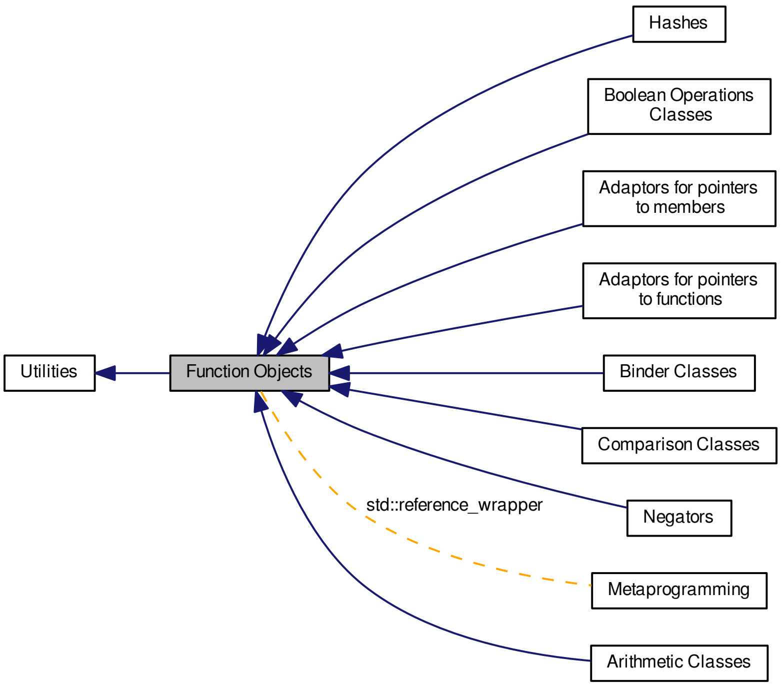
2.37.5.1 const _StateIdT std::__detail::_S_invalid_state_id `[static]`

The special case in which a state identifier is not an index.

Definition at line 198 of file regex_nfa.h.

2.38 Function Objects

Collaboration diagram for Function Objects:



Modules

- Adaptors for pointers to functions
- Adaptors for pointers to members
- Arithmetic Classes
- Binder Classes
- Boolean Operations Classes
- Comparison Classes
- Hashes
- Negators

Classes

- struct std::binary_function< _Arg1, _Arg2, _Result >
- class std::function< _Res(_ArgTypes...)>

  Primary class template for std::function.
  Polymorphic function wrapper.
- class std::reference_wrapper< _Tp >

  Primary class template for reference_wrapper.
- struct std::unary_function< _Arg, _Result >

Functions

- template<typename _Tp , typename _Class >
  _Mem_fn< _Tp _Class::* > std::mem_fn (_Tp _Class::*__pm) noexcept

2.38.1 Detailed Description

Function objects, or *functors*, are objects with an `operator()` defined and accessible. They can be passed as arguments to algorithm templates and used in place of a function pointer. Not only is the resulting expressiveness of the library increased, but the generated code can be more efficient than what you might write by hand. When we refer to *functors*, then, generally we include function pointers in the description as well.

Often, functors are only created as temporaries passed to algorithm calls, rather than being created as named variables.

Two examples taken from the standard itself follow. To perform a by-element addition of two vectors `a` and `b` containing `double`, and put the result in `a`, use

```
transform (a.begin(), a.end(), b.begin(), a.begin(), plus<double>());
```

To negate every element in `a`, use

```
transform(a.begin(), a.end(), a.begin(), negate<double>());
```

The addition and negation functions will be inlined directly.

The standard functors are derived from structs named `unary_function` and `binary_function`. These two classes contain nothing but typedefs, to aid in generic (template) programming. If you write your own functors, you might consider doing the same.

2.38.2 Function Documentation

2.38.2.1 template<typename _Tp , typename _Class > _Mem_fn< _Tp _Class::* > std::mem_fn (_Tp _Class::* *__pm*) `[inline]`, `[noexcept]`

Returns a function object that forwards to the member pointer *pm*.

Definition at line 961 of file functional.

2.39 Arithmetic Classes

Collaboration diagram for Arithmetic Classes:

Classes

- struct std::divides< _Tp >

    One of the math functors.
- struct std::minus< _Tp >

    One of the math functors.
- struct std::modulus< _Tp >

    One of the math functors.
- struct std::multiplies< _Tp >

    One of the math functors.
- struct std::negate< _Tp >

    One of the math functors.
- struct std::plus< _Tp >

    One of the math functors.

2.39.1 Detailed Description

Because basic math often needs to be done during an algorithm, the library provides functors for those operations. See the documentation for the base classes for examples of their use.

2.40 Comparison Classes

Collaboration diagram for Comparison Classes:

Classes

- struct std::equal_to< _Tp >

  One of the comparison functors.
- struct std::greater< _Tp >

  One of the comparison functors.
- struct std::greater_equal< _Tp >

  One of the comparison functors.
- struct std::less< _Tp >

  One of the comparison functors.
- struct std::less_equal< _Tp >

  One of the comparison functors.
- struct std::not_equal_to< _Tp >

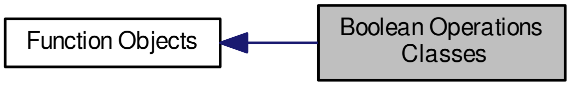
  One of the comparison functors.

2.40.1 Detailed Description

The library provides six wrapper functors for all the basic comparisons in C++, like $<$.

2.41 Boolean Operations Classes

Collaboration diagram for Boolean Operations Classes:



Classes

- struct std::logical_and< _Tp >

  One of the Boolean operations functors.
- struct std::logical_not< _Tp >

  One of the Boolean operations functors.
- struct std::logical_or< _Tp >

  One of the Boolean operations functors.

2.41.1 Detailed Description

Here are wrapper functors for Boolean operations: `&&`, ||, and `!`.

2.42 Negators

Collaboration diagram for Negators:

Classes

- class std::binary_negate< _Predicate >

  One of the negation functors.
- class std::unary_negate< _Predicate >

  One of the negation functors.

Functions

- template<typename _Predicate >
  unary_negate< _Predicate > std::not1 (const _Predicate &__pred)
- template<typename _Predicate >
  binary_negate< _Predicate > std::not2 (const _Predicate &__pred)

2.42.1 Detailed Description

The functions `not1` and `not2` each take a predicate functor and return an instance of `unary_negate` or `binary_negate`, respectively. These classes are functors whose `operator()` performs the stored predicate function and then returns the negation of the result.

For example, given a vector of integers and a trivial predicate,

```
struct IntGreaterThanThree
  : public std::unary_function<int, bool>
{
    bool operator() (int x) { return x > 3; }
};

std::find_if (v.begin(), v.end(), not1(IntGreaterThanThree()));
```

The call to `find_if` will locate the first index (i) of `v` for which `!(v[i] > 3)` is true.

The not1/unary_negate combination works on predicates taking a single argument. The not2/binary_negate combination works on predicates which take two arguments.

2.42.2 Function Documentation

2.42.2.1 template<typename _Predicate > unary_negate<_Predicate> std::not1 (const _Predicate & *__pred*) `[inline]`

One of the negation functors.

Definition at line 369 of file stl_function.h.

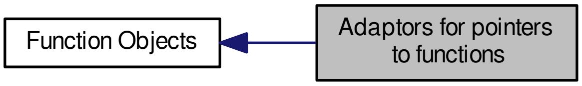
2.42.2.2 template<typename _Predicate > binary_negate<_Predicate> std::not2 (const _Predicate & *__pred*) [inline]

One of the negation functors.

Definition at line 394 of file stl_function.h.

2.43 Adaptors for pointers to functions

Collaboration diagram for Adaptors for pointers to functions:



Classes

- class std::pointer_to_binary_function< _Arg1, _Arg2, _Result >

  One of the adaptors for function pointers.
- class std::pointer_to_unary_function< _Arg, _Result >

  One of the adaptors for function pointers.

Functions

- template<typename _Arg , typename _Result >
  pointer_to_unary_function
  < _Arg, _Result > std::ptr_fun (_Result($*$__x)(_Arg))
- template<typename _Arg1 , typename _Arg2 , typename _Result >
  pointer_to_binary_function
  < _Arg1, _Arg2, _Result > std::ptr_fun (_Result($*$__x)(_Arg1, _Arg2))

2.43.1 Detailed Description

The advantage of function objects over pointers to functions is that the objects in the standard library declare nested typedefs describing their argument and result types with uniform names (e.g., `result_type` from the base classes `unary_function` and `binary_function`). Sometimes those typedefs are required, not just optional.

Adaptors are provided to turn pointers to unary (single-argument) and binary (double-argument) functions into function objects. The long-winded functor `pointer_to_unary_function` is constructed with a function pointer `f`, and its `operator()` called with argument `x` returns `f(x)`. The functor `pointer_to_binary_function` does the same thing, but with a double-argument `f` and `operator()`.

The function `ptr_fun` takes a pointer-to-function `f` and constructs an instance of the appropriate functor.

2.43.2 Function Documentation

2.43.2.1 template<typename _Arg , typename _Result > pointer_to_unary_function<_Arg, _Result> std::ptr_fun (_Result($*$)(_Arg) __x) `[inline]`

One of the adaptors for function pointers.

Definition at line 442 of file stl_function.h.

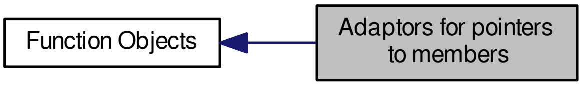
2.43.2.2 template<typename _Arg1 , typename _Arg2 , typename _Result > pointer_to_binary_function<_Arg1, _Arg2, _Result> std::ptr_fun (_Result(*)(_Arg1, _Arg2) __x) `[inline]`

One of the adaptors for function pointers.

Definition at line 468 of file stl_function.h.

2.44 Adaptors for pointers to members

Collaboration diagram for Adaptors for pointers to members:



Classes

- class std::const_mem_fun1_ref_t< _Ret, _Tp, _Arg >

  One of the adaptors for member pointers.
- class std::const_mem_fun1_t< _Ret, _Tp, _Arg >

  One of the adaptors for member pointers.
- class std::const_mem_fun_ref_t< _Ret, _Tp >

  One of the adaptors for member pointers.
- class std::const_mem_fun_t< _Ret, _Tp >

  One of the adaptors for member pointers.
- class std::mem_fun1_ref_t< _Ret, _Tp, _Arg >

  One of the adaptors for member pointers.
- class std::mem_fun1_t< _Ret, _Tp, _Arg >

  One of the adaptors for member pointers.
- class std::mem_fun_ref_t< _Ret, _Tp >

  One of the adaptors for member pointers.
- class std::mem_fun_t< _Ret, _Tp >

  One of the adaptors for member pointers.

Functions

- template<typename _Ret , typename _Tp >
  mem_fun_t< _Ret, _Tp > **std::mem_fun** (_Ret(_Tp::∗__f)())
- template<typename _Ret , typename _Tp , typename _Arg >
  mem_fun1_t< _Ret, _Tp, _Arg > **std::mem_fun** (_Ret(_Tp::∗__f)(_Arg))
- template<typename _Ret , typename _Tp >
  mem_fun_ref_t< _Ret, _Tp > **std::mem_fun_ref** (_Ret(_Tp::∗__f)())
- template<typename _Ret , typename _Tp , typename _Arg >
  mem_fun1_ref_t< _Ret, _Tp, _Arg > **std::mem_fun_ref** (_Ret(_Tp::∗__f)(_Arg))

2.44.1 Detailed Description

There are a total of 8 = 2^3 function objects in this family. (1) Member functions taking no arguments vs member functions taking one argument. (2) Call through pointer vs call through reference. (3) Const vs non-const member function.

All of this complexity is in the function objects themselves. You can ignore it by using the helper function mem_fun and mem_fun_ref, which create whichever type of adaptor is appropriate.

2.45 Heap

Collaboration diagram for Heap:

Functions

- template<typename _RandomAccessIterator >
  bool std::is_heap (_RandomAccessIterator __first, _RandomAccessIterator __last)
- template<typename _RandomAccessIterator , typename _Compare >
  bool std::is_heap (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp)
- template<typename _RandomAccessIterator >
  _RandomAccessIterator std::is_heap_until (_RandomAccessIterator __first, _RandomAccessIterator __last)
- template<typename _RandomAccessIterator , typename _Compare >
  _RandomAccessIterator std::is_heap_until (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp)
- template<typename _RandomAccessIterator >
  void std::make_heap (_RandomAccessIterator __first, _RandomAccessIterator __last)
- template<typename _RandomAccessIterator , typename _Compare >
  void std::make_heap (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp)
- template<typename _RandomAccessIterator >
  void std::pop_heap (_RandomAccessIterator __first, _RandomAccessIterator __last)
- template<typename _RandomAccessIterator , typename _Compare >
  void std::pop_heap (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp)
- template<typename _RandomAccessIterator >
  void std::push_heap (_RandomAccessIterator __first, _RandomAccessIterator __last)
- template<typename _RandomAccessIterator , typename _Compare >
  void std::push_heap (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp)
- template<typename _RandomAccessIterator >
  void std::sort_heap (_RandomAccessIterator __first, _RandomAccessIterator __last)
- template<typename _RandomAccessIterator , typename _Compare >
  void std::sort_heap (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __comp)

2.45.1 Detailed Description

2.45.2 Function Documentation

2.45.2.1 template<typename _RandomAccessIterator > bool std::is_heap (_RandomAccessIterator *__first,* _RandomAccessIterator *__last*) `[inline]`

Determines whether a range is a heap.

Parameters

__first	Start of range.
__last	End of range.

Returns

True if range is a heap, false otherwise.

Definition at line 565 of file stl_heap.h.

References std::is_heap_until().

2.45.2.2 template<typename _RandomAccessIterator , typename _Compare > bool std::is_heap (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Compare *__comp*) [inline]

Determines whether a range is a heap using comparison functor.

Parameters

__first	Start of range.
__last	End of range.
__comp	Comparison functor to use.

Returns

True if range is a heap, false otherwise.

Definition at line 578 of file stl_heap.h.

References std::is_heap_until().

2.45.2.3 template<typename _RandomAccessIterator > _RandomAccessIterator std::is_heap_until (_RandomAccessIterator *__first,* _RandomAccessIterator *__last*) [inline]

Search the end of a heap.

Parameters

__first	Start of range.
__last	End of range.

Returns

An iterator pointing to the first element not in the heap.

This operation returns the last iterator i in [__first, __last) for which the range [__first, i) is a heap.

Definition at line 517 of file stl_heap.h.

References std::distance().

2.45.2.4 template<typename _RandomAccessIterator , typename _Compare > _RandomAccessIterator std::is_heap_until (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Compare *__comp*) [inline]

Search the end of a heap using comparison functor.

Parameters

__first	Start of range.
__last	End of range.
__comp	Comparison functor to use.

Returns

An iterator pointing to the first element not in the heap.

This operation returns the last iterator i in [__first, __last) for which the range [__first, i) is a heap. Comparisons are made using __comp.

Definition at line 543 of file stl_heap.h.

References std::distance().

Referenced by std::is_heap().

2.45.2.5 template<typename _RandomAccessIterator > void std::make_heap (_RandomAccessIterator *__first,* _RandomAccessIterator *__last*)

Construct a heap over a range.

Parameters

__first	Start of heap.
__last	End of heap.

This operation makes the elements in [__first,__last) into a heap.

Definition at line 380 of file stl_heap.h.

2.45.2.6 template<typename _RandomAccessIterator , typename _Compare > void std::make_heap (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Compare *__comp*)

Construct a heap over a range using comparison functor.

Parameters

__first	Start of heap.
__last	End of heap.
__comp	Comparison functor to use.

This operation makes the elements in [__first,__last) into a heap. Comparisons are made using __comp.

Definition at line 420 of file stl_heap.h.

Referenced by std::__heap_select(), std::partial_sort_copy(), and std::priority_queue< _Tp, _Sequence, _Compare >::priority_queue().

2.45.2.7 template<typename _RandomAccessIterator > void std::pop_heap (_RandomAccessIterator *__first,* _RandomAccessIterator *__last*) `[inline]`

Pop an element off a heap.

Parameters

__first	Start of heap.
__last	End of heap.

Precondition

[__first, __last) is a valid, non-empty range.

This operation pops the top of the heap. The elements __first and __last-1 are swapped and [__first,__last-1) is made into a heap.

Definition at line 281 of file stl_heap.h.

2.45.2.8 template<typename _RandomAccessIterator , typename _Compare > void std::pop_heap (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Compare *__comp*) `[inline]`

Pop an element off a heap using comparison functor.

Parameters

__first	Start of heap.
__last	End of heap.
__comp	Comparison functor to use.

This operation pops the top of the heap. The elements __first and __last-1 are swapped and [__first,__last-1) is made into a heap. Comparisons are made using comp.

Definition at line 356 of file stl_heap.h.

Referenced by std::priority_queue< _Tp, _Sequence, _Compare >::pop().

2.45.2.9 template<typename _RandomAccessIterator > void std::push_heap (_RandomAccessIterator *__first,* _RandomAccessIterator *__last*) `[inline]`

Push an element onto a heap.

Parameters

__first	Start of heap.
__last	End of heap + element.

This operation pushes the element at last-1 onto the valid heap over the range [__first,__last-1). After completion, [__first,__last) is a valid heap.

Definition at line 156 of file stl_heap.h.

2.45.2.10 template<typename _RandomAccessIterator , typename _Compare > void std::push_heap (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Compare *__comp*) `[inline]`

Push an element onto a heap using comparison functor.

Parameters

__first	Start of heap.
__last	End of heap + element.
__comp	Comparison functor.

This operation pushes the element at __last-1 onto the valid heap over the range [__first,__last-1). After completion, [__first,__last) is a valid heap. Compare operations are performed using comp.

Definition at line 206 of file stl_heap.h.

Referenced by std::priority_queue< _Tp, _Sequence, _Compare >::push().

2.45.2.11 template<typename _RandomAccessIterator > void std::sort_heap (_RandomAccessIterator *__first*, _RandomAccessIterator *__last*)

Sort a heap.

Parameters

__first	Start of heap.
__last	End of heap.

This operation sorts the valid heap in the range [__first,__last).

Definition at line 459 of file stl_heap.h.

2.45.2.12 template<typename _RandomAccessIterator , typename _Compare > void std::sort_heap (_RandomAccessIterator *__first*, _RandomAccessIterator *__last*, _Compare *__comp*)

Sort a heap using comparison functor.

Parameters

__first	Start of heap.
__last	End of heap.
__comp	Comparison functor to use.

This operation sorts the valid heap in the range [__first,__last). Comparisons are made using __comp.

Definition at line 488 of file stl_heap.h.

Referenced by std::partial_sort(), and std::partial_sort_copy().

2.46 Iterators

Collaboration diagram for Iterators:

Modules

- Iterator Tags

Classes

- class std::__has_iterator_category_helper< _Tp >

  Traits class for iterators.
- class std::back_insert_iterator< _Container >

  Turns assignment into insertion.
- class std::front_insert_iterator< _Container >

  Turns assignment into insertion.
- struct std::input_iterator_tag

  Marking input iterators.
- class std::insert_iterator< _Container >

  Turns assignment into insertion.
- class std::istream_iterator< _Tp, _CharT, _Traits, _Dist >

  Provides input iterator semantics for streams.
- class std::istreambuf_iterator< _CharT, _Traits >

  Provides input iterator semantics for streambufs.
- struct std::iterator< _Category, _Tp, _Distance, _Pointer, _Reference >

  Common iterator class.
- struct std::iterator_traits< _Tp $*$ >

  Partial specialization for pointer types.
- struct std::iterator_traits< const _Tp $*$ >

  Partial specialization for const pointer types.
- class std::move_iterator< _Iterator >
- class std::ostream_iterator< _Tp, _CharT, _Traits >

  Provides output iterator semantics for streams.
- class std::ostreambuf_iterator< _CharT, _Traits >

  Provides output iterator semantics for streambufs.
- class std::reverse_iterator< _Iterator >

Functions

- template<bool _IsMove, typename _CharT >
  __gnu_cxx::__enable_if
  < __is_char< _CharT >::__value,

2.46.1 Detailed Description

Abstractions for uniform iterating through various underlying types.

2.46.2 Function Documentation

2.46.2.1 template<typename _Iter > iterator_traits<_Iter>::iterator_category std::__iterator_category (const _Iter &) [inline]

This function is not a part of the C++ standard but is syntactic sugar for internal library use only.

Definition at line 201 of file stl_iterator_base_types.h.

Referenced by std::__find_if_not(), __gnu_debug::__valid_range_aux(), std::advance(), __gnu_cxx::copy_n(), std::copy_n(), __gnu_cxx::distance(), std::distance(), std::find(), std::find_end(), std::find_if(), std::partition(), std::reverse(), std::search_n(), __gnu_cxx::uninitialized_copy_n(), std::uninitialized_copy_n(), and std::unique_copy().

2.46.2.2 template<typename _Container > back_insert_iterator<_Container> std::back_inserter (_Container & *__x*) [inline]

Parameters

__x	A container of arbitrary type.

Returns

An instance of back_insert_iterator working on `__x`.

This wrapper function helps in creating back_insert_iterator instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 479 of file stl_iterator.h.

Referenced by std::match_results< _FwdIterT, _Alloc >::format(), and std::regex_replace().

2.46.2.3 template<typename _Container > front_insert_iterator<_Container> std::front_inserter (_Container & *__x*) [inline]

Parameters

__x	A container of arbitrary type.

Returns

An instance of front_insert_iterator working on `x`.

This wrapper function helps in creating front_insert_iterator instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 569 of file stl_iterator.h.

2.46.2.4 template<typename _Container , typename _Iterator > insert_iterator<_Container> std::inserter (_Container & *__x*, _Iterator *__i*) `[inline]`

Parameters

__x	A container of arbitrary type.

Returns

An instance of insert_iterator working on `__x`.

This wrapper function helps in creating insert_iterator instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 683 of file stl_iterator.h.

2.46.2.5 template<class _Tp , class _CharT , class _Traits , class _Dist > bool std::operator!= (const istream_iterator< _Tp, _CharT, _Traits, _Dist > & *__x*, const istream_iterator< _Tp, _CharT, _Traits, _Dist > & *__y*) `[inline]`

Return false if x and y are both end or not end, or x and y are the same.

Definition at line 137 of file stream_iterator.h.

2.46.2.6 template<typename _Tp , typename _CharT , typename _Traits , typename _Dist > bool std::operator== (const istream_iterator< _Tp, _CharT, _Traits, _Dist > & *__x*, const istream_iterator< _Tp, _CharT, _Traits, _Dist > & *__y*) `[inline]`

Return true if x and y are both end or not end, or x and y are the same.

Definition at line 130 of file stream_iterator.h.

2.46.2.7 template<typename _Iterator > bool std::operator== (const reverse_iterator< _Iterator > & *__x*, const reverse_iterator< _Iterator > & *__y*) `[inline]`

Parameters

__x	A reverse_iterator.
__y	A reverse_iterator.

Returns

A simple bool.

Reverse iterators forward many operations to their underlying base() iterators. Others are implemented in terms of one another.

Definition at line 291 of file stl_iterator.h.

References std::reverse_iterator< _Iterator >::base().

2.47 Iterator Tags

Collaboration diagram for Iterator Tags:

Classes

- struct std::bidirectional_iterator_tag

  Bidirectional iterators support a superset of forward iterator operations.
- struct std::forward_iterator_tag

  Forward iterators support a superset of input iterator operations.
- struct std::input_iterator_tag

  Marking input iterators.
- struct std::output_iterator_tag

  Marking output iterators.
- struct std::random_access_iterator_tag

  Random-access iterators support a superset of bidirectional iterator operations.

2.47.1 Detailed Description

These are empty types, used to distinguish different iterators. The distinction is not made by what they contain, but simply by what they are. Different underlying algorithms can then be used based on the different operations supported by different iterator types.

2.48 Strings

Collaboration diagram for Strings:

Classes

- class std::basic_string< _CharT, _Traits, _Alloc >

  Managing sequences of characters and character-like objects.
- struct std::char_traits< _CharT >

  Basis for explicit traits specializations.

Typedefs

- typedef basic_string< char > std::string
- typedef basic_string< char16_t > std::u16string
- typedef basic_string< char32_t > std::u32string
- typedef basic_string< wchar_t > std::wstring

2.48.1 Detailed Description

2.48.2 Typedef Documentation

2.48.2.1 typedef basic_string<char> **std::string**

A string of `char`.

Definition at line 64 of file stringfwd.h.

2.48.2.2 typedef basic_string<char16_t> **std::u16string**

A string of `char16_t`.

Definition at line 80 of file stringfwd.h.

2.48.2.3 typedef basic_string<char32_t> **std::u32string**

A string of `char32_t`.

Definition at line 83 of file stringfwd.h.

2.48.2.4 typedef basic_string<wchar_t> **std::wstring**

A string of `wchar_t`.

Definition at line 70 of file stringfwd.h.

2.49 Binder Classes

Collaboration diagram for Binder Classes:

Namespaces

- namespace std::placeholders

Classes

- struct std::_Placeholder< _Num >

  The type of placeholder objects defined by libstdc++.
- class std::binder1st< _Operation >

  One of the binder functors.
- class std::binder2nd< _Operation >

  One of the binder functors.
- struct std::is_bind_expression< _Tp >

  Determines if the given type _Tp is a function object should be treated as a subexpression when evaluating calls to function objects returned by bind(). [TR1 3.6.1].
- struct std::is_bind_expression< _Bind< _Signature > >

  Class template _Bind is always a bind expression.
- struct std::is_bind_expression< _Bind_result< _Result, _Signature > >

  Class template _Bind_result is always a bind expression.
- struct std::is_bind_expression< const _Bind< _Signature > >

  Class template _Bind is always a bind expression.
- struct std::is_bind_expression< const _Bind_result< _Result, _Signature > >

  Class template _Bind_result is always a bind expression.
- struct std::is_bind_expression< const volatile _Bind< _Signature > >

  Class template _Bind is always a bind expression.
- struct std::is_bind_expression< const volatile _Bind_result< _Result, _Signature > >

  Class template _Bind_result is always a bind expression.
- struct std::is_bind_expression< volatile _Bind< _Signature > >

  Class template _Bind is always a bind expression.
- struct std::is_bind_expression< volatile _Bind_result< _Result, _Signature > >

  Class template _Bind_result is always a bind expression.
- struct std::is_placeholder< _Tp >

  Determines if the given type _Tp is a placeholder in a bind() expression and, if so, which placeholder it is. [TR1 3.6.2].
- struct std::is_placeholder< _Placeholder< _Num > >

Functions

- template<typename _Func , typename... _BoundArgs>
  _Bind_helper< __is_socketlike
  < _Func >::value, _Func,
  _BoundArgs...>::type std::bind (_Func &&__f, _BoundArgs &&...__args)
- template<typename _Result , typename _Func , typename... _BoundArgs>
  _Bindres_helper< _Result,
  _Func, _BoundArgs...>::type std::bind (_Func &&__f, _BoundArgs &&...__args)
- template<typename _Operation , typename _Tp >
  binder1st< _Operation > std::bind1st (const _Operation &__fn, const _Tp &__x)
- template<typename _Operation , typename _Tp >
  binder2nd< _Operation > std::bind2nd (const _Operation &__fn, const _Tp &__x)

2.49.1 Detailed Description

Binders turn functions/functors with two arguments into functors with a single argument, storing an argument to be applied later. For example, a variable `B` of type `binder1st` is constructed from a functor `f` and an argument `x`. Later, B's `operator()` is called with a single argument `y`. The return value is the value of `f(x,y)`. `B` can be *called* with various arguments (y1, y2, ...) and will in turn call `f(x,y1)`, `f(x,y2)`, ...

The function `bind1st` is provided to save some typing. It takes the function and an argument as parameters, and returns an instance of `binder1st`.

The type `binder2nd` and its creator function `bind2nd` do the same thing, but the stored argument is passed as the second parameter instead of the first, e.g., `bind2nd`(std::minus<float>(),1.3) will create a functor whose `operator()` accepts a floating-point number, subtracts 1.3 from it, and returns the result. (If `bind1st` had been used, the functor would perform *1.3 - x* instead.

Creator-wrapper functions like `bind1st` are intended to be used in calling algorithms. Their return values will be temporary objects. (The goal is to not require you to type names like `std::binder1st<std::plus<int>>` for declaring a variable to hold the return value from `bind1st`(std::plus<int>(),5).

These become more useful when combined with the composition functions.

These functions are deprecated in C++11 and can be replaced by `std::bind` (or `std::tr1::bind`) which is more powerful and flexible, supporting functions with any number of arguments. Uses of `bind1st` can be replaced by `std::bind(f, x, std::placeholders::_1)` and `bind2nd` by `std::bind(f, std::placeholders::_1, x)`.

2.49.2 Function Documentation

2.49.2.1 template<typename _Func , typename... _BoundArgs> _Bind_helper<__is_socketlike<_Func>::value, _Func, _BoundArgs...>::type std::bind (_Func && __*f*, _BoundArgs &&... __*args*) [inline]

Function template for std::bind.

Definition at line 1655 of file functional.

Referenced by std::is_permutation().

2.49.2.2 template<typename _Result , typename _Func , typename... _BoundArgs> _Bindres_helper<_Result, _Func, _BoundArgs...>::type std::bind (_Func && __*f*, _BoundArgs &&... __*args*) [inline]

Function template for std::bind<R>.

Definition at line 1682 of file functional.

2.49.2.3 template<typename _Operation , typename _Tp > binder1st<_Operation> std::bind1st (const _Operation & *__fn*, const _Tp & *__x*) `[inline]`

One of the binder functors.

Definition at line 131 of file binders.h.

2.49.2.4 template<typename _Operation , typename _Tp > binder2nd<_Operation> std::bind2nd (const _Operation & *__fn*, const _Tp & *__x*) `[inline]`

One of the binder functors.

Definition at line 166 of file binders.h.

2.50 Mathematical Special Functions

2.50.1 Detailed Description

A collection of advanced mathematical special functions.

2.50.2 Function Documentation

2.50.2.1 template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::tr1::assoc_laguerre (unsigned int *__n*, unsigned int *__m*, _Tp *__x*) `[inline]`

5.2.1.1 Associated Laguerre polynomials.

Definition at line 1055 of file tr1/cmath.

2.50.2.2 template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::tr1::assoc_legendre (unsigned int *__l*, unsigned int *__m*, _Tp *__x*) `[inline]`

5.2.1.2 Associated Legendre functions.

Definition at line 1072 of file tr1/cmath.

2.50.2.3 template<typename _Tpx , typename _Tpy > __gnu_cxx::__promote_2<_Tpx, _Tpy>::__type std::tr1::beta (_Tpx *__x*, _Tpy *__y*) `[inline]`

5.2.1.3 Beta functions.

Definition at line 1089 of file tr1/cmath.

2.50.2.4 template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::tr1::comp_ellint_1 (_Tp *__k*) `[inline]`

5.2.1.4 Complete elliptic integrals of the first kind.

Definition at line 1106 of file tr1/cmath.

2.50.2.5 template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::tr1::comp_ellint_2 (_Tp *__k*) `[inline]`

5.2.1.5 Complete elliptic integrals of the second kind.

Definition at line 1123 of file tr1/cmath.

2.50.2.6 template<typename _Tp , typename _Tpn > __gnu_cxx::__promote_2<_Tp, _Tpn>::__type std::tr1::comp_ellint_3 (_Tp *__k*, _Tpn *__nu*) [inline]

5.2.1.6 Complete elliptic integrals of the third kind.

Definition at line 1140 of file tr1/cmath.

2.50.2.7 template<typename _Tpa , typename _Tpc , typename _Tp > __gnu_cxx::__promote_3<_Tpa, _Tpc, _Tp>::__type std::tr1::conf_hyperg (_Tpa *__a*, _Tpc *__c*, _Tp *__x*) [inline]

5.2.1.7 Confluent hypergeometric functions.

Definition at line 1157 of file tr1/cmath.

2.50.2.8 template<typename _Tpnu , typename _Tp > __gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::tr1::cyl_bessel_i (_Tpnu *__nu*, _Tp *__x*) [inline]

5.2.1.8 Regular modified cylindrical Bessel functions.

Definition at line 1174 of file tr1/cmath.

2.50.2.9 template<typename _Tpnu , typename _Tp > __gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::tr1::cyl_bessel_j (_Tpnu *__nu*, _Tp *__x*) [inline]

5.2.1.9 Cylindrical Bessel functions (of the first kind).

Definition at line 1191 of file tr1/cmath.

2.50.2.10 template<typename _Tpnu , typename _Tp > __gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::tr1::cyl_bessel_k (_Tpnu *__nu*, _Tp *__x*) [inline]

5.2.1.10 Irregular modified cylindrical Bessel functions.

Definition at line 1208 of file tr1/cmath.

2.50.2.11 template<typename _Tpnu , typename _Tp > __gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::tr1::cyl_neumann (_Tpnu *__nu*, _Tp *__x*) [inline]

5.2.1.11 Cylindrical Neumann functions.

Definition at line 1225 of file tr1/cmath.

2.50.2.12 template<typename _Tp , typename _Tpp > __gnu_cxx::__promote_2<_Tp, _Tpp>::__type std::tr1::ellint_1 (_Tp *__k*, _Tpp *__phi*) [inline]

5.2.1.12 Incomplete elliptic integrals of the first kind.

Definition at line 1242 of file tr1/cmath.

2.50.2.13 template<typename _Tp , typename _Tpp > __gnu_cxx::__promote_2<_Tp, _Tpp>::__type std::tr1::ellint_2 (_Tp *__k*, _Tpp *__phi*) [inline]

5.2.1.13 Incomplete elliptic integrals of the second kind.

Definition at line 1259 of file tr1/cmath.

2.50.2.14 template<typename _Tp , typename _Tpn , typename _Tpp > __gnu_cxx::__promote_3<_Tp, _Tpn, _Tpp>::__type std::tr1::ellint_3 (_Tp *__k*, _Tpn *__nu*, _Tpp *__phi*) [inline]

5.2.1.14 Incomplete elliptic integrals of the third kind.

Definition at line 1276 of file tr1/cmath.

2.50.2.15 template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::tr1::expint (_Tp *__x*) [inline]

5.2.1.15 Exponential integrals.

Definition at line 1293 of file tr1/cmath.

2.50.2.16 template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::tr1::hermite (unsigned int *__n*, _Tp *__x*) [inline]

5.2.1.16 Hermite polynomials.

Definition at line 1310 of file tr1/cmath.

2.50.2.17 template<typename _Tpa , typename _Tpb , typename _Tpc , typename _Tp > __gnu_cxx::__promote_4<_Tpa, _Tpb, _Tpc, _Tp>::__type std::tr1::hyperg (_Tpa *__a*, _Tpb *__b*, _Tpc *__c*, _Tp *__x*) [inline]

5.2.1.17 Hypergeometric functions.

Definition at line 1327 of file tr1/cmath.

2.50.2.18 template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::tr1::laguerre (unsigned int *__n*, _Tp *__x*) [inline]

5.2.1.18 Laguerre polynomials.

Definition at line 1344 of file tr1/cmath.

2.50.2.19 template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::tr1::legendre (unsigned int *__n*, _Tp *__x*) [inline]

5.2.1.19 Legendre polynomials.

Definition at line 1361 of file tr1/cmath.

2.50.2.20 template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::tr1::riemann_zeta (_Tp *__x*) [inline]

5.2.1.20 Riemann zeta function.

Definition at line 1378 of file tr1/cmath.

2.50.2.21 template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::tr1::sph_bessel (unsigned int *__n*, _Tp *__x*) [inline]

5.2.1.21 Spherical Bessel functions.

Definition at line 1395 of file tr1/cmath.

2.50.2.22 template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::tr1::sph_legendre (unsigned int *__l*, unsigned int *__m*, _Tp *__theta*) [inline]

5.2.1.22 Spherical associated Legendre functions.

Definition at line 1412 of file tr1/cmath.

2.50.2.23 template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::tr1::sph_neumann (unsigned int *__n*, _Tp *__x*) [inline]

5.2.1.23 Spherical Neumann functions.

Definition at line 1429 of file tr1/cmath.

- class __gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_Tl, _Alloc >
- class __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >
- class __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >

Macros

- #define **PB_DS_CC_HASH_BASE**
- #define **PB_DS_GP_HASH_BASE**
- #define **PB_DS_HASH_BASE**

2.53.1 Detailed Description

2.54 Base and Policy Classes

Collaboration diagram for Base and Policy Classes:

Classes

- class __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >
- class __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >

2.54.1 Detailed Description

2.55 Branch-Based

Collaboration diagram for Branch-Based:

Modules

- Base and Policy Classes

Classes

- class __gnu_pbds::basic_branch< Key, Mapped, Tag, Node_Update, Policy_Tl, _Alloc >
- class __gnu_pbds::tree< Key, Mapped, Cmp_Fn, Tag, Node_Update, _Alloc >
- class __gnu_pbds::trie< Key, Mapped, _ATraits, Tag, Node_Update, _Alloc >

Macros

- #define **PB_DS_BRANCH_BASE**
- #define **PB_DS_TREE_BASE**
- #define **PB_DS_TREE_NODE_AND_IT_TRAITS**
- #define **PB_DS_TRIE_BASE**
- #define **PB_DS_TRIE_NODE_AND_IT_TRAITS**

2.55.1 Detailed Description

2.56 Base and Policy Classes

Collaboration diagram for Base and Policy Classes:

Classes

- class __gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >

  Ordered-vector tree associative-container.
- class __gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::cond_dtor< Size_Type >

  Conditional destructor.
- class __gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >

  PATRICIA trie.
  This implementation loosely borrows ideas from: 1) Fast Mergeable Integer Maps, Okasaki, Gill 1998 2) Ptset: Sets of integers implemented as Patricia trees, Jean-Christophe Filliatr, 2000.
- class __gnu_pbds::detail::rb_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >

  Red-Black tree.
  This implementation uses an idea from the SGI STL (using a header node which is needed for efficient iteration).
- class __gnu_pbds::detail::splay_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >

  Splay tree.

2.56.1 Detailed Description

2.57 List-Based

Collaboration diagram for List-Based:

Classes

- class __gnu_pbds::list_update< Key, Mapped, Eq_Fn, Update_Policy, _Alloc >

Macros

- #define **PB_DS_LU_BASE**

2.57.1 Detailed Description

2.58 Exceptions

Collaboration diagram for Exceptions:

Classes

- struct __gnu_pbds::container_error

  Base class for exceptions.
- struct __gnu_pbds::insert_error

  An entry cannot be inserted into a container object for logical reasons (not, e.g., if memory is unabvailable, in which case the allocator_type's exception will be thrown).
- struct __gnu_pbds::join_error

  A join cannot be performed logical reasons (i.e., the ranges of the two container objects being joined overlaps.
- struct __gnu_pbds::resize_error

  A container cannot be resized.

Functions

- void **__gnu_pbds::__throw_container_error** ()
- void **__gnu_pbds::__throw_insert_error** ()
- void **__gnu_pbds::__throw_join_error** ()
- void **__gnu_pbds::__throw_resize_error** ()

2.58.1 Detailed Description

2.59 Heap-Based

Collaboration diagram for Heap-Based:

Modules

- Base and Policy Classes

Classes

- class __gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >

Typedefs

- typedef _Alloc **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::allocator_type**
- typedef Cmp_Fn **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::cmp_fn**
- typedef base_type::const_iterator **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::const_iterator**
- typedef __rebind_va::const_pointer **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::const_pointer**
- typedef __rebind_va::const_reference **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::const_reference**
- typedef Tag **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::container_category**
- typedef allocator_type::difference_type **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::difference_type**
- typedef base_type::iterator **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::iterator**
- typedef base_type::point_const_iterator **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::point_const_iterator**
- typedef base_type::point_iterator **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::point_iterator**
- typedef __rebind_va::pointer **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::pointer**
- typedef __rebind_va::reference **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::reference**
- typedef allocator_type::size_type **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::size_type**
- typedef _Tv **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::value_type**

Functions

- __gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::priority_queue (const cmp_fn &r_cmp_fn)
- template<typename It >
  __gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::priority_queue (It first_it, It last_it)

- template<typename It >
  __gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::priority_queue (It first_it, It last_it, const cmp_fn &r_cmp_fn)
- **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::priority_queue** (const priority_queue &other)
- priority_queue & **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::operator=** (const priority_queue &other)
- void **__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::swap** (priority_queue &other)

2.59.1 Detailed Description

2.59.2 Function Documentation

2.59.2.1 template<typename _Tv , typename Cmp_Fn = std::less<_Tv>, typename Tag = pairing_heap_tag, typename _Alloc = std::allocator<char>> __gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::priority_queue (const cmp_fn & *r_cmp_fn*) `[inline]`

Constructor taking some policy objects. r_cmp_fn will be copied by the Cmp_Fn object of the container object.

Definition at line 116 of file priority_queue.hpp.

2.59.2.2 template<typename _Tv , typename Cmp_Fn = std::less<_Tv>, typename Tag = pairing_heap_tag, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::priority_queue (It *first_it,* It *last_it*) `[inline]`

Constructor taking __iterators to a range of value_types. The value_types between first_it and last_it will be inserted into the container object.

Definition at line 122 of file priority_queue.hpp.

2.59.2.3 template<typename _Tv , typename Cmp_Fn = std::less<_Tv>, typename Tag = pairing_heap_tag, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >::priority_queue (It *first_it,* It *last_it,* const cmp_fn & *r_cmp_fn*) `[inline]`

Constructor taking __iterators to a range of value_types and some policy objects The value_types between first_it and last_it will be inserted into the container object. r_cmp_fn will be copied by the cmp_fn object of the container object.

Definition at line 130 of file priority_queue.hpp.

2.60 Base and Policy Classes

Collaboration diagram for Base and Policy Classes:

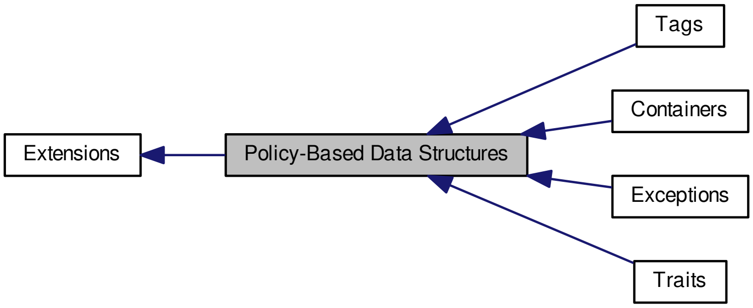
Classes

- class __gnu_pbds::detail::binary_heap< Value_Type, Cmp_Fn, _Alloc >
- class __gnu_pbds::detail::binomial_heap< Value_Type, Cmp_Fn, _Alloc >
- class __gnu_pbds::detail::pairing_heap< Value_Type, Cmp_Fn, _Alloc >
- class __gnu_pbds::detail::rc_binomial_heap< Value_Type, Cmp_Fn, _Alloc >
- class __gnu_pbds::detail::thin_heap< Value_Type, Cmp_Fn, _Alloc >

2.60.1 Detailed Description

2.61 Policy-Based Data Structures

Collaboration diagram for Policy-Based Data Structures:



Modules

- Containers
- Exceptions
- Tags
- Traits

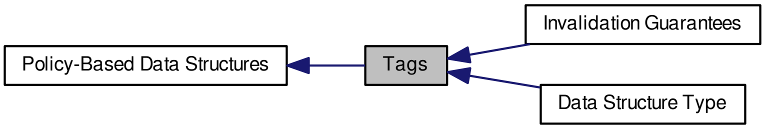
2.61.1 Detailed Description

This is a library of policy-based elementary data structures: associative containers and priority queues. It is designed for high-performance, flexibility, semantic safety, and conformance to the corresponding containers in std (except for some points where it differs by design).

For details, see: `http://gcc.gnu.org/onlinedocs/libstdc++/ext/pb_ds/index.html`

2.62 Tags

Collaboration diagram for Tags:



Modules

- Data Structure Type
- Invalidation Guarantees

Classes

- struct __gnu_pbds::trivial_iterator_tag

  A trivial iterator tag. Signifies that the iterators has none of std::iterators's movement abilities.

Typedefs

- typedef void __gnu_pbds::trivial_iterator_difference_type

2.62.1 Detailed Description

2.62.2 Typedef Documentation

2.62.2.1 typedef void __gnu_pbds::trivial_iterator_difference_type

Prohibit moving trivial iterators.

Definition at line 79 of file tag_and_trait.hpp.

2.63 Invalidation Guarantees

Collaboration diagram for Invalidation Guarantees:

Classes

- struct __gnu_pbds::basic_invalidation_guarantee
- struct __gnu_pbds::point_invalidation_guarantee
- struct __gnu_pbds::range_invalidation_guarantee

2.63.1 Detailed Description

2.64 Data Structure Type

Collaboration diagram for Data Structure Type:

Classes

- struct __gnu_pbds::associative_tag

    Basic associative-container.
- struct __gnu_pbds::basic_branch_tag

    Basic branch structure.
- struct __gnu_pbds::basic_hash_tag

    Basic hash structure.
- struct __gnu_pbds::binary_heap_tag

    Binary-heap (array-based).
- struct __gnu_pbds::binomial_heap_tag

    Binomial-heap.
- struct __gnu_pbds::cc_hash_tag

    Collision-chaining hash.
- struct __gnu_pbds::container_tag

    Base data structure tag.
- struct __gnu_pbds::gp_hash_tag

    General-probing hash.
- struct __gnu_pbds::list_update_tag

    List-update.
- struct __gnu_pbds::ov_tree_tag

    Ordered-vector tree.
- struct __gnu_pbds::pairing_heap_tag

    Pairing-heap.
- struct __gnu_pbds::pat_trie_tag

    PATRICIA trie.
- struct __gnu_pbds::priority_queue_tag

    Basic priority-queue.
- struct __gnu_pbds::rb_tree_tag

    Red-black tree.
- struct __gnu_pbds::rc_binomial_heap_tag

    Redundant-counter binomial-heap.
- struct __gnu_pbds::sequence_tag

    Basic sequence.

- struct __gnu_pbds::splay_tree_tag

  Splay tree.
- struct __gnu_pbds::string_tag

  Basic string container, inclusive of strings, ropes, etc.
- struct __gnu_pbds::thin_heap_tag

  Thin heap.
- struct __gnu_pbds::tree_tag

  Basic tree structure.
- struct __gnu_pbds::trie_tag

  Basic trie structure.

2.64.1 Detailed Description

2.65 Traits

Collaboration diagram for Traits:

Classes

- struct __gnu_pbds::container_traits< Cntnr >

  Container traits.
- struct __gnu_pbds::container_traits_base< binary_heap_tag >

  Specialization, binary heap.
- struct __gnu_pbds::container_traits_base< binomial_heap_tag >

  Specialization, binomial heap.
- struct __gnu_pbds::container_traits_base< cc_hash_tag >

  Specialization, cc hash.
- struct __gnu_pbds::container_traits_base< gp_hash_tag >

  Specialization, gp hash.
- struct __gnu_pbds::container_traits_base< list_update_tag >

  Specialization, list update.
- struct __gnu_pbds::container_traits_base< ov_tree_tag >

  Specialization, ov tree.
- struct __gnu_pbds::container_traits_base< pairing_heap_tag >

  Specialization, pairing heap.
- struct __gnu_pbds::container_traits_base< pat_trie_tag >

  Specialization, pat trie.
- struct __gnu_pbds::container_traits_base< rb_tree_tag >

  Specialization, rb tree.
- struct __gnu_pbds::container_traits_base< rc_binomial_heap_tag >

  Specialization, rc binomial heap.
- struct __gnu_pbds::container_traits_base< splay_tree_tag >

  Specialization, splay tree.
- struct __gnu_pbds::container_traits_base< thin_heap_tag >

  Specialization, thin heap.
- struct __gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >

  Binary search tree traits, primary template.
- struct __gnu_pbds::detail::bin_search_tree_traits< Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc >

  Specialization.
- struct __gnu_pbds::detail::no_throw_copies< Key, Mapped >

  Primary template.

- struct __gnu_pbds::detail::no_throw_copies< Key, null_type >

  Specialization.
- struct __gnu_pbds::detail::stored_data< _Tv, _Th >

  Primary template for representation of stored data. Two types of data can be stored: value and hash.
- struct __gnu_pbds::detail::stored_data< _Tv, null_type >

  Specialization for representation of stored data of just value type.
- struct __gnu_pbds::detail::stored_hash< _Th >

  Stored hash.
- struct __gnu_pbds::detail::stored_value< _Tv >

  Stored value.
- struct __gnu_pbds::detail::tree_metadata_helper< Node_Update, false >

  Specialization, false.
- struct __gnu_pbds::detail::tree_metadata_helper< Node_Update, true >

  Specialization, true.
- struct __gnu_pbds::detail::tree_node_metadata_dispatch< Key, Data, Cmp_Fn, Node_Update, _Alloc >

  Tree node metadata dispatch.
- struct __gnu_pbds::detail::tree_traits< Key, Mapped, Cmp_Fn, Node_Update, ov_tree_tag, _Alloc >

  Tree traits.
- struct __gnu_pbds::detail::tree_traits< Key, Mapped, Cmp_Fn, Node_Update, rb_tree_tag, _Alloc >

  Specialization.
- struct __gnu_pbds::detail::tree_traits< Key, Mapped, Cmp_Fn, Node_Update, splay_tree_tag, _Alloc >

  Specialization.
- struct __gnu_pbds::detail::tree_traits< Key, null_type, Cmp_Fn, Node_Update, ov_tree_tag, _Alloc >

  Specialization.
- struct __gnu_pbds::detail::tree_traits< Key, null_type, Cmp_Fn, Node_Update, rb_tree_tag, _Alloc >

  Specialization.
- struct __gnu_pbds::detail::tree_traits< Key, null_type, Cmp_Fn, Node_Update, splay_tree_tag, _Alloc >

  Specialization.
- struct __gnu_pbds::detail::trie_metadata_helper< Node_Update, false >

  Specialization, false.
- struct __gnu_pbds::detail::trie_metadata_helper< Node_Update, true >

  Specialization, true.
- struct __gnu_pbds::detail::trie_node_metadata_dispatch< Key, Data, Cmp_Fn, Node_Update, _Alloc >

  Trie node metadata dispatch.
- struct __gnu_pbds::detail::trie_traits< Key, Mapped, _ATraits, Node_Update, pat_trie_tag, _Alloc >

  Specialization.
- struct __gnu_pbds::detail::trie_traits< Key, null_type, _ATraits, Node_Update, pat_trie_tag, _Alloc >

  Specialization.
- struct __gnu_pbds::detail::type_base< Key, Mapped, _Alloc, false >
- struct __gnu_pbds::detail::type_base< Key, Mapped, _Alloc, true >
- struct __gnu_pbds::detail::type_base< Key, null_type, _Alloc, false >
- struct __gnu_pbds::detail::type_base< Key, null_type, _Alloc, true >
- struct __gnu_pbds::detail::type_dispatch< Key, Mapped, _Alloc, Store_Hash >

  Type base dispatch.
- struct __gnu_pbds::detail::types_traits< Key, Mapped, _Alloc, Store_Hash >

  Traits for abstract types.
- struct __gnu_pbds::null_node_update< _Tp1, _Tp2, _Tp3, _Tp4 >

A null node updator, indicating that no node updates are required.

- struct __gnu_pbds::null_type

  Represents no type, or absence of type, for template tricks.
- struct container_traits_base< _Tag >

  Primary template, container traits base.
- struct tree_metadata_helper< Node_Update, _BTp >

  Tree metadata helper.
- struct trie_metadata_helper< Node_Update, _BTp >

  Trie metadata helper.
- struct type_base< Key, Mapped, _Alloc, Store_Hash >

  Primary template.

Variables

- static null_type **__gnu_pbds::detail::type_base< Key, null_type, _Alloc, false >::s_null_type**
- static null_type **__gnu_pbds::detail::type_base< Key, null_type, _Alloc, true >::s_null_type**

2.65.1 Detailed Description

2.66 Random Number Generators

Collaboration diagram for Random Number Generators:

Classes

- class std::discard_block_engine< _RandomNumberEngine, __p, __r >
- class std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >
- class std::linear_congruential_engine< _UIntType, __a, __c, __m >

  A model of a linear congruential random number generator.
- class std::mersenne_twister_engine< _UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f >
- class std::random_device
- class std::shuffle_order_engine< _RandomNumberEngine, __k >

  Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits `__w`.

Typedefs

- typedef minstd_rand0 **std::default_random_engine**
- typedef shuffle_order_engine
  < minstd_rand0, 256 > **std::knuth_b**

2.66.1 Detailed Description

These classes define objects which provide random or pseudorandom numbers, either from a discrete or a continuous interval. The random number generator supplied as a part of this library are all uniform random number generators which provide a sequence of random number uniformly distributed over their range.

A number generator is a function object with an operator() that takes zero arguments and returns a number.

A compliant random number generator must satisfy the following requirements.

To be documented.

Table 273: Random Number Generator Requirements

2.66.2 Typedef Documentation

2.66.2.1 typedef linear_congruential_engine<uint_fast32_t, 48271UL, 0UL, 2147483647UL> std::minstd_rand

An alternative LCR (Lehmer Generator function).

Definition at line 1527 of file random.h.

2.66.2.2 typedef linear_congruential_engine<uint_fast32_t, 16807UL, 0UL, 2147483647UL> std::minstd_rand0

The classic Minimum Standard rand0 of Lewis, Goodman, and Miller.

Definition at line 1521 of file random.h.

2.66.2.3 typedef mersenne_twister_engine< uint_fast32_t, 32, 624, 397, 31, 0x9908b0dfUL, 11, 0xffffffffUL, 7, 0x9d2c5680UL, 15, 0xefc60000UL, 18, 1812433253UL> std::mt19937

The classic Mersenne Twister.

Reference: M. Matsumoto and T. Nishimura, Mersenne Twister: A 623-Dimensionally Equidistributed Uniform Pseudo--Random Number Generator, ACM Transactions on Modeling and Computer Simulation, Vol. 8, No. 1, January 1998, pp 3-30.

Definition at line 1543 of file random.h.

2.66.2.4 typedef mersenne_twister_engine< uint_fast64_t, 64, 312, 156, 31, 0xb5026f5aa96619e9ULL, 29, 0x5555555555555555ULL, 17, 0x71d67fffeda60000ULL, 37, 0xfff7eee000000000ULL, 43, 6364136223846793005ULL> std::mt19937_64

An alternative Mersenne Twister.

Definition at line 1555 of file random.h.

2.66.3 Function Documentation

2.66.3.1 template<typename _UIntType , _UIntType __a, _UIntType __c, _UIntType __m> bool std::operator!= (const **std::linear_congruential_engine**< _UIntType, __a, __c, __m > & *__lhs*, const **std::linear_congruential_engine**< _UIntType, __a, __c, __m > & *__rhs*) `[inline]`

Compares two linear congruential random number generator objects of the same type for inequality.

Parameters

__lhs	A linear congruential random number generator object.
__rhs	Another linear congruential random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 409 of file random.h.

2.66.3.2 template<typename _UIntType , size_t __w, size_t __n, size_t __m, size_t __r, _UIntType __a, size_t __u, _UIntType __d, size_t __s, _UIntType __b, size_t __t, _UIntType __c, size_t __l, _UIntType __f> bool std::operator!= (const **std::mersenne_twister_engine**< _UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f > & *__lhs*, const **std::mersenne_twister_engine**< _UIntType, __w, __n, __m, __r, __a, __u, __d, __s, __b, __t, __c, __l, __f > & *__rhs*) `[inline]`

Compares two % mersenne_twister_engine random number generator objects of the same type for inequality.

Parameters

__lhs	A % mersenne_twister_engine random number generator object.
__rhs	Another % mersenne_twister_engine random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 641 of file random.h.

2.66.3.3 template<typename _UIntType , size_t __w, size_t __s, size_t __r> bool std::operator!= (const std::subtract_with_carry_engine< _UIntType, __w, __s, __r > & *__lhs,* const std::subtract_with_carry_engine< _UIntType, __w, __s, __r > & *__rhs*) [inline]

Compares two % subtract_with_carry_engine random number generator objects of the same type for inequality.

Parameters

__lhs	A % subtract_with_carry_engine random number generator object.
__rhs	Another % subtract_with_carry_engine random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 840 of file random.h.

2.66.3.4 template<typename _RandomNumberEngine , size_t __p, size_t __r> bool std::operator!= (const std::discard_block_engine< _RandomNumberEngine, __p, __r > & *__lhs,* const std::discard_block_engine< _RandomNumberEngine, __p, __r > & *__rhs*) [inline]

Compares two discard_block_engine random number generator objects of the same type for inequality.

Parameters

__lhs	A discard_block_engine random number generator object.
__rhs	Another discard_block_engine random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1062 of file random.h.

2.66.3.5 template<typename _RandomNumberEngine , size_t __w, typename _UIntType > bool std::operator!= (const std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & *__lhs,* const std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & *__rhs*) [inline]

Compares two independent_bits_engine random number generator objects of the same type for inequality.

Parameters

__lhs	A independent_bits_engine random number generator object.
__rhs	Another independent_bits_engine random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1258 of file random.h.

2.66.3.6 template<typename _RandomNumberEngine , size_t __k> bool std::operator!= (const std::shuffle_order_engine< _RandomNumberEngine, __k > & *__lhs*, const std::shuffle_order_engine< _RandomNumberEngine, __k > & *__rhs*) [inline]

Compares two shuffle_order_engine random number generator objects of the same type for inequality.

Parameters

__lhs	A shuffle_order_engine random number generator object.
__rhs	Another shuffle_order_engine random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1510 of file random.h.

2.66.3.7 template<typename _RandomNumberEngine , size_t __w, typename _UIntType , typename _CharT , typename _Traits > std::basic_ostream<_CharT, _Traits>& std::operator<< (std::basic_ostream< _CharT, _Traits > & *__os*, const std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & *__x*)

Inserts the current state of a independent_bits_engine random number generator engine `__x` into the output stream `__os`.

Parameters

__os	An output stream.
__x	A independent_bits_engine random number generator engine.

Returns

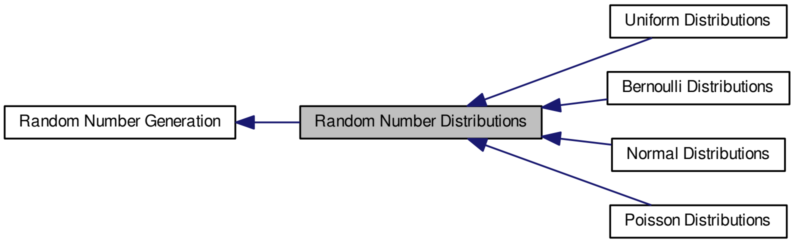
The output stream with the state of `__x` inserted or in an error state.

Definition at line 1277 of file random.h.

References std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::base().

2.67 Random Number Distributions

Collaboration diagram for Random Number Distributions:



Modules

- Bernoulli Distributions
- Normal Distributions
- Poisson Distributions
- Uniform Distributions

2.67.1 Detailed Description

2.68 Uniform Distributions

Collaboration diagram for Uniform Distributions:

Classes

- class std::uniform_int_distribution< _IntType >

  Uniform discrete distribution for random numbers. A discrete random distribution on the range $[min, max]$ *with equal probability throughout the range.*
- struct std::uniform_int_distribution< _IntType >::param_type
- class std::uniform_real_distribution< _RealType >

  Uniform continuous distribution for random numbers.
- struct std::uniform_real_distribution< _RealType >::param_type

Functions

- template<typename _IntType >
  bool std::operator!= (const std::uniform_int_distribution< _IntType > &__d1, const std::uniform_int_distribution< _IntType > &__d2)
- template<typename _IntType >
  bool std::operator!= (const std::uniform_real_distribution< _IntType > &__d1, const std::uniform_real_distribution< _IntType > &__d2)
- template<typename _IntType , typename _CharT , typename _Traits >
  std::basic_ostream< _CharT,
  _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > &, const std::uniform_int_distribution< _IntType > &)
- template<typename _RealType , typename _CharT , typename _Traits >
  std::basic_ostream< _CharT,
  _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > &, const std::uniform_real_distribution< _RealType > &)
- template<typename _IntType , typename _CharT , typename _Traits >
  std::basic_istream< _CharT,
  _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > &, std::uniform_int_distribution< _IntType > &)
- template<typename _RealType , typename _CharT , typename _Traits >
  std::basic_istream< _CharT,
  _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > &, std::uniform_real_distribution< _RealType > &)

2.68.1 Detailed Description

2.68.2 Function Documentation

2.68.2.1 template< typename _IntType > bool std::operator!= (const **std::uniform_int_distribution**< _IntType > & *__d1*, const **std::uniform_int_distribution**< _IntType > & *__d2*) `[inline]`

Return true if two uniform integer distributions have different parameters.

Definition at line 1825 of file random.h.

2.68.2.2 template< typename _IntType > bool std::operator!= (const **std::uniform_real_distribution**< _IntType > & *__d1*, const **std::uniform_real_distribution**< _IntType > & *__d2*) `[inline]`

Return true if two uniform real distributions have different parameters.

Definition at line 2034 of file random.h.

2.68.2.3 template< typename _IntType , typename _CharT , typename _Traits > **std::basic_ostream**< _CharT, _Traits > & std::operator<< (**std::basic_ostream**< _CharT, _Traits > & *__os*, const **std::uniform_int_distribution**< _IntType > & *__x*)

Inserts a uniform_int_distribution random number distribution ___`x` into the output stream `os`.

Parameters

__os	An output stream.
__x	A uniform_int_distribution random number distribution.

Returns

The output stream with the state of ___`x` inserted or in an error state.

Definition at line 1029 of file bits/random.tcc.

References std::ios_base::flags(), std::left(), and std::scientific().

2.68.2.4 template< typename _RealType , typename _CharT , typename _Traits > **std::basic_ostream**< _CharT, _Traits > & std::operator<< (**std::basic_ostream**< _CharT, _Traits > & *__os*, const **std::uniform_real_distribution**< _RealType > & *__x*)

Inserts a uniform_real_distribution random number distribution ___`x` into the output stream ___`os`.

Parameters

__os	An output stream.
__x	A uniform_real_distribution random number distribution.

Returns

The output stream with the state of ___`x` inserted or in an error state.

Definition at line 1088 of file bits/random.tcc.

References std::ios_base::flags(), std::left(), and std::scientific().

2.68.2.5 template<typename _IntType , typename _CharT , typename _Traits > std::basic_istream< _CharT, _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > & *__is,* std::uniform_int_distribution< _IntType > & *__x*)

Extracts a uniform_int_distribution random number distribution `__x` from the input stream `__is`.

Parameters

__is	An input stream.
__x	A uniform_int_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 1050 of file bits/random.tcc.

References std::dec(), std::ios_base::flags(), std::uniform_int_distribution< _IntType >::param(), and std::skipws().

2.68.2.6 template<typename _RealType , typename _CharT , typename _Traits > std::basic_istream< _CharT, _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > & *__is,* std::uniform_real_distribution< _RealType > & *__x*)

Extracts a uniform_real_distribution random number distribution `__x` from the input stream `__is`.

Parameters

__is	An input stream.
__x	A uniform_real_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 1112 of file bits/random.tcc.

References std::ios_base::flags(), std::uniform_real_distribution< _RealType >::param(), and std::skipws().

2.69 Normal Distributions

Collaboration diagram for Normal Distributions:

Classes

- class std::cauchy_distribution< _RealType >

    A cauchy_distribution random number distribution.
- struct std::cauchy_distribution< _RealType >::param_type
- class std::chi_squared_distribution< _RealType >

    A chi_squared_distribution random number distribution.
- struct std::chi_squared_distribution< _RealType >::param_type
- class std::fisher_f_distribution< _RealType >

    A fisher_f_distribution random number distribution.
- struct std::fisher_f_distribution< _RealType >::param_type
- class std::gamma_distribution< _RealType >

    A gamma continuous distribution for random numbers.
- struct std::gamma_distribution< _RealType >::param_type
- class std::lognormal_distribution< _RealType >

    A lognormal_distribution random number distribution.
- struct std::lognormal_distribution< _RealType >::param_type
- class std::normal_distribution< _RealType >

    A normal continuous distribution for random numbers.
- struct std::normal_distribution< _RealType >::param_type
- class std::student_t_distribution< _RealType >

    A student_t_distribution random number distribution.
- struct std::student_t_distribution< _RealType >::param_type

Functions

- template<typename _RealType >
  bool std::operator!= (const std::normal_distribution< _RealType > &__d1, const std::normal_distribution< _RealType > &__d2)
- template<typename _RealType >
  bool std::operator!= (const std::lognormal_distribution< _RealType > &__d1, const std::lognormal_distribution< _RealType > &__d2)
- template<typename _RealType >
  bool std::operator!= (const std::gamma_distribution< _RealType > &__d1, const std::gamma_distribution< _RealType > &__d2)

- template<typename _RealType >
  bool std::operator!= (const std::chi_squared_distribution< _RealType > &__d1, const std::chi_squared_distribution< _RealType > &__d2)
- template<typename _RealType >
  bool std::operator!= (const std::cauchy_distribution< _RealType > &__d1, const std::cauchy_distribution< _RealType > &__d2)
- template<typename _RealType >
  bool std::operator!= (const std::fisher_f_distribution< _RealType > &__d1, const std::fisher_f_distribution< _RealType > &__d2)
- template<typename _RealType >
  bool std::operator!= (const std::student_t_distribution< _RealType > &__d1, const std::student_t_distribution< _RealType > &__d2)
- template<typename _RealType , typename _CharT , typename _Traits >
  std::basic_ostream< _CharT,
  _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > &__os, const std::cauchy_distribution< _RealType > &__x)
- template<typename _RealType , typename _CharT , typename _Traits >
  std::basic_istream< _CharT,
  _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > &__is, std::cauchy_distribution< _RealType > &__x)

2.69.1 Detailed Description

2.69.2 Function Documentation

2.69.2.1 template<typename _RealType > bool std::operator!= (const **std::normal_distribution**< _RealType > & *__d1,* const **std::normal_distribution**< _RealType > & *__d2*) [inline]

Return true if two normal distributions are different.

Definition at line 2283 of file random.h.

2.69.2.2 template<typename _RealType > bool std::operator!= (const **std::lognormal_distribution**< _RealType > & *__d1,* const **std::lognormal_distribution**< _RealType > & *__d2*) [inline]

Return true if two lognormal distributions are different.

Definition at line 2487 of file random.h.

2.69.2.3 template<typename _RealType > bool std::operator!= (const **std::gamma_distribution**< _RealType > & *__d1,* const **std::gamma_distribution**< _RealType > & *__d2*) [inline]

Return true if two gamma distributions are different.

Definition at line 2707 of file random.h.

2.69.2.4 template<typename _RealType > bool std::operator!= (const **std::chi_squared_distribution**< _RealType > & *__d1,* const **std::chi_squared_distribution**< _RealType > & *__d2*) [inline]

Return true if two Chi-squared distributions are different.

Definition at line 2917 of file random.h.

2.69.2.5 template<typename _RealType > bool std::operator!= (const **std::cauchy_distribution**< _RealType > & *__d1,* const **std::cauchy_distribution**< _RealType > & *__d2*) [inline]

Return true if two Cauchy distributions have different parameters.

Definition at line 3084 of file random.h.

2.69.2.6 template< typename _RealType > bool std::operator!= (const **std::fisher_f_distribution**< _RealType > & *__d1*, const **std::fisher_f_distribution**< _RealType > & *__d2*) [inline]

Return true if two Fisher f distributions are diferent.

Definition at line 3340 of file random.h.

2.69.2.7 template< typename _RealType > bool std::operator!= (const **std::student_t_distribution**< _RealType > & *__d1*, const **std::student_t_distribution**< _RealType > & *__d2*) [inline]

Return true if two Student t distributions are different.

Definition at line 3553 of file random.h.

2.69.2.8 template< typename _RealType , typename _CharT , typename _Traits > **std::basic_ostream**< _CharT, _Traits > & std::operator<< (**std::basic_ostream**< _CharT, _Traits > & *__os*, const **std::cauchy_distribution**< _RealType > & *__x*)

Inserts a cauchy_distribution random number distribution `__x` into the output stream `__os`.

Parameters

__os	An output stream.
__x	A cauchy_distribution random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 2273 of file bits/random.tcc.

References std::ios_base::flags(), std::left(), and std::scientific().

2.69.2.9 template< typename _RealType , typename _CharT , typename _Traits > **std::basic_istream**< _CharT, _Traits > & std::operator>> (**std::basic_istream**< _CharT, _Traits > & *__is*, **std::cauchy_distribution**< _RealType > & *__x*)

Extracts a cauchy_distribution random number distribution `__x` from the input stream `__is`.

Parameters

__is	An input stream.
__x	A cauchy_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 2297 of file bits/random.tcc.

References std::dec(), std::ios_base::flags(), std::cauchy_distribution< _RealType >::param(), and std::skipws().

2.70 Bernoulli Distributions

Collaboration diagram for Bernoulli Distributions:

Classes

- class std::bernoulli_distribution

    A Bernoulli random number distribution.
- struct std::bernoulli_distribution::param_type
- class std::binomial_distribution< _IntType >

    A discrete binomial random number distribution.
- struct std::binomial_distribution< _IntType >::param_type
- class std::geometric_distribution< _IntType >

    A discrete geometric random number distribution.
- struct std::geometric_distribution< _IntType >::param_type
- class std::negative_binomial_distribution< _IntType >

    A negative_binomial_distribution random number distribution.
- struct std::negative_binomial_distribution< _IntType >::param_type

Functions

- bool std::operator!= (const std::bernoulli_distribution &__d1, const std::bernoulli_distribution &__d2)
- template<typename _IntType >
  bool std::operator!= (const std::binomial_distribution< _IntType > &__d1, const std::binomial_distribution< _IntType > &__d2)
- template<typename _IntType >
  bool std::operator!= (const std::geometric_distribution< _IntType > &__d1, const std::geometric_distribution< _IntType > &__d2)
- template<typename _IntType >
  bool std::operator!= (const std::negative_binomial_distribution< _IntType > &__d1, const std::negative_binomial_distribution< _IntType > &__d2)
- template<typename _CharT , typename _Traits >
  std::basic_ostream< _CharT,
  _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > &__os, const std::bernoulli_distribution &__x)
- template<typename _IntType , typename _CharT , typename _Traits >
  std::basic_ostream< _CharT,
  _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > &__os, const std::geometric_distribution< _IntType > &__x)

- template<typename _CharT , typename _Traits >
  std::basic_istream< _CharT,
  _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > &__is, std::bernoulli_distribution &__x)
- template<typename _IntType , typename _CharT , typename _Traits >
  std::basic_istream< _CharT,
  _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > &__is, std::geometric_distribution< _IntType > &__x)

2.70.1 Detailed Description

2.70.2 Function Documentation

2.70.2.1 bool std::operator!= (const **std::bernoulli_distribution** & *__d1*, const **std::bernoulli_distribution** & *__d2*) `[inline]`

Return true if two Bernoulli distributions have different parameters.

Definition at line 3729 of file random.h.

2.70.2.2 template<typename _IntType > bool std::operator!= (const **std::binomial_distribution**< _IntType > & *__d1*, const **std::binomial_distribution**< _IntType > & *__d2*) `[inline]`

Return true if two binomial distributions are different.

Definition at line 3994 of file random.h.

2.70.2.3 template<typename _IntType > bool std::operator!= (const **std::geometric_distribution**< _IntType > & *__d1*, const **std::geometric_distribution**< _IntType > & *__d2*) `[inline]`

Return true if two geometric distributions have different parameters.

Definition at line 4163 of file random.h.

2.70.2.4 template<typename _IntType > bool std::operator!= (const **std::negative_binomial_distribution**< _IntType > & *__d1*, const **std::negative_binomial_distribution**< _IntType > & *__d2*) `[inline]`

Return true if two negative binomial distributions are different.

Definition at line 4408 of file random.h.

2.70.2.5 template<typename _CharT , typename _Traits > **std::basic_ostream**< _CharT, _Traits > & std::operator<< (**std::basic_ostream**< _CharT, _Traits > & *__os*, const **std::bernoulli_distribution** & *__x*)

Inserts a bernoulli_distribution random number distribution `__x` into the output stream `__os`.

Parameters

__os	An output stream.
__x	A bernoulli_distribution random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1150 of file bits/random.tcc.

References std::ios_base::flags(), std::left(), and std::scientific().

2.70.2.6 template<typename _IntType , typename _CharT , typename _Traits > std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > & __os, const std::geometric_distribution< _IntType > & __x)

Inserts a geometric_distribution random number distribution `__x` into the output stream `__os`.

Parameters

__os	An output stream.
__x	A geometric_distribution random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1232 of file bits/random.tcc.

References std::ios_base::flags(), std::left(), and std::scientific().

2.70.2.7 template<typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& std::operator>> (std::basic_istream< _CharT, _Traits > & __is, std::bernoulli_distribution & __x)

Extracts a bernoulli_distribution random number distribution `__x` from the input stream `__is`.

Parameters

__is	An input stream.
__x	A bernoulli_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 3759 of file random.h.

References std::bernoulli_distribution::param().

2.70.2.8 template<typename _IntType , typename _CharT , typename _Traits > std::basic_istream< _CharT, _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > & __is, std::geometric_distribution< _IntType > & __x)

Extracts a geometric_distribution random number distribution `__x` from the input stream `__is`.

Parameters

__is	An input stream.
__x	A geometric_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 1256 of file bits/random.tcc.

References std::ios_base::flags(), std::geometric_distribution< _IntType >::param(), and std::skipws().

2.71 Poisson Distributions

Collaboration diagram for Poisson Distributions:

Classes

- class std::discrete_distribution< _IntType >

  A discrete_distribution random number distribution.
- struct std::discrete_distribution< _IntType >::param_type
- class std::exponential_distribution< _RealType >

  An exponential continuous distribution for random numbers.
- struct std::exponential_distribution< _RealType >::param_type
- class std::extreme_value_distribution< _RealType >

  A extreme_value_distribution random number distribution.
- struct std::extreme_value_distribution< _RealType >::param_type
- class std::piecewise_constant_distribution< _RealType >

  A piecewise_constant_distribution random number distribution.
- struct std::piecewise_constant_distribution< _RealType >::param_type
- class std::piecewise_linear_distribution< _RealType >

  A piecewise_linear_distribution random number distribution.
- struct std::piecewise_linear_distribution< _RealType >::param_type
- class std::poisson_distribution< _IntType >

  A discrete Poisson random number distribution.
- struct std::poisson_distribution< _IntType >::param_type
- class std::weibull_distribution< _RealType >

  A weibull_distribution random number distribution.
- struct std::weibull_distribution< _RealType >::param_type

Functions

- template<typename _IntType >
  bool std::operator!= (const std::poisson_distribution< _IntType > &__d1, const std::poisson_distribution< _IntType > &__d2)
- template<typename _RealType >
  bool std::operator!= (const std::exponential_distribution< _RealType > &__d1, const std::exponential_distribution< _RealType > &__d2)

2.71.1 Detailed Description

2.71.2 Function Documentation

2.71.2.1 template<typename _IntType > bool std::operator!= (const **std::poisson_distribution**< _IntType > & *__d1,* const **std::poisson_distribution**< _IntType > & *__d2*) [inline]

Return true if two Poisson distributions are different.

Definition at line 4624 of file random.h.

2.71.2.2 template<typename _RealType > bool std::operator!= (const **std::exponential_distribution**< _RealType > & *__d1,* const **std::exponential_distribution**< _RealType > & *__d2*) [inline]

Return true if two exponential distributions have different parameters.

Definition at line 4802 of file random.h.

2.71.2.3 template<typename _RealType > bool std::operator!= (const std::weibull_distribution< _RealType > & __d1, const std::weibull_distribution< _RealType > & __d2) [inline]

Return true if two Weibull distributions have different parameters.

Definition at line 5005 of file random.h.

2.71.2.4 template<typename _RealType > bool std::operator!= (const std::extreme_value_distribution< _RealType > & __d1, const std::extreme_value_distribution< _RealType > & __d2) [inline]

Return true if two extreme value distributions have different parameters.

Definition at line 5208 of file random.h.

2.71.2.5 template<typename _IntType > bool std::operator!= (const std::discrete_distribution< _IntType > & __d1, const std::discrete_distribution< _IntType > & __d2) [inline]

Return true if two discrete distributions have different parameters.

Definition at line 5468 of file random.h.

2.71.2.6 template<typename _RealType > bool std::operator!= (const std::piecewise_constant_distribution< _RealType > & __d1, const std::piecewise_constant_distribution< _RealType > & __d2) [inline]

Return true if two piecewise constant distributions have different parameters.

Definition at line 5735 of file random.h.

2.71.2.7 template<typename _RealType > bool std::operator!= (const std::piecewise_linear_distribution< _RealType > & __d1, const std::piecewise_linear_distribution< _RealType > & __d2) [inline]

Return true if two piecewise linear distributions have different parameters.

Definition at line 6005 of file random.h.

2.71.2.8 template<typename _RealType , typename _CharT , typename _Traits > std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > & __os, const std::exponential_distribution< _RealType > & __x)

Inserts a exponential_distribution random number distribution `__x` into the output stream `__os`.

Parameters

__os	An output stream.
__x	A exponential_distribution random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 1881 of file bits/random.tcc.

References std::ios_base::flags(), std::left(), and std::scientific().

2.71.2.9 template<typename _RealType , typename _CharT , typename _Traits > std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > & __os, const std::weibull_distribution< _RealType > & __x)

Inserts a weibull_distribution random number distribution `__x` into the output stream `__os`.

Parameters

__os	An output stream.
__x	A weibull_distribution random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 2672 of file bits/random.tcc.

References std::ios_base::flags(), std::left(), and std::scientific().

2.71.2.10 template< typename _RealType , typename _CharT , typename _Traits > std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > & *__os,* const std::extreme_value_distribution< _RealType > & *__x*)

Inserts a extreme_value_distribution random number distribution `__x` into the output stream `__os`.

Parameters

__os	An output stream.
__x	A extreme_value_distribution random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

Definition at line 2748 of file bits/random.tcc.

References std::ios_base::flags(), std::left(), and std::scientific().

2.71.2.11 template< typename _RealType , typename _CharT , typename _Traits > std::basic_istream< _CharT, _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > & *__is,* std::exponential_distribution< _RealType > & *__x*)

Extracts a exponential_distribution random number distribution `__x` from the input stream `__is`.

Parameters

__is	An input stream.
__x	A exponential_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 1904 of file bits/random.tcc.

References std::dec(), std::ios_base::flags(), std::exponential_distribution< _RealType >::param(), and std::skipws().

2.71.2.12 template< typename _RealType , typename _CharT , typename _Traits > std::basic_istream< _CharT, _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > & *__is,* std::weibull_distribution< _RealType > & *__x*)

Extracts a weibull_distribution random number distribution `__x` from the input stream `__is`.

Parameters

__is	An input stream.
__x	A weibull_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 2696 of file bits/random.tcc.

References std::dec(), std::ios_base::flags(), std::weibull_distribution< _RealType >::param(), and std::skipws().

2.71.2.13 template<typename _RealType , typename _CharT , typename _Traits > std::basic_istream< _CharT, _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > & *__is,* std::extreme_value_distribution< _RealType > & *__x*)

Extracts a extreme_value_distribution random number distribution `__x` from the input stream `__is`.

Parameters

__is	An input stream.
__x	A extreme_value_distribution random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

Definition at line 2772 of file bits/random.tcc.

References std::dec(), std::ios_base::flags(), std::extreme_value_distribution< _RealType >::param(), and std::skipws().

2.72 Random Number Utilities

Collaboration diagram for Random Number Utilities:

Classes

- class std::seed_seq

  The seed_seq class generates sequences of seeds for random number generators.

2.72.1 Detailed Description

3 Namespace Documentation

3.1 __gnu_cxx Namespace Reference

Namespaces

- namespace __detail
- namespace typelist

Classes

- struct __alloc_traits

  Uniform interface to C++98 and C++0x allocators.
- struct __common_pool_policy

  Policy for shared __pool objects.
- class __mt_alloc

  This is a fixed size (power of 2) allocator which - when compiled with thread support - will maintain one freelist per size per thread plus a global one. Steps are taken to limit the per thread freelist sizes (by returning excess back to the global list). Further details: `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt12ch32.html`.
- class __mt_alloc_base

  Base class for _Tp dependent member functions.
- struct __per_type_pool_policy

  Policy for individual __pool objects.
- class __pool< false >

  Specialization for single thread.
- class __pool< true >

  Specialization for thread enabled, via gthreads.h.
- class __pool_alloc

  Allocator using a memory pool with a single lock.
- class __pool_alloc_base

  Base class for __pool_alloc.
- struct __pool_base

  Base class for pool object.
- class __rc_string_base
- class __scoped_lock

  Scoped lock idiom.
- class __versa_string

  Template class __versa_string.
  Data structure managing sequences of characters and character-like objects.
- struct _Caster
- struct _Char_types

  Mapping from character type to associated types.
- class _ExtPtr_allocator

  An example allocator which uses a non-standard pointer type.
  This allocator specifies that containers use a 'relative pointer' as it's pointer type. (See ext/pointer.h) Memory allocation in this example is still performed using std::allocator.
- struct _Invalid_type
- class _Pointer_adapter
- class _Relative_pointer_impl

A storage policy for use with _Pointer_adapter<> which stores the pointer's address as an offset value which is relative to its own address.

- class _Relative_pointer_impl< const _Tp >
- class _Std_pointer_impl

  A storage policy for use with _Pointer_adapter<> which yields a standard pointer.
- struct _Unqualified_type
- struct annotate_base

  Base class for checking address and label information about allocations. Create a std::map between the allocated address (void∗) and a datum for annotations, which are a pair of numbers corresponding to label and allocated size.
- class array_allocator

  An allocator that uses previously allocated memory. This memory can be externally, globally, or otherwise allocated.
- class array_allocator_base

  Base class.
- class binary_compose

  An SGI extension .
- class bitmap_allocator

  Bitmap Allocator, primary template.
- struct char_traits

  Base class used to implement std::char_traits.
- struct character

  A POD class that serves as a character abstraction class.
- struct condition_base

  Base struct for condition policy.
- struct constant_binary_fun

  An SGI extension .
- struct constant_unary_fun

  An SGI extension .
- struct constant_void_fun

  An SGI extension .
- class debug_allocator

  A meta-allocator with debugging bits, as per [20.4].
  This is precisely the allocator defined in the C++ Standard.
- class enc_filebuf

  class enc_filebuf.
- struct encoding_char_traits

  encoding_char_traits
- class encoding_state

  Extension to use iconv for dealing with character encodings.
- struct forced_error

  Thown by exception safety machinery.
- class free_list

  The free list class for managing chunks of memory to be given to and returned by the bitmap_allocator.
- class hash_map
- class hash_multimap
- class hash_multiset
- class hash_set
- struct limit_condition

  Base class for incremental control and throw.

- class malloc_allocator

  An allocator that uses malloc.
  This is precisely the allocator defined in the C++ Standard.
- class new_allocator

  An allocator that uses global new, as per [20.4].
  This is precisely the allocator defined in the C++ Standard.
- struct project1st

  An SGI extension .
- struct project2nd

  An SGI extension .
- struct random_condition

  Base class for random probability control and throw.
- struct rb_tree
- class recursive_init_error

  Exception thrown by __cxa_guard_acquire.
  6.7[stmt.dcl]/4: If control re-enters the declaration (recursively) while the object is being initialized, the behavior is undefined.
- class rope
- struct select1st

  An SGI extension .
- struct select2nd

  An SGI extension .
- class slist
- class stdio_filebuf

  Provides a layer of compatibility for C/POSIX.
  This GNU extension provides extensions for working with standard C FILE∗'s and POSIX file descriptors. It must be instantiated by the user with the type of character used in the file stream, e.g., stdio_filebuf<char>.
- class stdio_sync_filebuf

  Provides a layer of compatibility for C.
  This GNU extension provides extensions for working with standard C FILE∗'s. It must be instantiated by the user with the type of character used in the file stream, e.g., stdio_filebuf<char>.
- class subtractive_rng
- struct temporary_buffer
- class throw_allocator_base

  Allocator class with logging and exception generation control. Intended to be used as an allocator_type in templatized code.
  Note: Deallocate not allowed to throw.
- struct throw_allocator_limit

  Allocator throwing via limit condition.
- struct throw_allocator_random

  Allocator throwing via random condition.
- struct throw_value_base

  Class with exception generation control. Intended to be used as a value_type in templatized code.
- struct throw_value_limit

  Type throwing via limit condition.
- struct throw_value_random

  Type throwing via random condition.
- class unary_compose

  An SGI extension .

3.1.1 Detailed Description

GNU extensions for public use.

3.1.2 Function Documentation

3.1.2.1 template<typename _ToType , typename _FromType > _ToType __gnu_cxx::__static_pointer_cast (const _FromType & *__arg*) [inline]

Casting operations for cases where _FromType is not a standard pointer. _ToType can be a standard or non-standard pointer. Given that _FromType is not a pointer, it must have a get() method that returns the standard pointer equivalent of the address it points to, and must have an element_type typedef which names the type it points to.

Definition at line 68 of file cast.h.

3.1.2.2 template<typename _ToType , typename _FromType > _ToType __gnu_cxx::__static_pointer_cast (_FromType * __arg) [inline]

Casting operations for cases where _FromType is a standard pointer. _ToType can be a standard or non-standard pointer.

Definition at line 96 of file cast.h.

3.1.2.3 size_t __gnu_cxx::_Bit_scan_forward (size_t __num) [inline]

Generic Version of the bsf instruction.

Definition at line 513 of file bitmap_allocator.h.

Referenced by __gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object().

3.1.2.4 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator!= (const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs) [inline]

Test difference of two strings.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs.compare*(*__rhs*) != 0. False otherwise.

Definition at line 2279 of file vstring.h.

3.1.2.5 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator!= (const _CharT * __lhs, const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs) [inline]

Test difference of C string and string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__rhs.compare*(*__lhs*) != 0. False otherwise.

Definition at line 2292 of file vstring.h.

3.1.2.6 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator!= (const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs, const _CharT * __rhs) [inline]

Test difference of string and C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs.compare*(*__rhs*) != 0. False otherwise.

Definition at line 2305 of file vstring.h.

3.1.2.7 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs,* const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*)

Concatenate two strings.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with value of *__lhs* followed by *__rhs*.

Definition at line 180 of file vstring.tcc.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::reserve(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

3.1.2.8 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ (const _CharT ∗ *__lhs,* const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*)

Concatenate C string and string.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with value of *__lhs* followed by *__rhs*.

Definition at line 193 of file vstring.tcc.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

3.1.2.9 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ (_CharT *__lhs,* const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*)

Concatenate character and string.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with *__lhs* followed by *__rhs*.

Definition at line 210 of file vstring.tcc.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::push_back(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::reserve(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

3.1.2.10 template< typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs*, const _CharT * *__rhs*)

Concatenate string and C string.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with *__lhs* followed by *__rhs*.

Definition at line 223 of file vstring.tcc.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

3.1.2.11 template< typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs*, _CharT *__rhs*)

Concatenate string and character.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with *__lhs* followed by *__rhs*.

Definition at line 240 of file vstring.tcc.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::push_back(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::reserve(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

3.1.2.12 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator< (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs*, const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*) `[inline]`

Test if string precedes string.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs* precedes *__rhs*. False otherwise.

Definition at line 2319 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.2.13 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator< (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs*, const _CharT ∗ *__rhs*) `[inline]`

Test if string precedes C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs* precedes *__rhs*. False otherwise.

Definition at line 2332 of file vstring.h.

3.1.2.14 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator< (const _CharT ∗ *__lhs*, const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*) `[inline]`

Test if C string precedes string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__lhs* precedes *__rhs*. False otherwise.

Definition at line 2345 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.2.15 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator<= (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs*, const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*) `[inline]`

Test if string doesn't follow string.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs* doesn't follow *__rhs.* False otherwise.

Definition at line 2399 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.2.16 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator<= (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs*, const _CharT * *__rhs*) `[inline]`

Test if string doesn't follow C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs* doesn't follow *__rhs.* False otherwise.

Definition at line 2412 of file vstring.h.

3.1.2.17 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator<= (const _CharT * *__lhs*, const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*) `[inline]`

Test if C string doesn't follow string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__lhs* doesn't follow *__rhs.* False otherwise.

Definition at line 2425 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.2.18 template< typename _Tp > bool __gnu_cxx::operator== (const _Pointer_adapter< _Tp > & *__lhs*, const _Pointer_adapter< _Tp > & *__rhs*) `[inline]`

Comparison operators for _Pointer_adapter defer to the base class' comparison operators, when possible.

Definition at line 529 of file pointer.h.

3.1.2.19 template< typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator== (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs*, const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*) `[inline]`

Test equivalence of two strings.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs.compare*(*__rhs*) == 0. False otherwise.

Definition at line 2228 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.2.20 template< typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator== (const _CharT * *__lhs*, const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*) `[inline]`

Test equivalence of C string and string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__rhs.compare*(*__lhs*) == 0. False otherwise.

Definition at line 2252 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.2.21 template< typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator== (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs*, const _CharT * *__rhs*) `[inline]`

Test equivalence of string and C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs.compare*(*__rhs*) == 0. False otherwise.

Definition at line 2265 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.2.22 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator> (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs*, const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*) [inline]

Test if string follows string.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs* follows *__rhs*. False otherwise.

Definition at line 2359 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.2.23 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator> (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs*, const _CharT ∗ *__rhs*) [inline]

Test if string follows C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs* follows *__rhs*. False otherwise.

Definition at line 2372 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.2.24 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator> (const _CharT ∗ *__lhs*, const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*) [inline]

Test if C string follows string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__lhs* follows *__rhs.* False otherwise.

Definition at line 2385 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.2.25 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator>= (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs,* const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*) [inline]

Test if string doesn't precede string.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs* doesn't precede *__rhs.* False otherwise.

Definition at line 2439 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.2.26 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator>= (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs,* const _CharT ∗ *__rhs*) [inline]

Test if string doesn't precede C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs* doesn't precede *__rhs.* False otherwise.

Definition at line 2452 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.2.27 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::operator>= (const _CharT ∗ *__lhs,* const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*) [inline]

Test if C string doesn't precede string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__lhs* doesn't precede *__rhs*. False otherwise.

Definition at line 2465 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.2.28 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> void __gnu_cxx::swap (__versa_string< _CharT, _Traits, _Alloc, _Base > & *__lhs*, __versa_string< _CharT, _Traits, _Alloc, _Base > & *__rhs*) `[inline]`

Swap contents of two strings.

Parameters

__lhs	First string.
__rhs	Second string.

Exchanges the contents of *__lhs* and *__rhs* in constant time.

Definition at line 2479 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::swap().

3.2 __gnu_cxx::__detail Namespace Reference

Classes

- class __mini_vector

  __mini_vector<> is a stripped down version of the full-fledged std::vector<>.
- class _Bitmap_counter

  The bitmap counter which acts as the bitmap manipulator, and manages the bit-manipulation functions and the searching and identification functions on the bit-map.
- class _Ffit_finder

  The class which acts as a predicate for applying the first-fit memory allocation policy for the bitmap allocator.

Enumerations

- enum { **_S_max_rope_depth** }
- enum { **bits_per_byte**, **bits_per_block** }
- enum **_Tag** { **_S_leaf**, **_S_concat**, **_S_substringfn**, **_S_function** }

Functions

- void __bit_allocate (size_t *__pbmap, size_t __pos) throw ()
- void __bit_free (size_t *__pbmap, size_t __pos) throw ()
- template<typename _ForwardIterator , typename _Tp , typename _Compare >
  _ForwardIterator **__lower_bound** (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__val, _Compare __comp)
- template<typename _AddrPair >
  size_t __num_bitmaps (_AddrPair __ap)
- template<typename _AddrPair >
  size_t __num_blocks (_AddrPair __ap)

3.2.1 Detailed Description

Implementation details not part of the namespace __gnu_cxx interface.

3.2.2 Function Documentation

3.2.2.1 void __gnu_cxx::__detail::__bit_allocate (size_t ∗ *__pbmap*, size_t *__pos*) throw () `[inline]`

Mark a memory address as allocated by re-setting the corresponding bit in the bit-map.

Definition at line 488 of file bitmap_allocator.h.

Referenced by __gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object().

3.2.2.2 void __gnu_cxx::__detail::__bit_free (size_t ∗ *__pbmap*, size_t *__pos*) throw () `[inline]`

Mark a memory address as free by setting the corresponding bit in the bit-map.

Definition at line 499 of file bitmap_allocator.h.

Referenced by __gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object().

3.2.2.3 template<typename _AddrPair > size_t __gnu_cxx::__detail::__num_bitmaps (_AddrPair *__ap*) `[inline]`

The number of Bit-maps pointed to by the address pair passed to the function.

Definition at line 276 of file bitmap_allocator.h.

References __num_blocks().

Referenced by __gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object(), and __gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object().

3.2.2.4 template<typename _AddrPair > size_t __gnu_cxx::__detail::__num_blocks (_AddrPair *__ap*) `[inline]`

The number of Blocks pointed to by the address pair passed to the function.

Definition at line 268 of file bitmap_allocator.h.

Referenced by __num_bitmaps().

3.3 __gnu_cxx::typelist Namespace Reference

Functions

- template<typename Fn , typename Typelist >
  void **apply** (Fn &, Typelist)
- template<typename Gn , typename Typelist >
  void apply_generator (Gn &, Typelist)
- template<typename Gn , typename TypelistT , typename TypelistV >
  void **apply_generator** (Gn &, TypelistT, TypelistV)
- template<typename Fn , typename Typelist >
  void **apply_generator** (Fn &fn, Typelist)
- template<typename Fn , typename TypelistT , typename TypelistV >
  void **apply_generator** (Fn &fn, TypelistT, TypelistV)

3.3.1 Detailed Description

GNU typelist extensions for public compile-time use.

3.3.2 Function Documentation

3.3.2.1 template<typename Gn , typename Typelist > void __gnu_cxx::typelist::apply_generator (Gn & , Typelist)

Apply all typelist types to generator functor.

3.4 __gnu_debug Namespace Reference

Classes

- class _After_nth_from
- struct _BeforeBeginHelper
- class _Equal_to
- class _Not_equal_to
- class _Safe_iterator

  Safe iterator wrapper.
- class _Safe_iterator_base

  Basic functionality for a safe iterator.
- class _Safe_local_iterator

  Safe iterator wrapper.
- class _Safe_local_iterator_base

  Basic functionality for a safe iterator.
- class _Safe_sequence

  Base class for constructing a safe sequence type that tracks iterators that reference it.
- class _Safe_sequence_base

  Base class that supports tracking of iterators that reference a sequence.
- class _Safe_unordered_container

  Base class for constructing a safe unordered container type that tracks iterators that reference it.
- class _Safe_unordered_container_base

  Base class that supports tracking of local iterators that reference an unordered container.
- class basic_string

  Class std::basic_string with safety/checking/debug instrumentation.

Typedefs

- typedef basic_string< char > **string**
- typedef basic_string< wchar_t > **wstring**

Enumerations

- enum **_Debug_msg_id** {

3.4.1 Detailed Description

GNU debug classes for public use.

3.4.2 Enumeration Type Documentation

3.4.2.1 enum __gnu_debug::_Distance_precision

The precision to which we can calculate the distance between two iterators.

Definition at line 70 of file safe_iterator.h.

3.4.3 Function Documentation

3.4.3.1 template<typename _Iterator > _Siter_base<_Iterator>::iterator_type __gnu_debug::__base (_Iterator *__it*) [inline]

Helper function to extract base iterator of random access safe iterator in order to reduce performance impact of debug mode. Limited to random access iterator because it is the only category for which it is possible to check for correct iterators order in the __valid_range function thanks to the < operator.

Definition at line 546 of file functions.h.

Referenced by __gnu_parallel::__for_each_template_random_access_workstealing(), __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_before_dereferenceable(), std::boolalpha(), std::dec(), std::fixed(), std::hex(), std::internal(), std::left(), std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), std::nouppercase(), std::oct(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

3.4.3.2 template<typename _Iterator > bool __gnu_debug::__check_dereferenceable (_Iterator &) `[inline]`

Assume that some arbitrary iterator is dereferenceable, because we can't prove that it isn't.

Definition at line 70 of file functions.h.

3.4.3.3 template<typename _Tp > bool __gnu_debug::__check_dereferenceable (const _Tp * *__ptr*) `[inline]`

Non-NULL pointers are dereferenceable.

Definition at line 76 of file functions.h.

3.4.3.4 template<typename _Iterator , typename _Sequence > bool __gnu_debug::__check_dereferenceable (const _Safe_iterator< _Iterator, _Sequence > & *__x*) `[inline]`

Safe iterators know if they are singular.

Definition at line 82 of file functions.h.

References __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_dereferenceable().

3.4.3.5 template<typename _Tp > bool __gnu_debug::__check_singular (const _Tp * *__ptr*) `[inline]`

Non-NULL pointers are nonsingular.

Definition at line 57 of file functions.h.

3.4.3.6 template<typename _Iterator , typename _Sequence > bool __gnu_debug::__check_singular (const _Safe_iterator< _Iterator, _Sequence > & *__x*) `[inline]`

Safe iterators know if they are singular.

Definition at line 63 of file functions.h.

References __gnu_debug::_Safe_iterator_base::_M_singular().

3.4.3.7 bool __gnu_debug::__check_singular_aux (const _Safe_iterator_base * *__x*) `[inline]`

Iterators that derive from _Safe_iterator_base but that aren't _Safe_iterators can be determined singular or non-singular via _Safe_iterator_base.

Definition at line 64 of file safe_iterator.h.

References __gnu_debug::_Safe_iterator_base::_M_singular().

3.4.3.8 template<typename _CharT , typename _Integer > const _CharT* __gnu_debug::__check_string (const _CharT * *__s*, const _Integer &__n *__attribute__(__unused__)*) `[inline]`

Checks that __s is non-NULL or __n == 0, and then returns __s.

Definition at line 168 of file functions.h.

3.4.3.9 template<typename _CharT > const _CharT* __gnu_debug::__check_string (const _CharT * *__s*) `[inline]`

Checks that __s is non-NULL and then returns __s.

Definition at line 180 of file functions.h.

3.4.3.10 template<typename _Iterator1 , typename _Iterator2 > std::pair<typename std::iterator_traits<_Iterator1>::difference_type, _Distance_precision> __gnu_debug::__get_distance (const _Iterator1 & *__lhs,* const _Iterator2 & *__rhs,* std::random_access_iterator_tag) [inline]

Determine the distance between two iterators with some known precision.

Definition at line 83 of file safe_iterator.h.

References std::make_pair().

3.4.3.11 template<typename _InputIterator > bool __gnu_debug::__valid_range (const _InputIterator & *__first,* const _InputIterator & *__last*) [inline]

Don't know what these iterators are, or if they are even iterators (we may get an integral type for InputIterator), so see if they are integral and pass them on to the next phase otherwise.

Definition at line 131 of file functions.h.

References __valid_range_aux().

3.4.3.12 template<typename _Iterator , typename _Sequence > bool __gnu_debug::__valid_range (const _Safe_iterator< _Iterator, _Sequence > & *__first,* const _Safe_iterator< _Iterator, _Sequence > & *__last*) [inline]

Safe iterators know how to check if they form a valid range.

Definition at line 140 of file functions.h.

3.4.3.13 template<typename _Iterator , typename _Sequence > bool __gnu_debug::__valid_range (const _Safe_local_iterator< _Iterator, _Sequence > & *__first,* const _Safe_local_iterator< _Iterator, _Sequence > & *__last*) [inline]

Safe local iterators know how to check if they form a valid range.

Definition at line 147 of file functions.h.

3.4.3.14 template<typename _Integral > bool __gnu_debug::__valid_range_aux (const _Integral & *,* const _Integral & *,* std::__true_type) [inline]

We say that integral types for a valid range, and defer to other routines to realize what to do with integral types instead of iterators.

Definition at line 111 of file functions.h.

Referenced by __valid_range().

3.4.3.15 template<typename _InputIterator > bool __gnu_debug::__valid_range_aux (const _InputIterator & *__first,* const _InputIterator & *__last,* std::__false_type) [inline]

We have iterators, so figure out what kind of iterators that are to see if we can check the range ahead of time.

Definition at line 119 of file functions.h.

References std::__iterator_category(), and __valid_range_aux2().

3.4.3.16 template<typename _RandomAccessIterator > bool __gnu_debug::__valid_range_aux2 (const _RandomAccessIterator & *__first,* const _RandomAccessIterator & *__last,* std::random_access_iterator_tag) [inline]

If the distance between two random access iterators is nonnegative, assume the range is valid.

Definition at line 90 of file functions.h.

Referenced by __valid_range_aux().

3.4.3.17 template<typename _InputIterator > bool __gnu_debug::__valid_range_aux2 (const _InputIterator & , const _InputIterator & , std::input_iterator_tag) [inline]

Can't test for a valid range with input iterators, because iteration may be destructive. So we just assume that the range is valid.

Definition at line 101 of file functions.h.

3.5 __gnu_internal Namespace Reference

3.5.1 Detailed Description

GNU implemenation details, not for public use or export. Used only when anonymous namespaces cannot be substituted.

3.6 __gnu_parallel Namespace Reference

Classes

- struct __accumulate_binop_reduct

  General reduction, using a binary operator.
- struct __accumulate_selector

  std::accumulate() selector.
- struct __adjacent_difference_selector

  Selector that returns the difference between two adjacent __elements.
- struct __adjacent_find_selector

  Test predicate on two adjacent elements.
- class __binder1st

  Similar to std::binder1st, but giving the argument types explicitly.
- class __binder2nd

  Similar to std::binder2nd, but giving the argument types explicitly.
- struct __count_if_selector

  std::count_if () selector.
- struct __count_selector

  std::count() selector.
- struct __fill_selector

  std::fill() selector.
- struct __find_first_of_selector

  Test predicate on several elements.
- struct __find_if_selector

  Test predicate on a single element, used for std::find() and std::find_if ().
- struct __for_each_selector

  std::for_each() selector.
- struct __generate_selector

  std::generate() selector.
- struct __generic_find_selector

  Base class of all __gnu_parallel::__find_template selectors.
- struct __generic_for_each_selector

Generic __selector for embarrassingly parallel functions.
- struct __identity_selector

  Selector that just returns the passed iterator.
- struct __inner_product_selector

  std::inner_product() selector.
- struct __max_element_reduct

  Reduction for finding the maximum element, using a comparator.
- struct __min_element_reduct

  Reduction for finding the maximum element, using a comparator.
- struct __mismatch_selector

  Test inverted predicate on a single element.
- struct __multiway_merge_3_variant_sentinel_switch

  Switch for 3-way merging with __sentinels turned off.
- struct __multiway_merge_3_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >

  Switch for 3-way merging with __sentinels turned on.
- struct __multiway_merge_4_variant_sentinel_switch

  Switch for 4-way merging with __sentinels turned off.
- struct __multiway_merge_4_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >

  Switch for 4-way merging with __sentinels turned on.
- struct __multiway_merge_k_variant_sentinel_switch

  Switch for k-way merging with __sentinels turned on.
- struct __multiway_merge_k_variant_sentinel_switch< false, __stable, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >

  Switch for k-way merging with __sentinels turned off.
- struct __replace_if_selector

  std::replace() selector.
- struct __replace_selector

  std::replace() selector.
- struct __transform1_selector

  std::transform() __selector, one input sequence variant.
- struct __transform2_selector

  std::transform() __selector, two input sequences variant.
- class __unary_negate

  Similar to std::unary_negate, but giving the argument types explicitly.
- struct _DRandomShufflingGlobalData

  Data known to every thread participating in __gnu_parallel::__parallel_random_shuffle().
- struct _DRSSorterPU

  Local data for a thread participating in __gnu_parallel::__parallel_random_shuffle().
- struct _DummyReduct

  Reduction function doing nothing.
- class _EqualFromLess

  Constructs predicate for equality from strict weak ordering predicate.
- struct _EqualTo

  Similar to std::equal_to, but allows two different types.
- class _GuardedIterator

_Iterator wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons.

- class _IteratorPair

  A pair of iterators. The usual iterator operations are applied to both child iterators.
- class _IteratorTriple

  A triple of iterators. The usual iterator operations are applied to all three child iterators.
- struct _Job

  One __job for a certain thread.
- struct _Less

  Similar to std::less, but allows two different types.
- class _Lexicographic

  Compare __a pair of types lexicographically, ascending.
- class _LexicographicReverse

  Compare __a pair of types lexicographically, descending.
- class _LoserTree

  Stable _LoserTree variant.
- class _LoserTree< false, _Tp, _Compare >

  Unstable _LoserTree variant.
- class _LoserTreeBase

  Guarded loser/tournament tree.
- class _LoserTreePointer

  Stable _LoserTree implementation.
- class _LoserTreePointer< false, _Tp, _Compare >

  Unstable _LoserTree implementation.
- class _LoserTreePointerBase

  Base class of _Loser Tree implementation using pointers.
- class _LoserTreePointerUnguarded

  Stable unguarded _LoserTree variant storing pointers.
- class _LoserTreePointerUnguarded< false, _Tp, _Compare >

  Unstable unguarded _LoserTree variant storing pointers.
- class _LoserTreePointerUnguardedBase

  Unguarded loser tree, keeping only pointers to the elements in the tree structure.
- struct _LoserTreeTraits

  Traits for determining whether the loser tree should use pointers or copies.
- class _LoserTreeUnguarded

  Stable implementation of unguarded _LoserTree.
- class _LoserTreeUnguarded< false, _Tp, _Compare >

  Non-Stable implementation of unguarded _LoserTree.
- class _LoserTreeUnguardedBase

  Base class for unguarded _LoserTree implementation.
- struct _Multiplies

  Similar to std::multiplies, but allows two different types.
- struct _Nothing

  Functor doing nothing.
- struct _Piece

  Subsequence description.
- struct _Plus

  Similar to std::plus, but allows two different types.

- struct _PMWMSSortingData

  Data accessed by all threads.
- class _PseudoSequence

  Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.
- class _PseudoSequenceIterator

  _Iterator associated with __gnu_parallel::_PseudoSequence. If features the usual random-access iterator functionality.
- struct _QSBThreadLocal

  Information local to one thread in the parallel quicksort run.
- class _RandomNumber

  Random number generator, based on the Mersenne twister.
- class _RestrictedBoundedConcurrentQueue

  Double-ended queue of bounded size, allowing lock-free atomic access. push_front() and pop_front() must not be called concurrently to each other, while pop_back() can be called concurrently at all times. `empty()`*,* `size()`*, and* `top()` *are intentionally not provided. Calling them would not make sense in a concurrent setting.*
- struct _SamplingSorter

  Stable sorting functor.
- struct _SamplingSorter< false, _RAIter, _StrictWeakOrdering >

  Non-__stable sorting functor.
- struct _Settings

  class _Settings Run-time settings for the parallel mode including all tunable parameters.
- struct _SplitConsistently

  Split consistently.
- struct _SplitConsistently< false, _RAIter, _Compare, _SortingPlacesIterator >

  Split by sampling.
- struct _SplitConsistently< true, _RAIter, _Compare, _SortingPlacesIterator >

  Split by exact splitting.
- struct balanced_quicksort_tag

  Forces parallel sorting using balanced quicksort at compile time.
- struct balanced_tag

  Recommends parallel execution using dynamic load-balancing at compile time.
- struct constant_size_blocks_tag

  Selects the constant block size variant for std::find().
- struct default_parallel_tag

  Recommends parallel execution using the default parallel algorithm.
- struct equal_split_tag

  Selects the equal splitting variant for std::find().
- struct exact_tag

  Forces parallel merging with exact splitting, at compile time.
- struct find_tag

  Base class for for std::find() variants.
- struct growing_blocks_tag

  Selects the growing block size variant for std::find().
- struct multiway_mergesort_exact_tag

  Forces parallel sorting using multiway mergesort with exact splitting at compile time.
- struct multiway_mergesort_sampling_tag

  Forces parallel sorting using multiway mergesort with splitting by sampling at compile time.
- struct multiway_mergesort_tag

Forces parallel sorting using multiway mergesort at compile time.

- struct omp_loop_static_tag

  Recommends parallel execution using OpenMP static load-balancing at compile time.
- struct omp_loop_tag

  Recommends parallel execution using OpenMP dynamic load-balancing at compile time.
- struct parallel_tag

  Recommends parallel execution at compile time, optionally using a user-specified number of threads.
- struct quicksort_tag

  Forces parallel sorting using unbalanced quicksort at compile time.
- struct sampling_tag

  Forces parallel merging with exact splitting, at compile time.
- struct sequential_tag

  Forces sequential execution at compile time.
- struct unbalanced_tag

  Recommends parallel execution using static load-balancing at compile time.

Typedefs

- typedef unsigned short _BinIndex
- typedef int64_t _CASable
- typedef uint64_t _SequenceIndex
- typedef uint16_t _ThreadIndex

Enumerations

Variables

- static const int _CASable_bits
- static const _CASable _CASable_mask

3.6.1 Detailed Description

GNU parallel code for public use.

3.6.2 Typedef Documentation

3.6.2.1 typedef unsigned short __gnu_parallel::_BinIndex

Type to hold the index of a bin.

Since many variables of this type are allocated, it should be chosen as small as possible.

Definition at line 47 of file random_shuffle.h.

3.6.2.2 typedef int64_t __gnu_parallel::_CASable

Longest compare-and-swappable integer type on this platform.

Definition at line 127 of file types.h.

3.6.2.3 typedef uint64_t __gnu_parallel::_SequenceIndex

Unsigned integer to index __elements. The total number of elements for each algorithm must fit into this type.

Definition at line 117 of file types.h.

3.6.2.4 typedef uint16_t __gnu_parallel::_ThreadIndex

Unsigned integer to index a thread number. The maximum thread number (for each processor) must fit into this type.

Definition at line 123 of file types.h.

3.6.3 Enumeration Type Documentation

3.6.3.1 enum __gnu_parallel::_AlgorithmStrategy

Strategies for run-time algorithm selection:

Definition at line 67 of file types.h.

3.6.3.2 enum __gnu_parallel::_FindAlgorithm

Find algorithms:

Definition at line 106 of file types.h.

3.6.3.3 enum __gnu_parallel::_MultiwayMergeAlgorithm

Merging algorithms:

Definition at line 85 of file types.h.

3.6.3.4 enum __gnu_parallel::_Parallelism

Run-time equivalents for the compile-time tags.

Enumerator:

sequential Not parallel.
parallel_unbalanced Parallel unbalanced (equal-sized chunks).
parallel_balanced Parallel balanced (work-stealing).
parallel_omp_loop Parallel with OpenMP dynamic load-balancing.
parallel_omp_loop_static Parallel with OpenMP static load-balancing.
parallel_taskqueue Parallel with OpenMP taskqueue construct.

Definition at line 44 of file types.h.

3.6.3.5 enum __gnu_parallel::_PartialSumAlgorithm

Partial sum algorithms: recursive, linear.

Definition at line 91 of file types.h.

3.6.3.6 enum __gnu_parallel::_SortAlgorithm

Sorting algorithms:

Definition at line 76 of file types.h.

3.6.3.7 enum __gnu_parallel::_SplittingAlgorithm

Sorting/merging algorithms: sampling, __exact.

Definition at line 98 of file types.h.

3.6.4 Function Documentation

3.6.4.1 template<typename _RAIter , typename _DifferenceTp > void __gnu_parallel::__calc_borders (_RAIter *__elements,* _DifferenceTp *__length,* _DifferenceTp * *__off*)

Precalculate __advances for Knuth-Morris-Pratt algorithm.

Parameters

__elements	Begin iterator of sequence to search for.
__length	Length of sequence to search for.
__off	Returned __offsets.

Definition at line 51 of file search.h.

Referenced by __search_template().

3.6.4.2 template<typename _Tp > bool __gnu_parallel::__compare_and_swap (volatile _Tp * *__ptr,* _Tp *__comparand,* _Tp *__replacement*) [inline]

Compare-and-swap.

Compare `*__ptr` and `__comparand`. If equal, let `*__ptr=__replacement` and return `true`, return `false` otherwise.

Parameters

__ptr	Pointer to signed integer.
__comparand	Compare value.
__replacement	Replacement value.

Definition at line 108 of file parallel/compatibility.h.

Referenced by __parallel_partition(), __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Piece >::pop_back(), and __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Piece >::pop_front().

3.6.4.3 void __gnu_parallel::__decode2 (_CASable *__x,* int & *__a,* int & *__b*) [inline]

Decode two integers from one gnu_parallel::_CASable.

Parameters

__x	__gnu_parallel::_CASable to decode integers from.
__a	First integer, to be decoded from the most-significant `_CASable_bits/2` bits of `__x`.
__b	Second integer, to be encoded in the least-significant `_CASable_bits/2` bits of `__x`.

See Also

__encode2

Definition at line 133 of file parallel/base.h.

References _CASable_bits, and _CASable_mask.

Referenced by __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Piece >::pop_back(), __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Piece >::pop_front(), and __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Piece >::push_front().

3.6.4.4 template<typename _RAIter , typename _DifferenceTp > void __gnu_parallel::__determine_samples (_PMWMSSortingData< _RAIter > * __sd, _DifferenceTp __num_samples)

Select _M_samples from a sequence.

Parameters

__sd	Pointer to algorithm data. _Result will be placed in `__sd->_M_samples`.
__num_samples	Number of _M_samples to select.

Definition at line 97 of file multiway_mergesort.h.

References __equally_split(), __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_samples, __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_source, and __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_starts.

3.6.4.5 _CASable __gnu_parallel::__encode2 (int __a, int __b) `[inline]`

Encode two integers into one gnu_parallel::_CASable.

Parameters

__a	First integer, to be encoded in the most-significant `_CASable_bits/2` bits.
__b	Second integer, to be encoded in the least-significant `_CASable_bits/2` bits.

Returns

value encoding `__a` and `__b`.

See Also

__decode2

Definition at line 119 of file parallel/base.h.

References _CASable_bits.

Referenced by __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Piece >::_RestrictedBoundedConcurrentQueue(), __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Piece >::pop_back(), __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Piece >::pop_front(), and __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Piece >::push_front().

3.6.4.6 template<typename _DifferenceType , typename _OutputIterator > _OutputIterator __gnu_parallel::__equally_split (_DifferenceType __n, _ThreadIndex __num_threads, _OutputIterator __s)

function to split a sequence into parts of almost equal size.

The resulting sequence __s of length __num_threads+1 contains the splitting positions when splitting the range [0,__n) into parts of almost equal size (plus minus 1). The first entry is 0, the last one n. There may result empty parts.

Parameters

__n	Number of elements
__num_threads	Number of parts
__s	Splitters

Returns

End of __splitter sequence, i.e. `__s+__num_threads+1`

Definition at line 48 of file equally_split.h.

Referenced by __determine_samples(), __find_template(), __parallel_partial_sum_linear(), __parallel_unique_copy(), __search_template(), and multiway_merge_exact_splitting().

3.6.4.7 template<typename _DifferenceType > _DifferenceType __gnu_parallel::__equally_split_point (_DifferenceType *__n*, _ThreadIndex *__num_threads*, _ThreadIndex *__thread_no*)

function to split a sequence into parts of almost equal size.

Returns the position of the splitting point between thread number __thread_no (included) and thread number __thread_no+1 (excluded).

Parameters

__n	Number of elements
__num_threads	Number of parts
__thread_no	Number of threads

Returns

splitting point

Definition at line 75 of file equally_split.h.

Referenced by __for_each_template_random_access_ed().

3.6.4.8 template<typename _Tp > _Tp __gnu_parallel::__fetch_and_add (volatile _Tp * *__ptr*, _Tp *__addend*) `[inline]`

Add a value to a variable, atomically.

Parameters

__ptr	Pointer to a signed integer.
__addend	Value to add.

Definition at line 74 of file parallel/compatibility.h.

Referenced by __parallel_partition(), and __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Piece >::push_front().

3.6.4.9 template<typename _RAIter1 , typename _RAIter2 , typename _Pred , typename _Selector > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_template (_RAIter1 *__begin1*, _RAIter1 *__end1*, _RAIter2 *__begin2*, _Pred *__pred*, _Selector *__selector*) `[inline]`

Parallel std::find, switch for different algorithms.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence. Must have same length as first sequence.
__pred	Find predicate.
__selector	_Functionality (e. g. std::find_if(), std::equal(),...)

Returns

Place of finding in both sequences.

Definition at line 60 of file find.h.

References __gnu_parallel::_Settings::get(), and std::make_pair().

3.6.4.10 template<typename _RAIter1 , typename _RAIter2 , typename _Pred , typename _Selector > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_template (_RAIter1 *__begin1,* _RAIter1 *__end1,* _RAIter2 *__begin2,* _Pred *__pred,* _Selector *__selector,* equal_split_tag)

Parallel std::find, equal splitting variant.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence. Second __sequence must have same length as first sequence.
__pred	Find predicate.
__selector	_Functionality (e. g. std::find_if(), std::equal(),...)

Returns

Place of finding in both sequences.

Definition at line 97 of file find.h.

References __equally_split(), and _GLIBCXX_CALL.

3.6.4.11 template<typename _RAIter1 , typename _RAIter2 , typename _Pred , typename _Selector > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_template (_RAIter1 *__begin1,* _RAIter1 *__end1,* _RAIter2 *__begin2,* _Pred *__pred,* _Selector *__selector,* growing_blocks_tag)

Parallel std::find, growing block size variant.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence. Second __sequence must have same length as first sequence.
__pred	Find predicate.
__selector	_Functionality (e. g. std::find_if(), std::equal(),...)

Returns

Place of finding in both sequences.

See Also

__gnu_parallel::_Settings::find_sequential_search_size
__gnu_parallel::_Settings::find_scale_factor

There are two main differences between the growing blocks and the constant-size blocks variants. 1. For GB, the block size grows; for CSB, the block size is fixed. 2. For GB, the blocks are allocated dynamically; for CSB, the blocks are allocated in a predetermined manner, namely spacial round-robin.

Definition at line 185 of file find.h.

References _GLIBCXX_CALL, __gnu_parallel::_Settings::find_scale_factor, __gnu_parallel::_Settings::find_sequential_search_size, and __gnu_parallel::_Settings::get().

3.6.4.12 template<typename _RAIter1 , typename _RAIter2 , typename _Pred , typename _Selector > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_template (_RAIter1 *__begin1,* _RAIter1 *__end1,* _RAIter2 *__begin2,* _Pred *__pred,* _Selector *__selector,* constant_size_blocks_tag)

Parallel std::find, constant block size variant.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence. Second __sequence must have same length as first sequence.
__pred	Find predicate.
__selector	_Functionality (e. g. std::find_if(), std::equal(),...)

Returns

Place of finding in both sequences.

See Also

__gnu_parallel::_Settings::find_sequential_search_size
__gnu_parallel::_Settings::find_block_size There are two main differences between the growing blocks and the constant-size blocks variants. 1. For GB, the block size grows; for CSB, the block size is fixed. 2. References _GLIBCXX_CALL, __gnu_parallel::_Settings::find_initial_block_size, __gnu_parallel::_Settings::find_sequential_search_size, and __gnu_parallel::_Settings::get().

3.6.4.13 template<typename _IIter , typename _UserOp , typename _Functionality , typename _Red , typename _Result > _UserOp __gnu_parallel::__for_each_template_random_access (_IIter *__begin,* _IIter *__end,* _UserOp *__user_op,* _Functionality & *__functionality,* _Red *__reduction,* _Result *__reduction_start,* _Result & *__output,* typename std::iterator_traits< _IIter >::difference_type *__bound,* _Parallelism *__parallelism_tag*)

Chose the desired algorithm by evaluating `__parallelism_tag`.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__user_op	A user-specified functor (comparator, predicate, associative operator,...)
__functionality	functor to *process* an element with __user_op (depends on desired functionality, e. g. accumulate, for_each,...
__reduction	Reduction functor.
__reduction_start	Initial value for reduction.
__output	Output iterator.
__bound	Maximum number of elements processed.
__parallelism_tag	Parallelization method

Definition at line 61 of file for_each.h.

References __for_each_template_random_access_ed(), __for_each_template_random_access_omp_loop(), __for_each_template_random_access_workstealing(), parallel_omp_loop, parallel_omp_loop_static, and parallel_unbalanced.

3.6.4.14 template<typename _RAIter , typename _Op , typename _Fu , typename _Red , typename _Result > _Op __gnu_parallel::__for_each_template_random_access_ed (_RAIter *__begin,* _RAIter *__end,* _Op *__o,* _Fu & *__f,* _Red *__r,* _Result *__base,* _Result & *__output,* typename std::iterator_traits< _RAIter >::difference_type *__bound*)

Embarrassingly parallel algorithm for random access iterators, using hand-crafted parallelization by equal splitting the work.

Parameters

__begin	Begin iterator of element sequence.
__end	End iterator of element sequence.
__o	User-supplied functor (comparator, predicate, adding functor, ...)
__f	Functor to "process" an element with __op (depends on desired functionality, e. g. for std::for_each(), ...).
__r	Functor to "add" a single __result to the already processed elements (depends on functionality).
__base	Base value for reduction.
__output	Pointer to position where final result is written to
__bound	Maximum number of elements processed (e. g. for std::count_n()).

Returns

User-supplied functor (that may contain a part of the result).

Definition at line 67 of file par_loop.h.

References __equally_split_point().

Referenced by __for_each_template_random_access().

3.6.4.15 template<typename _RAIter , typename _Op , typename _Fu , typename _Red , typename _Result > _Op __gnu_parallel::__for_each_template_random_access_omp_loop (_RAIter *__begin,* _RAIter *__end,* _Op *__o,* _Fu & *__f,* _Red *__r,* _Result *__base,* _Result & *__output,* typename std::iterator_traits< _RAIter >::difference_type *__bound*)

Embarrassingly parallel algorithm for random access iterators, using an OpenMP for loop.

Parameters

__begin	Begin iterator of element sequence.
__end	End iterator of element sequence.
__o	User-supplied functor (comparator, predicate, adding functor, etc.).
__f	Functor to *process* an element with __op (depends on desired functionality, e. g. for std::for_each(), ...).
__r	Functor to *add* a single __result to the already processed elements (depends on functionality).
__base	Base value for reduction.
__output	Pointer to position where final result is written to
__bound	Maximum number of elements processed (e. g. for std::count_n()).

Returns

User-supplied functor (that may contain a part of the result).

Definition at line 67 of file omp_loop.h.

Referenced by __for_each_template_random_access().

3.6.4.16 template<typename _RAIter , typename _Op , typename _Fu , typename _Red , typename _Result > _Op __gnu_parallel::__for_each_template_random_access_omp_loop_static (_RAIter *__begin,* _RAIter *__end,* _Op *__o,* _Fu & *__f,* _Red *__r,* _Result *__base,* _Result & *__output,* typename std::iterator_traits< _RAIter >::difference_type *__bound*)

Embarrassingly parallel algorithm for random access iterators, using an OpenMP for loop with static scheduling.

Parameters

__begin	Begin iterator of element sequence.
__end	End iterator of element sequence.
__o	User-supplied functor (comparator, predicate, adding functor, ...).
__f	Functor to *process* an element with __op (depends on desired functionality, e. g. for std::for_each(), ...).
__r	Functor to *add* a single __result to the already processed __elements (depends on functionality).
__base	Base value for reduction.
__output	Pointer to position where final result is written to
__bound	Maximum number of elements processed (e. g. for std::count_n()).

Returns

User-supplied functor (that may contain a part of the result).

Definition at line 66 of file omp_loop_static.h.

3.6.4.17 template<typename _RAIter , typename _Op , typename _Fu , typename _Red , typename _Result > _Op __gnu_parallel::__for_each_template_random_access_workstealing (_RAIter *__begin,* _RAIter *__end,* _Op *__op,* _Fu & *__f,* _Red *__r,* _Result *__base,* _Result & *__output,* typename std::iterator_traits< _RAIter >::difference_type *__bound*)

Work stealing algorithm for random access iterators.

Uses O(1) additional memory. Synchronization at job lists is done with atomic operations.

Parameters

__begin	Begin iterator of element sequence.
__end	End iterator of element sequence.
__op	User-supplied functor (comparator, predicate, adding functor, ...).
__f	Functor to *process* an element with __op (depends on desired functionality, e. g. for std::for_each(), ...).
__r	Functor to *add* a single __result to the already processed elements (depends on functionality).
__base	Base value for reduction.
__output	Pointer to position where final result is written to
__bound	Maximum number of elements processed (e. g. for std::count_n()).

Returns

User-supplied functor (that may contain a part of the result).

Definition at line 99 of file workstealing.h.

References __gnu_debug::__base(), __yield(), _GLIBCXX_CALL, __gnu_parallel::_Job< _DifferenceTp >::_M_first, __gnu_parallel::_Job< _DifferenceTp >::_M_last, __gnu_parallel::_Job< _DifferenceTp >::_M_load, __gnu_parallel::_Settings::cache_line_size, __gnu_parallel::_Settings::get(), and min().

Referenced by __for_each_template_random_access().

3.6.4.18 template<typename _IIter , typename _Compare > bool __gnu_parallel::__is_sorted (_IIter *__begin,* _IIter *__end,* _Compare *__comp*)

Check whether [__begin, `__end`) is sorted according to `__comp`.

Parameters

__begin	Begin iterator of sequence.
__end	End iterator of sequence.
__comp	Comparator.

Returns

`true` if sorted, `false` otherwise.

Definition at line 51 of file checkers.h.

Referenced by __sequential_multiway_merge(), multiway_merge_loser_tree_sentinel(), and parallel_multiway_merge().

3.6.4.19 template<typename _RAIter , typename _Compare > _RAIter __gnu_parallel::__median_of_three_iterators (_RAIter *__a,* _RAIter *__b,* _RAIter *__c,* _Compare *__comp*)

Compute the median of three referenced elements, according to `__comp`.

Parameters

__a	First iterator.
__b	Second iterator.
__c	Third iterator.
__comp	Comparator.

Definition at line 398 of file parallel/base.h.

Referenced by __qsb_divide().

3.6.4.20 template<typename _RAIter1 , typename _RAIter2 , typename _OutputIterator , typename _DifferenceTp , typename _Compare > _OutputIterator __gnu_parallel::__merge_advance (_RAIter1 & *__begin1,* _RAIter1 *__end1,* _RAIter2 & *__begin2,* _RAIter2 *__end2,* _OutputIterator *__target,* _DifferenceTp *__max_length,* _Compare *__comp*) `[inline]`

Merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant. Static switch on whether to use the conditional-move variant.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__end2	End iterator of second sequence.
__target	Target begin iterator.
__max_length	Maximum number of elements to merge.
__comp	Comparator.

Returns

Output end iterator.

Definition at line 171 of file merge.h.

References __merge_advance_movc(), and _GLIBCXX_CALL.

Referenced by __parallel_merge_advance(), and __sequential_multiway_merge().

3.6.4.21 template<typename _RAIter1 , typename _RAIter2 , typename _OutputIterator , typename _DifferenceTp , typename _Compare > _OutputIterator __gnu_parallel::__merge_advance_movc (_RAIter1 & *__begin1,* _RAIter1 *__end1,* _RAIter2 & *__begin2,* _RAIter2 *__end2,* _OutputIterator *__target,* _DifferenceTp *__max_length,* _Compare *__comp*)

Merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant. Specially designed code should allow the compiler to generate conditional moves instead of branches.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__end2	End iterator of second sequence.
__target	Target begin iterator.
__max_length	Maximum number of elements to merge.
__comp	Comparator.

Returns

Output end iterator.

Definition at line 105 of file merge.h.

Referenced by __merge_advance().

3.6.4.22 template<typename _RAIter1 , typename _RAIter2 , typename _OutputIterator , typename _DifferenceTp , typename _Compare > _OutputIterator __gnu_parallel::__merge_advance_usual (_RAIter1 & *__begin1,* _RAIter1 *__end1,* _RAIter2 & *__begin2,* _RAIter2 *__end2,* _OutputIterator *__target,* _DifferenceTp *__max_length,* _Compare *__comp*)

Merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__end2	End iterator of second sequence.
__target	Target begin iterator.
__max_length	Maximum number of elements to merge.
__comp	Comparator.

Returns

Output end iterator.

Definition at line 57 of file merge.h.

3.6.4.23 template< typename _RAIter1 , typename _RAIter2 , typename _RAIter3 , typename _Compare > _RAIter3 __gnu_parallel::__parallel_merge_advance (_RAIter1 & *__begin1,* _RAIter1 *__end1,* _RAIter2 & *__begin2,* _RAIter2 *__end2,* _RAIter3 *__target,* typename std::iterator_traits< _RAIter1 >::difference_type *__max_length,* _Compare *__comp*) `[inline]`

Merge routine fallback to sequential in case the iterators of the two input sequences are of different type.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__end2	End iterator of second sequence.
__target	Target begin iterator.
__max_length	Maximum number of elements to merge.
__comp	Comparator.

Returns

Output end iterator.

Definition at line 195 of file merge.h.

References __merge_advance().

3.6.4.24 template< typename _RAIter1 , typename _RAIter3 , typename _Compare > _RAIter3 __gnu_parallel::__parallel_merge_advance (_RAIter1 & *__begin1,* _RAIter1 *__end1,* _RAIter1 & *__begin2,* _RAIter1 *__end2,* _RAIter3 *__target,* typename std::iterator_traits< _RAIter1 >::difference_type *__max_length,* _Compare *__comp*) `[inline]`

Parallel merge routine being able to merge only the `__max_length` smallest elements.

The `__begin` iterators are advanced accordingly, they might not reach `__end`, in contrast to the usual variant. The functionality is projected onto parallel_multiway_merge.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__end2	End iterator of second sequence.

__target	Target begin iterator.
__max_length	Maximum number of elements to merge.
__comp	Comparator.

Returns

Output end iterator.

Definition at line 223 of file merge.h.

References std::make_pair(), multiway_merge_exact_splitting(), and parallel_multiway_merge().

3.6.4.25 template<typename _RAIter , typename _Compare > void __gnu_parallel::__parallel_nth_element (_RAIter *__begin,* _RAIter *__nth,* _RAIter *__end,* _Compare *__comp*)

Parallel implementation of std::nth_element().

Parameters

__begin	Begin iterator of input sequence.
__nth	_Iterator of element that must be in position afterwards.
__end	End iterator of input sequence.
__comp	Comparator.

Definition at line 332 of file partition.h.

References __parallel_partition(), _GLIBCXX_CALL, __gnu_parallel::_Settings::get(), std::max(), __gnu_parallel::_Settings::nth_element_minimal_n, and __gnu_parallel::_Settings::partition_minimal_n.

Referenced by __parallel_partial_sort().

3.6.4.26 template<typename _RAIter , typename _Compare > void __gnu_parallel::__parallel_partial_sort (_RAIter *__begin,* _RAIter *__middle,* _RAIter *__end,* _Compare *__comp*)

Parallel implementation of std::partial_sort().

Parameters

__begin	Begin iterator of input sequence.
__middle	Sort until this position.
__end	End iterator of input sequence.
__comp	Comparator.

Definition at line 422 of file partition.h.

References __parallel_nth_element().

3.6.4.27 template<typename _IIter , typename _OutputIterator , typename _BinaryOperation > _OutputIterator __gnu_parallel::__parallel_partial_sum (_IIter *__begin,* _IIter *__end,* _OutputIterator *__result,* _BinaryOperation *__bin_op*)

Parallel partial sum front-__end.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.

__result	Begin iterator of output sequence.
__bin_op	Associative binary function.

Returns

End iterator of output sequence.

Definition at line 205 of file partial_sum.h.

References __parallel_partial_sum_linear(), _GLIBCXX_CALL, and __gnu_parallel::_Settings::get().

3.6.4.28 template<typename _IIter , typename _OutputIterator , typename _BinaryOperation > _OutputIterator __gnu_parallel::__parallel_partial_sum_basecase (_IIter *__begin,* _IIter *__end,* _OutputIterator *__result,* _BinaryOperation *__bin_op,* typename std::iterator_traits< _IIter >::value_type *__value*)

Base case prefix sum routine.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__result	Begin iterator of output sequence.
__bin_op	Associative binary function.
__value	Start value. Must be passed since the neutral element is unknown in general.

Returns

End iterator of output sequence.

Definition at line 58 of file partial_sum.h.

Referenced by __parallel_partial_sum_linear().

3.6.4.29 template<typename _IIter , typename _OutputIterator , typename _BinaryOperation > _OutputIterator __gnu_parallel::__parallel_partial_sum_linear (_IIter *__begin,* _IIter *__end,* _OutputIterator *__result,* _BinaryOperation *__bin_op,* typename std::iterator_traits< _IIter >::difference_type *__n*)

Parallel partial sum implementation, two-phase approach, no recursion.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__result	Begin iterator of output sequence.
__bin_op	Associative binary function.
__n	Length of sequence.

Returns

End iterator of output sequence.

Definition at line 89 of file partial_sum.h.

Choose multiway mergesort, splitting variant at run-time, for parallel sorting.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__comp	Comparator.

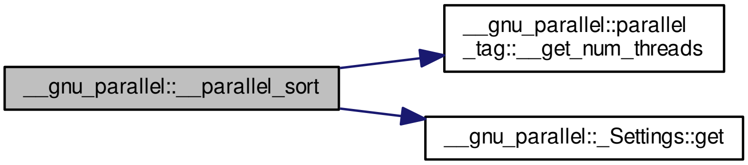
Template Parameters

__stable	Sort stable.

Definition at line 75 of file sort.h.

References __gnu_parallel::parallel_tag::__get_num_threads(), _GLIBCXX_CALL, and __gnu_parallel::_Settings::get().

Here is the call graph for this function:



3.6.4.35 template<bool __stable, typename _RAIter , typename _Compare > void __gnu_parallel::__parallel_sort (_RAIter *__begin*, _RAIter *__end*, _Compare *__comp*, multiway_mergesort_exact_tag *__parallelism*) [inline]

Choose multiway mergesort with exact splitting, for parallel sorting.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__comp	Comparator.

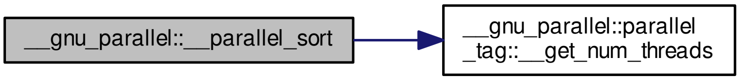
Template Parameters

__stable	Sort stable.

Definition at line 99 of file sort.h.

References __gnu_parallel::parallel_tag::__get_num_threads(), and _GLIBCXX_CALL.

Here is the call graph for this function:



3.6.4.36 template<bool __stable, typename _RAIter , typename _Compare > void __gnu_parallel::__parallel_sort (_RAIter *__begin*, _RAIter *__end*, _Compare *__comp*, multiway_mergesort_sampling_tag *__parallelism*) [inline]

Choose multiway mergesort with splitting by sampling, for parallel sorting.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__comp	Comparator.

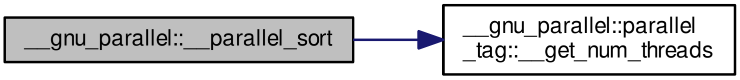
Template Parameters

__stable	Sort stable.

Definition at line 120 of file sort.h.

References __gnu_parallel::parallel_tag::__get_num_threads(), and _GLIBCXX_CALL.

Here is the call graph for this function:



3.6.4.37 template<bool __stable, typename _RAIter , typename _Compare > void __gnu_parallel::__parallel_sort (_RAIter *__begin*, _RAIter *__end*, _Compare *__comp*, quicksort_tag *__parallelism*) [inline]

Choose quicksort for parallel sorting.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__comp	Comparator.

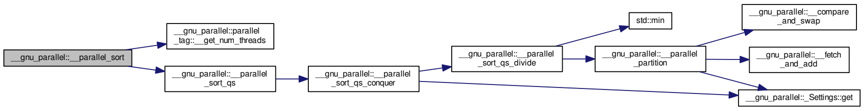
Template Parameters

__stable	Sort stable.

Definition at line 140 of file sort.h.

References __gnu_parallel::parallel_tag::__get_num_threads(), __parallel_sort_qs(), and _GLIBCXX_CALL.

Here is the call graph for this function:



3.6.4.38 template<bool __stable, typename _RAIter , typename _Compare > void __gnu_parallel::__parallel_sort (_RAIter *__begin,* _RAIter *__end,* _Compare *__comp,* balanced_quicksort_tag *__parallelism*) [inline]

Choose balanced quicksort for parallel sorting.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__comp	Comparator.

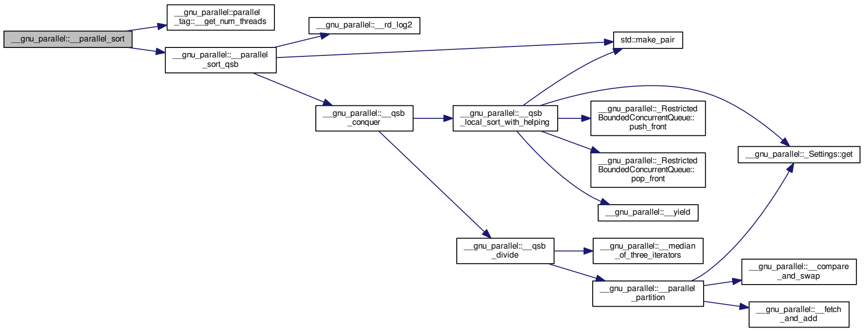
Template Parameters

__stable	Sort stable.

Definition at line 161 of file sort.h.

References __gnu_parallel::parallel_tag::__get_num_threads(), __parallel_sort_qsb(), and _GLIBCXX_CALL.

Here is the call graph for this function:



3.6.4.39 template<bool __stable, typename _RAIter , typename _Compare > void __gnu_parallel::__parallel_sort (_RAIter *__begin,* _RAIter *__end,* _Compare *__comp,* default_parallel_tag *__parallelism*) [inline]

Choose multiway mergesort with exact splitting, for parallel sorting.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__comp	Comparator.

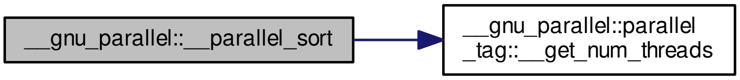
Template Parameters

__stable	Sort stable.

Definition at line 183 of file sort.h.

References __gnu_parallel::parallel_tag::__get_num_threads(), and _GLIBCXX_CALL.

Here is the call graph for this function:



3.6.4.40 template<bool __stable, typename _RAIter , typename _Compare > void __gnu_parallel::__parallel_sort (_RAIter *__begin*, _RAIter *__end*, _Compare *__comp*, parallel_tag *__parallelism*) [inline]

Choose a parallel sorting algorithm.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__comp	Comparator.

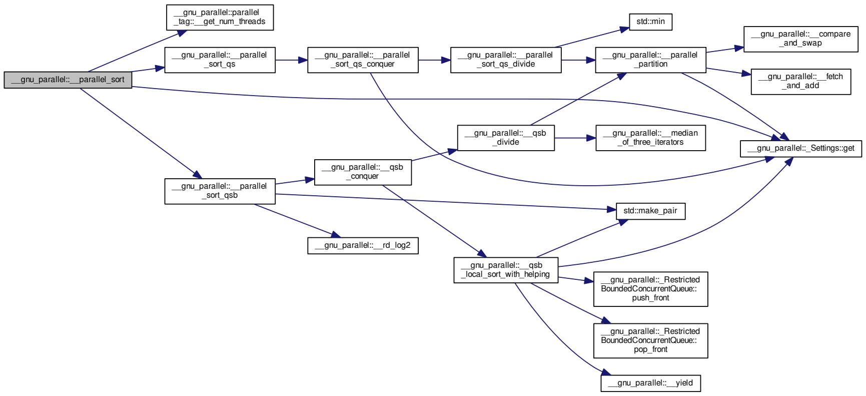
Template Parameters

__stable	Sort stable.

Definition at line 203 of file sort.h.

References __gnu_parallel::parallel_tag::__get_num_threads(), __parallel_sort_qs(), __parallel_sort_qsb(), _GLIBCXX_CALL, and __gnu_parallel::_Settings::get().

Here is the call graph for this function:



3.6.4.41 template<typename _RAIter , typename _Compare > void __gnu_parallel::__parallel_sort_qs (_RAIter *__begin*, _RAIter *__end*, _Compare *__comp*, _ThreadIndex *__num_threads*)

Unbalanced quicksort main call.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator input sequence, ignored.
__comp	Comparator.
__num_threads	Number of threads that are allowed to work on this part.

Definition at line 154 of file quicksort.h.

Parallel std::unique_copy(), w/__o explicit equality predicate.

Parameters

__first	Begin iterator of input sequence.
__last	End iterator of input sequence.
__result	Begin iterator of result __sequence.
__binary_pred	Equality predicate.

Returns

End iterator of result __sequence.

Definition at line 50 of file unique_copy.h.

References __equally_split(), and _GLIBCXX_CALL.

Referenced by __parallel_unique_copy().

3.6.4.46 template<typename _IIter , class _OutputIterator > _OutputIterator __gnu_parallel::__parallel_unique_copy (_IIter *__first*, _IIter *__last*, _OutputIterator *__result*) `[inline]`

Parallel std::unique_copy(), without explicit equality predicate.

Parameters

__first	Begin iterator of input sequence.
__last	End iterator of input sequence.
__result	Begin iterator of result __sequence.

Returns

End iterator of result __sequence.

Definition at line 186 of file unique_copy.h.

References __parallel_unique_copy().

3.6.4.47 template<typename _RAIter , typename _Compare > void __gnu_parallel::__qsb_conquer (_QSBThreadLocal< _RAIter > ** *__tls,* _RAIter *__begin,* _RAIter *__end,* _Compare *__comp,* _ThreadIndex *__iam,* _ThreadIndex *__num_threads,* bool *__parent_wait*)

Quicksort conquer step.

Parameters

__tls	Array of thread-local storages.
__begin	Begin iterator of subsequence.
__end	End iterator of subsequence.
__comp	Comparator.
__iam	Number of the thread processing this function.
__num_threads	Number of threads that are allowed to work on this part.

Quicksort step doing load-balanced local sort.

Parameters

__tls	Array of thread-local storages.
__comp	Comparator.
__iam	Number of the thread processing this function.

Definition at line 247 of file balanced_quicksort.h.

References __yield(), _GLIBCXX_ASSERTIONS, __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_elements_leftover, __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_initial, __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_leftover_parts, __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_num_threads, __gnu_parallel::_Settings::get(), std::make_pair(), __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_front(), __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::push_front(), and __gnu_parallel::_Settings::sort_qsb_base_case_maximal_n.

Referenced by __qsb_conquer().

3.6.4.50 template<typename _RandomNumberGenerator > int __gnu_parallel::__random_number_pow2 (int *__logp*, _RandomNumberGenerator & *__rng*) `[inline]`

Generate a random number in [0,2^__logp).

Parameters

__logp	Logarithm (basis 2) of the upper range __bound.
__rng	Random number generator to use.

Definition at line 115 of file random_shuffle.h.

Referenced by __parallel_random_shuffle_drs_pu(), and __sequential_random_shuffle().

3.6.4.51 template<typename _Size > _Size __gnu_parallel::__rd_log2 (_Size *__n*) `[inline]`

Calculates the rounded-down logarithm of `__n` for base 2.

Parameters

__n	Argument.

Returns

Returns 0 for any argument <1.

Definition at line 102 of file parallel/base.h.

Referenced by __parallel_random_shuffle_drs(), __parallel_sort_qsb(), __round_up_to_pow2(), __sequential_random_shuffle(), __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase(), multiseq_partition(), and multiseq_selection().

3.6.4.52 template<typename _Tp > _Tp __gnu_parallel::__round_up_to_pow2 (_Tp *__x*)

Round up to the next greater power of 2.

Parameters

__x	_Integer to round up

Definition at line 248 of file random_shuffle.h.

References __rd_log2().

Referenced by __parallel_random_shuffle_drs(), __sequential_random_shuffle(), and multiseq_selection().

3.6.4.53 template<typename __RAIter1 , typename __RAIter2 , typename _Pred > __RAIter1 __gnu_parallel::__search_template (__RAIter1 *__begin1,* __RAIter1 *__end1,* __RAIter2 *__begin2,* __RAIter2 *__end2,* _Pred *__pred*)

Parallel std::search.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__end2	End iterator of second sequence.
__pred	Find predicate.

Returns

Place of finding in first sequences.

Definition at line 81 of file search.h.

References __calc_borders(), __equally_split(), _GLIBCXX_CALL, and std::min().

3.6.4.54 template<bool __stable, bool __sentinels, typename _RAIterIterator , typename _RAIter3 , typename _DifferenceTp , typename _Compare > _RAIter3 __gnu_parallel::__sequential_multiway_merge (_RAIterIterator *__seqs_begin,* _RAIterIterator *__seqs_end,* _RAIter3 *__target,* const typename std::iterator_traits< typename std::iterator_traits< _RAIterIterator >::value_type::first_type >::value_type & *__sentinel,* _DifferenceTp *__length,* _Compare *__comp*)

Sequential multi-way merging switch.

The _GLIBCXX_PARALLEL_DECISION is based on the branching factor and runtime settings.

Parameters

__seqs_begin	Begin iterator of iterator pair input sequence.
__seqs_end	End iterator of iterator pair input sequence.
__target	Begin iterator of output sequence.
__comp	Comparator.
__length	Maximum length to merge, possibly larger than the number of elements available.
__sentinel	The sequences have __a __sentinel element.

Returns

End iterator of output sequence.

Definition at line 920 of file multiway_merge.h.

References __is_sorted(), __merge_advance(), _GLIBCXX_CALL, and _GLIBCXX_PARALLEL_LENGTH.

Referenced by multiway_merge(), and multiway_merge_sentinels().

3.6.4.55 template<typename _RAIter , typename _RandomNumberGenerator > void __gnu_parallel::__sequential_random_shuffle (_RAIter *__begin,* _RAIter *__end,* _RandomNumberGenerator & *__rng*)

Sequential cache-efficient random shuffle.

Parameters

__begin	Begin iterator of sequence.
__end	End iterator of sequence.
__rng	Random number generator to use.

Definition at line 410 of file random_shuffle.h.

References __random_number_pow2(), __rd_log2(), __round_up_to_pow2(), __gnu_parallel::_Settings::get(), __gnu_parallel::_Settings::L2_cache_size, std::min(), std::partial_sum(), and __gnu_parallel::_Settings::TLB_size.

3.6.4.56 template<typename _IIter > void __gnu_parallel::__shrink (std::vector< _IIter > & *__os_starts,* size_t & *__count_to_two,* size_t & *__range_length*)

Combines two ranges into one and thus halves the number of ranges.

Parameters

__os_starts	Start positions worked on (oversampled).
__count_to_two	Counts up to 2.
__range_length	Current length of a chunk.

Definition at line 70 of file list_partition.h.

References std::vector< _Tp, _Alloc >::size().

Referenced by __shrink_and_double().

3.6.4.57 template<typename _IIter > void __gnu_parallel::__shrink_and_double (std::vector< _IIter > & *__os_starts,* size_t & *__count_to_two,* size_t & *__range_length,* const bool *__make_twice*)

Shrinks and doubles the ranges.

Parameters

__os_starts	Start positions worked on (oversampled).
__count_to_two	Counts up to 2.
__range_length	Current length of a chunk.
__make_twice	Whether the `__os_starts` is allowed to be grown or not

Definition at line 50 of file list_partition.h.

References __shrink(), std::vector< _Tp, _Alloc >::resize(), and std::vector< _Tp, _Alloc >::size().

Referenced by list_partition().

3.6.4.58 void __gnu_parallel::__yield ( ) `[inline]`

Yield control to another thread, without waiting for the end of the time slice.

Definition at line 121 of file parallel/compatibility.h.

Referenced by __for_each_template_random_access_workstealing(), and __qsb_local_sort_with_helping().

3.6.4.59 template<typename _IIter , typename _FunctorType > size_t __gnu_parallel::list_partition (const _IIter *__begin,* const _IIter *__end,* _IIter * *__starts,* size_t * *__lengths,* const int *__num_parts,* _FunctorType & *__f,* int *__oversampling* = `0`)

Splits a sequence given by input iterators into parts of almost equal size.

The function needs only one pass over the sequence.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.

__starts	Start iterators for the resulting parts, dimension `__num_parts+1`. For convenience, `__starts` [__num_parts] contains the end iterator of the sequence.
__lengths	Length of the resulting parts.
__num_parts	Number of parts to split the sequence into.
__f	Functor to be applied to each element by traversing __it
__oversampling	Oversampling factor. If 0, then the partitions will differ in at most {{__end} - {__begin}} __elements. Otherwise, the ratio between the longest and the shortest part is bounded by 1/({__oversampling}{num})

Returns

Length of the whole sequence.

Definition at line 101 of file list_partition.h.

References __shrink_and_double(), and std::vector< _Tp, _Alloc >::size().

3.6.4.60 template<typename _Tp > const _Tp& __gnu_parallel::max (const _Tp & *__a,* const _Tp & *__b*) `[inline]`

Definition at line 150 of file parallel/base.h.

3.6.4.61 template<typename _Tp > const _Tp& __gnu_parallel::min (const _Tp & *__a,* const _Tp & *__b*) `[inline]`

Equivalent to std::min.

Definition at line 144 of file parallel/base.h.

Referenced by __for_each_template_random_access_workstealing().

3.6.4.62 template<typename _RanSeqs , typename _RankType , typename _RankIterator , typename _Compare > void __gnu_parallel::multiseq_partition (_RanSeqs *__begin_seqs,* _RanSeqs *__end_seqs,* _RankType *__rank,* _RankIterator *__begin_offsets,* _Compare *__comp* = std::less< `typename std::iterator_traits<typename std::iterator_traits<_RanSeqs>::value_type:: first_type>::value_type>()`)

Splits several sorted sequences at a certain global __rank, resulting in a splitting point for each sequence. The sequences are passed via a sequence of random-access iterator pairs, none of the sequences may be empty. If there are several equal elements across the split, the ones on the __left side will be chosen from sequences with smaller number.

Parameters

__begin_seqs	Begin of the sequence of iterator pairs.
__end_seqs	End of the sequence of iterator pairs.
__rank	The global rank to partition at.
__begin_offsets	A random-access __sequence __begin where the __result will be stored in. Each element of the sequence is an iterator that points to the first element on the greater part of the respective __sequence.
__comp	The ordering functor, defaults to std::less<_Tp>.

Definition at line 122 of file multiseq_selection.h.

References __rd_log2(), _GLIBCXX_CALL, std::vector< _Tp, _Alloc >::begin(), std::distance(), std::priority_queue< _Tp, _Sequence, _Compare >::empty(), std::vector< _Tp, _Alloc >::end(), std::make_pair(), std::max(), std::min(), std::priority_queue< _Tp, _Sequence, _Compare >::pop(), std::priority_queue< _Tp, _Sequence, _Compare >::push(), std::vector< _Tp, _Alloc >::push_back(), and std::priority_queue< _Tp, _Sequence, _Compare >::top().

3.6.4.63 template<typename _Tp , typename _RanSeqs , typename _RankType , typename _Compare > _Tp __gnu_parallel::multiseq_selection (_RanSeqs *__begin_seqs,* _RanSeqs *__end_seqs,* _RankType *__rank,* _RankType & *__offset,* _Compare *__comp =* std::less< _Tp >())

Selects the element at a certain global __rank from several sorted sequences.

The sequences are passed via a sequence of random-access iterator pairs, none of the sequences may be empty.

Parameters

__begin_seqs	Begin of the sequence of iterator pairs.
__end_seqs	End of the sequence of iterator pairs.
__rank	The global rank to partition at.
__offset	The rank of the selected element in the global subsequence of elements equal to the selected element. If the selected element is unique, this number is 0.
__comp	The ordering functor, defaults to std::less.

Definition at line 388 of file multiseq_selection.h.

3.6.4.64 template<typename _RAIterPairIterator , typename _RAIterOut , typename _DifferenceTp , typename _Compare > _RAIterOut __gnu_parallel::multiway_merge (_RAIterPairIterator *__seqs_begin,* _RAIterPairIterator *__seqs_end,* _RAIterOut *__target,* _DifferenceTp *__length,* _Compare *__comp,* __gnu_parallel::sequential_tag)

Multiway Merge Frontend.

Merge the sequences specified by seqs_begin and __seqs_end into __target. __seqs_begin and __seqs_end must point to a sequence of pairs. These pairs must contain an iterator to the beginning of a sequence in their first entry and an iterator the _M_end of the same sequence in their second entry.

Ties are broken arbitrarily. See stable_multiway_merge for a variant that breaks ties by sequence number but is slower.

The first entries of the pairs (i.e. the begin iterators) will be moved forward.

The output sequence has to provide enough space for all elements that are written to it.

This function will merge the input sequences:

- not stable
- parallel, depending on the input size and Settings
- using sampling for splitting
- not using sentinels

Example:

```
int sequences[10][10];
for (int __i = 0; __i < 10; ++__i)
  for (int __j = 0; __i < 10; ++__j)
    sequences[__i][__j] = __j;
```

```
int __out[33];
std::vector<std::pair<int*> > seqs;
for (int __i = 0; __i < 10; ++__i)
  { seqs.push(std::make_pair<int*>(sequences[__i],
                                   sequences[__i] + 10)) }

multiway_merge(seqs.begin(), seqs.end(), __target, std::less<int>(), 33);
```

See Also

stable_multiway_merge

Precondition

All input sequences must be sorted.
Target must provide enough space to merge out length elements or the number of elements in all sequences, whichever is smaller.

Postcondition

[__target, return __value) contains merged __elements from the input sequences.
return __value - __target = min(__length, number of elements in all sequences).

Template Parameters

_RAIterPairIterator	iterator over sequence of pairs of iterators
_RAIterOut	iterator over target sequence
_DifferenceTp	difference type for the sequence
_Compare	strict weak ordering type to compare elements in sequences

Parameters

__seqs_begin	__begin of sequence __sequence
__seqs_end	_M_end of sequence __sequence
__target	target sequence to merge to.
__comp	strict weak ordering to use for element comparison.
__length	Maximum length to merge, possibly larger than the number of elements available.

Returns

_M_end iterator of output sequence

Definition at line 1418 of file multiway_merge.h.

References __sequential_multiway_merge(), and _GLIBCXX_CALL.

3.6.4.65 template<template< typename RAI, typename C > class iterator, typename _RAIterIterator , typename _RAIter3 , typename _DifferenceTp , typename _Compare > _RAIter3 __gnu_parallel::multiway_merge_3_variant (_RAIterIterator *__seqs_begin,* _RAIterIterator *__seqs_end,* _RAIter3 *__target,* _DifferenceTp *__length,* _Compare *__comp*)

Highly efficient 3-way merging procedure.

Merging is done with the algorithm implementation described by Peter Sanders. Basically, the idea is to minimize the number of necessary comparison after merging an element. The implementation trick that makes this fast is that the order of the sequences is stored in the instruction pointer (translated into labels in C++).

This works well for merging up to 4 sequences.

Note that making the merging stable does *not* come at a performance hit.

Whether the merging is done guarded or unguarded is selected by the used iterator class.

Parameters

__seqs_begin	Begin iterator of iterator pair input sequence.
__seqs_end	End iterator of iterator pair input sequence.
__target	Begin iterator of output sequence.
__comp	Comparator.
__length	Maximum length to merge, less equal than the total number of elements available.

Returns

End iterator of output sequence.

Definition at line 241 of file multiway_merge.h.

References _GLIBCXX_CALL.

3.6.4.66 template<template< typename RAI, typename C > class iterator, typename _RAIterIterator , typename _RAIter3 , typename _DifferenceTp , typename _Compare > _RAIter3 __gnu_parallel::multiway_merge_4_variant (_RAIterIterator *__seqs_begin,* _RAIterIterator *__seqs_end,* _RAIter3 *__target,* _DifferenceTp *__length,* _Compare *__comp*)

Highly efficient 4-way merging procedure.

Merging is done with the algorithm implementation described by Peter Sanders. Basically, the idea is to minimize the number of necessary comparison after merging an element. The implementation trick that makes this fast is that the order of the sequences is stored in the instruction pointer (translated into goto labels in C++).

This works well for merging up to 4 sequences.

Note that making the merging stable does *not* come at a performance hit.

Whether the merging is done guarded or unguarded is selected by the used iterator class.

Parameters

__seqs_begin	Begin iterator of iterator pair input sequence.
__seqs_end	End iterator of iterator pair input sequence.
__target	Begin iterator of output sequence.
__comp	Comparator.
__length	Maximum length to merge, less equal than the total number of elements available.

Returns

End iterator of output sequence.

Definition at line 360 of file multiway_merge.h.

Definition at line 491 of file multiway_merge.h.

References _GLIBCXX_CALL, and _GLIBCXX_PARALLEL_LENGTH.

3.6.4.69 template<typename UnguardedLoserTree , typename _RAIterIterator , typename _RAIter3 , typename _DifferenceTp , typename _Compare > _RAIter3 __gnu_parallel::multiway_merge_loser_tree_sentinel (_RAIterIterator *__seqs_begin,* _RAIterIterator *__seqs_end,* _RAIter3 *__target,* const typename std::iterator_traits< typename std::iterator_traits< _RAIterIterator >::value_type::first_type >::value_type & *__sentinel,* _DifferenceTp *__length,* _Compare *__comp*)

Multi-way merging procedure for a high branching factor, requiring sentinels to exist.

Template Parameters

UnguardedLoserTree	_Loser Tree variant to use for the unguarded merging.

Parameters

__seqs_begin	Begin iterator of iterator pair input sequence.
__seqs_end	End iterator of iterator pair input sequence.
__target	Begin iterator of output sequence.
__comp	Comparator.
__length	Maximum length to merge, less equal than the total number of elements available.

Returns

End iterator of output sequence.

Definition at line 662 of file multiway_merge.h.

References __is_sorted(), and _GLIBCXX_CALL.

3.6.4.70 template<typename _LT , typename _RAIterIterator , typename _RAIter3 , typename _DifferenceTp , typename _Compare > _RAIter3 __gnu_parallel::multiway_merge_loser_tree_unguarded (_RAIterIterator *__seqs_begin*, _RAIterIterator *__seqs_end*, _RAIter3 *__target*, const typename std::iterator_traits< typename std::iterator_traits< _RAIterIterator >::value_type::first_type >::value_type & *__sentinel*, _DifferenceTp *__length*, _Compare *__comp*)

Multi-way merging procedure for a high branching factor, unguarded case.

Merging is done using the LoserTree class `_LT`.

Stability is selected by the used LoserTrees.

Precondition

No input will run out of elements during the merge.

Parameters

__seqs_begin	Begin iterator of iterator pair input sequence.
__seqs_end	End iterator of iterator pair input sequence.
__target	Begin iterator of output sequence.
__comp	Comparator.
__length	Maximum length to merge, less equal than the total number of elements available.

Returns

End iterator of output sequence.

Definition at line 574 of file multiway_merge.h.

References _GLIBCXX_CALL.

3.6.4.71 template<bool __stable, typename _RAIterIterator , typename _Compare , typename _DifferenceType > void __gnu_parallel::multiway_merge_sampling_splitting (_RAIterIterator *__seqs_begin*, _RAIterIterator *__seqs_end*, _DifferenceType *__length*, _DifferenceType *__total_length*, _Compare *__comp*, std::vector< std::pair< _DifferenceType, _DifferenceType > > ∗ *__pieces*)

Sampling based splitting for parallel multiway-merge routine.

Definition at line 1035 of file multiway_merge.h.

References _GLIBCXX_PARALLEL_LENGTH, __gnu_parallel::_Settings::get(), and __gnu_parallel::_Settings::merge_oversampling.

3.6.4.72 template<typename _RAIterPairIterator , typename _RAIterOut , typename _DifferenceTp , typename _Compare > _RAIterOut __gnu_parallel::multiway_merge_sentinels (_RAIterPairIterator *__seqs_begin,* _RAIterPairIterator *__seqs_end,* _RAIterOut *__target,* _DifferenceTp *__length,* _Compare *__comp,* __gnu_parallel::sequential_tag)

Multiway Merge Frontend.

Merge the sequences specified by seqs_begin and __seqs_end into __target. __seqs_begin and __seqs_end must point to a sequence of pairs. These pairs must contain an iterator to the beginning of a sequence in their first entry and an iterator the _M_end of the same sequence in their second entry.

Ties are broken arbitrarily. See stable_multiway_merge for a variant that breaks ties by sequence number but is slower.

The first entries of the pairs (i.e. the begin iterators) will be moved forward accordingly.

The output sequence has to provide enough space for all elements that are written to it.

This function will merge the input sequences:

- not stable
- parallel, depending on the input size and Settings
- using sampling for splitting
- using sentinels

You have to take care that the element the _M_end iterator points to is readable and contains a value that is greater than any other non-sentinel value in all sequences.

Example:

```
int sequences[10][11];
for (int __i = 0; __i < 10; ++__i)
  for (int __j = 0; __i < 11; ++__j)
    sequences[__i][__j] = __j; // __last one is sentinel!

int __out[33];
std::vector<std::pair<int*> > seqs;
for (int __i = 0; __i < 10; ++__i)
  { seqs.push(std::make_pair<int*>(sequences[__i],
                                   sequences[__i] + 10)) }

multiway_merge(seqs.begin(), seqs.end(), __target, std::less<int>(), 33);
```

Precondition

All input sequences must be sorted.
Target must provide enough space to merge out length elements or the number of elements in all sequences, whichever is smaller.
For each `__i`, `__seqs_begin`[__i].second must be the end marker of the sequence, but also reference the one more __sentinel element.

Postcondition

[__target, return __value) contains merged __elements from the input sequences.
return __value - __target = min(__length, number of elements in all sequences).

- class __vector2list_info

  A vector-to-list instrumentation line in the object table.
- class __vector2list_stack_info

  A vector-to-list instrumentation line in the stack table.
- struct __warning_data

  Representation of a warning.

Typedefs

- typedef std::::vector
  < __cost_factor ∗ > **__cost_factor_vector**
- typedef std::::unordered_map
  < std::string, std::string > __env_t
- typedef void ∗ **__instruction_address_t**

- **_GLIBCXX_PROFILE_DEFINE_UNINIT_DATA** (__env_t, __env)
- _GLIBCXX_PROFILE_DEFINE_UNINIT_DATA (__gnu_cxx::__mutex, __global_lock)

3.8.1 Detailed Description

GNU profile code for public use.

3.8.2 Typedef Documentation

3.8.2.1 typedef std:: ::unordered_map<std::string, std::string> __gnu_profile::__env_t

Internal environment. Values can be set one of two ways: 1. In config file "var = value". The default config file path is libstdcxx-profile.conf. 2. By setting process environment variables. For instance, in a Bash shell you can set the unit cost of iterating through a map like this: export __map_iterate_cost_factor=5.0. If a value is set both in the input file and through an environment variable, the environment value takes precedence.

Definition at line 65 of file profiler_trace.h.

3.8.3 Function Documentation

3.8.3.1 bool __gnu_profile::__profcxx_init ( ) [inline]

This function must be called by each instrumentation point.

The common path is inlined fully.

Definition at line 649 of file profiler_trace.h.

3.8.3.2 void __gnu_profile::__report (void) [inline]

Final report method, registered with **atexit**.

This can also be called directly by user code, including signal handlers. It is protected against deadlocks by the reentrance guard in profiler.h. However, when called from a signal handler that triggers while within __gnu_profile (under the guarded zone), no output will be produced.

Definition at line 440 of file profiler_trace.h.

References std::min().

3.8.3.3 __gnu_profile::_GLIBCXX_PROFILE_DEFINE_UNINIT_DATA (__gnu_cxx::__mutex , __global_lock)

Master lock.

3.9 __gnu_sequential Namespace Reference

3.9.1 Detailed Description

GNU sequential classes for public use.

3.10 abi Namespace Reference

3.10.1 Detailed Description

The cross-vendor C++ Application Binary Interface. A namespace alias to __cxxabiv1, but user programs should use the alias 'abi'. A brief overview of an ABI is given in the libstdc++ FAQ, question 5.8 (you may have a copy of the FAQ locally, or you can view the online version at `http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#5_8`).

GCC subscribes to a cross-vendor ABI for C++, sometimes called the IA64 ABI because it happens to be the native ABI for that platform. It is summarized at `http://www.codesourcery.com/cxx-abi/` along with the current specification.

For users of GCC greater than or equal to 3.x, entry points are available in <cxxabi.h>, which notes, *'It is not normally necessary for user programs to include this header, or use the entry points directly. However, this header is available should that be needed.'*

3.11 std Namespace Reference

Namespaces

- namespace __debug
- namespace __detail
- namespace __parallel

- namespace __profile
- namespace chrono
- namespace decimal
- namespace placeholders
- namespace regex_constants
- namespace rel_ops
- namespace this_thread
- namespace tr1
- namespace tr2

Classes

- struct __atomic_base

  Base class for atomic integrals.
- struct __atomic_base< _PTp * >

  Partial specialization for pointer types.
- struct __atomic_flag_base

  Base type for atomic_flag.
- class __codecvt_abstract_base

  Common base for codecvt functions.
- class __ctype_abstract_base

  Common base for ctype facet.
- class __has_iterator_category_helper

  Traits class for iterators.
- struct __is_location_invariant
- struct __numeric_limits_base

  Part of std::numeric_limits.
- struct _Base_bitset
- struct _Base_bitset< 0 >
- struct _Base_bitset< 1 >
- class _Deque_base
- struct _Deque_iterator

  A deque::iterator.
- struct _Derives_from_binary_function

  Determines if the type _Tp derives from binary_function.
- struct _Derives_from_unary_function

  Determines if the type _Tp derives from unary_function.
- class _Function_base

  Base class of all polymorphic function object wrappers.
- struct _Fwd_list_base

  Base class for forward_list.
- struct _Fwd_list_const_iterator

  A forward_list::const_iterator.
- struct _Fwd_list_iterator

  A forward_list::iterator.
- struct _Fwd_list_node

  A helper node class for forward_list. This is just a linked list with uninitialized storage for a data value in each node. There is a sorting utility method.

- struct _Fwd_list_node_base

  A helper basic node class for forward_list. This is just a linked list with nothing inside it. There are purely list shuffling utility methods here.
- class _Hashtable
- class _List_base

  See bits/stl_deque.h's _Deque_base for an explanation.
- struct _List_const_iterator

  A list::const_iterator.
- struct _List_iterator

  A list::iterator.
- struct _List_node

  An actual node in the list.
- struct _Maybe_get_result_type

  If we have found a result_type, extract it.
- struct _Maybe_unary_or_binary_function
- struct _Maybe_unary_or_binary_function< _Res, _T1 >

  Derives from `unary_function`, as appropriate.
- struct _Maybe_unary_or_binary_function< _Res, _T1, _T2 >

  Derives from `binary_function`, as appropriate.
- struct _Maybe_wrap_member_pointer
- struct _Maybe_wrap_member_pointer< _Tp _Class::∗ >
- class _Mem_fn< _Res(_Class::∗)(_ArgTypes...) const >

  Implementation of `mem_fn` for const member function pointers.
- class _Mem_fn< _Res(_Class::∗)(_ArgTypes...) const volatile >

  Implementation of `mem_fn` for const volatile member function pointers.
- class _Mem_fn< _Res(_Class::∗)(_ArgTypes...) volatile >

  Implementation of `mem_fn` for volatile member function pointers.
- class _Mem_fn< _Res(_Class::∗)(_ArgTypes...)>

  Implementation of `mem_fn` for member function pointers.
- class _Mu< _Arg, false, false >
- class _Mu< _Arg, false, true >
- class _Mu< _Arg, true, false >
- class _Mu< reference_wrapper< _Tp >, false, false >
- struct _Placeholder

  The type of placeholder objects defined by libstdc++.
- struct _Reference_wrapper_base
- struct _Safe_tuple_element
- struct _Safe_tuple_element_impl
- struct _Safe_tuple_element_impl< __i, _Tuple, false >
- class _Temporary_buffer
- struct _Tuple_impl< _Idx >
- struct _Tuple_impl< _Idx, _Head, _Tail...>
- struct _Vector_base

  See bits/stl_deque.h's _Deque_base for an explanation.
- struct _Weak_result_type
- struct _Weak_result_type_impl
- struct _Weak_result_type_impl< _Res(&)(_ArgTypes...)>

  Retrieve the result type for a function reference.

- struct _Weak_result_type_impl< _Res(∗)(_ArgTypes...)>

  Retrieve the result type for a function pointer.
- struct _Weak_result_type_impl< _Res(_ArgTypes...)>

  Retrieve the result type for a function type.
- struct _Weak_result_type_impl< _Res(_Class::∗)(_ArgTypes...) const >

  Retrieve result type for a const member function pointer.
- struct _Weak_result_type_impl< _Res(_Class::∗)(_ArgTypes...) const volatile >

  Retrieve result type for a const volatile member function pointer.
- struct _Weak_result_type_impl< _Res(_Class::∗)(_ArgTypes...) volatile >

  Retrieve result type for a volatile member function pointer.
- struct _Weak_result_type_impl< _Res(_Class::∗)(_ArgTypes...)>

  Retrieve result type for a member function pointer.
- struct add_const

  add_const
- struct add_cv

  add_cv
- struct add_lvalue_reference

  add_lvalue_reference
- struct add_pointer

  add_pointer
- struct add_rvalue_reference

  add_rvalue_reference
- struct add_volatile

  add_volatile
- struct adopt_lock_t

  Assume the calling thread has already obtained mutex ownership and manage it.
- struct aligned_storage

  Alignment type.
- struct alignment_of

  alignment_of
- struct allocator

  The standard allocator, as per [20.4].
- class allocator< void >

  allocator<void> specialization.
- struct allocator_arg_t

  [allocator.tag]
- struct allocator_traits

  Uniform interface to all allocator types.
- struct array

  A standard container for storing a fixed size sequence of elements.
- struct atomic

  Generic atomic type, primary class template.
- struct atomic< _Tp ∗ >

  Partial specialization for pointer types.
- struct atomic< bool >

  Explicit specialization for bool.
- struct atomic< char >

Explicit specialization for char.

- struct atomic< char16_t >

  Explicit specialization for char16_t.
- struct atomic< char32_t >

  Explicit specialization for char32_t.
- struct atomic< int >

  Explicit specialization for int.
- struct atomic< long >

  Explicit specialization for long.
- struct atomic< long long >

  Explicit specialization for long long.
- struct atomic< short >

  Explicit specialization for short.
- struct atomic< signed char >

  Explicit specialization for signed char.
- struct atomic< unsigned char >

  Explicit specialization for unsigned char.
- struct atomic< unsigned int >

  Explicit specialization for unsigned int.
- struct atomic< unsigned long >

  Explicit specialization for unsigned long.
- struct atomic< unsigned long long >

  Explicit specialization for unsigned long long.
- struct atomic< unsigned short >

  Explicit specialization for unsigned short.
- struct atomic< wchar_t >

  Explicit specialization for wchar_t.
- struct atomic_bool

  atomic_bool
- struct atomic_flag

  atomic_flag
- class auto_ptr

  A simple smart pointer providing strict ownership semantics.
- struct auto_ptr_ref
- class back_insert_iterator

  Turns assignment into insertion.
- class bad_alloc

  Exception possibly thrown by `new`.
  `bad_alloc` *(or classes derived from it) is used to report allocation errors from the throwing forms of* `new`*.*
- class bad_cast

  Thrown during incorrect typecasting.
  If you attempt an invalid `dynamic_cast` *expression, an instance of this class (or something derived from this class) is thrown.*
- class bad_exception
- class bad_function_call

  Exception class thrown when class template function's operator() is called with an empty target.
- class bad_typeid

  Thrown when a NULL pointer in a `typeid` *expression is used.*

- class bad_weak_ptr

    Exception possibly thrown by `shared_ptr`.
- class basic_filebuf

    The actual work of input and output (for files).
- class basic_fstream

    Controlling input and output for files.
- class basic_ifstream

    Controlling input for files.
- class basic_ios

    Template class basic_ios, virtual base class for all stream classes.
- class basic_iostream

    Template class basic_iostream.
- class basic_istream

    Template class basic_istream.
- class basic_istringstream

    Controlling input for std::string.
- class basic_ofstream

    Controlling output for files.
- class basic_ostream

    Template class basic_ostream.
- class basic_ostringstream

    Controlling output for std::string.
- class basic_regex
- class basic_streambuf

    The actual work of input and output (interface).
- class basic_string

    Managing sequences of characters and character-like objects.
- class basic_stringbuf

    The actual work of input and output (for std::string).
- class basic_stringstream

    Controlling input and output for std::string.
- class bernoulli_distribution

    A Bernoulli random number distribution.
- struct bidirectional_iterator_tag

    Bidirectional iterators support a superset of forward iterator operations.
- struct binary_function
- class binary_negate

    One of the negation functors.
- class binder1st

    One of the binder functors.
- class binder2nd

    One of the binder functors.
- class binomial_distribution

    A discrete binomial random number distribution.
- class cauchy_distribution

    A cauchy_distribution random number distribution.
- struct char_traits

Basis for explicit traits specializations.
- struct char_traits< __gnu_cxx::character< V, I, S > >

  char_traits<__gnu_cxx::character> specialization.
- struct char_traits< char >

  21.1.3.1 char_traits specializations
- struct char_traits< wchar_t >

  21.1.3.2 char_traits specializations
- class chi_squared_distribution

  A chi_squared_distribution random number distribution.
- class codecvt

  Primary class template codecvt.
  NB: Generic, mostly useless implementation.
- class codecvt< _InternT, _ExternT, encoding_state >

  codecvt<InternT, _ExternT, encoding_state> specialization.
- class codecvt< char, char, mbstate_t >

  class codecvt<char, char, mbstate_t> specialization.
- class codecvt< wchar_t, char, mbstate_t >

  class codecvt<wchar_t, char, mbstate_t> specialization.
- class codecvt_base

  Empty base class for codecvt facet [22.2.1.5].
- class codecvt_byname

  class codecvt_byname [22.2.1.6].
- class collate

  Facet for localized string comparison.
- class collate_byname

  class collate_byname [22.2.4.2].
- struct complex
- struct complex< double >

  26.2.3 complex specializations complex<double> specialization
- struct complex< float >

  26.2.3 complex specializations complex<float> specialization
- struct complex< long double >

  26.2.3 complex specializations complex<long double> specialization
- class condition_variable

  condition_variable
- class condition_variable_any

  condition_variable_any
- struct conditional

  Define a member typedef `type` *to one of two argument types.*
- class const_mem_fun1_ref_t

  One of the adaptors for member pointers.
- class const_mem_fun1_t

  One of the adaptors for member pointers.
- class const_mem_fun_ref_t

  One of the adaptors for member pointers.
- class const_mem_fun_t

  One of the adaptors for member pointers.

- class ctype

  Primary class template ctype facet.
  This template class defines classification and conversion functions for character sets. It wraps cctype functionality. Ctype gets used by streams for many I/O operations.
- class ctype< char >

  The ctype<char> specialization.
  This class defines classification and conversion functions for the char type. It gets used by char streams for many I/O operations. The char specialization provides a number of optimizations as well.
- class ctype< wchar_t >

  The ctype<wchar_t> specialization.
  This class defines classification and conversion functions for the wchar_t type. It gets used by wchar_t streams for many I/O operations. The wchar_t specialization provides a number of optimizations as well.
- struct ctype_base

  Base class for ctype.
- class ctype_byname

  class ctype_byname [22.2.1.2].
- class ctype_byname< char >

  22.2.1.4 Class ctype_byname specializations.
- class decay

  decay
- struct default_delete

  Primary template, default_delete.
- struct default_delete< _Tp[]>

  Specialization, default_delete.
- struct defer_lock_t

  Do not acquire ownership of the mutex.
- class deque

  A standard container using fixed-size memory allocation and constant-time manipulation of elements at either end.
- class discard_block_engine
- class discrete_distribution

  A discrete_distribution random number distribution.
- struct divides

  One of the math functors.
- class domain_error
- struct enable_if

  Define a member typedef `type` only if a boolean constant is true.
- class enable_shared_from_this

  Base class allowing use of member function shared_from_this.
- struct equal_to

  One of the comparison functors.
- class error_category

  error_category
- struct error_code

  error_code
- struct error_condition

  error_condition
- class exception

  Base class for all library exceptions.

- class exponential_distribution

  An exponential continuous distribution for random numbers.
- struct extent

  extent
- class extreme_value_distribution

  A extreme_value_distribution random number distribution.
- class fisher_f_distribution

  A fisher_f_distribution random number distribution.
- struct forward_iterator_tag

  Forward iterators support a superset of input iterator operations.
- class forward_list

  A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.
- class fpos

  Class representing stream positions.
- class front_insert_iterator

  Turns assignment into insertion.
- class function< _Res(_ArgTypes...)>

  Primary class template for std::function.
  Polymorphic function wrapper.
- class future_error

  Exception type thrown by futures.
- class gamma_distribution

  A gamma continuous distribution for random numbers.
- class geometric_distribution

  A discrete geometric random number distribution.
- struct greater

  One of the comparison functors.
- struct greater_equal

  One of the comparison functors.
- class gslice

  Class defining multi-dimensional subset of an array.
- class gslice_array

  Reference to multi-dimensional subset of an array.
- struct has_trivial_copy_assign

  has_trivial_copy_assign (temporary legacy)
- struct has_trivial_copy_constructor

  has_trivial_copy_constructor (temporary legacy)
- struct has_trivial_default_constructor

  has_trivial_default_constructor (temporary legacy)
- struct has_virtual_destructor

  has_virtual_destructor
- struct hash< __debug::bitset< _Nb > >

  std::hash specialization for bitset.
- struct hash< __debug::vector< bool, _Alloc > >

  std::hash specialization for vector<bool>.
- struct hash< __gnu_cxx::__u16vstring >

  std::hash specialization for __u16vstring.

- struct hash< __gnu_cxx::__u32vstring >

    std::hash specialization for __u32vstring.
- struct hash< __gnu_cxx::__vstring >

    std::hash specialization for __vstring.
- struct hash< __gnu_cxx::__wvstring >

    std::hash specialization for __wvstring.
- struct hash< __gnu_cxx::throw_value_limit >

    Explicit specialization of std::hash for __gnu_cxx::throw_value_limit.
- struct hash< __gnu_cxx::throw_value_random >

    Explicit specialization of std::hash for __gnu_cxx::throw_value_limit.
- struct hash< __profile::bitset< _Nb > >

    std::hash specialization for bitset.
- struct hash< __profile::vector< bool, _Alloc > >

    std::hash specialization for vector<bool>.
- struct hash< __shared_ptr< _Tp, _Lp > >

    std::hash specialization for __shared_ptr.
- struct hash< _Tp ∗ >

    Partial specializations for pointer types.
- struct hash< bool >

    Explicit specialization for bool.
- struct hash< char >

    Explicit specialization for char.
- struct hash< char16_t >

    Explicit specialization for char16_t.
- struct hash< char32_t >

    Explicit specialization for char32_t.
- struct hash< double >

    Specialization for double.
- struct hash< error_code >

    std::hash specialization for error_code.
- struct hash< float >

    Specialization for float.
- struct hash< int >

    Explicit specialization for int.
- struct hash< long >

    Explicit specialization for long.
- struct hash< long double >

    Specialization for long double.
- struct hash< long long >

    Explicit specialization for long long.
- struct hash< shared_ptr< _Tp > >

    std::hash specialization for shared_ptr.
- struct hash< short >

    Explicit specialization for short.
- struct hash< signed char >

    Explicit specialization for signed char.
- struct hash< string >

std::hash specialization for string.

- struct hash< thread::id >

  std::hash specialization for thread::id.
- struct hash< type_index >

  std::hash specialization for type_index.
- struct hash< u16string >

  std::hash specialization for u16string.
- struct hash< u32string >

  std::hash specialization for u32string.
- struct hash< unique_ptr< _Tp, _Dp > >

  std::hash specialization for unique_ptr.
- struct hash< unsigned char >

  Explicit specialization for unsigned char.
- struct hash< unsigned int >

  Explicit specialization for unsigned int.
- struct hash< unsigned long >

  Explicit specialization for unsigned long.
- struct hash< unsigned long long >

  Explicit specialization for unsigned long long.
- struct hash< unsigned short >

  Explicit specialization for unsigned short.
- struct hash< wchar_t >

  Explicit specialization for wchar_t.
- struct hash< wstring >

  std::hash specialization for wstring.
- struct hash<::bitset< _Nb > >

  std::hash specialization for bitset.
- struct hash<::vector< bool, _Alloc > >

  std::hash specialization for vector<bool>.
- class independent_bits_engine
- class indirect_array

  Reference to arbitrary subset of an array.
- class initializer_list

  initializer_list
- struct input_iterator_tag

  Marking input iterators.
- class insert_iterator

  Turns assignment into insertion.
- struct integral_constant

  integral_constant
- class invalid_argument
- class ios_base

  The base of the I/O class hierarchy.
  This class defines everything that can be defined about I/O that does not depend on the type of characters being input or output. Most people will only see `ios_base` *when they need to specify the full name of the various I/O flags (e.g., the openmodes).*
- struct is_abstract

  is_abstract

- struct is_arithmetic

  is_arithmetic
- struct is_array

  is_array
- struct is_assignable

  is_assignable
- struct is_base_of

  is_base_of
- struct is_bind_expression

  Determines if the given type _Tp is a function object should be treated as a subexpression when evaluating calls to function objects returned by bind(). [TR1 3.6.1].
- struct is_bind_expression< _Bind< _Signature > >

  Class template _Bind is always a bind expression.
- struct is_bind_expression< _Bind_result< _Result, _Signature > >

  Class template _Bind_result is always a bind expression.
- struct is_bind_expression< const _Bind< _Signature > >

  Class template _Bind is always a bind expression.
- struct is_bind_expression< const _Bind_result< _Result, _Signature > >

  Class template _Bind_result is always a bind expression.
- struct is_bind_expression< const volatile _Bind< _Signature > >

  Class template _Bind is always a bind expression.
- struct is_bind_expression< const volatile _Bind_result< _Result, _Signature > >

  Class template _Bind_result is always a bind expression.
- struct is_bind_expression< volatile _Bind< _Signature > >

  Class template _Bind is always a bind expression.
- struct is_bind_expression< volatile _Bind_result< _Result, _Signature > >

  Class template _Bind_result is always a bind expression.
- struct is_class

  is_class
- struct is_compound

  is_compound
- struct is_const

  is_const
- struct is_constructible

  is_constructible
- struct is_convertible

  is_convertible
- struct is_copy_assignable

  is_copy_assignable
- struct is_copy_constructible

  is_copy_constructible
- struct is_default_constructible

  is_default_constructible
- struct is_destructible

  is_destructible
- struct is_empty

  is_empty

- struct is_enum

  is_enum
- struct is_error_code_enum

  is_error_code_enum
- struct is_error_code_enum< future_errc >

  Specialization.
- struct is_error_condition_enum

  is_error_condition_enum
- struct is_floating_point

  is_floating_point
- struct is_function

  is_function
- struct is_fundamental

  is_fundamental
- struct is_integral

  is_integral
- struct is_literal_type

  is_literal_type
- struct is_lvalue_reference

  is_lvalue_reference
- struct is_member_function_pointer

  is_member_function_pointer
- struct is_member_object_pointer

  is_member_object_pointer
- struct is_member_pointer

  is_member_pointer
- struct is_move_assignable

  is_move_assignable
- struct is_move_constructible

  is_move_constructible
- struct is_nothrow_assignable

  is_nothrow_assignable
- struct is_nothrow_constructible

  is_nothrow_constructible
- struct is_nothrow_copy_assignable

  is_nothrow_copy_assignable
- struct is_nothrow_copy_constructible

  is_nothrow_copy_constructible
- struct is_nothrow_default_constructible

  is_nothrow_default_constructible
- struct is_nothrow_destructible

  is_nothrow_destructible
- struct is_nothrow_move_assignable

  is_nothrow_move_assignable
- struct is_nothrow_move_constructible

  is_nothrow_move_constructible
- struct is_object

is_object
- struct is_placeholder

  Determines if the given type _Tp is a placeholder in a bind() expression and, if so, which placeholder it is. [TR1 3.6.2].
- struct is_placeholder< _Placeholder< _Num > >
- struct is_pod

  is_pod
- struct is_pointer

  is_pointer
- struct is_polymorphic

  is_polymorphic
- struct is_reference

  is_reference
- struct is_rvalue_reference

  is_rvalue_reference
- struct is_same

  is_same
- struct is_scalar

  is_scalar
- struct is_signed

  is_signed
- struct is_standard_layout

  is_standard_layout
- struct is_trivial

  is_trivial
- struct is_trivially_destructible

  is_trivially_constructible (still unimplemented)
- struct is_union

  is_union
- struct is_unsigned

  is_unsigned
- struct is_void

  is_void
- struct is_volatile

  is_volatile
- class istream_iterator

  Provides input iterator semantics for streams.
- class istreambuf_iterator

  Provides input iterator semantics for streambufs.
- struct iterator

  Common iterator class.
- struct iterator_traits< _Tp ∗ >

  Partial specialization for pointer types.
- struct iterator_traits< const _Tp ∗ >

  Partial specialization for const pointer types.
- class length_error
- struct less

  One of the comparison functors.

- struct less_equal

  One of the comparison functors.
- class linear_congruential_engine

  A model of a linear congruential random number generator.
- class list

  A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.
- class locale

  Container class for localization functionality.
  The locale class is first a class wrapper for C library locales. It is also an extensible container for user-defined localization. A locale is a collection of facets that implement various localization features such as money, time, and number printing.
- class lock_guard

  Scoped lock idiom.
- class logic_error

  One of two subclasses of exception.
- struct logical_and

  One of the Boolean operations functors.
- struct logical_not

  One of the Boolean operations functors.
- struct logical_or

  One of the Boolean operations functors.
- class lognormal_distribution

  A lognormal_distribution random number distribution.
- struct make_signed

  make_signed
- struct make_unsigned

  make_unsigned
- class map

  A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time.
- class mask_array

  Reference to selected subset of an array.
- class match_results

  The results of a match or search operation.
- class mem_fun1_ref_t

  One of the adaptors for member pointers.
- class mem_fun1_t

  One of the adaptors for member pointers.
- class mem_fun_ref_t

  One of the adaptors for member pointers.
- class mem_fun_t

  One of the adaptors for member pointers.
- class mersenne_twister_engine
- class messages

  Primary class template messages.
  This facet encapsulates the code to retrieve messages from message catalogs. The only thing defined by the standard for this facet is the interface. All underlying functionality is implementation-defined.
- struct messages_base

  Messages facet base class providing catalog typedef.
- class messages_byname

class messages_byname [22.2.7.2].

- struct minus

  One of the math functors.
- struct modulus

  One of the math functors.
- class money_base

  Money format ordering data.
  This class contains an ordered array of 4 fields to represent the pattern for formatting a money amount. Each field may contain one entry from the part enum. symbol, sign, and value must be present and the remaining field must contain either none or space.
- class money_get

  Primary class template money_get.
  This facet encapsulates the code to parse and return a monetary amount from a string.
- class money_put

  Primary class template money_put.
  This facet encapsulates the code to format and output a monetary amount.
- class moneypunct

  Primary class template moneypunct.
  This facet encapsulates the punctuation, grouping and other formatting features of money amount string representations.
- class moneypunct_byname

  class moneypunct_byname [22.2.6.4].
- class move_iterator
- class multimap

  A standard container made up of (key,value) pairs, which can be retrieved based on a key, in logarithmic time.
- struct multiplies

  One of the math functors.
- class multiset

  A standard container made up of elements, which can be retrieved in logarithmic time.
- class mutex

  mutex
- struct negate

  One of the math functors.
- class negative_binomial_distribution

  A negative_binomial_distribution random number distribution.
- class nested_exception

  Exception class with exception_ptr data member.
- class normal_distribution

  A normal continuous distribution for random numbers.
- struct not_equal_to

  One of the comparison functors.
- class num_get

  Primary class template num_get.
  This facet encapsulates the code to parse and return a number from a string. It is used by the istream numeric extraction operators.
- class num_put

  Primary class template num_put.
  This facet encapsulates the code to convert a number to a string. It is used by the ostream numeric insertion operators.
- struct numeric_limits

  Properties of fundamental types.

- struct numeric_limits< bool >

  numeric_limits<bool> specialization.
- struct numeric_limits< char >

  numeric_limits<char> specialization.
- struct numeric_limits< char16_t >

  numeric_limits<char16_t> specialization.
- struct numeric_limits< char32_t >

  numeric_limits<char32_t> specialization.
- struct numeric_limits< double >

  numeric_limits<double> specialization.
- struct numeric_limits< float >

  numeric_limits<float> specialization.
- struct numeric_limits< int >

  numeric_limits<int> specialization.
- struct numeric_limits< long >

  numeric_limits<long> specialization.
- struct numeric_limits< long double >

  numeric_limits<long double> specialization.
- struct numeric_limits< long long >

  numeric_limits<long long> specialization.
- struct numeric_limits< short >

  numeric_limits<short> specialization.
- struct numeric_limits< signed char >

  numeric_limits<signed char> specialization.
- struct numeric_limits< unsigned char >

  numeric_limits<unsigned char> specialization.
- struct numeric_limits< unsigned int >

  numeric_limits<unsigned int> specialization.
- struct numeric_limits< unsigned long >

  numeric_limits<unsigned long> specialization.
- struct numeric_limits< unsigned long long >

  numeric_limits<unsigned long long> specialization.
- struct numeric_limits< unsigned short >

  numeric_limits<unsigned short> specialization.
- struct numeric_limits< wchar_t >

  numeric_limits<wchar_t> specialization.
- class numpunct

  Primary class template numpunct.
  This facet stores several pieces of information related to printing and scanning numbers, such as the decimal point character. It takes a template parameter specifying the char type. The numpunct facet is used by streams for many I/O operations involving numbers.
- class numpunct_byname

  class numpunct_byname [22.2.3.2].
- struct once_flag

  once_flag
- class ostream_iterator

  Provides output iterator semantics for streams.
- class ostreambuf_iterator

Provides output iterator semantics for streambufs.

- class out_of_range
- struct output_iterator_tag

  Marking output iterators.
- class overflow_error
- struct owner_less< shared_ptr< _Tp > >

  Partial specialization of owner_less for shared_ptr.
- struct owner_less< weak_ptr< _Tp > >

  Partial specialization of owner_less for weak_ptr.
- struct pair

  Struct holding two objects of arbitrary type.
- class piecewise_constant_distribution

  A piecewise_constant_distribution random number distribution.
- struct piecewise_construct_t

  piecewise_construct_t
- class piecewise_linear_distribution

  A piecewise_linear_distribution random number distribution.
- struct plus

  One of the math functors.
- class pointer_to_binary_function

  One of the adaptors for function pointers.
- class pointer_to_unary_function

  One of the adaptors for function pointers.
- struct pointer_traits

  Uniform interface to all pointer-like types.
- struct pointer_traits< _Tp * >

  Partial specialization for built-in pointers.
- class poisson_distribution

  A discrete Poisson random number distribution.
- class priority_queue

  A standard container automatically sorting its contents.
- class queue

  A standard container giving FIFO behavior.
- struct random_access_iterator_tag

  Random-access iterators support a superset of bidirectional iterator operations.
- class random_device
- class range_error
- struct rank

  rank
- struct ratio

  Provides compile-time rational arithmetic.
- struct ratio_equal

  ratio_equal
- struct ratio_not_equal

  ratio_not_equal
- class raw_storage_iterator
- class recursive_mutex

recursive_mutex

- class reference_wrapper

  Primary class template for reference_wrapper.
- class regex_error

  A regular expression exception class.
  The regular expression library throws objects of this class on error.
- class regex_iterator
- class regex_token_iterator
- struct regex_traits

  Class regex_traits. Describes aspects of a regular expression.
- struct remove_all_extents

  remove_all_extents
- struct remove_const

  remove_const
- struct remove_cv

  remove_cv
- struct remove_extent

  remove_extent
- struct remove_pointer

  remove_pointer
- struct remove_reference

  remove_reference
- struct remove_volatile

  remove_volatile
- class reverse_iterator
- class runtime_error

  One of two subclasses of exception.
- class scoped_allocator_adaptor

  Primary class template.
- class seed_seq

  The seed_seq class generates sequences of seeds for random number generators.
- class set

  A standard container made up of unique keys, which can be retrieved in logarithmic time.
- class shared_ptr

  A smart pointer with reference-counted copy semantics.
- class shuffle_order_engine

  Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits `__w`*.*
- class slice

  Class defining one-dimensional subset of an array.
- class slice_array

  Reference to one-dimensional subset of an array.
- class stack

  A standard container giving FILO behavior.
- class student_t_distribution

  A student_t_distribution random number distribution.
- class sub_match
- class system_error

Thrown to indicate error code of underlying system.

- class thread

  thread

- class time_base

  Time format ordering data.
  This class provides an enum representing different orderings of time: day, month, and year.

- class time_get

  Primary class template time_get.
  This facet encapsulates the code to parse and return a date or time from a string. It is used by the istream numeric extraction operators.

- class time_get_byname

  class time_get_byname [22.2.5.2].

- class time_put

  Primary class template time_put.
  This facet encapsulates the code to format and output dates and times according to formats used by strftime().

- class time_put_byname

  class time_put_byname [22.2.5.4].

- struct try_to_lock_t

  Try to acquire ownership of the mutex without blocking.

- class tuple

  Primary class template, tuple.

- class tuple< _T1, _T2 >

  Partial specialization, 2-element tuple. Includes construction and assignment from a pair.

- struct tuple_element< 0, tuple< _Head, _Tail...> >
- struct tuple_element< __i, tuple< _Head, _Tail...> >
- struct tuple_size< tuple< _Elements...> >

  class tuple_size

- struct type_index

  Class type_index
  The class type_index provides a simple wrapper for type_info which can be used as an index type in associative containers (23.6) and in unordered associative containers (23.7).

- class type_info

  Part of RTTI.

- struct unary_function
- class unary_negate

  One of the negation functors.

- class underflow_error
- struct underlying_type

  The underlying type of an enum.

- class uniform_int_distribution

  Uniform discrete distribution for random numbers. A discrete random distribution on the range $[min, max]$ *with equal probability throughout the range.*

- class uniform_real_distribution

  Uniform continuous distribution for random numbers.

- class unique_lock

  unique_lock

- class unique_ptr

  20.7.1.2 unique_ptr for single objects.

- class unique_ptr< _Tp[ ], _Dp >

20.7.1.3 unique_ptr for array objects with a runtime length

- class unordered_map

  A standard container composed of unique keys (containing at most one of each key value) that associates values of another type with the keys.
- class unordered_multimap

  A standard container composed of equivalent keys (possibly containing multiple of each key value) that associates values of another type with the keys.
- class unordered_multiset

  A standard container composed of equivalent keys (possibly containing multiple of each key value) in which the elements' keys are the elements themselves.
- class unordered_set

  A standard container composed of unique keys (containing at most one of each key value) in which the elements' keys are the elements themselves.
- struct uses_allocator

  [allocator.uses.trait]
- struct uses_allocator< tuple< _Types...>, _Alloc >

  Partial specialization for tuples.
- class valarray

  Smart array designed to support numeric processing.
- class vector

  A standard container which offers fixed time access to individual elements in any order.
- class vector< bool, _Alloc >

  A specialization of vector for booleans which offers fixed time access to individual elements in any order.
- class weak_ptr

  A smart pointer with weak semantics.
- class weibull_distribution

  A weibull_distribution random number distribution.

Standard Stream Objects

The <iostream> header declares the eight standard stream objects. For other declarations, see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch24.html` *and the I/O forward declarations*

They are required by default to cooperate with the global C library's `FILE` *streams, and to be available during program startup and termination. For more information, see the HOWTO linked to above.*

- istream cin
- ostream cout
- ostream cerr
- ostream clog
- wistream wcin
- wostream wcout
- wostream wcerr
- wostream wclog

3.11.1 Detailed Description

ISO C++ entities toplevel namespace is std.

3.11.2 Typedef Documentation

3.11.2.1 template<bool _Cache> using std::__umap_traits = typedef __detail::_Hashtable_traits<_Cache, false, true>

Base types for unordered_map.

Definition at line 39 of file unordered_map.h.

3.11.2.2 template<bool _Cache> using std::__ummap_traits = typedef __detail::_Hashtable_traits<_Cache, false, false>

Base types for unordered_multimap.

Definition at line 56 of file unordered_map.h.

3.11.2.3 template<bool _Cache> using std::__umset_traits = typedef __detail::_Hashtable_traits<_Cache, true, false>

Base types for unordered_multiset.

Definition at line 54 of file unordered_set.h.

3.11.2.4 template<bool _Cache> using std::__uset_traits = typedef __detail::_Hashtable_traits<_Cache, true, true>

Base types for unordered_set.

Definition at line 39 of file unordered_set.h.

3.11.2.5 typedef void(∗ std::new_handler)()

If you write your own error handler to be called by `new`, it must be of this type.

Definition at line 73 of file new.

3.11.2.6 typedef long long **std::streamoff**

Type used by fpos, char_traits<char>, and char_traits<wchar_t>.

In clauses 21.1.3.1 and 27.4.1 streamoff is described as an implementation defined type. Note: In versions of GCC up to and including GCC 3.3, streamoff was typedef long.

Definition at line 94 of file postypes.h.

3.11.2.7 typedef **fpos**<mbstate_t> **std::streampos**

File position for char streams.

Definition at line 228 of file postypes.h.

3.11.2.8 typedef ptrdiff_t **std::streamsize**

Integral type for I/O operation counts and buffer sizes.

Definition at line 98 of file postypes.h.

3.11.2.9 typedef **fpos**<mbstate_t> **std::u16streampos**

File position for char16_t streams.

Definition at line 234 of file postypes.h.

3.11.2.10 typedef **fpos**<mbstate_t> **std::u32streampos**

File position for char32_t streams.

Definition at line 236 of file postypes.h.

3.11.2.11 typedef **fpos**<mbstate_t> **std::wstreampos**

File position for wchar_t streams.

Definition at line 230 of file postypes.h.

3.11.3 Enumeration Type Documentation

3.11.3.1 anonymous enum

Todo Needs documentation! See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html` This controls some aspect of the sort routines.

Definition at line 2225 of file stl_algo.h.

3.11.3.2 enum **std::float_denorm_style**

Describes the denormalization for floating-point types.

These values represent the presence or absence of a variable number of exponent bits. This type is used in the std::numeric_limits class.

Enumerator:

denorm_indeterminate	Indeterminate at compile time whether denormalized values are allowed.
denorm_absent	The type does not allow denormalized values.
denorm_present	The type allows denormalized values.

Definition at line 171 of file limits.

3.11.3.3 enum std::float_round_style

Describes the rounding style for floating-point types.

This is used in the std::numeric_limits class.

Enumerator:

round_toward_zero Intermediate.

round_to_nearest To zero.

round_toward_infinity To the nearest representable value.

round_toward_neg_infinity To infinity.

Definition at line 156 of file limits.

3.11.4 Function Documentation

3.11.4.1 template<typename _RandomAccessIterator > void std::__final_insertion_sort (_RandomAccessIterator *__first,* _RandomAccessIterator *__last*)

This is a helper function for the sort routine.

Definition at line 2230 of file stl_algo.h.

References __insertion_sort(), and __unguarded_insertion_sort().

Referenced by sort().

3.11.4.2 template<typename _RandomAccessIterator , typename _Compare > void std::__final_insertion_sort (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Compare *__comp*)

This is a helper function for the sort routine.

Definition at line 2245 of file stl_algo.h.

References __insertion_sort(), and __unguarded_insertion_sort().

3.11.4.3 template<typename _InputIterator , typename _Tp > _InputIterator std::__find (_InputIterator *__first,* _InputIterator *__last,* const _Tp & *__val,* input_iterator_tag) `[inline]`

This is an overload used by find() for the Input Iterator case.

Definition at line 130 of file stl_algo.h.

Referenced by find().

3.11.4.4 template<typename _RandomAccessIterator , typename _Tp > _RandomAccessIterator std::__find (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* const _Tp & *__val,* random_access_iterator_tag)

This is an overload used by find() for the RAI case.

Definition at line 152 of file stl_algo.h.

3.11.4.5 template<typename _InputIterator , typename _Predicate > _InputIterator std::__find_if (_InputIterator *__first,* _InputIterator *__last,* _Predicate *__pred,* input_iterator_tag) `[inline]`

This is an overload used by find_if() for the Input Iterator case.

Definition at line 141 of file stl_algo.h.

Referenced by find_if().

3.11.4.6 template<typename _RandomAccessIterator , typename _Predicate > _RandomAccessIterator std::__find_if (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Predicate *__pred,* random_access_iterator_tag)

This is an overload used by find_if() for the RAI case.

Definition at line 200 of file stl_algo.h.

3.11.4.7 template<typename _InputIterator , typename _Predicate > _InputIterator std::__find_if_not (_InputIterator *__first,* _InputIterator *__last,* _Predicate *__pred,* input_iterator_tag) [inline]

This is an overload used by find_if_not() for the Input Iterator case.

Definition at line 248 of file stl_algo.h.

Referenced by __find_if_not(), find_if_not(), and stable_partition().

3.11.4.8 template<typename _RandomAccessIterator , typename _Predicate > _RandomAccessIterator std::__find_if_not (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Predicate *__pred,* random_access_iterator_tag)

This is an overload used by find_if_not() for the RAI case.

Definition at line 259 of file stl_algo.h.

3.11.4.9 template<typename _InputIterator , typename _Predicate > _InputIterator std::__find_if_not (_InputIterator *__first,* _InputIterator *__last,* _Predicate *__pred*) [inline]

Provided for stable_partition to use.

Definition at line 307 of file stl_algo.h.

References __find_if_not(), and __iterator_category().

3.11.4.10 template<typename _InputIterator , typename _Predicate , typename _Distance > _InputIterator std::__find_if_not_n (_InputIterator *__first,* _Distance & *__len,* _Predicate *__pred*)

Like find_if_not(), but uses and updates a count of the remaining range length instead of comparing against an end iterator.

Definition at line 319 of file stl_algo.h.

Referenced by __inplace_stable_partition(), and __stable_partition_adaptive().

3.11.4.11 template<typename _EuclideanRingElement > _EuclideanRingElement std::__gcd (_EuclideanRingElement *__m,* _EuclideanRingElement *__n*)

This is a helper function for the rotate algorithm specialized on RAIs. It returns the greatest common divisor of two integer values.

Definition at line 1518 of file stl_algo.h.

3.11.4.12 template<typename _RandomAccessIterator > void std::__heap_select (_RandomAccessIterator *__first,* _RandomAccessIterator *__middle,* _RandomAccessIterator *__last*)

This is a helper function for the sort routines.

Definition at line 1953 of file stl_algo.h.

References make_heap().

Referenced by partial_sort().

3.11.4.13 template<typename _RandomAccessIterator , typename _Compare > void std::__heap_select (_RandomAccessIterator *__first,* _RandomAccessIterator *__middle,* _RandomAccessIterator *__last,* _Compare *__comp*)

This is a helper function for the sort routines.

Definition at line 1966 of file stl_algo.h.

References make_heap().

3.11.4.14 template<typename _ForwardIterator , typename _Predicate , typename _Distance > _ForwardIterator std::__inplace_stable_partition (_ForwardIterator *__first,* _Predicate *__pred,* _Distance *__len*)

This is a helper function... Requires __len != 0 and !__pred($*$__first), same as __stable_partition_adaptive.

Definition at line 1809 of file stl_algo.h.

References __find_if_not_n(), advance(), distance(), and rotate().

Referenced by stable_partition().

3.11.4.15 template<typename _RandomAccessIterator > void std::__inplace_stable_sort (_RandomAccessIterator *__first,* _RandomAccessIterator *__last*)

This is a helper function for the stable sorting routines.

Definition at line 3509 of file stl_algo.h.

References __insertion_sort(), and __merge_without_buffer().

Referenced by __inplace_stable_sort(), and stable_sort().

3.11.4.16 template<typename _RandomAccessIterator , typename _Compare > void std::__inplace_stable_sort (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Compare *__comp*)

This is a helper function for the stable sorting routines.

Definition at line 3528 of file stl_algo.h.

References __inplace_stable_sort(), __insertion_sort(), and __merge_without_buffer().

3.11.4.17 template<typename _RandomAccessIterator > void std::__insertion_sort (_RandomAccessIterator *__first,* _RandomAccessIterator *__last*)

This is a helper function for the sort routine.

Definition at line 2153 of file stl_algo.h.

References __unguarded_linear_insert().

Referenced by __final_insertion_sort(), and __inplace_stable_sort().

3.11.4.18 template<typename _RandomAccessIterator , typename _Compare > void std::__insertion_sort (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Compare *__comp*)

This is a helper function for the sort routine.

Definition at line 2176 of file stl_algo.h.

References __unguarded_linear_insert().

3.11.4.19 template<typename _RandomAccessIterator , typename _Size > void std::__introsort_loop (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Size *__depth_limit*)

This is a helper function for the sort routine.

Definition at line 2325 of file stl_algo.h.

References __unguarded_partition_pivot().

Referenced by __introsort_loop(), and sort().

3.11.4.20 template<typename _RandomAccessIterator , typename _Size , typename _Compare > void std::__introsort_loop (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* _Size *__depth_limit,* _Compare *__comp*)

This is a helper function for the sort routine.

Definition at line 2347 of file stl_algo.h.

References __introsort_loop(), and __unguarded_partition_pivot().

3.11.4.21 template<typename _Functor , typename... _Args> enable_if< (is_member_pointer< _Functor >::value &&!is_function< _Functor >::value &&!is_function< typename remove_pointer< _Functor >::type >::value), typename result_of< _Functor(_Args &&...)>::type >::type std::__invoke (_Functor & *__f,* _Args &&... *__args*) `[inline]`

Invoke a function object, which may be either a member pointer or a function object. The first parameter will tell which.

Definition at line 232 of file functional.

3.11.4.22 constexpr int std::__lg (int *__n*) `[inline]`

This is a helper function for the sort routines and for random.tcc.

Definition at line 980 of file stl_algobase.h.

Referenced by nth_element(), std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::operator()(), std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed(), and sort().

3.11.4.23 template<typename _BidirectionalIterator , typename _Distance , typename _Pointer > void std::__merge_adaptive (_BidirectionalIterator *__first,* _BidirectionalIterator *__middle,* _BidirectionalIterator *__last,* _Distance *__len1,* _Distance *__len2,* _Pointer *__buffer,* _Distance *__buffer_size*)

This is a helper function for the merge routines.

Definition at line 2957 of file stl_algo.h.

References __move_merge_adaptive(), __move_merge_adaptive_backward(), __rotate_adaptive(), advance(), distance(), lower_bound(), and upper_bound().

Referenced by __merge_adaptive(), and inplace_merge().

3.11.4.24 template<typename _BidirectionalIterator , typename _Distance , typename _Pointer , typename _Compare > void std::__merge_adaptive (_BidirectionalIterator *__first,* _BidirectionalIterator *__middle,* _BidirectionalIterator *__last,* _Distance *__len1,* _Distance *__len2,* _Pointer *__buffer,* _Distance *__buffer_size,* _Compare *__comp*)

This is a helper function for the merge routines.

Definition at line 3013 of file stl_algo.h.

References __merge_adaptive(), __move_merge_adaptive(), __move_merge_adaptive_backward(), __rotate_adaptive(), advance(), distance(), lower_bound(), and upper_bound().

3.11.4.25 template<typename _BidirectionalIterator , typename _Distance > void std::__merge_without_buffer (_BidirectionalIterator *__first*, _BidirectionalIterator *__middle*, _BidirectionalIterator *__last*, _Distance *__len1*, _Distance *__len2*)

This is a helper function for the merge routines.

Definition at line 3070 of file stl_algo.h.

References advance(), distance(), iter_swap(), lower_bound(), rotate(), and upper_bound().

Referenced by __inplace_stable_sort(), __merge_without_buffer(), and inplace_merge().

3.11.4.26 template<typename _BidirectionalIterator , typename _Distance , typename _Compare > void std::__merge_without_buffer (_BidirectionalIterator *__first*, _BidirectionalIterator *__middle*, _BidirectionalIterator *__last*, _Distance *__len1*, _Distance *__len2*, _Compare *__comp*)

This is a helper function for the merge routines.

Definition at line 3114 of file stl_algo.h.

References __merge_without_buffer(), advance(), distance(), iter_swap(), lower_bound(), rotate(), and upper_bound().

3.11.4.27 template<typename _Iterator > void std::__move_median_first (_Iterator *__a*, _Iterator *__b*, _Iterator *__c*)

Swaps the median value of $*$__a, $*$__b and $*$__c to $*$__a.

Definition at line 78 of file stl_algo.h.

References iter_swap().

Referenced by __unguarded_partition_pivot().

3.11.4.28 template<typename _Iterator , typename _Compare > void std::__move_median_first (_Iterator *__a*, _Iterator *__b*, _Iterator *__c*, _Compare *__comp*)

Swaps the median value of $*$__a, $*$__b and $*$__c under __comp to $*$__a.

Definition at line 102 of file stl_algo.h.

References iter_swap().

3.11.4.29 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator > _OutputIterator std::__move_merge (_InputIterator1 *__first1*, _InputIterator1 *__last1*, _InputIterator2 *__first2*, _InputIterator2 *__last2*, _OutputIterator *__result*)

This is a helper function for the __merge_sort_loop routines.

Definition at line 3272 of file stl_algo.h.

3.11.4.30 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare > _OutputIterator std::__move_merge (_InputIterator1 *__first1*, _InputIterator1 *__last1*, _InputIterator2 *__first2*, _InputIterator2 *__last2*, _OutputIterator *__result*, _Compare *__comp*)

This is a helper function for the __merge_sort_loop routines.

Definition at line 3299 of file stl_algo.h.

3.11.4.31 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator > void std::__move_merge_adaptive (_InputIterator1 *__first1*, _InputIterator1 *__last1*, _InputIterator2 *__first2*, _InputIterator2 *__last2*, _OutputIterator *__result*)

This is a helper function for the __merge_adaptive routines.

Definition at line 2778 of file stl_algo.h.

Referenced by __merge_adaptive().

3.11.4.32 template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare > void std::__move_merge_adaptive (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _InputIterator2 *__last2,* _OutputIterator *__result,* _Compare *__comp*)

This is a helper function for the __merge_adaptive routines.

Definition at line 2804 of file stl_algo.h.

3.11.4.33 template<typename _BidirectionalIterator1 , typename _BidirectionalIterator2 , typename _BidirectionalIterator3 > void std::__move_merge_adaptive_backward (_BidirectionalIterator1 *__first1,* _BidirectionalIterator1 *__last1,* _BidirectionalIterator2 *__first2,* _BidirectionalIterator2 *__last2,* _BidirectionalIterator3 *__result*)

This is a helper function for the __merge_adaptive routines.

Definition at line 2830 of file stl_algo.h.

Referenced by __merge_adaptive().

3.11.4.34 template<typename _BidirectionalIterator1 , typename _BidirectionalIterator2 , typename _BidirectionalIterator3 , typename _Compare > void std::__move_merge_adaptive_backward (_BidirectionalIterator1 *__first1,* _BidirectionalIterator1 *__last1,* _BidirectionalIterator2 *__first2,* _BidirectionalIterator2 *__last2,* _BidirectionalIterator3 *__result,* _Compare *__comp*)

This is a helper function for the __merge_adaptive routines.

Definition at line 2872 of file stl_algo.h.

3.11.4.35 template<typename _ForwardIterator , typename _Predicate > _ForwardIterator std::__partition (_ForwardIterator *__first,* _ForwardIterator *__last,* _Predicate *__pred,* forward_iterator_tag)

This is a helper function...

Definition at line 1752 of file stl_algo.h.

References iter_swap().

Referenced by partition().

3.11.4.36 template<typename _BidirectionalIterator , typename _Predicate > _BidirectionalIterator std::__partition (_BidirectionalIterator *__first,* _BidirectionalIterator *__last,* _Predicate *__pred,* bidirectional_iterator_tag)

This is a helper function...

Definition at line 1777 of file stl_algo.h.

References iter_swap().

3.11.4.37 template<typename _BidirectionalIterator > void std::__reverse (_BidirectionalIterator *__first,* _BidirectionalIterator *__last,* bidirectional_iterator_tag)

This is an uglified reverse(_BidirectionalIterator, _BidirectionalIterator) overloaded for bidirectional iterators.

Definition at line 1418 of file stl_algo.h.

References iter_swap().

Referenced by __rotate(), and reverse().

3.11.4.38 template<typename _RandomAccessIterator > void std::__reverse (_RandomAccessIterator *__first,* _RandomAccessIterator *__last,* random_access_iterator_tag)

This is an uglified reverse(_BidirectionalIterator, _BidirectionalIterator) overloaded for random access iterators.

Definition at line 1438 of file stl_algo.h.

References iter_swap().

3.11.4.39 template<typename _ForwardIterator > void std::__rotate (_ForwardIterator *__first,* _ForwardIterator *__middle,* _ForwardIterator *__last,* forward_iterator_tag)

This is a helper function for the rotate algorithm.

Definition at line 1532 of file stl_algo.h.

References iter_swap().

Referenced by __gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object(), and rotate().

3.11.4.40 template<typename _BidirectionalIterator > void std::__rotate (_BidirectionalIterator *__first,* _BidirectionalIterator *__middle,* _BidirectionalIterator *__last,* bidirectional_iterator_tag)

This is a helper function for the rotate algorithm.

Definition at line 1568 of file stl_algo.h.

References __reverse(), and iter_swap().

3.11.4.41 template<typename _RandomAccessIterator > void std::__rotate (_RandomAccessIterator *__first,* _RandomAccessIterator *__middle,* _RandomAccessIterator *__last,* random_access_iterator_tag)

This is a helper function for the rotate algorithm.

Definition at line 1598 of file stl_algo.h.

References iter_swap(), and swap_ranges().

3.11.4.42 template<typename _BidirectionalIterator1 , typename _BidirectionalIterator2 , typename _Distance > _BidirectionalIterator1 std::__rotate_adaptive (_BidirectionalIterator1 *__first,* _BidirectionalIterator1 *__middle,* _BidirectionalIterator1 *__last,* _Distance *__len1,* _Distance *__len2,* _BidirectionalIterator2 *__buffer,* _Distance *__buffer_size*)

This is a helper function for the merge routines.

Definition at line 2915 of file stl_algo.h.

References advance(), distance(), and rotate().

Referenced by __merge_adaptive().

3.11.4.43 template<typename _ForwardIterator , typename _Integer , typename _Tp > _ForwardIterator std::__search_n (_ForwardIterator *__first,* _ForwardIterator *__last,* _Integer *__count,* const _Tp & *__val,* std::forward_iterator_tag)

This is an uglified search_n(_ForwardIterator, _ForwardIterator, _Integer, const _Tp&) overloaded for forward iterators.

Definition at line 347 of file stl_algo.h.

Referenced by search_n().

3.11.4.44 template<typename _RandomAccessIter , typename _Integer , typename _Tp > _RandomAccessIter std::__search_n (_RandomAccessIter *__first*, _RandomAccessIter *__last*, _Integer *__count*, const _Tp & *__val*, std::random_access_iterator_tag)

This is an uglified search_n(_ForwardIterator, _ForwardIterator, _Integer, const _Tp&) overloaded for random access iterators.

Definition at line 379 of file stl_algo.h.

3.11.4.45 template<typename _ForwardIterator , typename _Integer , typename _Tp , typename _BinaryPredicate > _ForwardIterator std::__search_n (_ForwardIterator *__first*, _ForwardIterator *__last*, _Integer *__count*, const _Tp & *__val*, _BinaryPredicate *__binary_pred*, std::forward_iterator_tag)

This is an uglified search_n(_ForwardIterator, _ForwardIterator, _Integer, const _Tp&, _BinaryPredicate) overloaded for forward iterators.

Definition at line 433 of file stl_algo.h.

3.11.4.46 template<typename _RandomAccessIter , typename _Integer , typename _Tp , typename _BinaryPredicate > _RandomAccessIter std::__search_n (_RandomAccessIter *__first*, _RandomAccessIter *__last*, _Integer *__count*, const _Tp & *__val*, _BinaryPredicate *__binary_pred*, std::random_access_iterator_tag)

This is an uglified search_n(_ForwardIterator, _ForwardIterator, _Integer, const _Tp&, _BinaryPredicate) overloaded for random access iterators.

Definition at line 472 of file stl_algo.h.

3.11.4.47 template<typename _ForwardIterator , typename _Pointer , typename _Predicate , typename _Distance > _ForwardIterator std::__stable_partition_adaptive (_ForwardIterator *__first*, _ForwardIterator *__last*, _Predicate *__pred*, _Distance *__len*, _Pointer *__buffer*, _Distance *__buffer_size*)

This is a helper function... Requires __first != __last and !__pred(∗__first) and __len == distance(__first, __last).

!__pred(∗__first) allows us to guarantee that we don't move-assign an element onto itself.

Definition at line 1841 of file stl_algo.h.

References __find_if_not_n(), advance(), distance(), and rotate().

Referenced by stable_partition().

3.11.4.48 template<typename _RandomAccessIterator > void std::__unguarded_insertion_sort (_RandomAccessIterator *__first*, _RandomAccessIterator *__last*) [inline]

This is a helper function for the sort routine.

Definition at line 2198 of file stl_algo.h.

References __unguarded_linear_insert().

Referenced by __final_insertion_sort().

3.11.4.49 template<typename _RandomAccessIterator , typename _Compare > void std::__unguarded_insertion_sort (_RandomAccessIterator *__first*, _RandomAccessIterator *__last*, _Compare *__comp*) [inline]

This is a helper function for the sort routine.

Definition at line 2211 of file stl_algo.h.

References __unguarded_linear_insert().

3.11.4.50 template<typename _RandomAccessIterator > void std::__unguarded_linear_insert (_RandomAccessIterator *__last*)

This is a helper function for the sort routine.

Definition at line 2116 of file stl_algo.h.

Referenced by __insertion_sort(), and __unguarded_insertion_sort().

3.11.4.51 template<typename _RandomAccessIterator , typename _Compare > void std::__unguarded_linear_insert (_RandomAccessIterator *__last*, _Compare *__comp*)

This is a helper function for the sort routine.

Definition at line 2134 of file stl_algo.h.

3.11.4.52 template<typename _RandomAccessIterator , typename _Tp > _RandomAccessIterator std::__unguarded_partition (_RandomAccessIterator *__first*, _RandomAccessIterator *__last*, const _Tp & *__pivot*)

This is a helper function...

Definition at line 2261 of file stl_algo.h.

References iter_swap().

Referenced by __unguarded_partition_pivot().

3.11.4.53 template<typename _RandomAccessIterator , typename _Tp , typename _Compare > _RandomAccessIterator std::__unguarded_partition (_RandomAccessIterator *__first*, _RandomAccessIterator *__last*, const _Tp & *__pivot*, _Compare *__comp*)

This is a helper function...

Definition at line 2281 of file stl_algo.h.

References iter_swap().

3.11.4.54 template<typename _RandomAccessIterator > _RandomAccessIterator std::__unguarded_partition_pivot (_RandomAccessIterator *__first*, _RandomAccessIterator *__last*) `[inline]`

This is a helper function...

Definition at line 2302 of file stl_algo.h.

References __move_median_first(), and __unguarded_partition().

Referenced by __introsort_loop().

3.11.4.55 template<typename _RandomAccessIterator , typename _Compare > _RandomAccessIterator std::__unguarded_partition_pivot (_RandomAccessIterator *__first*, _RandomAccessIterator *__last*, _Compare *__comp*) `[inline]`

This is a helper function...

Definition at line 2314 of file stl_algo.h.

References __move_median_first(), and __unguarded_partition().

3.11.4.56 template<typename _ForwardIterator , typename _OutputIterator > _OutputIterator std::__unique_copy (_ForwardIterator *__first*, _ForwardIterator *__last*, _OutputIterator *__result*, forward_iterator_tag , output_iterator_tag)

This is an uglified unique_copy(_InputIterator, _InputIterator, _OutputIterator) overloaded for forward iterators and output iterator as result.

Definition at line 1270 of file stl_algo.h.

Referenced by unique_copy().

3.11.4.57 template<typename _InputIterator , typename _OutputIterator > _OutputIterator std::__unique_copy (_InputIterator *__first,* _InputIterator *__last,* _OutputIterator *__result,* input_iterator_tag *,* output_iterator_tag)

This is an uglified unique_copy(_InputIterator, _InputIterator, _OutputIterator) overloaded for input iterators and output iterator as result.

Definition at line 1293 of file stl_algo.h.

3.11.4.58 template<typename _InputIterator , typename _ForwardIterator > _ForwardIterator std::__unique_copy (_InputIterator *__first,* _InputIterator *__last,* _ForwardIterator *__result,* input_iterator_tag *,* forward_iterator_tag)

This is an uglified unique_copy(_InputIterator, _InputIterator, _OutputIterator) overloaded for input iterators and forward iterator as result.

Definition at line 1316 of file stl_algo.h.

3.11.4.59 template<typename _ForwardIterator , typename _OutputIterator , typename _BinaryPredicate > _OutputIterator std::__unique_copy (_ForwardIterator *__first,* _ForwardIterator *__last,* _OutputIterator *__result,* _BinaryPredicate *__binary_pred,* forward_iterator_tag *,* output_iterator_tag)

This is an uglified unique_copy(_InputIterator, _InputIterator, _OutputIterator, _BinaryPredicate) overloaded for forward iterators and output iterator as result.

Definition at line 1337 of file stl_algo.h.

3.11.4.60 template<typename _InputIterator , typename _OutputIterator , typename _BinaryPredicate > _OutputIterator std::__unique_copy (_InputIterator *__first,* _InputIterator *__last,* _OutputIterator *__result,* _BinaryPredicate *__binary_pred,* input_iterator_tag *,* output_iterator_tag)

This is an uglified unique_copy(_InputIterator, _InputIterator, _OutputIterator, _BinaryPredicate) overloaded for input iterators and output iterator as result.

Definition at line 1366 of file stl_algo.h.

3.11.4.61 template<typename _InputIterator , typename _ForwardIterator , typename _BinaryPredicate > _ForwardIterator std::__unique_copy (_InputIterator *__first,* _InputIterator *__last,* _ForwardIterator *__result,* _BinaryPredicate *__binary_pred,* input_iterator_tag *,* forward_iterator_tag)

This is an uglified unique_copy(_InputIterator, _InputIterator, _OutputIterator, _BinaryPredicate) overloaded for input iterators and forward iterator as result.

Definition at line 1395 of file stl_algo.h.

3.11.4.62 template<typename _T1 , typename... _Args> void std::_Construct (_T1 ∗ *__p,* _Args &&... *__args*) `[inline]`

Constructs an object in existing memory by invoking an allocated object's constructor with an initializer.

Definition at line 74 of file stl_construct.h.

3.11.4.63 template<typename _Tp > void std::_Destroy (_Tp ∗ *__pointer*) `[inline]`

Destroy the object pointed to by a pointer type.

Definition at line 92 of file stl_construct.h.

Referenced by std::deque< _Tp, _Alloc >::_M_fill_initialize(), std::deque< _Tp, _Alloc >::_M_range_initialize(), std::vector< _Tp, _Alloc >::operator=(), std::vector< _Tp, _Alloc >::reserve(), and std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > > >::∼vector().

3.11.4.64 template<typename _ForwardIterator > void std::_Destroy (_ForwardIterator *__first,* _ForwardIterator *__last*) [inline]

Destroy a range of objects. If the value_type of the object has a trivial destructor, the compiler should optimize all of this away, otherwise the objects' destructors must be invoked.

Definition at line 122 of file stl_construct.h.

3.11.4.65 template<typename _InputIterator , typename _Tp > _Tp std::accumulate (_InputIterator *__first,* _InputIterator *__last,* _Tp *__init*) [inline]

Accumulate values in a range.

Accumulates the values in the range [first,last) using operator+(). The initial value is *init*. The values are processed in order.

Parameters

__first	Start of range.
__last	End of range.
__init	Starting value to add other values to.

Returns

The final sum.

Definition at line 120 of file stl_numeric.h.

Referenced by __gnu_parallel::__parallel_partial_sum_linear().

3.11.4.66 template<typename _InputIterator , typename _Tp , typename _BinaryOperation > _Tp std::accumulate (_InputIterator *__first,* _InputIterator *__last,* _Tp *__init,* _BinaryOperation *__binary_op*) [inline]

Accumulate values in a range with operation.

Accumulates the values in the range [first,last) using the function object `__binary_op`. The initial value is `__init`. The values are processed in order.

Parameters

__first	Start of range.
__last	End of range.
__init	Starting value to add other values to.
__binary_op	Function object to accumulate with.

Returns

The final sum.

Definition at line 146 of file stl_numeric.h.

3.11.4.67 template<typename _Tp > std::complex< _Tp > std::acos (const std::complex< _Tp > & *__z*) [inline]

acos(__z) [8.1.2].

Definition at line 1610 of file complex.

3.11.4.68 template<typename _Tp > std::complex< _Tp > std::acosh (const std::complex< _Tp > & __z) [inline]

acosh(__z) [8.1.5].

Definition at line 1726 of file complex.

3.11.4.69 template<typename _InputIterator , typename _OutputIterator > _OutputIterator std::adjacent_difference (_InputIterator __first, _InputIterator __last, _OutputIterator __result)

Return differences between adjacent values.

Computes the difference between adjacent values in the range [first,last) using operator-() and writes the result to `__result`.

Parameters

__first	Start of input range.
__last	End of input range.
__result	Output sums.

Returns

Iterator pointing just beyond the values written to result.

_GLIBCXX_RESOLVE_LIB_DEFECTS DR 539. partial_sum and adjacent_difference should mention requirements

Definition at line 317 of file stl_numeric.h.

3.11.4.70 template<typename _InputIterator , typename _OutputIterator , typename _BinaryOperation > _OutputIterator std::adjacent_difference (_InputIterator __first, _InputIterator __last, _OutputIterator __result, _BinaryOperation __binary_op)

Return differences between adjacent values.

Computes the difference between adjacent values in the range [__first,__last) using the function object `__binary_op` and writes the result to `__result`.

Parameters

__first	Start of input range.
__last	End of input range.
__result	Output sum.
__binary_op	Function object.

Returns

Iterator pointing just beyond the values written to result.

_GLIBCXX_RESOLVE_LIB_DEFECTS DR 539. partial_sum and adjacent_difference should mention requirements

Definition at line 360 of file stl_numeric.h.

3.11.4.71 template<typename _InputIterator , typename _Distance > void std::advance (_InputIterator & __i, _Distance __n) [inline]

A generalization of pointer arithmetic.

Parameters

__i	An input iterator.
__n	The *delta* by which to change `__i`.

Returns

Nothing.

This increments `i` by `n`. For bidirectional and random access iterators, `__n` may be negative, in which case `__i` is decremented.

For random access iterators, this uses their + and - operations and are constant time. For other iterator classes they are linear time.

Definition at line 173 of file stl_iterator_base_funcs.h.

References __iterator_category().

Referenced by __inplace_stable_partition(), __merge_adaptive(), __merge_without_buffer(), __rotate_adaptive(), __stable_partition_adaptive(), std::deque< _Tp, _Alloc >::_M_range_initialize(), equal_range(), __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::get_child(), __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::get_child(), is_permutation(), lower_bound(), partition_point(), and upper_bound().

3.11.4.72 bool std::all ( ) const [noexcept]

Tests whether all the bits are on.

Returns

True if all the bits are set.

Definition at line 1317 of file bitset.

3.11.4.73 bool std::any ( ) const [noexcept]

Tests whether any of the bits are on.

Returns

True if at least one bit is set.

Definition at line 1325 of file bitset.

3.11.4.74 template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::arg (_Tp __x) [inline]

Additional overloads [8.1.9].

Definition at line 1824 of file complex.

References arg().

3.11.4.75 template<typename _Tp > std::complex< _Tp > std::asin (const std::complex< _Tp > & __z) [inline]

asin(__z) [8.1.3].

asinh(__z) [8.1.6].

Definition at line 1765 of file complex.

3.11.4.77 template<typename _Tp > std::complex< _Tp > std::atan (const std::complex< _Tp > & __z) [inline]

atan(__z) [8.1.4].

Definition at line 1690 of file complex.

3.11.4.78 template<typename _Tp > std::complex< _Tp > std::atanh (const std::complex< _Tp > & __z) [inline]

atanh(__z) [8.1.7].

Definition at line 1809 of file complex.

3.11.4.79 template<class _Container > auto std::begin (_Container & __cont) -> decltype(__cont.begin()) [inline]

Return an iterator pointing to the first element of the container.

Parameters

__cont	Container.

Definition at line 48 of file range_access.h.

3.11.4.80 template<class _Container > auto std::begin (const _Container & __cont) -> decltype(__cont.begin()) [inline]

Return an iterator pointing to the first element of the const container.

Parameters

__cont	Container.

Definition at line 58 of file range_access.h.

3.11.4.81 template<class _Tp , size_t _Nm> _Tp* std::begin (_Tp(&) __arr[_Nm]) [inline]

Return an iterator pointing to the first element of the array.

Parameters

__arr	Array.

Definition at line 87 of file range_access.h.

3.11.4.82 template<class _Tp > constexpr const _Tp* std::begin (initializer_list< _Tp > __ils) [noexcept]

Return an iterator pointing to the first element of the initilizer_list.

Parameters

__ils	Initializer list.

Definition at line 89 of file initializer_list.

Referenced by std::vector< _Tp, _Alloc >::emplace(), std::deque< _Tp, _Alloc >::erase(), __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::get_child(), std::vector< _Tp, _Alloc >::insert(), std::list< _Tp, _Alloc >::merge(), std::vector< _Tp, _Alloc >::operator=(), std::list< _Tp, _Alloc >::operator=(), std::list< _Tp, _Alloc >::remove(), std::list< _Tp, _Alloc >::remove_if(), std::list< _Tp, _Alloc >::resize(), std::list< _Tp, _Alloc >::sort(), std::forward_list< _Tp, _Alloc >::unique(), and std::list< _Tp, _Alloc >::unique().

3.11.4.83 **ios_base**& std::boolalpha (ios_base & __*base*) [inline]

Calls base.setf(ios_base::boolalpha).

Definition at line 795 of file ios_base.h.

References __gnu_debug::__base(), and std::ios_base::boolalpha.

3.11.4.84 template<typename _Tp , typename _Tp1 , _Lock_policy _Lp> __shared_ptr<_Tp, _Lp> std::const_pointer_cast (const __shared_ptr< _Tp1, _Lp > & __*r*) [inline], [noexcept]

const_pointer_cast

Definition at line 1196 of file shared_ptr_base.h.

3.11.4.85 size_t std::count ( ) const [noexcept]

Returns the number of bits which are set.

Definition at line 1277 of file bitset.

Referenced by is_permutation().

3.11.4.86 template<typename _Tp > **reference_wrapper**<const _Tp> std::cref (const _Tp & __*t*) [inline], [noexcept]

Denotes a const reference should be taken to a variable.

Definition at line 481 of file functional.

Referenced by cref().

3.11.4.87 template<typename _Tp > void std::cref (const _Tp &&) [delete]

Denotes a reference should be taken to a variable.

3.11.4.88 template<typename _Tp > **reference_wrapper**<const _Tp> std::cref (reference_wrapper< _Tp > __*t*) [inline], [noexcept]

Partial specialization.

Definition at line 499 of file functional.

References cref().

3.11.4.89 **ios_base**& std::dec (ios_base & __*base*) [inline]

Calls base.setf(ios_base::dec, ios_base::basefield).

Definition at line 933 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::basefield, std::ios_base::dec, and std::ios_base::setf().

Referenced by operator>>().

3.11.4.90 template<typename _InputIterator > iterator_traits<_InputIterator>::difference_type std::distance (_InputIterator __first, _InputIterator __last) [inline]

A generalization of pointer arithmetic.

Parameters

__first	An input iterator.
__last	An input iterator.

Returns

The distance between them.

Returns `n` such that __first + n == __last. This requires that `__last` must be reachable from `__first`. Note that `n` may be negative.

For random access iterators, this uses their + and - operations and are constant time. For other iterator classes they are linear time.

Definition at line 114 of file stl_iterator_base_funcs.h.

References __iterator_category().

Referenced by __inplace_stable_partition(), __merge_adaptive(), __merge_without_buffer(), __rotate_adaptive(), __stable_partition_adaptive(), std::deque< _Tp, _Alloc >::_M_range_initialize(), equal_range(), inplace_merge(), is_heap_until(), is_permutation(), std::sub_match< _Bi_iter >::length(), lower_bound(), __gnu_parallel::multiseq_partition(), __gnu_parallel::multiseq_selection(), __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::num_children(), partition_point(), std::match_results< _FwdIterT, _Alloc >::position(), __gnu_cxx::random_sample_n(), std::list< __inp, __rebind_inp >::size(), and upper_bound().

3.11.4.91 template<typename _Tp , typename _Tp1 , _Lock_policy _Lp> __shared_ptr<_Tp, _Lp> std::dynamic_pointer_cast (const __shared_ptr< _Tp1, _Lp > & __r) [inline], [noexcept]

dynamic_pointer_cast

Definition at line 1206 of file shared_ptr_base.h.

3.11.4.92 template<class _Container > auto std::end (_Container & __cont) -> decltype(__cont.end()) [inline]

Return an iterator pointing to one past the last element of the container.

Parameters

__cont	Container.

Definition at line 68 of file range_access.h.

3.11.4.93 template<class _Container > auto std::end (const _Container & __cont) -> decltype(__cont.end()) [inline]

Return an iterator pointing to one past the last element of the const container.

Parameters

__cont	Container.

Definition at line 78 of file range_access.h.

3.11.4.94 template<class _Tp , size_t _Nm> _Tp* std::end (_Tp(&) *__arr[_Nm]*) [inline]

Return an iterator pointing to one past the last element of the array.

Parameters

__arr	Array.

Definition at line 97 of file range_access.h.

3.11.4.95 template<class _Tp > constexpr const _Tp* std::end (initializer_list< _Tp > *__ils*) [noexcept]

Return an iterator pointing to one past the last element of the initilizer_list.

Parameters

__ils	Initializer list.

Definition at line 99 of file initializer_list.

Referenced by std::vector< _Tp, _Alloc >::emplace(), std::vector< _Tp, _Alloc >::erase(), std::deque< _Tp, _Alloc >::erase(), std::vector< _Tp, _Alloc >::insert(), std::list< _Tp, _Alloc >::merge(), std::vector< _Tp, _Alloc >::operator=(), std::list< _Tp, _Alloc >::operator=(), std::list< _Tp, _Alloc >::remove(), std::list< _Tp, _Alloc >::remove_if(), std::list< _Tp, _Alloc >::resize(), std::forward_list< _Tp, _Alloc >::resize(), std::forward_list< _Tp, _Alloc >::unique(), and std::list< _Tp, _Alloc >::unique().

3.11.4.96 template<typename _CharT , typename _Traits > **basic_ostream**<_CharT, _Traits>& std::endl (basic_ostream< _CharT, _Traits > & *__os*) [inline]

Write a newline and flush the stream.

This manipulator is often mistakenly used when a simple newline is desired, leading to poor buffering performance. See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html` for more on this subject.

Definition at line 564 of file ostream.

References flush(), std::basic_ostream< _CharT, _Traits >::put(), and std::basic_ios< _CharT, _Traits >::widen().

3.11.4.97 template<typename _CharT , typename _Traits > **basic_ostream**<_CharT, _Traits>& std::ends (basic_ostream< _CharT, _Traits > & *__os*) [inline]

Write a null character into the output sequence.

Null character is `CharT()` by definition. For CharT of `char`, this correctly writes the ASCII `NUL` character string terminator.

Definition at line 576 of file ostream.

References std::basic_ostream< _CharT, _Traits >::put().

3.11.4.98 template<typename _Tp > _Tp std::fabs (const **std::complex**< _Tp > & *__z*) [inline]

fabs(__z) [8.1.8].

Definition at line 1818 of file complex.

References abs().

3.11.4.99 ios_base& std::fixed (ios_base & __base) [inline]

Calls base.setf(ios_base::fixed, ios_base::floatfield).

Definition at line 958 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::fixed, std::ios_base::floatfield, and std::ios_base::setf().

3.11.4.100 bitset< _Nb >& std::flip ( ) [noexcept]

Toggles every bit to its opposite value.

Definition at line 1104 of file bitset.

3.11.4.101 bitset< _Nb >& std::flip (size_t __position)

Toggles a given bit to its opposite value.

Parameters

__position	The index of the bit.

Exceptions

std::out_of_range	If *pos* is bigger the size of the set.

Definition at line 1117 of file bitset.

References _Unchecked_flip().

3.11.4.102 template<typename _CharT , typename _Traits > basic_ostream<_CharT, _Traits>& std::flush (basic_ostream< _CharT, _Traits > & __os) [inline]

Flushes the output stream.

This manipulator simply calls the stream's `flush()` member function.

Definition at line 586 of file ostream.

References std::basic_ostream< _CharT, _Traits >::flush().

Referenced by endl().

3.11.4.103 template<typename _MoneyT > _Get_money<_MoneyT> std::get_money (_MoneyT & __mon, bool __intl = false) [inline]

Extended manipulator for extracting money.

Parameters

__mon	Either long double or a specialization of `basic_string`.
__intl	A bool indicating whether international format is to be used.

Sent to a stream object, this manipulator extracts *__mon*.

Definition at line 256 of file iomanip.

3.11.4.104 template<typename _Tp > pair<_Tp*, ptrdiff_t> std::get_temporary_buffer (ptrdiff_t __len) [noexcept]

Allocates a temporary buffer.

Parameters

__len	The number of objects of type Tp.

Returns

See full description.

Reinventing the wheel, but this time with prettier spokes!

This function tries to obtain storage for `__len` adjacent Tp objects. The objects themselves are not constructed, of course. A pair<> is returned containing *the buffer s address and capacity (in the units of sizeof(_Tp)), or a pair of 0 values if no storage can be obtained.* Note that the capacity obtained may be less than that requested if the memory is unavailable; you should compare len with the .second return value.

Provides the nothrow exception guarantee.

Definition at line 85 of file stl_tempbuf.h.

Referenced by std::_Temporary_buffer< _ForwardIterator, _Tp >::_Temporary_buffer().

3.11.4.105 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> basic_istream< _CharT, _Traits > & std::getline (basic_istream< _CharT, _Traits > & *__is,* __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base > & *__str,* _CharT *__delim*)

Read a line from stream into a string.

Parameters

__is	Input stream.
__str	Buffer to store into.
__delim	Character marking end of line.

Returns

Reference to the input stream.

Stores characters from *__is* into *__str* until *__delim* is found, the end of the stream is encountered, or str.max_size() is reached. If is.width() is non-zero, that is the limit on the number of characters stored into *__str*. Any previous contents of *__str* are erased. If *delim* was encountered, it is extracted but not stored into *__str*.

Definition at line 626 of file vstring.tcc.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::max_size(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

3.11.4.106 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> basic_istream<_CharT, _Traits>& std::getline (basic_istream< _CharT, _Traits > & *__is,* __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base > & *__str*) `[inline]`

Read a line from stream into a string.

Parameters

__is	Input stream.
__str	Buffer to store into.

Returns

Reference to the input stream.

Stores characters from is into *__str* until '

' is found, the end of the stream is encountered, or str.max_size() is reached. If is.width() is non-zero, that is the limit on the number of characters stored into *__str*. Any previous contents of *__str* are erased. If end of line was encountered, it is extracted but not stored into *__str*.

Definition at line 2567 of file vstring.h.

References getline(), and std::basic_ios< _CharT, _Traits >::widen().

3.11.4.107 template<typename _CharT , typename _Traits , typename _Alloc > basic_istream< _CharT, _Traits > & std::getline (basic_istream< _CharT, _Traits > & *__is*, basic_string< _CharT, _Traits, _Alloc > & *__str*, _CharT *__delim*)

Read a line from stream into a string.

Parameters

__is	Input stream.
__str	Buffer to store into.
__delim	Character marking end of line.

Returns

Reference to the input stream.

Stores characters from *__is* into *__str* until *__delim* is found, the end of the stream is encountered, or str.max_size() is reached. If is.width() is non-zero, that is the limit on the number of characters stored into *__str*. Any previous contents of *__str* are erased. If *__delim* was encountered, it is extracted but not stored into *__str*.

Definition at line 1068 of file basic_string.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::erase(), std::basic_string< _CharT, _Traits, _Alloc >::max_size(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

Referenced by getline().

3.11.4.110 template<typename _InputIterator1 , typename _InputIterator2 , typename _Tp > _Tp std::inner_product (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _Tp *__init*) [inline]

Compute inner product of two ranges.

Starting with an initial value of `__init`, multiplies successive elements from the two ranges and adds each product into the accumulated value using operator+(). The values in the ranges are processed in order.

Parameters

__first1	Start of range 1.
__last1	End of range 1.
__first2	Start of range 2.
__init	Starting value to add other values to.

Returns

The final inner product.

Definition at line 174 of file stl_numeric.h.

3.11.4.111 template<typename _InputIterator1 , typename _InputIterator2 , typename _Tp , typename _BinaryOperation1 , typename _BinaryOperation2 > _Tp std::inner_product (_InputIterator1 *__first1,* _InputIterator1 *__last1,* _InputIterator2 *__first2,* _Tp *__init,* _BinaryOperation1 *__binary_op1,* _BinaryOperation2 *__binary_op2*) [inline]

Compute inner product of two ranges.

Starting with an initial value of `__init`, applies `__binary_op2` to successive elements from the two ranges and accumulates each result into the accumulated value using `__binary_op1`. The values in the ranges are processed in order.

Parameters

__first1	Start of range 1.
__last1	End of range 1.
__first2	Start of range 2.
__init	Starting value to add other values to.
__binary_op1	Function object to accumulate with.
__binary_op2	Function object to apply to pairs of input values.

Returns

The final inner product.

Definition at line 206 of file stl_numeric.h.

3.11.4.112 ios_base& std::internal (ios_base & __base) [inline]

Calls base.setf(ios_base::internal, ios_base::adjustfield).

Definition at line 908 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::adjustfield, and std::ios_base::internal.

3.11.4.113 template<typename _ForwardIterator , typename _Tp > void std::iota (_ForwardIterator *__first*, _ForwardIterator *__last*, _Tp *__value*)

Create a range of sequentially increasing values.

For each element in the range [first,last) assigns `value` and increments `value` as if by `++value`.

Parameters

__first	Start of range.
__last	End of range.
__value	Starting value.

Returns

Nothing.

Definition at line 82 of file stl_numeric.h.

Definition at line 2578 of file locale_facets.h.

3.11.4.125 ios_base& std::left (ios_base & __base) [inline]

Calls base.setf(ios_base::left, ios_base::adjustfield).

Definition at line 916 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::adjustfield, std::ios_base::left, and std::ios_base::setf().

Referenced by operator<<().

3.11.4.126 ios_base& std::noboolalpha (ios_base & __base) [inline]

Calls base.unsetf(ios_base::boolalpha).

Definition at line 803 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::boolalpha, and std::ios_base::unsetf().

3.11.4.127 bool std::none ( ) const [noexcept]

Tests whether any of the bits are on.

Returns

True if none of the bits are set.

Definition at line 1333 of file bitset.

3.11.4.128 ios_base& std::noshowbase (ios_base & __base) [inline]

Calls base.unsetf(ios_base::showbase).

Definition at line 819 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::showbase, and std::ios_base::unsetf().

3.11.4.129 ios_base& std::noshowpoint (ios_base & *__base*) [inline]

Calls base.unsetf(ios_base::showpoint).

Definition at line 835 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::showpoint, and std::ios_base::unsetf().

3.11.4.130 ios_base& std::noshowpos (ios_base & *__base*) [inline]

Calls base.unsetf(ios_base::showpos).

Definition at line 851 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::showpos, and std::ios_base::unsetf().

3.11.4.131 ios_base& std::noskipws (ios_base & *__base*) [inline]

Calls base.unsetf(ios_base::skipws).

Definition at line 867 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::skipws, and std::ios_base::unsetf().

3.11.4.132 ios_base& std::nounitbuf (ios_base & *__base*) [inline]

Calls base.unsetf(ios_base::unitbuf).

Definition at line 899 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::unitbuf, and std::ios_base::unsetf().

3.11.4.133 ios_base& std::nouppercase (ios_base & *__base*) [inline]

Calls base.unsetf(ios_base::uppercase).

Definition at line 883 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::unsetf(), and std::ios_base::uppercase.

3.11.4.134 ios_base& std::oct (ios_base & *__base*) [inline]

Calls base.setf(ios_base::oct, ios_base::basefield).

Definition at line 949 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::basefield, std::ios_base::oct, and std::ios_base::setf().

Referenced by std::regex_traits< _Ch_type >::value().

3.11.4.135 template<typename _Tp , typename _Seq > bool std::operator!= (const stack< _Tp, _Seq > & *__x*, const stack< _Tp, _Seq > & *__y*) [inline]

Based on operator==.

Definition at line 267 of file stl_stack.h.

3.11.4.136 template<typename _Tp > bool std::operator!= (const _Fwd_list_iterator< _Tp > & *__x*, const _Fwd_list_const_iterator< _Tp > & *__y*) [inline]

Forward list iterator inequality comparison.

Definition at line 267 of file forward_list.h.

3.11.4.137 template<typename _Tp , typename _Seq > bool std::operator!= (const queue< _Tp, _Seq > & __x, const queue< _Tp, _Seq > & __y) [inline]

Based on operator==.

Definition at line 292 of file stl_queue.h.

3.11.4.138 template<typename _Key , typename _Compare , typename _Alloc > bool std::operator!= (const multiset< _Key, _Compare, _Alloc > & __x, const multiset< _Key, _Compare, _Alloc > & __y) [inline]

Returns !(x == y).

Definition at line 761 of file stl_multiset.h.

3.11.4.139 template<typename _Key , typename _Compare , typename _Alloc > bool std::operator!= (const set< _Key, _Compare, _Alloc > & __x, const set< _Key, _Compare, _Alloc > & __y) [inline]

Returns !(x == y).

Definition at line 776 of file stl_set.h.

3.11.4.140 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > bool std::operator!= (const multimap< _Key, _Tp, _Compare, _Alloc > & __x, const multimap< _Key, _Tp, _Compare, _Alloc > & __y) [inline]

Based on operator==.

Definition at line 887 of file stl_multimap.h.

3.11.4.141 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > bool std::operator!= (const map< _Key, _Tp, _Compare, _Alloc > & __x, const map< _Key, _Tp, _Compare, _Alloc > & __y) [inline]

Based on operator==.

Definition at line 985 of file stl_map.h.

3.11.4.142 bool std::operator!= (const bitset< _Nb > & __rhs) const [noexcept]

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1292 of file bitset.

3.11.4.143 template<typename _Tp , typename _Alloc > bool std::operator!= (const forward_list< _Tp, _Alloc > & __lx, const forward_list< _Tp, _Alloc > & __ly) [inline]

Based on operator==.

Definition at line 1367 of file forward_list.h.

3.11.4.144 template<typename _Tp , typename _Alloc > bool std::operator!= (const vector< _Tp, _Alloc > & __x, const vector< _Tp, _Alloc > & __y) [inline]

Based on operator==.

Definition at line 1423 of file stl_vector.h.

3.11.4.145 template<typename _Tp , typename _Alloc > bool std::operator!= (const list< _Tp, _Alloc > & __x, const list< _Tp, _Alloc > & __y) [inline]

Based on operator==.

Definition at line 1634 of file stl_list.h.

3.11.4.146 template<typename _Tp , typename _Alloc > bool std::operator!= (const deque< _Tp, _Alloc > & __x, const deque< _Tp, _Alloc > & __y) [inline]

Based on operator==.

Definition at line 1983 of file stl_deque.h.

3.11.4.147 template<typename _CharT , typename _Traits , typename _Alloc > bool std::operator!= (const basic_string< _CharT, _Traits, _Alloc > & __lhs, const basic_string< _CharT, _Traits, _Alloc > & __rhs) [inline]

Test difference of two strings.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs.compare*(*__rhs*) != 0. False otherwise.

Definition at line 2532 of file basic_string.h.

3.11.4.148 template<typename _CharT , typename _Traits , typename _Alloc > bool std::operator!= (const _CharT * __lhs, const basic_string< _CharT, _Traits, _Alloc > & __rhs) [inline]

Test difference of C string and string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__rhs.compare*(*__lhs*) != 0. False otherwise.

Definition at line 2544 of file basic_string.h.

3.11.4.149 template<typename _Res , typename... _Args> bool std::operator!= (const function< _Res(_Args...)> & __f, nullptr_t) [inline], [noexcept]

Compares a polymorphic function object wrapper against 0 (the NULL pointer).

Returns

`false` if the wrapper has no target, `true` otherwise

This function will not throw an exception.

Definition at line 2552 of file functional.

3.11.4.150 template<typename _CharT , typename _Traits , typename _Alloc > bool std::operator!= (const basic_string< _CharT, _Traits, _Alloc > & __lhs, const _CharT * __rhs) [inline]

Test difference of string and C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs.compare*(*__rhs*) != 0. False otherwise.

Definition at line 2556 of file basic_string.h.

3.11.4.151 template< typename _Res , typename... _Args > bool std::operator!= (nullptr_t , const function< _Res(_Args...)> & *__f*) [inline], [noexcept]

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 2558 of file functional.

3.11.4.152 template< size_t _Nb > bitset< _Nb > std::operator& (const bitset< _Nb > & *__x*, const bitset< _Nb > & *__y*) [inline], [noexcept]

Global bitwise operations on bitsets.

Parameters

__x	A bitset.
__y	A bitset of the same size as *__x*.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1416 of file bitset.

3.11.4.153 template< typename _CharT , typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc > std::operator+ (const basic_string< _CharT, _Traits, _Alloc > & *__lhs*, const basic_string< _CharT, _Traits, _Alloc > & *__rhs*)

Concatenate two strings.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with value of *__lhs* followed by *__rhs*.

Definition at line 2365 of file basic_string.h.

References std::basic_string< _CharT, _Traits, _Alloc >::append().

3.11.4.154 template<typename _CharT , typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc > std::operator+ (const _CharT * *__lhs,* const basic_string< _CharT, _Traits, _Alloc > & *__rhs*)

Concatenate C string and string.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with value of *__lhs* followed by *__rhs*.

Definition at line 692 of file basic_string.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::size().

3.11.4.155 template<typename _CharT , typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc > std::operator+ (_CharT *__lhs,* const basic_string< _CharT, _Traits, _Alloc > & *__rhs*)

Concatenate character and string.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with *__lhs* followed by *__rhs*.

Definition at line 708 of file basic_string.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::size().

3.11.4.156 template<typename _CharT , typename _Traits , typename _Alloc > basic_string<_CharT, _Traits, _Alloc> std::operator+ (const basic_string< _CharT, _Traits, _Alloc > & *__lhs,* const _CharT * *__rhs*) `[inline]`

Concatenate string and C string.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with *__lhs* followed by *__rhs*.

Definition at line 2402 of file basic_string.h.

References std::basic_string< _CharT, _Traits, _Alloc >::append().

3.11.4.157 template< typename _CharT , typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc> std::operator+ (const basic_string< _CharT, _Traits, _Alloc > & *__lhs*, _CharT *__rhs*) [inline]

Concatenate string and character.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with *__lhs* followed by *__rhs*.

Definition at line 2418 of file basic_string.h.

3.11.4.158 template< typename _Tp , typename _Seq > bool std::operator< (const stack< _Tp, _Seq > & *__x*, const stack< _Tp, _Seq > & *__y*) [inline]

Stack ordering relation.

Parameters

__x	A stack.
__y	A stack of the same type as *x*.

Returns

True iff *x* is lexicographically less than *__y*.

This is an total ordering relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, the elements must be comparable with <, and std::lexicographical_compare() is usually used to make the determination.

Definition at line 261 of file stl_stack.h.

3.11.4.159 template< typename _Tp , typename _Seq > bool std::operator< (const queue< _Tp, _Seq > & *__x*, const queue< _Tp, _Seq > & *__y*) [inline]

Queue ordering relation.

Parameters

__x	A queue.
__y	A queue of the same type as *x*.

Returns

True iff *__x* is lexicographically less than *__y*.

This is an total ordering relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, the elements must be comparable with <, and std::lexicographical_compare() is usually used to make the determination.

Definition at line 286 of file stl_queue.h.

References std::queue< _Tp, _Sequence >::c.

3.11.4.160 template<typename _Key , typename _Compare , typename _Alloc > bool std::operator< (const multiset< _Key, _Compare, _Alloc > & *__x*, const multiset< _Key, _Compare, _Alloc > & *__y*) [inline]

Multiset ordering relation.

Parameters

__x	A multiset.
__y	A multiset of the same type as *__x*.

Returns

True iff *__x* is lexicographically less than *__y*.

This is a total ordering relation. It is linear in the size of the maps. The elements must be comparable with <.

See std::lexicographical_compare() for how the determination is made.

Definition at line 754 of file stl_multiset.h.

3.11.4.161 template<typename _Key , typename _Compare , typename _Alloc > bool std::operator< (const set< _Key, _Compare, _Alloc > & *__x*, const set< _Key, _Compare, _Alloc > & *__y*) [inline]

Set ordering relation.

Parameters

__x	A set.
__y	A set of the same type as *x*.

Returns

True iff *__x* is lexicographically less than *__y*.

This is a total ordering relation. It is linear in the size of the maps. The elements must be comparable with <.

See std::lexicographical_compare() for how the determination is made.

Definition at line 769 of file stl_set.h.

3.11.4.162 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > bool std::operator< (const multimap< _Key, _Tp, _Compare, _Alloc > & *__x*, const multimap< _Key, _Tp, _Compare, _Alloc > & *__y*) [inline]

Multimap ordering relation.

Parameters

__x	A multimap.
__y	A multimap of the same type as *__x*.

Returns

True iff *x* is lexicographically less than *y*.

This is a total ordering relation. It is linear in the size of the multimaps. The elements must be comparable with <.

See std::lexicographical_compare() for how the determination is made.

Definition at line 880 of file stl_multimap.h.

3.11.4.163 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > bool std::operator< (const map< _Key, _Tp, _Compare, _Alloc > & *__x,* const map< _Key, _Tp, _Compare, _Alloc > & *__y*) `[inline]`

Map ordering relation.

Parameters

__x	A map.
__y	A map of the same type as *x*.

Returns

True iff *x* is lexicographically less than *y*.

This is a total ordering relation. It is linear in the size of the maps. The elements must be comparable with <.

See std::lexicographical_compare() for how the determination is made.

Definition at line 978 of file stl_map.h.

3.11.4.164 template<typename _Tp , typename _Alloc > bool std::operator< (const forward_list< _Tp, _Alloc > & *__lx,* const forward_list< _Tp, _Alloc > & *__ly*) `[inline]`

Forward list ordering relation.

Parameters

__lx	A forward_list.
__ly	A forward_list of the same type as *__lx*.

Returns

True iff *__lx* is lexicographically less than *__ly*.

This is a total ordering relation. It is linear in the number of elements of the forward lists. The elements must be comparable with <.

See std::lexicographical_compare() for how the determination is made.

Definition at line 1359 of file forward_list.h.

References lexicographical_compare().

3.11.4.165 template<typename _Tp , typename _Alloc > bool std::operator< (const vector< _Tp, _Alloc > & __x, const vector< _Tp, _Alloc > & __y) [inline]

Vector ordering relation.

Parameters

__x	A vector.
__y	A vector of the same type as *__x*.

Returns

True iff *__x* is lexicographically less than *__y*.

This is a total ordering relation. It is linear in the size of the vectors. The elements must be comparable with <.

See std::lexicographical_compare() for how the determination is made.

Definition at line 1416 of file stl_vector.h.

References std::vector< _Tp, _Alloc >::begin(), std::vector< _Tp, _Alloc >::end(), and lexicographical_compare().

3.11.4.166 template<typename _Tp , typename _Alloc > bool std::operator< (const list< _Tp, _Alloc > & __x, const list< _Tp, _Alloc > & __y) [inline]

List ordering relation.

Parameters

__x	A list.
__y	A list of the same type as *__x*.

Returns

True iff *__x* is lexicographically less than *__y*.

This is a total ordering relation. It is linear in the size of the lists. The elements must be comparable with <.

See std::lexicographical_compare() for how the determination is made.

Definition at line 1627 of file stl_list.h.

References lexicographical_compare().

3.11.4.167 template<typename _Tp , typename _Alloc > bool std::operator< (const deque< _Tp, _Alloc > & __x, const deque< _Tp, _Alloc > & __y) [inline]

Deque ordering relation.

Parameters

__x	A deque.
__y	A deque of the same type as *__x*.

Returns

True iff *x* is lexicographically less than *__y*.

This is a total ordering relation. It is linear in the size of the deques. The elements must be comparable with $<$.

See std::lexicographical_compare() for how the determination is made.

Definition at line 1975 of file stl_deque.h.

References lexicographical_compare().

3.11.4.168 template< typename _CharT , typename _Traits , typename _Alloc > bool std::operator< (const basic_string< _CharT, _Traits, _Alloc > & *__lhs*, const basic_string< _CharT, _Traits, _Alloc > & *__rhs*) [inline]

Test if string precedes string.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs* precedes *__rhs*. False otherwise.

Definition at line 2569 of file basic_string.h.

References std::basic_string< _CharT, _Traits, _Alloc >::compare().

3.11.4.169 template< typename _CharT , typename _Traits , typename _Alloc > bool std::operator< (const basic_string< _CharT, _Traits, _Alloc > & *__lhs*, const _CharT * *__rhs*) [inline]

Test if string precedes C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs* precedes *__rhs*. False otherwise.

Definition at line 2581 of file basic_string.h.

3.11.4.170 template< typename _CharT , typename _Traits , typename _Alloc > bool std::operator< (const _CharT * *__lhs*, const basic_string< _CharT, _Traits, _Alloc > & *__rhs*) [inline]

Test if C string precedes string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__lhs* precedes *__rhs*. False otherwise.

Definition at line 2593 of file basic_string.h.

References std::basic_string< _CharT, _Traits, _Alloc >::compare().

3.11.4.171 template<typename _CharT , typename _Traits > basic_ostream<_CharT, _Traits>& std::operator<< (basic_ostream< _CharT, _Traits > & *__out,* _CharT *__c*) [inline]

Character inserters.

Parameters

__out	An output stream.
__c	A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

If __`c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 471 of file ostream.

3.11.4.172 template<typename _CharT , typename _Traits > basic_ostream<_CharT, _Traits>& std::operator<< (basic_ostream< _CharT, _Traits > & *__out,* char *__c*) [inline]

Character inserters.

Parameters

__out	An output stream.
__c	A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

If __`c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 476 of file ostream.

3.11.4.173 template<class _Traits > basic_ostream<char, _Traits>& std::operator<< (basic_ostream< char, _Traits > & *__out,* char *__c*) [inline]

Character inserters.

Parameters

__out	An output stream.
__c	A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

If `__c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 482 of file ostream.

3.11.4.174 template<class _Traits > basic_ostream<char, _Traits>& std::operator<< (basic_ostream< char, _Traits > & __out, signed char __c) `[inline]`

Character inserters.

Parameters

__out	An output stream.
__c	A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

If `__c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 488 of file ostream.

3.11.4.175 template<class _Traits > basic_ostream<char, _Traits>& std::operator<< (basic_ostream< char, _Traits > & __out, unsigned char __c) `[inline]`

Character inserters.

Parameters

__out	An output stream.
__c	A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

If `__c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.

Definition at line 493 of file ostream.

3.11.4.176 template<typename _CharT , typename _Traits > basic_ostream<_CharT, _Traits>& std::operator<< (basic_ostream< _CharT, _Traits > & __out, const _CharT * __s) [inline]

String inserters.

Parameters

__out	An output stream.
__s	A character string.

Returns

out

Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 513 of file ostream.

References std::ios_base::badbit.

3.11.4.177 template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & std::operator<< (basic_ostream< _CharT, _Traits > & __out, const char * __s)

String inserters.

Parameters

__out	An output stream.
__s	A character string.

Returns

out

Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 321 of file ostream.tcc.

References std::ios_base::badbit, and std::basic_ios< _CharT, _Traits >::setstate().

3.11.4.178 template<class _Traits > basic_ostream<char, _Traits>& std::operator<< (basic_ostream< char, _Traits > & __out, const char * __s) [inline]

String inserters.

Parameters

__out	An output stream.
__s	A character string.

Returns

out

Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 530 of file ostream.

References std::ios_base::badbit.

3.11.4.179 template<class _Traits > **basic_ostream**<char, _Traits>& std::operator<< (basic_ostream< char, _Traits > & *__out,* const signed char ∗ *__s*) `[inline]`

String inserters.

Parameters

__out	An output stream.
__s	A character string.

Returns

out

Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 543 of file ostream.

3.11.4.180 template<class _Traits > **basic_ostream**<char, _Traits>& std::operator<< (basic_ostream< char, _Traits > & *__out,* const unsigned char ∗ *__s*) `[inline]`

String inserters.

Parameters

__out	An output stream.
__s	A character string.

Returns

out

Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.

Definition at line 548 of file ostream.

3.11.4.181 template<typename _CharT , typename _Traits , typename _Tp > basic_ostream<_CharT, _Traits>& std::operator<< (basic_ostream< _CharT, _Traits > && __os, const _Tp & __x) `[inline]`

Generic inserter for rvalue stream.

Parameters

__os	An input stream.
__x	A reference to the object being inserted.

Returns

os

This is just a forwarding function to allow insertion to rvalue streams since they won't bind to the inserter functions that take an lvalue reference.

Definition at line 602 of file ostream.

3.11.4.182 bitset<_Nb> std::operator<< (size_t __position) const `[noexcept]`

Self-explanatory.

Definition at line 1339 of file bitset.

3.11.4.183 template<class _CharT , class _Traits , size_t _Nb> std::basic_ostream<_CharT, _Traits>& std::operator<< (std::basic_ostream< _CharT, _Traits > & __os, const bitset< _Nb > & __x)

Global I/O operators for bitsets.

Direct I/O between streams and bitsets is supported. Output is straightforward. Input will skip whitespace, only accept *0* and *1* characters, and will only extract as many digits as the bitset will hold.

Definition at line 1521 of file bitset.

References std::__ctype_abstract_base< _CharT >::widen().

3.11.4.184 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> basic_ostream<_CharT, _Traits>& std::operator<< (basic_ostream< _CharT, _Traits > & __os, const __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base > & __str) `[inline]`

Write string to a stream.

Parameters

__os	Output stream.
__str	String to write out.

Returns

Reference to the output stream.

Output characters of *__str* into os following the same rules as for writing a C string.

Definition at line 2521 of file vstring.h.

3.11.4.185 template<typename _CharT , typename _Traits , typename _Alloc > basic_ostream<_CharT, _Traits>& std::operator<< (basic_ostream< _CharT, _Traits > & *__os,* const basic_string< _CharT, _Traits, _Alloc > & *__str*) [inline]

Write string to a stream.

Parameters

__os	Output stream.
__str	String to write out.

Returns

Reference to the output stream.

Output characters of *__str* into os following the same rules as for writing a C string.

Definition at line 2753 of file basic_string.h.

3.11.4.186 bitset<_Nb>& std::operator<<= (size_t *__position*) [noexcept]

Operations on bitsets.

Parameters

__position	The number of places to shift.

These should be self-explanatory.

Definition at line 980 of file bitset.

3.11.4.187 template<typename _Tp , typename _Seq > bool std::operator<= (const stack< _Tp, _Seq > & *__x,* const stack< _Tp, _Seq > & *__y*) [inline]

Based on operator<.

Definition at line 279 of file stl_stack.h.

Definition at line 1997 of file stl_deque.h.

3.11.4.197 template<typename _CharT , typename _Traits , typename _Alloc > bool std::operator<= (const basic_string< _CharT, _Traits, _Alloc > & __lhs, const basic_string< _CharT, _Traits, _Alloc > & __rhs) [inline]

Test if string doesn't follow string.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs* doesn't follow *__rhs*. False otherwise.

Definition at line 2643 of file basic_string.h.

References std::basic_string< _CharT, _Traits, _Alloc >::compare().

3.11.4.198 template<typename _CharT , typename _Traits , typename _Alloc > bool std::operator<= (const basic_string< _CharT, _Traits, _Alloc > & *__lhs*, const _CharT ∗ *__rhs*) [inline]

Test if string doesn't follow C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs* doesn't follow *__rhs*. False otherwise.

Definition at line 2655 of file basic_string.h.

3.11.4.199 template<typename _CharT , typename _Traits , typename _Alloc > bool std::operator<= (const _CharT ∗ *__lhs*, const basic_string< _CharT, _Traits, _Alloc > & *__rhs*) [inline]

Test if C string doesn't follow string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__lhs* doesn't follow *__rhs*. False otherwise.

Definition at line 2667 of file basic_string.h.

References std::basic_string< _CharT, _Traits, _Alloc >::compare().

3.11.4.200 template<typename _StateT > bool std::operator== (const fpos< _StateT > & *__lhs*, const fpos< _StateT > & *__rhs*) [inline]

Test if equivalent to another position.

Definition at line 216 of file postypes.h.

3.11.4.201 template<typename _Tp , typename _Seq > bool std::operator== (const stack< _Tp, _Seq > & *__x*, const stack< _Tp, _Seq > & *__y*) [inline]

Stack equality comparison.

Parameters

__x	A stack.
__y	A stack of the same type as *__x*.

Returns

True iff the size and elements of the stacks are equal.

This is an equivalence relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, and stacks are considered equivalent if their sequences compare equal.

Definition at line 243 of file stl_stack.h.

3.11.4.202 template<typename _Tp > bool std::operator== (const _Fwd_list_iterator< _Tp > & *__x*, const _Fwd_list_const_iterator< _Tp > & *__y*) [inline]

Forward list iterator equality comparison.

Definition at line 258 of file forward_list.h.

3.11.4.203 template<typename _Tp , typename _Seq > bool std::operator== (const queue< _Tp, _Seq > & *__x*, const queue< _Tp, _Seq > & *__y*) [inline]

Queue equality comparison.

Parameters

__x	A queue.
__y	A queue of the same type as *__x*.

Returns

True iff the size and elements of the queues are equal.

This is an equivalence relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, and queues are considered equivalent if their sequences compare equal.

Definition at line 268 of file stl_queue.h.

References std::queue< _Tp, _Sequence >::c.

3.11.4.204 template<typename _Key , typename _Compare , typename _Alloc > bool std::operator== (const multiset< _Key, _Compare, _Alloc > & *__x*, const multiset< _Key, _Compare, _Alloc > & *__y*) [inline]

Multiset equality comparison.

Parameters

__x	A multiset.
__y	A multiset of the same type as *__x*.

Returns

True iff the size and elements of the multisets are equal.

This is an equivalence relation. It is linear in the size of the multisets. Multisets are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 737 of file stl_multiset.h.

3.11.4.205 template<typename _Key , typename _Compare , typename _Alloc > bool std::operator== (const set< _Key, _Compare, _Alloc > & __x, const set< _Key, _Compare, _Alloc > & __y) [inline]

Set equality comparison.

Parameters

__x	A set.
__y	A set of the same type as *x*.

Returns

True iff the size and elements of the sets are equal.

This is an equivalence relation. It is linear in the size of the sets. Sets are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 752 of file stl_set.h.

3.11.4.206 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > bool std::operator== (const multimap< _Key, _Tp, _Compare, _Alloc > & __x, const multimap< _Key, _Tp, _Compare, _Alloc > & __y) [inline]

Multimap equality comparison.

Parameters

__x	A multimap.
__y	A multimap of the same type as *__x*.

Returns

True iff the size and elements of the maps are equal.

This is an equivalence relation. It is linear in the size of the multimaps. Multimaps are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 863 of file stl_multimap.h.

3.11.4.207 template<typename _Key , typename _Tp , typename _Compare , typename _Alloc > bool std::operator== (const map< _Key, _Tp, _Compare, _Alloc > & __x, const map< _Key, _Tp, _Compare, _Alloc > & __y) [inline]

Map equality comparison.

Parameters

__x	A map.
__y	A map of the same type as *x*.

Returns

True iff the size and elements of the maps are equal.

This is an equivalence relation. It is linear in the size of the maps. Maps are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 961 of file stl_map.h.

3.11.4.208 bool std::operator== (const bitset< _Nb > & __*rhs*) const [noexcept]

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1288 of file bitset.

3.11.4.209 template<typename _Tp , typename _Alloc > bool std::operator== (const forward_list< _Tp, _Alloc > & __*lx*, const forward_list< _Tp, _Alloc > & __*ly*)

Forward list equality comparison.

Parameters

__*lx*	A forward_list
__*ly*	A forward_list of the same type as __*lx*.

Returns

True iff the elements of the forward lists are equal.

This is an equivalence relation. It is linear in the number of elements of the forward lists. Deques are considered equivalent if corresponding elements compare equal.

Definition at line 387 of file forward_list.tcc.

References std::forward_list< _Tp, _Alloc >::cbegin(), and std::forward_list< _Tp, _Alloc >::cend().

3.11.4.210 template<typename _Tp , typename _Alloc > bool std::operator== (const vector< _Tp, _Alloc > & __*x*, const vector< _Tp, _Alloc > & __*y*) [inline]

Vector equality comparison.

Parameters

__*x*	A vector.
__*y*	A vector of the same type as __*x*.

Returns

True iff the size and elements of the vectors are equal.

This is an equivalence relation. It is linear in the size of the vectors. Vectors are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 1399 of file stl_vector.h.

References std::vector< _Tp, _Alloc >::begin(), std::vector< _Tp, _Alloc >::end(), equal(), and std::vector< _Tp, _Alloc >::size().

3.11.4.211 template< typename _Tp , typename _Alloc > bool std::operator== (const list< _Tp, _Alloc > & __x, const list< _Tp, _Alloc > & __y) [inline]

List equality comparison.

Parameters

__x	A list.
__y	A list of the same type as *__x*.

Returns

True iff the size and elements of the lists are equal.

This is an equivalence relation. It is linear in the size of the lists. Lists are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 1598 of file stl_list.h.

References std::list< _Tp, _Alloc >::begin(), and std::list< _Tp, _Alloc >::end().

3.11.4.212 template< typename _Tp , typename _Alloc > bool std::operator== (const deque< _Tp, _Alloc > & __x, const deque< _Tp, _Alloc > & __y) [inline]

Deque equality comparison.

Parameters

__x	A deque.
__y	A deque of the same type as *__x*.

Returns

True iff the size and elements of the deques are equal.

This is an equivalence relation. It is linear in the size of the deques. Deques are considered equivalent if their sizes are equal, and if corresponding elements compare equal.

Definition at line 1957 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::begin(), std::deque< _Tp, _Alloc >::end(), equal(), and std::deque< _Tp, _Alloc >::size().

3.11.4.213 template< typename _CharT , typename _Traits , typename _Alloc > bool std::operator== (const basic_string< _CharT, _Traits, _Alloc > & __lhs, const basic_string< _CharT, _Traits, _Alloc > & __rhs) [inline]

Test equivalence of two strings.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs.compare*(*__rhs*) == 0. False otherwise.

Definition at line 2486 of file basic_string.h.

References std::basic_string< _CharT, _Traits, _Alloc >::compare().

3.11.4.214 template<typename _CharT , typename _Traits , typename _Alloc > bool std::operator== (const _CharT * *__lhs*, const basic_string< _CharT, _Traits, _Alloc > & *__rhs*) [inline]

Test equivalence of C string and string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__rhs.compare*(*__lhs*) == 0. False otherwise.

Definition at line 2507 of file basic_string.h.

References std::basic_string< _CharT, _Traits, _Alloc >::compare().

3.11.4.215 template<typename _CharT , typename _Traits , typename _Alloc > bool std::operator== (const basic_string< _CharT, _Traits, _Alloc > & *__lhs*, const _CharT * *__rhs*) [inline]

Test equivalence of string and C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs.compare*(*__rhs*) == 0. False otherwise.

Definition at line 2519 of file basic_string.h.

References std::basic_string< _CharT, _Traits, _Alloc >::compare().

3.11.4.216 template<typename _Res , typename... _Args> bool std::operator== (const function< _Res(_Args...)> & *__f*, nullptr_t) [inline], [noexcept]

Compares a polymorphic function object wrapper against 0 (the NULL pointer).

Returns

`true` if the wrapper has no target, `false` otherwise

This function will not throw an exception.

Definition at line 2534 of file functional.

3.11.4.217 template<typename _Res , typename... _Args> bool std::operator== (nullptr_t , const function< _Res(_Args...)> & __f) [inline], [noexcept]

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.

Definition at line 2540 of file functional.

Test if C string doesn't precede string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__lhs* doesn't precede *__rhs*. False otherwise.

Definition at line 2704 of file basic_string.h.

References std::basic_string< _CharT, _Traits, _Alloc >::compare().

3.11.4.244 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::operator>> (basic_istream< _CharT, _Traits > & *__in*, _CharT & *__c*)

Character extractors.

Parameters

__in	An input stream.
__c	A character reference.

Returns

in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in *__c*. Otherwise, sets failbit in the input stream.

Definition at line 923 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

3.11.4.245 template<class _Traits > basic_istream<char, _Traits>& std::operator>> (basic_istream< char, _Traits > & *__in*, unsigned char & *__c*) [inline]

Character extractors.

Parameters

__in	An input stream.
__c	A character reference.

Returns

in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in *__c*. Otherwise, sets failbit in the input stream.

Definition at line 727 of file istream.

3.11.4.246 template<class _Traits > **basic_istream**<char, _Traits>& std::operator>> (basic_istream< char, _Traits > & *__in,* signed char & *__c*) `[inline]`

Character extractors.

Parameters

__in	An input stream.
__c	A character reference.

Returns

in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in *__c*. Otherwise, sets failbit in the input stream.

Definition at line 732 of file istream.

3.11.4.247 template<typename _CharT , typename _Traits > **basic_istream**< _CharT, _Traits > & std::operator>> (basic_istream< _CharT, _Traits > & *__in,* _CharT ∗ *__s*)

Character string extractors.

Parameters

__in	An input stream.
__s	A pointer to a character array.

Returns

__in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at *__s*. `n` is defined as:

- if `width()` is greater than zero, `n` is width() otherwise
- `n` is *the number of elements of the largest array of* ∗
- *`char_type` that can store a terminating `eos`.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- `n-1` characters are stored
- EOF is reached
- the next character is whitespace according to the current locale

- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

Definition at line 955 of file istream.tcc.

References std::ios_base::badbit, std::ios_base::eofbit, std::ios_base::failbit, std::ios_base::getloc(), std::ios_base::goodbit, std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), and std::ios_base::width().

3.11.4.248 template<> **basic_istream**<char>& std::operator>> (basic_istream< char > & *__in,* char * *__s*)

Character string extractors.

Parameters

__in	An input stream.
__s	A pointer to a character array.

Returns

__in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at *__s*. `n` is defined as:

- if `width()` is greater than zero, `n` is width() otherwise
- `n` is *the number of elements of the largest array of* *
- *`char_type` that can store a terminating `eos`.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- `n-1` characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

3.11.4.249 template<class _Traits > **basic_istream**<char, _Traits>& std::operator>> (basic_istream< char, _Traits > & *__in,* unsigned char * *__s*) `[inline]`

Character string extractors.

Parameters

__in	An input stream.
__s	A pointer to a character array.

Returns

__in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at *__s*. `n` is defined as:

- if `width()` is greater than zero, `n` is width() otherwise
- `n` is *the number of elements of the largest array of* $*$
- *`char_type` that can store a terminating `eos`.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- `n-1` characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

Definition at line 774 of file istream.

3.11.4.250 template<class _Traits > **basic_istream**<char, _Traits>& std::operator>> (basic_istream< char, _Traits > & *__in*, signed char * *__s*) `[inline]`

Character string extractors.

Parameters

__in	An input stream.
__s	A pointer to a character array.

Returns

__in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at *__s*. `n` is defined as:

- if `width()` is greater than zero, `n` is width() otherwise
- `n` is *the number of elements of the largest array of* $*$
- *`char_type` that can store a terminating `eos`.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- `n-1` characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.

If no characters are extracted, sets failbit.

Definition at line 779 of file istream.

3.11.4.251 template<typename _CharT , typename _Traits , typename _Tp > basic_istream<_CharT, _Traits>& std::operator>> (basic_istream< _CharT, _Traits > && __is, _Tp & __x) [inline]

Generic extractor for rvalue stream.

Parameters

__is	An input stream.
__x	A reference to the extraction target.

Returns

is

This is just a forwarding function to allow extraction from rvalue streams since they won't bind to the extractor functions that take an lvalue reference.

Definition at line 872 of file istream.

3.11.4.252 bitset<_Nb> std::operator>> (size_t __position) const [noexcept]

Self-explanatory.

Definition at line 1343 of file bitset.

3.11.4.253 template<class _CharT , class _Traits , size_t _Nb> std::basic_istream<_CharT, _Traits>& std::operator>> (std::basic_istream< _CharT, _Traits > & __is, bitset< _Nb > & __x)

Global I/O operators for bitsets.

Direct I/O between streams and bitsets is supported. Output is straightforward. Input will skip whitespace, only accept *0* and *1* characters, and will only extract as many digits as the bitset will hold.

Definition at line 1453 of file bitset.

References std::basic_string< _CharT, _Traits, _Alloc >::empty(), std::basic_string< _CharT, _Traits, _Alloc >::push_back(), std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_string< _CharT, _Traits, _Alloc >::reserve(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_ios< _CharT, _Traits >::widen().

3.11.4.254 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> basic_istream< _CharT, _Traits > & std::operator>> (basic_istream< _CharT, _Traits > & __is, __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base > & __str)

Read stream into a string.

Parameters

__is	Input stream.
__str	Buffer to store into.

Returns

Reference to the input stream.

Stores characters from *__is* into *__str* until whitespace is found, the end of the stream is encountered, or str.max_size() is reached. If is.width() is non-zero, that is the limit on the number of characters stored into *__str*. Any previous contents of *__str* are erased.

Definition at line 551 of file vstring.tcc.

References std::ios_base::getloc(), std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), and std::ios_base::width().

3.11.4.255 template<typename _CharT , typename _Traits , typename _Alloc > basic_istream< _CharT, _Traits > & std::operator>> (basic_istream< _CharT, _Traits > & *__is,* basic_string< _CharT, _Traits, _Alloc > & *__str*)

Read stream into a string.

Parameters

__is	Input stream.
__str	Buffer to store into.

Returns

Reference to the input stream.

Stores characters from *__is* into *__str* until whitespace is found, the end of the stream is encountered, or str.max_size() is reached. If is.width() is non-zero, that is the limit on the number of characters stored into *__str*. Any previous contents of *__str* are erased.

Definition at line 996 of file basic_string.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::append(), std::basic_string< _CharT, _Traits, _Alloc >::erase(), std::ios_base::getloc(), std::basic_string< _CharT, _Traits, _Alloc >::max_size(), std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_ios< _CharT, _Traits >::setstate(), and std::ios_base::width().

3.11.4.256 bitset<_Nb>& std::operator>>= (size_t *__position*) [noexcept]

Operations on bitsets.

Parameters

__position	The number of places to shift.

These should be self-explanatory.

Definition at line 993 of file bitset.

3.11.4.257 constexpr bool std::operator[] (size_t *__position*)

Array-indexing support.

Parameters

__position	Index into the bitset.

Returns

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

_GLIBCXX_RESOLVE_LIB_DEFECTS Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

Definition at line 1145 of file bitset.

3.11.4.258 template<size_t _Nb> bitset<_Nb> std::operator^ (const bitset< _Nb > & __x, const bitset< _Nb > & __y) `[inline]`, `[noexcept]`

Global bitwise operations on bitsets.

Parameters

__x	A bitset.
__y	A bitset of the same size as *__x*.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1434 of file bitset.

3.11.4.259 template<size_t _Nb> bitset<_Nb> std::operator| (const bitset< _Nb > & __x, const bitset< _Nb > & __y) `[inline]`, `[noexcept]`

Global bitwise operations on bitsets.

Parameters

__x	A bitset.
__y	A bitset of the same size as *__x*.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1425 of file bitset.

3.11.4.260 bitset<_Nb> std::operator~ ( ) const `[noexcept]`

See the no-argument flip().

Definition at line 1126 of file bitset.

3.11.4.261 template<typename _InputIterator , typename _OutputIterator > _OutputIterator std::partial_sum (_InputIterator *__first,* _InputIterator *__last,* _OutputIterator *__result*)

Return list of partial sums.

Accumulates the values in the range [first,last) using the + operator. As each successive input value is added into the total, that partial sum is written to `__result`. Therefore, the first value in `__result` is the first value of the input, the second value in `__result` is the sum of the first and second input values, and so on.

Parameters

__first	Start of input range.
__last	End of input range.
__result	Output sum.

Returns

Iterator pointing just beyond the values written to __result.

Definition at line 237 of file stl_numeric.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs_pu(), and __gnu_parallel::__sequential_random_shuffle().

3.11.4.262 template<typename _InputIterator , typename _OutputIterator , typename _BinaryOperation > _OutputIterator std::partial_sum (_InputIterator *__first,* _InputIterator *__last,* _OutputIterator *__result,* _BinaryOperation *__binary_op*)

Return list of partial sums.

Accumulates the values in the range [first,last) using `__binary_op`. As each successive input value is added into the total, that partial sum is written to `__result`. Therefore, the first value in `__result` is the first value of the input, the second value in `__result` is the sum of the first and second input values, and so on.

Parameters

__first	Start of input range.
__last	End of input range.
__result	Output sum.
__binary_op	Function object.

Returns

Iterator pointing just beyond the values written to __result.

Definition at line 278 of file stl_numeric.h.

3.11.4.263 template<typename _MoneyT > _Put_money<_MoneyT> std::put_money (const _MoneyT & *__mon,* bool *__intl =* `false`) `[inline]`

Extended manipulator for inserting money.

Parameters

__mon	Either long double or a specialization of `basic_string`.
__intl	A bool indicating whether international format is to be used.

Sent to a stream object, this manipulator inserts *__mon*.

Definition at line 303 of file iomanip.

3.11.4.264 template<typename _Tp > **reference_wrapper**<_Tp> std::ref (_Tp & *__t*) `[inline]`, `[noexcept]`

Denotes a reference should be taken to a variable.

Definition at line 475 of file functional.

Referenced by ref().

3.11.4.265 template<typename _Tp > void std::ref (const _Tp &&) `[delete]`

Denotes a reference should be taken to a variable.

3.11.4.266 template<typename _Tp > **reference_wrapper**<_Tp> std::ref (reference_wrapper< _Tp > *__t*) `[inline]`, `[noexcept]`

Partial specialization.

Definition at line 493 of file functional.

References ref().

3.11.4.267 template<typename _InputIterator , typename _OutputIterator , typename _Tp > _OutputIterator std::replace_copy (_InputIterator *__first,* _InputIterator *__last,* _OutputIterator *__result,* const _Tp & *__old_value,* const _Tp & *__new_value*)

Copy a sequence, replacing each element of one value with another value.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.
__old_value	The value to be replaced.
__new_value	The replacement value.

Returns

The end of the output sequence, `result+`(last-first).

Copies each element in the input range [__first,__last) to the output range [__result,__result+(__last-__first)) replacing elements equal to `__old_value` with `__new_value`.

Definition at line 3907 of file stl_algo.h.

3.11.4.268 bitset<_Nb>& std::reset ( ) `[noexcept]`

Sets every bit to false.

Definition at line 1079 of file bitset.

3.11.4.269 bitset<_Nb>& std::reset (size_t *__position*)

Sets a given bit to false.

Parameters

__position	The index of the bit.

Exceptions

std::out_of_range	If *pos* is bigger the size of the set.

Same as writing `set(pos,false)`.

Definition at line 1093 of file bitset.

References _Unchecked_reset().

3.11.4.270 _Resetiosflags std::resetiosflags (ios_base::fmtflags *__mask*) [inline]

Manipulator for `setf`.

Parameters

__mask	A format flags mask.

Sent to a stream object, this manipulator resets the specified flags, via *stream.setf(0,__mask)*.

Definition at line 63 of file iomanip.

3.11.4.271 template<typename _Tp > void std::return_temporary_buffer (_Tp * *__p*) [inline]

The companion to get_temporary_buffer().

Parameters

__p	A buffer previously allocated by get_temporary_buffer.

Returns

None.

Frees the memory pointed to by __p.

Definition at line 112 of file stl_tempbuf.h.

Referenced by std::_Temporary_buffer< _ForwardIterator, _Tp >::_Temporary_buffer().

3.11.4.272 ios_base& std::right (ios_base & *__base*) [inline]

Calls base.setf(ios_base::right, ios_base::adjustfield).

Definition at line 924 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::adjustfield, std::ios_base::right, and std::ios_base::setf().

3.11.4.273 ios_base& std::scientific (ios_base & *__base*) [inline]

Calls base.setf(ios_base::scientific, ios_base::floatfield).

Definition at line 966 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::floatfield, std::ios_base::scientific, and std::ios_base::setf().

Referenced by operator<<().

3.11.4.274 bitset<_Nb>& std::set ( ) [noexcept]

Sets every bit to true.

Definition at line 1054 of file bitset.

3.11.4.275 bitset< _Nb >& **std::set** (size_t __*position*, bool __*val* = `true`)

Sets a given bit to a particular value.

Parameters

__position	The index of the bit.
__val	Either true or false, defaults to true.

Exceptions

std::out_of_range	If *pos* is bigger the size of the set.

Definition at line 1068 of file bitset.

References _Unchecked_set().

3.11.4.276 **new_handler** std::set_new_handler (new_handler) throw ()

Takes a replacement handler as the argument, returns the previous handler.

3.11.4.277 _Setbase std::setbase (int __*base*) `[inline]`

Manipulator for `setf`.

Parameters

__base	A numeric base.

Sent to a stream object, this manipulator changes the `ios_base::basefield` flags to `oct`, `dec`, or `hex` when *base* is 8, 10, or 16, accordingly, and to 0 if *__base* is any other value.

Definition at line 124 of file iomanip.

3.11.4.278 template<typename _CharT > _Setfill<_CharT> std::setfill (_CharT __*c*) `[inline]`

Manipulator for `fill`.

Parameters

__c	The new fill character.

Sent to a stream object, this manipulator calls `fill(__c)` for that object.

Definition at line 162 of file iomanip.

3.11.4.279 _Setiosflags std::setiosflags (ios_base::fmtflags __*mask*) `[inline]`

Manipulator for `setf`.

Parameters

__mask	A format flags mask.

Sent to a stream object, this manipulator sets the format flags to *__mask*.

Definition at line 93 of file iomanip.

3.11.4.280 _Setprecision std::setprecision (int __n) `[inline]`

Manipulator for `precision`.

Parameters

__n	The new precision.

Sent to a stream object, this manipulator calls `precision(__n)` for that object.

Definition at line 192 of file iomanip.

3.11.4.281 _Setw std::setw (int __n) `[inline]`

Manipulator for `width`.

Parameters

__n	The new width.

Sent to a stream object, this manipulator calls `width(__n)` for that object.

Definition at line 222 of file iomanip.

3.11.4.282 ios_base& std::showbase (ios_base & __base) `[inline]`

Calls base.setf(ios_base::showbase).

Definition at line 811 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::setf(), and std::ios_base::showbase.

3.11.4.283 ios_base& std::showpoint (ios_base & __base) `[inline]`

Calls base.setf(ios_base::showpoint).

Definition at line 827 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::setf(), and std::ios_base::showpoint.

3.11.4.284 ios_base& std::showpos (ios_base & __base) `[inline]`

Calls base.setf(ios_base::showpos).

Definition at line 843 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::setf(), and std::ios_base::showpos.

3.11.4.285 constexpr size_t std::size ( ) const `[noexcept]`

Returns the total number of bits.

Definition at line 1282 of file bitset.

Referenced by std::deque< _Tp, _Alloc >::_M_new_elements_at_back(), std::deque< _Tp, _Alloc >::_M_new_elements_at_front(), std::basic_string< _CharT, _Traits, _Alloc >::append(), std::basic_string< _CharT, _Traits, _Alloc >::assign(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare(), std::basic_string< _CharT, _Traits, _Alloc >::compare(), std::deque< _Tp, _Alloc >::erase(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find(), std::basic_string< _CharT, _Traits, _Alloc >::find(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_not_of(), std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_of(), std::basic_string< _CharT, _Traits, _Alloc >::find_first_of(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_not_of(), std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of(), std::basic_string< _CharT, _Traits, _Alloc >::find_last_of(), std::vector< _Tp, _Alloc >::operator=(), std::deque< _Tp, _Alloc >::operator=(), std::vector< _Tp, _Alloc >::reserve(), std::basic_string< _CharT, _Traits, _Alloc >::reserve(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::resize(), std::basic_string< _CharT, _Traits, _Alloc >::resize(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind(), and std::basic_string< _CharT, _Traits, _Alloc >::rfind().

3.11.4.286 ios_base& std::skipws (ios_base & *__base*) [inline]

Calls base.setf(ios_base::skipws).

Definition at line 859 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::setf(), and std::ios_base::skipws.

Referenced by operator>>().

3.11.4.296 template<typename _Res , typename... _Args> void std::swap (function< _Res(_Args...)> & *__x,* function< _Res(_Args...)> & *__y*) [inline]

Swap the targets of two polymorphic function object wrappers.

This function will not throw an exception.

Definition at line 2570 of file functional.

3.11.4.297 template<typename _CharT , typename _Traits , typename _Alloc > void std::swap (basic_string< _CharT, _Traits, _Alloc > & *__lhs,* basic_string< _CharT, _Traits, _Alloc > & *__rhs*) [inline]

Swap contents of two strings.

Parameters

__lhs	First string.
__rhs	Second string.

Exchanges the contents of *__lhs* and *__rhs* in constant time.

Definition at line 2717 of file basic_string.h.

References std::basic_string< _CharT, _Traits, _Alloc >::swap().

3.11.4.298 bool std::test (size_t __position) const

Tests the value of a bit.

Parameters

__position	The index of a bit.

Returns

The value at *pos*.

Exceptions

std::out_of_range	If *pos* is bigger the size of the set.

Definition at line 1303 of file bitset.

References _Unchecked_test().

3.11.4.299 template<class _CharT , class _Traits , class _Alloc > **std::basic_string**< char, **std::char_traits**< char >, **std::allocator**< char > > std::to_string ( ) const

Returns a character interpretation of the bitset.

Returns

The string equivalent of the bits.

Note the ordering of the bits: decreasing character positions correspond to increasing bit positions (see the main class notes for an example).

Definition at line 1179 of file bitset.

3.11.4.300 unsigned long std::to_ulong ( ) const

Returns a numerical interpretation of the bitset.

Returns

The integral equivalent of the bits.

Exceptions

std::overflow_error	If there are too many bits to be represented in an `unsigned long`.

Definition at line 1160 of file bitset.

3.11.4.301 template<typename _CharT > _CharT std::tolower (_CharT *__c,* const locale & *__loc*) [inline]

Convenience interface to ctype.tolower(__c).

Definition at line 2602 of file locale_facets.h.

3.11.4.302 template<typename _CharT > _CharT std::toupper (_CharT *__c,* const locale & *__loc*) [inline]

Convenience interface to ctype.toupper(__c).

Definition at line 2596 of file locale_facets.h.

3.11.4.303 template<typename _InputIterator , typename _ForwardIterator > _ForwardIterator std::uninitialized_copy (_InputIterator *__first,* _InputIterator *__last,* _ForwardIterator *__result*) [inline]

Copies the range [first,last) into result.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.

Returns

__result + (__first - __last)

Like copy(), but does not require an initialized output range.

Definition at line 107 of file stl_uninitialized.h.

Referenced by __gnu_parallel::parallel_sort_mwms_pu().

3.11.4.304 template<typename _InputIterator , typename _Size , typename _ForwardIterator > _ForwardIterator std::uninitialized_copy_n (_InputIterator *__first,* _Size *__n,* _ForwardIterator *__result*) [inline]

Copies the range [first,first+n) into result.

Parameters

__first	An input iterator.
__n	The number of elements to copy.
__result	An output iterator.

Returns

__result + __n

Like copy_n(), but does not require an initialized output range.

Definition at line 647 of file stl_uninitialized.h.

References __iterator_category().

3.11.4.305 template<typename _ForwardIterator , typename _Tp > void std::uninitialized_fill (_ForwardIterator *__first,* _ForwardIterator *__last,* const _Tp & *__x*) [inline]

Copies the value x into the range [first,last).

Parameters

__first	An input iterator.
__last	An input iterator.
__x	The source value.

Returns

Nothing.

Like fill(), but does not require an initialized output range.

Definition at line 164 of file stl_uninitialized.h.

3.11.4.306 template<typename _ForwardIterator , typename _Size , typename _Tp > void std::uninitialized_fill_n (_ForwardIterator *__first,* _Size *__n,* const _Tp & *__x*) [inline]

Copies the value x into the range [first,first+n).

Parameters

__first	An input iterator.
__n	The number of copies to make.
__x	The source value.

Returns

Nothing.

Like fill_n(), but does not require an initialized output range.

Definition at line 218 of file stl_uninitialized.h.

3.11.4.307 ios_base& std::unitbuf (ios_base & *__base*) [inline]

Calls base.setf(ios_base::unitbuf).

Definition at line 891 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::setf(), and std::ios_base::unitbuf.

3.11.4.308 ios_base& std::uppercase (ios_base & *__base*) [inline]

Calls base.setf(ios_base::uppercase).

Definition at line 875 of file ios_base.h.

References __gnu_debug::__base(), std::ios_base::setf(), and std::ios_base::uppercase.

3.11.4.309 template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::ws (basic_istream< _CharT, _Traits > & *__is*)

Quick and easy way to eat whitespace.

This manipulator extracts whitespace characters, stopping when the next character is non-whitespace, or when the input sequence is empty. If the sequence is empty, `eofbit` is set in the stream, but not `failbit`.

The current locale is used to distinguish whitespace characters.

Example:

```
MyClass   mc;

std::cin >> std::ws >> mc;
```

will skip leading whitespace before calling operator>> on cin and your object. Note that the same effect can be achieved by creating a std::basic_istream::sentry inside your definition of operator>>.

Definition at line 1016 of file istream.tcc.

References std::ios_base::eofbit, std::ios_base::getloc(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_ios< _CharT, _Traits >::setstate().

3.11.5 Variable Documentation

3.11.5.1 ios_base::Init std::__ioinit `[static]`

Linked to standard error (buffered)

Definition at line 74 of file iostream.

Linked to standard output.

3.11.5.3 istream std::cin

Linked to standard input.

3.11.5.4 ostream std::clog

Linked to standard error (unbuffered)

3.11.5.5 ostream std::cout

Linked to standard input.

3.11.5.6 wostream std::wcerr

Linked to standard output.

3.11.5.7 wistream std::wcin

Linked to standard error (buffered)

3.11.5.8 wostream std::wclog

Linked to standard error (unbuffered)

3.11.5.9 wostream std::wcout

Linked to standard input.

3.12 std::__debug Namespace Reference

Classes

- class bitset

  Class std::bitset with additional safety/checking/debug instrumentation.
- class deque

  Class std::deque with safety/checking/debug instrumentation.
- class forward_list

  Class std::forward_list with safety/checking/debug instrumentation.

- class list

    Class std::list with safety/checking/debug instrumentation.
- class map

    Class std::map with safety/checking/debug instrumentation.
- class multimap

    Class std::multimap with safety/checking/debug instrumentation.
- class multiset

    Class std::multiset with safety/checking/debug instrumentation.
- class set

    Class std::set with safety/checking/debug instrumentation.
- class unordered_map

    Class std::unordered_map with safety/checking/debug instrumentation.
- class unordered_multimap

    Class std::unordered_multimap with safety/checking/debug instrumentation.
- class unordered_multiset

    Class std::unordered_multiset with safety/checking/debug instrumentation.
- class unordered_set

    Class std::unordered_set with safety/checking/debug instrumentation.
- class vector

    Class std::vector with safety/checking/debug instrumentation.

3.12.1 Detailed Description

GNU debug code, replaces standard behavior with debug behavior. Macros and namespaces used by the implementation outside of debug wrappers to verify certain properties. The __glibcxx_requires_xxx macros are merely wrappers around the __glibcxx_check_xxx wrappers when we are compiling with debug mode, but disappear when we are in release mode so that there is no checking performed in, e.g., the standard library algorithms.

3.12.2 Function Documentation

3.12.2.1 template<typename _Tp , typename _Alloc > bool std::__debug::operator<= (const forward_list< _Tp, _Alloc > & *__lx*, const forward_list< _Tp, _Alloc > & *__ly*) `[inline]`

Based on operator<.

Definition at line 768 of file debug/forward_list.

3.12.2.2 template<typename _Tp , typename _Alloc > bool std::__debug::operator> (const forward_list< _Tp, _Alloc > & *__lx*, const forward_list< _Tp, _Alloc > & *__ly*) `[inline]`

Based on operator<.

Definition at line 754 of file debug/forward_list.

3.12.2.3 template<typename _Tp , typename _Alloc > bool std::__debug::operator>= (const forward_list< _Tp, _Alloc > & *__lx*, const forward_list< _Tp, _Alloc > & *__ly*) `[inline]`

Based on operator<.

Definition at line 761 of file debug/forward_list.

3.12.2.4 template<typename _Tp , typename _Alloc > void std::__debug::swap (forward_list< _Tp, _Alloc > & *__lx*, forward_list< _Tp, _Alloc > & *__ly*) `[inline]`

See std::forward_list::swap().

Definition at line 775 of file debug/forward_list.

3.13 std::__detail Namespace Reference

Classes

- class _Automaton

  Base class for, um, automata. Could be an NFA or a DFA. Your choice.
- struct _Before_begin
- struct _CharMatcher

  Matches a single character.
- class _Compiler

  Builds an NFA from an input iterator interval.
- struct _Default_ranged_hash

Default ranged hash function H. In principle it should be a function object composed from objects of type H1 and H2 such that h(k, N) = h2(h1(k), N), but that would mean making extra copies of h1 and h2. So instead we'll just use a tag to tell class template hashtable to do that composition.

- struct _EndTagger

  End state tag.
- struct _Equal_helper< _Key, _Value, _ExtractKey, _Equal, _HashCodeType, false >

  Specialization.
- struct _Equal_helper< _Key, _Value, _ExtractKey, _Equal, _HashCodeType, true >

  Specialization.
- struct _Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false >

  Specialization.
- struct _Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true >

  Specialization.
- struct _Equality_base
- class _Grep_matcher

  Executes a regular expression NFA/DFA over a range using a variant of the parallel execution algorithm featured in the grep utility, modified to use Laurikari tags.
- struct _Hash_code_base< _Key, _Value, _ExtractKey, _H1, _H2, _Default_ranged_hash, false >

  Specialization: hash function and range-hashing function, no caching of hash codes. Provides typedef and accessor required by C++ 11.
- struct _Hash_code_base< _Key, _Value, _ExtractKey, _H1, _H2, _Default_ranged_hash, true >

  Specialization: hash function and range-hashing function, caching hash codes. H is provided but ignored. Provides typedef and accessor required by C++ 11.
- struct _Hash_code_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, false >

  Specialization: ranged hash function, no caching hash codes. H1 and H2 are provided but ignored. We define a dummy hash code type.
- struct _Hash_node< _Value, false >
- struct _Hash_node< _Value, true >
- struct _Hash_node_base
- struct _Hashtable_base
- struct _Hashtable_ebo_helper< _Nm, _Tp, false >

  Specialization not using EBO.
- struct _Hashtable_ebo_helper< _Nm, _Tp, true >

  Specialization using EBO.
- struct _Hashtable_traits
- struct _Insert< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false, _Unique_keys >

  Specialization.
- struct _Insert< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true, false >

  Specialization.
- struct _Insert< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true, true >

  Specialization.
- struct _Insert_base
- struct _List_node_base

  Common part of a node in the list.
- struct _Local_const_iterator

  local const_iterators

- struct _Local_iterator

  local iterators
- struct _Local_iterator_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, false >

  Specialization.
- struct _Local_iterator_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, true >

  Specialization.
- struct _Map_base
- struct _Map_base< _Key, _Pair, _Alloc, _Select1st, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false >

  Partial specialization, __unique_keys set to false.
- struct _Map_base< _Key, _Pair, _Alloc, _Select1st, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true >

  Partial specialization, __unique_keys set to true.
- struct _Mod_range_hashing

  Default range hashing function: use division to fold a large number into the range [0, N).
- class _Nfa

  struct _Nfa
- struct _Node_const_iterator

  Node const_iterators, used to iterate through all the hashtable.
- struct _Node_iterator

  Node iterators, used to iterate through all the hashtable.
- struct _Node_iterator_base

  Base class for node iterators.
- struct _PatternCursor

  ABC for pattern matching.
- struct _Prime_rehash_policy

  Default value for rehash policy. Bucket size is (usually) the smallest prime that keeps the load factor small enough.
- struct _RangeMatcher

  Matches a character range (bracket expression)
- struct _Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _Prime_rehash_policy, _Traits >

  Specialization.
- struct _Results

  Provides a generic facade for a templated match_results.
- class _Scanner

  struct _Scanner. Scans an input range for regex tokens.
- struct _Scanner_base

  Base class for scanner.
- class _SpecializedCursor

  Provides a cursor into the specific target string.
- class _SpecializedResults

  A _Results facade specialized for wrapping a templated match_results.
- struct _StartTagger

  Start state tag.
- struct _State

  struct _State
- class _StateSeq

  Describes a sequence of one or more _State, its current start and end(s). This structure contains fragments of an NFA during construction.

Typedefs

- typedef std::shared_ptr < _Automaton > _AutomatonPtr
- typedef std::function< bool(const _PatternCursor &)> _Matcher
- typedef int _StateIdT
- typedef std::set< _StateIdT > _StateSet
- typedef std::stack< _StateIdT, std::vector< _StateIdT > > _StateStack
- typedef std::function< void(const _PatternCursor &, _Results &)> _Tagger

Enumerations

- enum _Opcode { **_S_opcode_unknown**, **_S_opcode_alternative**, **_S_opcode_subexpr_begin**, **_S_opcode_subexpr_end**, **_S_opcode_match**, **_S_opcode_accept** }

Variables

- static const _StateIdT _S_invalid_state_id

3.13.1 Detailed Description

Implementation details not part of the namespace std interface.

3.14 std::__parallel Namespace Reference

Classes

- struct _CRandNumber

  Functor wrapper for std::rand().

Functions

- template<typename _IIter , typename _Tp , typename _Tag >

3.14.1 Detailed Description

GNU parallel code, replaces standard behavior with parallel behavior.

3.15 std::__profile Namespace Reference

Classes

- class bitset

  Class std::bitset wrapper with performance instrumentation.
- class deque

  Class std::deque wrapper with performance instrumentation.
- class forward_list

  Class std::forward_list wrapper with performance instrumentation.
- class list

  List wrapper with performance instrumentation.
- class map

  Class std::map wrapper with performance instrumentation.
- class multimap

  Class std::multimap wrapper with performance instrumentation.
- class multiset

  Class std::multiset wrapper with performance instrumentation.
- class set

  Class std::set wrapper with performance instrumentation.
- class unordered_map

  Class std::unordered_map wrapper with performance instrumentation.
- class unordered_multimap

  Class std::unordered_multimap wrapper with performance instrumentation.
- class unordered_multiset

  Unordered_multiset wrapper with performance instrumentation.
- class unordered_set

  Unordered_set wrapper with performance instrumentation.

3.15.1 Detailed Description

GNU profile code, replaces standard behavior with profile behavior.

3.15.2 Function Documentation

3.15.2.1 template<typename _Tp , typename _Alloc > bool std::__profile::operator<= (const forward_list< _Tp, _Alloc > & *__lx*, const forward_list< _Tp, _Alloc > & *__ly*) `[inline]`

Based on operator<.

Definition at line 166 of file profile/forward_list.

3.15.2.2 template<typename _Tp , typename _Alloc > bool std::__profile::operator> (const forward_list< _Tp, _Alloc > & *__lx*, const forward_list< _Tp, _Alloc > & *__ly*) `[inline]`

Based on operator<.

Definition at line 152 of file profile/forward_list.

3.15.2.3 template<typename _Tp , typename _Alloc > bool std::__profile::operator>= (const forward_list< _Tp, _Alloc > & *__lx*, const forward_list< _Tp, _Alloc > & *__ly*) `[inline]`

Based on operator<.

Definition at line 159 of file profile/forward_list.

3.15.2.4 template<typename _Tp , typename _Alloc > void std::__profile::swap (forward_list< _Tp, _Alloc > & __lx, forward_list< _Tp, _Alloc > & __ly) [inline]

See std::forward_list::swap().

Definition at line 173 of file profile/forward_list.

3.18.1 Detailed Description

ISO C++11 entities sub-namespace for functional.

3.19 std::regex_constants Namespace Reference

5.1 Regular Expression Syntax Options

- enum __syntax_option {
  _S_icase, **_S_nosubs**, **_S_optimize**, **_S_collate**,
  _S_ECMAScript, **_S_basic**, **_S_extended**, **_S_awk**,
  _S_grep, **_S_egrep**, **_S_syntax_last** }
- typedef unsigned int syntax_option_type
- constexpr syntax_option_type icase
- constexpr syntax_option_type nosubs
- constexpr syntax_option_type optimize
- constexpr syntax_option_type collate
- constexpr syntax_option_type ECMAScript
- constexpr syntax_option_type basic
- constexpr syntax_option_type extended
- constexpr syntax_option_type awk
- constexpr syntax_option_type grep
- constexpr syntax_option_type egrep

5.2 Matching Rules

Matching a regular expression against a sequence of characters [first, last) proceeds according to the rules of the grammar specified for the regular expression object, modified according to the effects listed below for any bitmask elements set.

- enum __match_flag {
  _S_not_bol, **_S_not_eol**, **_S_not_bow**, **_S_not_eow**,
  _S_any, **_S_not_null**, **_S_continuous**, **_S_prev_avail**,
  _S_sed, **_S_no_copy**, **_S_first_only**, **_S_match_flag_last** }
- typedef std::bitset
  < _S_match_flag_last > match_flag_type
- constexpr match_flag_type match_default
- constexpr match_flag_type match_not_bol
- constexpr match_flag_type match_not_eol
- constexpr match_flag_type match_not_bow
- constexpr match_flag_type match_not_eow
- constexpr match_flag_type match_any
- constexpr match_flag_type match_not_null
- constexpr match_flag_type match_continuous
- constexpr match_flag_type match_prev_avail
- constexpr match_flag_type format_default
- constexpr match_flag_type format_sed
- constexpr match_flag_type format_no_copy
- constexpr match_flag_type format_first_only

5.3 Error Types

- enum error_type {
  _S_error_collate, **_S_error_ctype**, **_S_error_escape**, **_S_error_backref**,
  _S_error_brack, **_S_error_paren**, **_S_error_brace**, **_S_error_badbrace**,
  _S_error_range, **_S_error_space**, **_S_error_badrepeat**, **_S_error_complexity**,
  _S_error_stack, **_S_error_last** }
- constexpr error_type error_collate (_S_error_collate)
- constexpr error_type error_ctype (_S_error_ctype)
- constexpr error_type error_escape (_S_error_escape)
- constexpr error_type error_backref (_S_error_backref)
- constexpr error_type error_brack (_S_error_brack)
- constexpr error_type error_paren (_S_error_paren)
- constexpr error_type error_brace (_S_error_brace)
- constexpr error_type error_badbrace (_S_error_badbrace)
- constexpr error_type error_range (_S_error_range)
- constexpr error_type error_space (_S_error_space)
- constexpr error_type error_badrepeat (_S_error_badrepeat)
- constexpr error_type error_complexity (_S_error_complexity)
- constexpr error_type error_stack (_S_error_stack)

3.19.1 Detailed Description

ISO C++-0x entities sub namespace for regex.

3.19.2 Typedef Documentation

3.19.2.1 typedef std::bitset<_S_match_flag_last> std::regex_constants::match_flag_type

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 198 of file regex_constants.h.

3.19.2.2 typedef unsigned int std::regex_constants::syntax_option_type

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type syntax_option_type shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 80 of file regex_constants.h.

3.19.3 Enumeration Type Documentation

3.19.3.1 enum std::regex_constants::__match_flag

This is a bitmask type indicating regex matching rules.

The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

Definition at line 175 of file regex_constants.h.

3.19.3.2 enum std::regex_constants::__syntax_option

This is a bitmask type indicating how to interpret the regex.

The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.

A valid value of type syntax_option_type shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.

Definition at line 54 of file regex_constants.h.

3.19.3.3 enum std::regex_constants::error_type

The expression contained an invalid collating element name.

Definition at line 49 of file regex_error.h.

3.19.4 Function Documentation

3.19.4.1 constexpr error_type std::regex_constants::error_backref (_S_error_backref)

The expression contained an invalid back reference.

3.19.4.2 constexpr error_type std::regex_constants::error_badbrace (_S_error_badbrace)

The expression contained an invalid range in a {} expression.

3.19.4.3 constexpr error_type std::regex_constants::error_badrepeat (_S_error_badrepeat)

One of *?+{ was not preceded by a valid regular expression.

3.19.4.4 constexpr error_type std::regex_constants::error_brace (_S_error_brace)

The expression contained mismatched { and }

3.19.4.5 constexpr error_type std::regex_constants::error_brack (_S_error_brack)

The expression contained mismatched [and].

3.19.4.6 constexpr error_type std::regex_constants::error_collate (_S_error_collate)

The expression contained an invalid collating element name.

3.19.4.7 constexpr error_type std::regex_constants::error_complexity (_S_error_complexity)

The complexity of an attempted match against a regular expression exceeded a pre-set level.

3.19.4.8 constexpr error_type std::regex_constants::error_ctype (_S_error_ctype)

The expression contained an invalid character class name.

3.19.4.9 constexpr error_type std::regex_constants::error_escape (_S_error_escape)

The expression contained an invalid escaped character, or a trailing escape.

3.19.4.10 constexpr error_type std::regex_constants::error_paren (_S_error_paren)

The expression contained mismatched (and).

3.19.4.11 constexpr error_type std::regex_constants::error_range (_S_error_range)

The expression contained an invalid character range, such as [b-a] in most encodings.

3.19.4.12 constexpr error_type std::regex_constants::error_space (_S_error_space)

There was insufficient memory to convert the expression into a finite state machine.

3.19.4.13 constexpr error_type std::regex_constants::error_stack (_S_error_stack)

There was insufficient memory to determine whether the regular expression could match the specified character sequence.

3.19.5 Variable Documentation

3.19.5.1 constexpr syntax_option_type std::regex_constants::awk

Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility awk in IEEE Std 1003.1-2001. This option is identical to syntax_option_type extended, except that C-style escape sequences are supported. These sequences are: \\, \a, \b, \f, \n, \r, \t , \v, \', ', and \ddd (where ddd is one, two, or three octal digits).

Definition at line 144 of file regex_constants.h.

3.19.5.2 constexpr syntax_option_type std::regex_constants::basic

Specifies that the grammar recognized by the regular expression engine is that used by POSIX basic regular expressions in IEEE Std 1003.1-2001, Portable Operating System Interface (POSIX), Base Definitions and Headers, Section 9, Regular Expressions [IEEE, Information Technology – Portable Operating System Interface (POSIX), IEEE Standard 1003.1-2001].

Definition at line 126 of file regex_constants.h.

3.19.5.3 constexpr syntax_option_type std::regex_constants::collate

Specifies that character ranges of the form [a-b] should be locale sensitive.

Definition at line 107 of file regex_constants.h.

3.19.5.4 constexpr syntax_option_type std::regex_constants::ECMAScript

Specifies that the grammar recognized by the regular expression engine is that used by ECMAScript in ECMA-262 [Ecma International, ECMAScript Language Specification, Standard Ecma-262, third edition, 1999], as modified in section [28.13]. This grammar is similar to that defined in the PERL scripting language but extended with elements found in the POSIX regular expression grammar.

Definition at line 117 of file regex_constants.h.

3.19.5.5 constexpr syntax_option_type std::regex_constants::egrep

Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility grep when given the -E option in IEEE Std 1003.1-2001. This option is identical to syntax_option_type extended, except that newlines are treated as whitespace.

Definition at line 160 of file regex_constants.h.

3.19.5.6 constexpr syntax_option_type std::regex_constants::extended

Specifies that the grammar recognized by the regular expression engine is that used by POSIX extended regular expressions in IEEE Std 1003.1-2001, Portable Operating System Interface (POSIX), Base Definitions and Headers, Section 9, Regular Expressions.

Definition at line 134 of file regex_constants.h.

3.19.5.7 constexpr match_flag_type std::regex_constants::format_default

When a regular expression match is to be replaced by a new string, the new string is constructed using the rules used by the ECMAScript replace function in ECMA- 262 [Ecma International, ECMAScript Language Specification, Standard Ecma-262, third edition, 1999], part 15.5.4.11 String.prototype.replace. In addition, during search and replace operations all non-overlapping occurrences of the regular expression are located and replaced, and sections of the input that did not match the expression are copied unchanged to the output string.

Format strings (from ECMA-262 [15.5.4.11]):

- $$ The dollar-sign itself ($)
- $& The matched substring.
- $‘ The portion of *string* that precedes the matched substring. This would be match_results::prefix().
- $’ The portion of *string* that follows the matched substring. This would be match_results::suffix().

- $n The nth capture, where n is in [1,9] and $n is not followed by a decimal digit. If n <= match_results::size() and the nth capture is undefined, use the empty string instead. If n > match_results::size(), the result is implementation-defined.
- $nn The nnth capture, where nn is a two-digit decimal number on [01, 99]. If nn <= match_results::size() and the nth capture is undefined, use the empty string instead. If nn > match_results::size(), the result is implementation-defined.

Definition at line 280 of file regex_constants.h.

3.19.5.8 constexpr match_flag_type std::regex_constants::format_first_only

When specified during a search and replace operation, only the first occurrence of the regular expression shall be replaced.

Definition at line 301 of file regex_constants.h.

3.19.5.9 constexpr match_flag_type std::regex_constants::format_no_copy

During a search and replace operation, sections of the character container sequence being searched that do not match the regular expression shall not be copied to the output string.

Definition at line 295 of file regex_constants.h.

3.19.5.10 constexpr match_flag_type std::regex_constants::format_sed

When a regular expression match is to be replaced by a new string, the new string is constructed using the rules used by the POSIX sed utility in IEEE Std 1003.1- 2001 [IEEE, Information Technology – Portable Operating System Interface (POSIX), IEEE Standard 1003.1-2001].

Definition at line 288 of file regex_constants.h.

3.19.5.11 constexpr syntax_option_type std::regex_constants::grep

Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility grep in IEEE Std 1003.1-2001. This option is identical to syntax_option_type basic, except that newlines are treated as whitespace.

Definition at line 152 of file regex_constants.h.

3.19.5.12 constexpr syntax_option_type std::regex_constants::icase

Specifies that the matching of regular expressions against a character sequence shall be performed without regard to case.

Definition at line 86 of file regex_constants.h.

3.19.5.13 constexpr match_flag_type std::regex_constants::match_any

If more than one match is possible then any match is an acceptable result.

Definition at line 235 of file regex_constants.h.

3.19.5.14 constexpr match_flag_type std::regex_constants::match_continuous

The expression only matches a sub-sequence that begins at first .

Definition at line 245 of file regex_constants.h.

3.19.5.15 constexpr match_flag_type std::regex_constants::match_default

The default matching rules.

Definition at line 203 of file regex_constants.h.

3.19.5.16 constexpr match_flag_type std::regex_constants::match_not_bol

The first character in the sequence [first, last) is treated as though it is not at the beginning of a line, so the character (^) in the regular expression shall not match [first, first).

Definition at line 210 of file regex_constants.h.

3.19.5.17 constexpr match_flag_type std::regex_constants::match_not_bow

The expression \b is not matched against the sub-sequence [first,first).

Definition at line 223 of file regex_constants.h.

3.19.5.18 constexpr match_flag_type std::regex_constants::match_not_eol

The last character in the sequence [first, last) is treated as though it is not at the end of a line, so the character ($) in the regular expression shall not match [last, last).

Definition at line 217 of file regex_constants.h.

3.19.5.19 constexpr match_flag_type std::regex_constants::match_not_eow

The expression \b should not be matched against the sub-sequence [last,last).

Definition at line 229 of file regex_constants.h.

3.19.5.20 constexpr match_flag_type std::regex_constants::match_not_null

The expression does not match an empty sequence.

Definition at line 240 of file regex_constants.h.

3.19.5.21 constexpr match_flag_type std::regex_constants::match_prev_avail

–first is a valid iterator position. When this flag is set then the flags match_not_bol and match_not_bow are ignored by the regular expression algorithms 28.11 and iterators 28.12.

Definition at line 252 of file regex_constants.h.

3.19.5.22 constexpr syntax_option_type std::regex_constants::nosubs

Specifies that when a regular expression is matched against a character container sequence, no sub-expression matches are to be stored in the supplied match_results structure.

Definition at line 93 of file regex_constants.h.

3.19.5.23 constexpr syntax_option_type std::regex_constants::optimize

Specifies that the regular expression engine should pay more attention to the speed with which regular expressions are matched, and less to the speed with which regular expression objects are constructed. Otherwise it has no detectable effect on the program output.

Definition at line 101 of file regex_constants.h.

3.20 std::rel_ops Namespace Reference

Functions

- template<class _Tp >
  bool operator!= (const _Tp &__x, const _Tp &__y)
- template<class _Tp >
  bool operator<= (const _Tp &__x, const _Tp &__y)
- template<class _Tp >
  bool operator> (const _Tp &__x, const _Tp &__y)
- template<class _Tp >
  bool operator>= (const _Tp &__x, const _Tp &__y)

3.20.1 Detailed Description

The generated relational operators are sequestered here.

3.20.2 Function Documentation

3.20.2.1 template<class _Tp > bool std::rel_ops::operator!= (const _Tp & __x, const _Tp & __y) [inline]

Defines != for arbitrary types, in terms of ==.

Parameters

__x	A thing.
__y	Another thing.

Returns

__x != __y

This function uses == to determine its result.

Definition at line 87 of file stl_relops.h.

3.20.2.2 template<class _Tp > bool std::rel_ops::operator<= (const _Tp & __x, const _Tp & __y) [inline]

Defines <= for arbitrary types, in terms of <.

Parameters

__x	A thing.
__y	Another thing.

Returns

__x <= __y

This function uses < to determine its result.

Definition at line 113 of file stl_relops.h.

3.20.2.3 template<class _Tp > bool std::rel_ops::operator> (const _Tp & __x, const _Tp & __y) [inline]

Defines > for arbitrary types, in terms of <.

Parameters

__x	A thing.
__y	Another thing.

Returns

__x > __y

This function uses < to determine its result.

Definition at line 100 of file stl_relops.h.

3.20.2.4 template<class _Tp > bool std::rel_ops::operator>= (const _Tp & *__x*, const _Tp & *__y*) `[inline]`

Defines >= for arbitrary types, in terms of <.

Parameters

__x	A thing.
__y	Another thing.

Returns

__x >= __y

This function uses < to determine its result.

Definition at line 126 of file stl_relops.h.

3.21 std::this_thread Namespace Reference

3.22.1 Detailed Description

ISO C++ TR1 entities toplevel namespace is std::tr1.

3.23 std::tr1::__detail Namespace Reference

3.23.1 Detailed Description

Implementation details not part of the namespace std::tr1 interface.

3.24 std::tr2 Namespace Reference

Namespaces

- namespace __detail

Classes

- struct __dynamic_bitset_base
- struct __reflection_typelist< _First, _Rest...>

  Partial specialization.
- struct __reflection_typelist<>

  Specialization for an empty typelist.
- struct bases

  Sequence abstraction metafunctions for manipulating a typelist.
- class bool_set
- struct direct_bases

  Enumerate all the direct base classes of a class. Form of a typelist.
- class dynamic_bitset

  The dynamic_bitset class represents a sequence of bits.

Functions

- bool **certainly** (bool_set __b)
- bool **contains** (bool_set __s, bool_set __t)

3.24.1 Detailed Description

ISO C++ TR2 entities toplevel namespace is std::tr2.

3.24.2 Function Documentation

3.24.2.1 template<typename _WordT , typename _Alloc > bool std::tr2::operator!= (const dynamic_bitset< _WordT, _Alloc > & *__lhs*, const dynamic_bitset< _WordT, _Alloc > & *__rhs*)

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1291 of file dynamic_bitset.

3.24.2.2 template<typename _WordT , typename _Alloc > dynamic_bitset<_WordT, _Alloc> std::tr2::operator& (const dynamic_bitset< _WordT, _Alloc > & *__x*, const dynamic_bitset< _WordT, _Alloc > & *__y*) [inline]

Global bitwise operations on bitsets.

Parameters

__x	A bitset.
__y	A bitset of the same size as *__x*.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1332 of file dynamic_bitset.

3.24.2.3 template<typename _WordT , typename _Alloc > dynamic_bitset<_WordT, _Alloc> std::tr2::operator- (const dynamic_bitset< _WordT, _Alloc > & *__x*, const dynamic_bitset< _WordT, _Alloc > & *__y*) `[inline]`

Global bitwise operations on bitsets.

Parameters

__x	A bitset.
__y	A bitset of the same size as *__x*.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1362 of file dynamic_bitset.

3.24.2.4 template<typename _WordT , typename _Alloc > bool std::tr2::operator< (const dynamic_bitset< _WordT, _Alloc > & *__lhs*, const dynamic_bitset< _WordT, _Alloc > & *__rhs*)

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1297 of file dynamic_bitset.

3.24.2.5 template<typename _CharT , typename _Traits , typename _WordT , typename _Alloc > std::basic_ostream<_CharT, _Traits>& std::tr2::operator<< (std::basic_ostream< _CharT, _Traits > & *__os*, const dynamic_bitset< _WordT, _Alloc > & *__x*)

Global I/O operators for bitsets.

Direct I/O between streams and bitsets is supported. Output is straightforward. Input will skip whitespace and only accept '0' and '1' characters. The dynamic_bitset will grow as necessary to hold the string of bits.

Definition at line 1455 of file dynamic_bitset.

References std::__ctype_abstract_base< _CharT >::widen().

3.24.2.6 template<typename _WordT , typename _Alloc > bool std::tr2::operator<= (const dynamic_bitset< _WordT, _Alloc > & *__lhs*, const dynamic_bitset< _WordT, _Alloc > & *__rhs*)

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1303 of file dynamic_bitset.

3.24.2.7 template<typename _WordT , typename _Alloc > bool std::tr2::operator== (const dynamic_bitset< _WordT, _Alloc > & *__lhs*, const dynamic_bitset< _WordT, _Alloc > & *__rhs*)

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1285 of file dynamic_bitset.

3.24.2.8 template<typename _WordT , typename _Alloc > bool std::tr2::operator> (const dynamic_bitset< _WordT, _Alloc > & *__lhs*, const dynamic_bitset< _WordT, _Alloc > & *__rhs*)

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1309 of file dynamic_bitset.

3.24.2.9 template<typename _WordT , typename _Alloc > bool std::tr2::operator>= (const dynamic_bitset< _WordT, _Alloc > & *__lhs*, const dynamic_bitset< _WordT, _Alloc > & *__rhs*)

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1315 of file dynamic_bitset.

3.24.2.10 template<typename _CharT , typename _Traits , typename _WordT , typename _Alloc > std::basic_istream<_CharT, _Traits>& std::tr2::operator>> (std::basic_istream< _CharT, _Traits > & *__is*, dynamic_bitset< _WordT, _Alloc > & *__x*)

Global I/O operators for bitsets.

Direct I/O between streams and bitsets is supported. Output is straightforward. Input will skip whitespace and only accept '0' and '1' characters. The dynamic_bitset will grow as necessary to hold the string of bits.

Definition at line 1383 of file dynamic_bitset.

References std::basic_string< _CharT, _Traits, _Alloc >::empty(), std::basic_string< _CharT, _Traits, _Alloc >::push_back(), std::basic_ios< _CharT, _Traits >::rdbuf(), std::basic_string< _CharT, _Traits, _Alloc >::reserve(), std::tr2::dynamic_bitset< _WordT, _Alloc >::resize(), std::basic_ios< _CharT, _Traits >::setstate(), std::basic_string< _CharT, _Traits, _Alloc >::size(), std::tr2::dynamic_bitset< _WordT, _Alloc >::size(), and std::basic_ios< _CharT, _Traits >::widen().

3.24.2.11 template<typename _WordT , typename _Alloc > dynamic_bitset<_WordT, _Alloc> std::tr2::operator^ (const dynamic_bitset< _WordT, _Alloc > & *__x*, const dynamic_bitset< _WordT, _Alloc > & *__y*) [inline]

Global bitwise operations on bitsets.

Parameters

__x	A bitset.
__y	A bitset of the same size as *__x*.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1352 of file dynamic_bitset.

3.24.2.12 template<typename _WordT , typename _Alloc > dynamic_bitset<_WordT, _Alloc> std::tr2::operator| (const dynamic_bitset< _WordT, _Alloc > & *__x*, const dynamic_bitset< _WordT, _Alloc > & *__y*) [inline]

Global bitwise operations on bitsets.

Parameters

__x	A bitset.
__y	A bitset of the same size as *__x*.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1342 of file dynamic_bitset.

3.25 std::tr2::__detail Namespace Reference

3.25.1 Detailed Description

Implementation details not part of the namespace std::tr2 interface. Dynamic Bitset.

See N2050, Proposal to Add a Dynamically Sizeable Bitset to the Standard Library.

4 Class Documentation

4.1 __cxxabiv1::__forced_unwind Class Reference

4.1.1 Detailed Description

Thrown as part of forced unwinding.

A magic placeholder class that can be caught by reference to recognize forced unwinding.

Definition at line 48 of file cxxabi_forced.h.

The documentation for this class was generated from the following file:

- cxxabi_forced.h

4.2 __gnu_cxx::__alloc_traits< _Alloc > Struct Template Reference

4.2.1 Detailed Description

template<typename _Alloc>struct __gnu_cxx::__alloc_traits< _Alloc >

Uniform interface to C++98 and C++0x allocators.

Definition at line 128 of file ext/alloc_traits.h.

4.2.2 Member Typedef Documentation

4.2.2.1 template<typename _Alloc> typedef __const_void_pointer std::allocator_traits< _Alloc >::const_void_pointer `[inherited]`

The allocator's const void pointer type.

`Alloc::const_void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const void>`

Definition at line 142 of file bits/alloc_traits.h.

4.2.2.2 template<typename _Alloc> typedef __propagate_on_container_copy_assignment std::allocator_traits< _Alloc >::propagate_on_container_copy_assignment `[inherited]`

How the allocator is propagated on copy assignment.

`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`

Definition at line 176 of file bits/alloc_traits.h.

4.2.2.3 template<typename _Alloc> typedef __propagate_on_container_move_assignment std::allocator_traits< _Alloc >::propagate_on_container_move_assignment `[inherited]`

How the allocator is propagated on move assignment.

`Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`

Definition at line 188 of file bits/alloc_traits.h.

4.2.2.4 template<typename _Alloc> typedef __propagate_on_container_swap std::allocator_traits< _Alloc >::propagate_on_container_swap `[inherited]`

How the allocator is propagated on swap.

`Alloc::propagate_on_container_swap` if that type exists, otherwise `false_type`

Definition at line 199 of file bits/alloc_traits.h.

4.2.2.5 template<typename _Alloc> typedef __void_pointer std::allocator_traits< _Alloc >::void_pointer `[inherited]`

The allocator's void pointer type.

`Alloc::void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<void>`

Definition at line 131 of file bits/alloc_traits.h.

4.2.3 Member Function Documentation

4.2.3.1 template<typename _Alloc> static pointer std::allocator_traits< _Alloc >::allocate (_Alloc & __a, size_type __n) `[inline]`, `[static]`, `[inherited]`

Allocate memory.

Parameters

__a	An allocator.
__n	The number of objects to allocate space for.

Calls `a.allocate(n)`

Definition at line 352 of file bits/alloc_traits.h.

4.2.3.2 template<typename _Alloc> static pointer std::allocator_traits< _Alloc >::allocate (_Alloc & __a, size_type __n, const_void_pointer __hint) `[inline]`, `[static]`, `[inherited]`

Allocate memory.

Parameters

__a	An allocator.
__n	The number of objects to allocate space for.
__hint	Aid to locality.

Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

Definition at line 367 of file bits/alloc_traits.h.

4.2.3.3 template<typename _Alloc> template<typename _Tp , typename... _Args> static auto **std::allocator_traits**< _Alloc >::construct (_Alloc & *__a*, _Tp * *__p*, _Args &&... *__args*) -> decltype(_S_construct(__a, __p, **std::forward**< _Args>(__args)...)) `[inline]`, `[static]`, `[inherited]`

Construct an object of type *_Tp*.

Parameters

__a	An allocator.
__p	Pointer to memory of suitable size and alignment for Tp
__args	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...)` if that expression is well-formed, otherwise uses placement-new to construct an object of type *_Tp* at location *__p* from the arguments *__args*...

Definition at line 393 of file bits/alloc_traits.h.

4.2.3.4 template<typename _Alloc> static void **std::allocator_traits**< _Alloc >::deallocate (_Alloc & *__a*, **pointer** *__p*, **size_type** *__n*) `[inline]`, `[static]`, `[inherited]`

Deallocate memory.

Parameters

__a	An allocator.
__p	Pointer to the memory to deallocate.
__n	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

Definition at line 378 of file bits/alloc_traits.h.

4.2.3.5 template<typename _Alloc> template<class _Tp > static void **std::allocator_traits**< _Alloc >::destroy (_Alloc & *__a*, _Tp * *__p*) `[inline]`, `[static]`, `[inherited]`

Destroy an object of type *_Tp*.

Parameters

__a	An allocator.
__p	Pointer to the object to destroy

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`

Definition at line 406 of file bits/alloc_traits.h.

4.2.3.6 template<typename _Alloc> static size_type std::allocator_traits< _Alloc >::max_size (const _Alloc & *__a*) `[inline]`, `[static]`, `[inherited]`

The maximum supported allocation size.

Parameters

__a	An allocator.

Returns

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_type>::max()`

Definition at line 417 of file bits/alloc_traits.h.

Referenced by std::forward_list< _Tp, _Alloc >::max_size().

4.2.3.7 template<typename _Alloc> static _Alloc std::allocator_traits< _Alloc >::select_on_container_copy_construction (const _Alloc & *__rhs*) `[inline]`, `[static]`, `[inherited]`

Obtain an allocator to use when copying a container.

Parameters

__rhs	An allocator.

Returns

`__rhs.select_on_container_copy_construction()` or *__rhs*

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns *__rhs*

Definition at line 429 of file bits/alloc_traits.h.

The documentation for this struct was generated from the following file:

- ext/alloc_traits.h

4.3 __gnu_cxx::__common_pool_policy< _PoolTp, _Thread > Struct Template Reference

Inherits __common_pool_base< _PoolTp, _Thread >.

4.3.1 Detailed Description

template<template< bool > class _PoolTp, bool _Thread>struct __gnu_cxx::__common_pool_policy< _PoolTp, _Thread >

Policy for shared __pool objects.

Definition at line 460 of file mt_allocator.h.

The documentation for this struct was generated from the following file:

- mt_allocator.h

4.4 __gnu_cxx::__detail::__mini_vector< _Tp > Class Template Reference

Public Types

- typedef const _Tp & **const_reference**
- typedef ptrdiff_t **difference_type**
- typedef pointer **iterator**
- typedef _Tp ∗ **pointer**
- typedef _Tp & **reference**

- void **pop_back** () throw ()
- void **push_back** (const_reference __x)
- size_type **size** () const throw ()

4.4.1 Detailed Description

template<typename _Tp>class __gnu_cxx::__detail::__mini_vector< _Tp >

__mini_vector<> is a stripped down version of the full-fledged std::vector<>.

It is to be used only for built-in types or PODs. Notable differences are:

1. Not all accessor functions are present. 2. Used ONLY for PODs. 3. No Allocator template argument. Uses operator new() to get memory, and operator delete() to free it. Caveat: The dtor does NOT free the memory allocated, so this a memory-leaking vector!

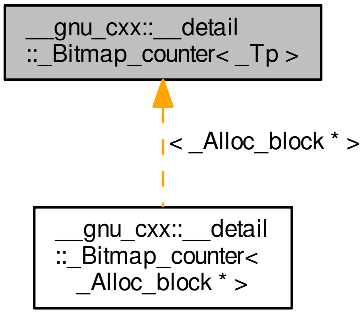
Definition at line 69 of file bitmap_allocator.h.

The documentation for this class was generated from the following file:

- bitmap_allocator.h

4.5 __gnu_cxx::__detail::_Bitmap_counter< _Tp > Class Template Reference

Inheritance diagram for __gnu_cxx::__detail::_Bitmap_counter< _Tp >:



Public Member Functions

- **_Bitmap_counter** (_BPVector &Rvbp, long __index=-1)
- pointer **_M_base** () const throw ()
- bool **_M_finished** () const throw ()

- void **_M_set_internal_bitmap** (size_t ∗__new_internal_marker) throw ()
- _Index_type **_M_where** () const throw ()
- _Bitmap_counter & **operator++** () throw ()

4.5.1 Detailed Description

template<typename _Tp>class __gnu_cxx::__detail::_Bitmap_counter< _Tp >

The bitmap counter which acts as the bitmap manipulator, and manages the bit-manipulation functions and the searching and identification functions on the bit-map.

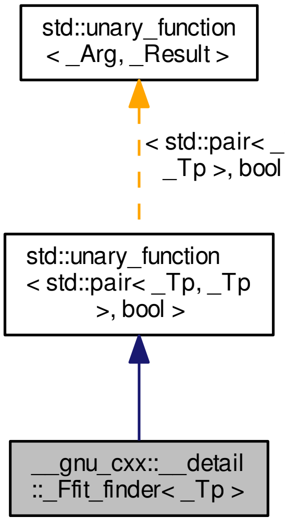
Definition at line 396 of file bitmap_allocator.h.

The documentation for this class was generated from the following file:

- bitmap_allocator.h

4.6 __gnu_cxx::__detail::_Ffit_finder< _Tp > Class Template Reference

Inheritance diagram for __gnu_cxx::__detail::_Ffit_finder< _Tp >:



Public Types

- typedef std::pair< _Tp, _Tp > argument_type
- typedef bool result_type

Public Member Functions

- size_t ∗ **_M_get** () const throw ()
- _Counter_type **_M_offset** () const throw ()
- bool **operator()** (_Block_pair __bp) throw ()

4.6.1 Detailed Description

template<typename _Tp>class __gnu_cxx::__detail::_Ffit_finder< _Tp >

The class which acts as a predicate for applying the first-fit memory allocation policy for the bitmap allocator.

Definition at line 331 of file bitmap_allocator.h.

4.6.2 Member Typedef Documentation

4.6.2.1 typedef **std::pair**< _Tp, _Tp > **std::unary_function**< **std::pair**< _Tp, _Tp > , bool >**::argument_type** `[inherited]`

`argument_type` is the type of the argument

Definition at line 104 of file stl_function.h.

4.6.2.2 typedef bool **std::unary_function**< **std::pair**< _Tp, _Tp > , bool >**::result_type** `[inherited]`

`result_type` is the return type

Definition at line 107 of file stl_function.h.

The documentation for this class was generated from the following file:

- bitmap_allocator.h

4.7 __gnu_cxx::__mt_alloc< _Tp, _Poolp > Class Template Reference

Inheritance diagram for __gnu_cxx::__mt_alloc< _Tp, _Poolp >:

4.7.1 Detailed Description

template<typename _Tp, typename _Poolp = __common_pool_policy<__pool, true >>class __gnu_cxx::__mt_alloc< _Tp, _Poolp >

This is a fixed size (power of 2) allocator which - when compiled with thread support - will maintain one freelist per size per thread plus a *global* one. Steps are taken to limit the per thread freelist sizes (by returning excess back to the *global* list).

Further details: `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt12ch32.html`.

Definition at line 639 of file mt_allocator.h.

The documentation for this class was generated from the following file:

4.13.1 Detailed Description

Base class for __pool_alloc.

Uses various allocators to fulfill underlying requests (and makes as few requests as possible when in default high-speed pool mode).

Important implementation properties: 0. If globally mandated, then allocate objects from new 1. If the clients request an object of size $>$ _S_max_bytes, the resulting object will be obtained directly from new 2. In all other cases, we allocate an object of size exactly _S_round_up(requested_size). Thus the client has enough size information that we can return the object to the proper free list without permanently losing part of the object.

Definition at line 78 of file pool_allocator.h.

The documentation for this class was generated from the following file:

- pool_allocator.h

4.15.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>class __gnu_cxx::__rc_string_base< _CharT, _Traits, _Alloc >

Documentation? What's that? Nathan Myers `ncm@cantrip.org`.

A string looks like this:

```
                                    [_Rep]
                                    _M_length
[__rc_string_base<char_type>]       _M_capacity
_M_dataplus                         _M_refcount
_M_p ---------------->              unnamed array of char_type
```

Where the _M_p points to the first character in the string, and you cast it to a pointer-to-_Rep and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: _Rep::_M_refdata(), and __rc_string_base::_M_rep(); and the allocation function which gets a block of raw bytes and with room enough and constructs a _Rep object at the front.

The reason you want _M_data pointing to the character array and not the _Rep is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the _Rep for the debugger to use, so users can check the actual string length.)

Note that the _Rep object is a POD so that you can have a static *empty string* _Rep object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string _Rep object.

All but the last paragraph is considered pretty conventional for a C++ string implementation.

4.17.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base>class __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >

Template class __versa_string.

Data structure managing sequences of characters and character-like objects.

Definition at line 56 of file vstring.h.

4.17.2 Constructor & Destructor Documentation

4.17.2.1 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string ( ) [inline]

Default constructor creates an empty string.

Definition at line 134 of file vstring.h.

Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::substr().

4.17.2.2 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (const _Alloc & *__a*) [inline], [explicit]

Construct an empty string using allocator *a*.

Definition at line 141 of file vstring.h.

4.17.2.3 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__str*) [inline]

Construct string with copy of value of *__str*.

Parameters

__str	Source string.

Definition at line 149 of file vstring.h.

4.17.2.4 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (__versa_string< _CharT, _Traits, _Alloc, _Base > && *__str*) [inline], [noexcept]

String move constructor.

Parameters

__str	Source string.

The newly-constructed string contains the exact contents of *__str*. The contents of *__str* are a valid, but unspecified string.

Definition at line 161 of file vstring.h.

4.17.2.5 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (std::initializer_list< _CharT > *__l*, const _Alloc & *__a* = _Alloc()) [inline]

Construct string from an initializer list.

Parameters

__l	std::initializer_list of characters.
__a	Allocator to use (default is default allocator).

Definition at line 169 of file vstring.h.

4.17.2.6 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__str*, size_type *__pos*, size_type *__n* = npos) [inline]

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__n	Number of characters to copy (default remainder).

Definition at line 180 of file vstring.h.

4.17.2.7 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__str*, size_type *__pos*, size_type *__n*, const _Alloc & *__a*) [inline]

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__n	Number of characters to copy.
__a	Allocator to use.

Definition at line 195 of file vstring.h.

4.17.2.8 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (const _CharT * *__s*, size_type *__n*, const _Alloc & *__a* = `_Alloc()`) `[inline]`

Construct string initialized by a character array.

Parameters

__s	Source character array.
__n	Number of characters to copy.
__a	Allocator to use (default is default allocator).

NB: *__s* must have at least *__n* characters, '\0' has no special meaning.

Definition at line 212 of file vstring.h.

4.17.2.9 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (const _CharT * *__s*, const _Alloc & *__a* = `_Alloc()`) `[inline]`

Construct string as copy of a C string.

Parameters

__s	Source C string.
__a	Allocator to use (default is default allocator).

Definition at line 221 of file vstring.h.

4.17.2.10 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (size_type *__n*, _CharT *__c*, const _Alloc & *__a* = `_Alloc()`) `[inline]`

Construct string as multiple characters.

Parameters

__n	Number of characters.
__c	Character to use.
__a	Allocator to use (default is default allocator).

Definition at line 231 of file vstring.h.

4.17.2.11 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (_InputIterator *__beg*, _InputIterator *__end*, const _Alloc & *__a* = `_Alloc()`) `[inline]`

Construct string as copy of a range.

Parameters

__beg	Start of range.
__end	End of range.
__a	Allocator to use (default is default allocator).

Definition at line 246 of file vstring.h.

4.17.2.12 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::∼__versa_string ( ) `[inline]`, `[noexcept]`

Destroy the string instance.

Definition at line 253 of file vstring.h.

4.17.3 Member Function Documentation

4.17.3.1 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__str*) `[inline]`

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

Definition at line 688 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

Referenced by std::getline(), __gnu_cxx::operator+(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+=().

4.17.3.2 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__str,* size_type *__pos,* size_type *__n*) `[inline]`

Append a substring.

Parameters

__str	The string to append.
__pos	Index of the first character of str to append.
__n	The number of characters to append.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *pos* is not a valid index.

This function appends *__n* characters from *__str* starting at *__pos* to this string. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is appended.

Definition at line 705 of file vstring.h.

4.17.3.3 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (const _CharT * *__s,* size_type *__n*) [inline]

Append a C substring.

Parameters

__s	The C string to append.
__n	The number of characters to append.

Returns

Reference to this string.

Definition at line 717 of file vstring.h.

4.17.3.4 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (const _CharT * *__s*) [inline]

Append a C string.

Parameters

__s	The C string to append.

Returns

Reference to this string.

Definition at line 730 of file vstring.h.

4.17.3.5 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (size_type *__n,* _CharT *__c*) [inline]

Append multiple characters.

Parameters

__n	The number of characters to append.
__c	The character to use.

Returns

Reference to this string.

Appends n copies of c to this string.

Definition at line 747 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.17.3.6 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (std::initializer_list< _CharT > *__l*) [inline]

Append an initializer_list of characters.

Parameters

__l	The initializer_list of characters to append.

Returns

Reference to this string.

Definition at line 757 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append().

Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append().

4.17.3.7 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (_InputIterator *__first,* _InputIterator *__last*) [inline]

Append a range of characters.

Parameters

__first	Iterator referencing the first character to append.
__last	Iterator marking the end of the range.

Returns

Reference to this string.

Appends characters in the range [first,last) to this string.

Definition at line 776 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.17.3.8 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__str*) [inline]

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

Definition at line 799 of file vstring.h.

Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator=().

4.17.3.9 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (__versa_string< _CharT, _Traits, _Alloc, _Base > && *__str*) [inline]

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

This function sets this string to the exact contents of *__str*. *__str* is a valid, but unspecified string.

Definition at line 815 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::swap().

4.17.3.10 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__str*, size_type *__pos*, size_type *__n*) [inline]

Set value to a substring of a string.

Parameters

__str	The string to use.
__pos	Index of the first character of str.
__n	Number of characters to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *__pos* is not a valid index.

This function sets this string to the substring of *__str* consisting of *__n* characters at *__pos*. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is used.

Definition at line 836 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.17.3.11 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> **__versa_string& __gnu_cxx::__versa_string**< _CharT, _Traits, _Alloc, _Base >::assign (const _CharT * *__s*, size_type *__n*) `[inline]`

Set value to a C substring.

Parameters

__s	The C string to use.
__n	Number of characters to use.

Returns

Reference to this string.

This function sets the value of this string to the first *__n* characters of *__s*. If *__n* is is larger than the number of available characters in *__s*, the remainder of *__s* is used.

Definition at line 853 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.17.3.12 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> **__versa_string& __gnu_cxx::__versa_string**< _CharT, _Traits, _Alloc, _Base >::assign (const _CharT * *__s*) `[inline]`

Set value to contents of a C string.

Parameters

__s	The C string to use.

Returns

Reference to this string.

This function sets the value of this string to the value of *__s*. The data is copied, so there is no dependence on *__s* once the function returns.

Definition at line 869 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.17.3.13 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> **__versa_string& __gnu_cxx::__versa_string**< _CharT, _Traits, _Alloc, _Base >::assign (size_type *__n*, _CharT *__c*) `[inline]`

Set value to multiple characters.

Parameters

__n	Length of the resulting string.
__c	The character to use.

Returns

Reference to this string.

This function sets the value of this string to *__n* copies of character *__c*.

Definition at line 886 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.17.3.14 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (_InputIterator *__first*, _InputIterator *__last*) [inline]

Set value to a range of characters.

Parameters

__first	Iterator referencing the first character to append.
__last	Iterator marking the end of the range.

Returns

Reference to this string.

Sets value of string to characters in the range [first,last).

Definition at line 905 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.17.3.15 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (std::initializer_list< _CharT > *__l*) [inline]

Set value to an initializer_list of characters.

Parameters

__l	The initializer_list of characters to assign.

Returns

Reference to this string.

Definition at line 915 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign().

Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign().

4.17.3.16 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::at (size_type *__n*) const [inline]

Provides access to the data contained in the string.

Parameters

__n	The index of the character to access.

Returns

Read-only (const) reference to the character.

Exceptions

std::out_of_range	If *__n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.

Definition at line 579 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.17.3.17 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::at (size_type __n) [inline]

Provides access to the data contained in the string.

Parameters

__n	The index of the character to access.

Returns

Read/write reference to the character.

Exceptions

std::out_of_range	If *__n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails. Success results in unsharing the string.

Definition at line 598 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.17.3.18 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::back ( ) [inline]

Returns a read/write reference to the data at the last element of the string.

Definition at line 628 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[](), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.17.3.19 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::back ( ) const [inline]

Returns a read-only (constant) reference to the data at the last element of the string.

Definition at line 636 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[](), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.17.3.20 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::begin ( ) [inline], [noexcept]

Returns a read/write iterator that points to the first character in the string. Unshares the string.

Definition at line 319 of file vstring.h.

Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::crend(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rend().

4.17.3.21 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first character in the string.

Definition at line 330 of file vstring.h.

4.17.3.22 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const _CharT∗ __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::c_str ( ) const [inline], [noexcept]

Return const pointer to null-terminated contents.

This is a handle to internal data. Do not modify or dire things may happen.

Definition at line 1538 of file vstring.h.

4.17.3.23 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::capacity ( ) const [inline], [noexcept]

Returns the total number of characters that the string can hold before needing to allocate more memory.

Definition at line 490 of file vstring.h.

Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::push_back(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::shrink_to_fit().

4.17.3.24 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first character in the string.

Definition at line 394 of file vstring.h.

4.17.3.25 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::cend ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 402 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.17.3.26 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::clear ( ) [inline], [noexcept]

Erases the string, making it empty.

Definition at line 518 of file vstring.h.

4.17.3.27 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__str*) const [inline]

Compare to a string.

Parameters

__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *__str*, 0 if their values are equivalent, or > 0 if this string is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of size() and str.size(). The function then compares the two strings by calling traits::compare(data(), str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 1964 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data(), std::min(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

Referenced by __gnu_cxx::operator<(), __gnu_cxx::operator<=(), __gnu_cxx::operator==(), __gnu_cxx::operator>(), and __gnu_cxx::operator>=().

4.17.3.28 template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (size_type *__pos,* size_type *__n,* const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__str*) const

Compare substring to a string.

Parameters

__pos	Index of first character of substring.
__n	Number of characters in substring.
__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n* characters starting at *__pos*. Returns an integer < 0 if the substring is ordered before *__str*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__str.size()*. The function then compares the two strings by calling traits::compare(substring.data(),str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 459 of file vstring.tcc.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data(), std::min(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.17.3.29 template< typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (size_type *__pos1*, size_type *__n1*, const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__str*, size_type *__pos2*, size_type *__n2*) const

Compare substring to a substring.

Parameters

__pos1	Index of first character of substring.
__n1	Number of characters in substring.
__str	String to compare against.
__pos2	Index of first character of substring of str.
__n2	Number of characters in substring of str.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos1*. Form the substring of *__str* from the *__n2* characters starting at *__pos2*. Returns an integer < 0 if this substring is ordered before the substring of *__str*, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of *__str*. Determines the effective length rlen of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 476 of file vstring.tcc.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data(), and std::min().

4.17.3.30 template< typename _CharT, typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (const _CharT * *__s*) const

Compare to a C string.

Parameters

__s	C string to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *__s*, 0 if their values are equivalent, or > 0 if this string is ordered after *__s*. Determines the effective length rlen of the strings to compare as the smallest of size() and the length of a string constructed from *__s*. The function then compares the two strings by calling traits::compare(data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 495 of file vstring.tcc.

References std::min(), and std::size().

4.17.3.31 template< typename _CharT, typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (size_type *__pos,* size_type *__n1,* const _CharT * *__s*) const

Compare substring to a C string.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	C string to compare against.

Returns

Integer $<$ 0, 0, or $>$ 0.

Form the substring of this string from the *__n1* characters starting at *__pos*. Returns an integer $<$ 0 if the substring is ordered before *__s*, 0 if their values are equivalent, or $>$ 0 if the substring is ordered after *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and the length of a string constructed from *__s*. The function then compares the two string by calling traits::compare(substring.data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 511 of file vstring.tcc.

References std::min().

4.17.3.32 template< typename _CharT, typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (size_type *__pos,* size_type *__n1,* const _CharT * *__s,* size_type *__n2*) const

Compare substring against a character array.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	character array to compare against.
__n2	Number of characters of s.

Returns

Integer $<$ 0, 0, or $>$ 0.

Form the substring of this string from the *__n1* characters starting at *__pos*. Form a string from the first *__n2* characters of *__s*. Returns an integer $<$ 0 if this substring is ordered before the string from *__s*, 0 if their values are equivalent, or $>$ 0 if this substring is ordered after the string from *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__n2*. The function then compares the two strings by calling traits::compare(substring.data(),__s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: __s must have at least n2 characters, *\0* has no special meaning.

Definition at line 528 of file vstring.tcc.

References std::min().

4.17.3.33 template<typename _CharT, typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::copy (_CharT * __s, size_type __n, size_type __pos = 0) const

Copy substring into C string.

Parameters

__s	C string to copy value into.
__n	Number of characters to copy.
__pos	Index of first character to copy.

Returns

Number of characters actually copied

Exceptions

std::out_of_range	If pos > size().

Copies up to *__n* characters starting at *__pos* into the C string *s*. If *__pos* is greater than size(), out_of_range is thrown.

Definition at line 254 of file vstring.tcc.

4.17.3.34 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::crbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 411 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::end().

Remove characters.

Parameters

__pos	Index of first character to remove (default 0).
__n	Number of characters to remove (default remainder).

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos* is beyond the end of this string.

Removes *__n* characters from this string starting at *__pos*. The length of the string is reduced by *__n*. If there are < *__n* characters to remove, the remainder of the string is truncated. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Remove one character.

Parameters

__position	Iterator referencing the character to remove.

Returns

iterator referencing same location after removal.

Removes the character at *__position* from this string. The value of the string doesn't change if an error is thrown.

Definition at line 1131 of file vstring.h.

4.17.3.42 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase (iterator *__first,* iterator *__last*) [inline]

Remove a range of characters.

Parameters

__first	Iterator referencing the first character to remove.
__last	Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

Definition at line 1152 of file vstring.h.

4.17.3.43 template<typename _CharT, typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find (const _CharT * *__s,* size_type *__pos,* size_type *__n*) const

Find position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search from.
__n	Number of characters from *__s* to search for.

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

Definition at line 269 of file vstring.tcc.

__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.

Definition at line 1783 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of().

4.17.3.62 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of (_CharT *__c*, size_type *__pos* = npos) const [inline], [noexcept]

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.

Note: equivalent to rfind(c, pos).

Definition at line 1802 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind().

4.17.3.63 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::front ( ) `[inline]`

Returns a read/write reference to the data at the first element of the string.

Definition at line 612 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[]().

4.17.3.64 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::front ( ) const `[inline]`

Returns a read-only (constant) reference to the data at the first element of the string.

Definition at line 620 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[]().

4.17.3.65 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> allocator_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::get_allocator ( ) const `[inline]`, `[noexcept]`

Return copy of allocator used to construct this string.

Definition at line 1555 of file vstring.h.

4.17.3.66 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (iterator *__p*, size_type *__n*, _CharT *__c*) `[inline]`

Insert multiple characters.

Parameters

__p	Iterator referencing location in string to insert at.
__n	Number of characters to insert
__c	The character to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts *__n* copies of character *__c* starting at the position referenced by iterator *__p*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 933 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.17.3.67 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>> void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (iterator *__p*, _InputIterator *__beg*, _InputIterator *__end*) `[inline]`

Insert a range of characters.

Parameters

__p	Iterator referencing location in string to insert at.
__beg	Start of range.
__end	End of range.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts characters in range [beg,end). If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 955 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.17.3.68 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void **__gnu_cxx::__versa_string**< _CharT, _Traits, _Alloc, _Base >::insert (iterator *__p*, **std::initializer_list**< _CharT > *__l*) `[inline]`

Insert an initializer_list of characters.

Parameters

__p	Iterator referencing location in string to insert at.
__l	The initializer_list of characters to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Definition at line 966 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert().

Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert().

4.17.3.69 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> **__versa_string**& **__gnu_cxx::__versa_string**< _CharT, _Traits, _Alloc, _Base >::insert (size_type *__pos1*, const **__versa_string**< _CharT, _Traits, _Alloc, _Base > & *__str*) `[inline]`

Insert value of a string.

Parameters

__pos1	Iterator referencing location in string to insert at.
__str	The string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts value of *__str* starting at *__pos1*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 983 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

Insert a substring.

Parameters

__pos1	Iterator referencing location in string to insert at.
__str	The string to insert.
__pos2	Start of characters in str to insert.
__n	Number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos1* > size() or *__pos2* > *__str.size()*.

Starting at *__pos1*, insert *__n* character of *__str* beginning with *__pos2*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos1* is beyond the end of this string or *__pos2* is beyond the end of *__str*, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1006 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.17.3.71 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (size_type *__pos*, const _CharT * *__s*, size_type *__n*) [inline]

Insert a C substring.

Parameters

__pos	Iterator referencing location in string to insert at.
__s	The C string to insert.
__n	The number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts the first *__n* characters of *__s* starting at *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1029 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.17.3.72 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> **__versa_string& __gnu_cxx::__versa_string**< _CharT, _Traits, _Alloc, _Base >::insert (size_type *__pos*, const _CharT * *__s*) `[inline]`

Insert a C string.

Parameters

__pos	Iterator referencing location in string to insert at.
__s	The C string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts the first *__n* characters of *__s* starting at *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1048 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.17.3.73 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> **__versa_string& __gnu_cxx::__versa_string**< _CharT, _Traits, _Alloc, _Base >::insert (size_type *__pos*, size_type *__n*, _CharT *__c*) `[inline]`

Insert multiple characters.

Parameters

__pos	Index in string to insert at.
__n	Number of characters to insert
__c	The character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts *__n* copies of character *__c* starting at index *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* > length(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1072 of file vstring.h.

4.17.3.74 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (iterator *__p*, _CharT *__c*) `[inline]`

Insert one character.

Parameters

__p	Iterator referencing position in string to insert at.
__c	The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts character *__c* at position referenced by *__p*. If adding character causes the length to exceed max_size(), length_error is thrown. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1090 of file vstring.h.

4.17.3.75 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::length ( ) const `[inline]`, `[noexcept]`

Returns the number of characters in the string, not including any null-termination.

Definition at line 435 of file vstring.h.

4.17.3.76 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::max_size ( ) const `[inline]`, `[noexcept]`

Returns the size() of the largest possible string.

Definition at line 440 of file vstring.h.

Referenced by std::getline().

4.17.3.77 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+= (const __versa_string< _CharT, _Traits, _Alloc, _Base > & *__str*) [inline]

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

Definition at line 647 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append().

Append a character.

Parameters

__c	The character to append.

Returns

Reference to this string.

Definition at line 665 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::push_back().

4.17.3.80 template< typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+= (std::initializer_list< _CharT > __l) [inline]

Append an initializer_list of characters.

Parameters

__l	The initializer_list of characters to be appended.

Returns

Reference to this string.

Definition at line 678 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append().

4.17.3.81 template< typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]

Assign the value of *str* to this string.

Parameters

__str	Source string.

Definition at line 260 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign().

4.17.3.82 template< typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (__versa_string< _CharT, _Traits, _Alloc, _Base > && __str) [inline]

String move assignment operator.

Parameters

__str	Source string.

The contents of *__str* are moved into this string (without copying). *__str* is a valid, but unspecified string.

Definition at line 272 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::swap().

Set value to string constructed from initializer list.

Parameters

__l	std::initializer_list.

Definition at line 284 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign().

4.17.3.84 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (const _CharT ∗ __s) [inline]

Copy contents of *__s* into this string.

Parameters

__s	Source null-terminated string.

Definition at line 296 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign().

4.17.3.85 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (_CharT __c) [inline]

Set value to string of length 1.

Parameters

__c	Source character.

Assigning to a character makes this string length 1 and (∗this)[0] == *__c*.

Definition at line 307 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign().

4.17.3.86 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[] (size_type __pos) const [inline]

Subscript access to the data contained in the string.

Parameters

__pos	The index of the character to access.

Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)

Definition at line 541 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

Replace characters with value from another string.

Parameters

__pos	Index of first character to replace.
__n	Number of characters to be replaced.
__str	String to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos* is beyond the end of this string.
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [pos,pos+n) from this string. In place, the value of *__str* is inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1191 of file vstring.h.

Replace characters with value from another string.

Parameters

__pos1	Index of first character to replace.
__n1	Number of characters to be replaced.
__str	String to insert.
__pos2	Index of first character of str to use.
__n2	Number of characters from str to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos1* > size() or *__pos2* > str.size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [pos1,pos1 + n) from this string. In place, the value of *__str* is inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Replace characters with value of a C substring.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__s	C string to insert.
__n2	Number of characters from *__s* to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos1* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [pos,pos + n1) from this string. In place, the first *__n2* characters of *__s* are inserted, or all of *__s* if *__n2* is too large. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Replace range of characters with string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__str	String value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, the value of *__str* is inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1308 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.17.3.100 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (iterator *__i1*, iterator *__i2*, const _CharT * *__s*, size_type *__n*) `[inline]`

Replace range of characters with C substring.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__s	C string value to insert.
__n	Number of characters from s to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, the first *n* characters of *__s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1326 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.17.3.101 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (iterator *__i1*, iterator *__i2*, const _CharT * *__s*) `[inline]`

Replace range of characters with C string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__s	C string value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, the characters of *__s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Replace range of characters with multiple characters.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__n	Number of characters to insert.
__c	Character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, *__n* copies of *__c* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1368 of file vstring.h.

4.17.3.103 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (iterator *__i1*, iterator *__i2*, _InputIterator *__k1*, _InputIterator *__k2*) `[inline]`

Replace range of characters with range.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__k1	Iterator referencing start of range to insert.
__k2	Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, characters in the range [k1,k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1393 of file vstring.h.

4.17.3.104 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (iterator *__i1*, iterator *__i2*, std::initializer_list< _CharT > *__l*) `[inline]`

Replace range of characters with initializer_list.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__l	The initializer_list of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, characters in the range [k1,k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1474 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.17.3.105 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::reserve (size_type *__res_arg* = `0`) `[inline]`

Attempt to preallocate enough memory for specified number of characters.

Parameters

__res_arg	Number of characters required.

Exceptions

std::length_error	If *__res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than max_size(), length_error is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Definition at line 511 of file vstring.h.

Referenced by __gnu_cxx::operator+(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::shrink_to_fit().

4.17.3.106 template<typename _CharT, typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::resize (size_type *__n*, _CharT *__c*)

Resizes the string to the specified number of characters.

Parameters

__n	Number of characters the string should contain.
__c	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to *__c*.

Definition at line 50 of file vstring.tcc.

References std::size().

4.17.3.107 template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::resize (size_type *__n*) [inline]

Resizes the string to the specified number of characters.

Parameters

__n	Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.

Definition at line 467 of file vstring.h.

Find last position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.

Definition at line 1629 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind().

Find last position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.

Definition at line 312 of file vstring.tcc.

References std::min(), and std::size().

Get a substring.

Parameters

__pos	Index of first character (default 0).
__n	Number of characters in substring (default remainder).

Returns

The new string.

Exceptions

std::out_of_range	If pos > size().

Construct and return a new string using the *__n* characters starting at *__pos*. If the string is too short, use the remainder of the characters. If *__pos* is beyond the end of the string, out_of_range is thrown.

Definition at line 1943 of file vstring.h.

4.18 __gnu_cxx::_Caster< _ToType > Struct Template Reference

Public Types

- typedef _ToType::element_type * **type**

4.18.1 Detailed Description

template<typename _ToType>struct __gnu_cxx::_Caster< _ToType >

These functions are here to allow containers to support non standard pointer types. For normal pointers, these resolve to the use of the standard cast operation. For other types the functions will perform the apprpriate cast to/from the custom pointer class so long as that class meets the following conditions: 1) has a typedef element_type which names tehe type it points to. 2) has a get() const method which returns element_type∗. 3) has a constructor which can take one element_type∗ argument. This type supports the semantics of the pointer cast operators (below.)

Definition at line 52 of file cast.h.

The documentation for this struct was generated from the following file:

4.19 __gnu_cxx::_Char_types< _CharT > Struct Template Reference

Public Types

- typedef unsigned long **int_type**
- typedef std::streamoff **off_type**
- typedef std::streampos **pos_type**
- typedef std::mbstate_t **state_type**

4.19.1 Detailed Description

template<typename _CharT>struct __gnu_cxx::_Char_types< _CharT >

Mapping from character type to associated types.

Note

> This is an implementation class for the generic version of char_traits. It defines int_type, off_type, pos_type, and state_type. By default these are unsigned long, streamoff, streampos, and mbstate_t. Users who need a different set of types, but who don't need to change the definitions of any function defined in char_traits, can specialize __gnu_cxx::_Char_types while leaving __gnu_cxx::char_traits alone.

Definition at line 58 of file char_traits.h.

4.22.1 Detailed Description

template<typename _Storage_policy>class __gnu_cxx::_Pointer_adapter< _Storage_policy >

The following provides an 'alternative pointer' that works with the containers when specified as the pointer typedef of the allocator.

The pointer type used with the containers doesn't have to be this class, but it must support the implicit conversions, pointer arithmetic, comparison operators, etc. that are supported by this class, and avoid raising compile-time ambiguities. Because creating a working pointer can be challenging, this pointer template was designed to wrapper an easier storage policy type, so that it becomes reusable for creating other pointer types.

A key point of this class is also that it allows container writers to 'assume' Allocator::pointer is a typedef for a normal pointer. This class supports most of the conventions of a true pointer, and can, for instance handle implicit conversion to const and base class pointer types. The only impositions on container writers to support extended pointers are: 1) use the Allocator::pointer typedef appropriately for pointer types. 2) if you need pointer casting, use the __pointer_cast<> functions from ext/cast.h. This allows pointer cast operations to be overloaded as necessary by custom pointers.

Note: The const qualifier works with this pointer adapter as follows:

_Tp∗ == _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp∗ == _Pointer_adapter<_Std_pointer_impl<const _Tp> >; _Tp∗ const == const _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp∗ const == const _Pointer_-adapter<_Std_pointer_impl<const _Tp> >;

Definition at line 281 of file pointer.h.

The documentation for this class was generated from the following file:

- pointer.h

4.23 __gnu_cxx::_Relative_pointer_impl< _Tp > Class Template Reference

Public Types

- typedef _Tp **element_type**

Public Member Functions

- bool **operator<** (const _Relative_pointer_impl &__rarg) const
- bool **operator==** (const _Relative_pointer_impl &__rarg) const
- void **set** (_Tp ∗__arg)

4.23.1 Detailed Description

template<typename _Tp>class __gnu_cxx::_Relative_pointer_impl< _Tp >

A storage policy for use with _Pointer_adapter<> which stores the pointer's address as an offset value which is relative to its own address.

This is intended for pointers within shared memory regions which might be mapped at different addresses by different processes. For null pointers, a value of 1 is used. (0 is legitimate sometimes for nodes in circularly linked lists) This value was chosen as the least likely to generate an incorrect null, As there is no reason why any normal pointer would point 1 byte into its own pointer address.

Definition at line 109 of file pointer.h.

The documentation for this class was generated from the following file:

- pointer.h

4.24 __gnu_cxx::_Relative_pointer_impl< const _Tp > Class Template Reference

4.24.1 Detailed Description

template<typename _Tp>class __gnu_cxx::_Relative_pointer_impl< const _Tp >

Relative_pointer_impl needs a specialization for const T because of the casting done during pointer arithmetic.

Definition at line 161 of file pointer.h.

The documentation for this class was generated from the following file:

- pointer.h

4.25 __gnu_cxx::_Std_pointer_impl< _Tp > Class Template Reference

Public Types

- typedef _Tp **element_type**

Public Member Functions

- _Tp ∗ **get** () const
- bool **operator<** (const _Std_pointer_impl &__rarg) const
- bool **operator==** (const _Std_pointer_impl &__rarg) const
- void **set** (element_type ∗__arg)

4.25.1 Detailed Description

template<typename _Tp>class __gnu_cxx::_Std_pointer_impl< _Tp >

A storage policy for use with _Pointer_adapter<> which yields a standard pointer.

A _Storage_policy is required to provide 4 things: 1) A get() API for returning the stored pointer value. 2) An set() API for storing a pointer value. 3) An element_type typedef to define the type this points to. 4) An operator<() to support pointer comparison. 5) An operator==() to support pointer comparison.

Definition at line 66 of file pointer.h.

The documentation for this class was generated from the following file:

- pointer.h

4.26 __gnu_cxx::_Unqualified_type< _Tp > Struct Template Reference

Public Types

- typedef _Tp **type**

4.26.1 Detailed Description

template<typename _Tp>struct __gnu_cxx::_Unqualified_type< _Tp >

This structure accommodates the way in which std::iterator_traits<> is normally specialized for const T∗, so that value_type is still T.

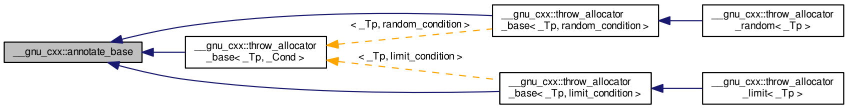
Definition at line 241 of file pointer.h.

The documentation for this struct was generated from the following file:

- pointer.h

4.27 __gnu_cxx::annotate_base Struct Reference

Inheritance diagram for __gnu_cxx::annotate_base:



Public Member Functions

- void **check_allocated** (void ∗p, size_t size)
- void **check_allocated** (size_t label)
- void **erase** (void ∗p, size_t size)
- void **insert** (void ∗p, size_t size)

Static Public Member Functions

- static size_t **get_label** ()
- static void **set_label** (size_t l)

Friends

- std::ostream & **operator**<< (std::ostream &, const annotate_base &)

4.27.1 Detailed Description

Base class for checking address and label information about allocations. Create a std::map between the allocated address (void∗) and a datum for annotations, which are a pair of numbers corresponding to label and allocated size.

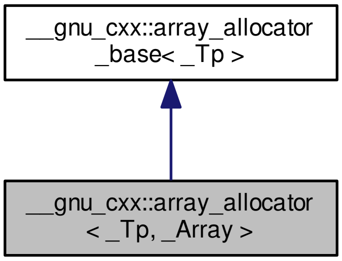
Definition at line 88 of file throw_allocator.h.

The documentation for this struct was generated from the following file:

- throw_allocator.h

4.28 __gnu_cxx::array_allocator< _Tp, _Array > Class Template Reference

Inheritance diagram for __gnu_cxx::array_allocator< _Tp, _Array >:



Public Types

- typedef _Array **array_type**
- typedef const _Tp ∗ **const_pointer**
- typedef const _Tp & **const_reference**
- typedef ptrdiff_t **difference_type**
- typedef _Tp ∗ **pointer**
- typedef std::true_type **propagate_on_container_move_assignment**
- typedef _Tp & **reference**
- typedef size_t **size_type**
- typedef _Tp **value_type**

Public Member Functions

- **array_allocator** (array_type ∗__array=0) noexcept
- **array_allocator** (const array_allocator &__o) noexcept
- template< typename _Tp1 , typename _Array1 >
  array_allocator (const array_allocator< _Tp1, _Array1 > &) noexcept
- pointer **address** (reference __x) const noexcept
- const_pointer **address** (const_reference __x) const noexcept
- pointer **allocate** (size_type __n, const void ∗=0)
- template<typename _Up , typename... _Args>
  void **construct** (_Up ∗__p, _Args &&...__args)
- void **deallocate** (pointer, size_type)
- template<typename _Up >
  void **destroy** (_Up ∗__p)
- size_type **max_size** () const noexcept

4.28.1 Detailed Description

template<typename _Tp, typename _Array = std::tr1::array<_Tp, 1>>class __gnu_cxx::array_allocator< _Tp, _Array >

An allocator that uses previously allocated memory. This memory can be externally, globally, or otherwise allocated.

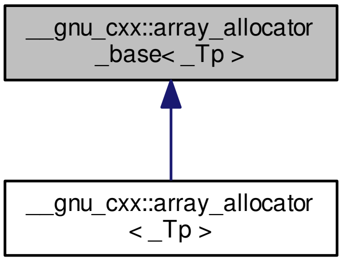
Definition at line 106 of file array_allocator.h.

The documentation for this class was generated from the following file:

- array_allocator.h

4.29 __gnu_cxx::array_allocator_base< _Tp > Class Template Reference

Inheritance diagram for __gnu_cxx::array_allocator_base< _Tp >:



Public Types

- typedef const _Tp ∗ **const_pointer**
- typedef const _Tp & **const_reference**
- typedef ptrdiff_t **difference_type**
- typedef _Tp ∗ **pointer**
- typedef _Tp & **reference**
- typedef size_t **size_type**
- typedef _Tp **value_type**

Public Member Functions

- pointer **address** (reference __x) const noexcept
- const_pointer **address** (const_reference __x) const noexcept
- template<typename _Up , typename... _Args>
  void **construct** (_Up ∗__p, _Args &&...__args)
- void **deallocate** (pointer, size_type)
- template<typename _Up >
  void **destroy** (_Up ∗__p)
- size_type **max_size** () const noexcept

4.29.1 Detailed Description

template<typename _Tp>class __gnu_cxx::array_allocator_base< _Tp >

Base class.

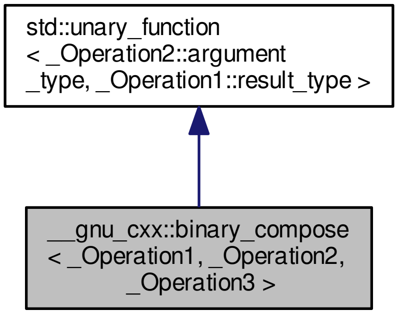
Definition at line 50 of file array_allocator.h.

The documentation for this class was generated from the following file:

- array_allocator.h

4.30 __gnu_cxx::binary_compose< _Operation1, _Operation2, _Operation3 > Class Template Reference

Inheritance diagram for __gnu_cxx::binary_compose< _Operation1, _Operation2, _Operation3 >:



Public Types

- typedef _Arg argument_type
- typedef _Result result_type

Public Member Functions

- **binary_compose** (const _Operation1 &__x, const _Operation2 &__y, const _Operation3 &__z)
- _Operation1::result_type **operator()** (const typename _Operation2::argument_type &__x) const

Protected Attributes

- _Operation1 **_M_fn1**
- _Operation2 **_M_fn2**
- _Operation3 **_M_fn3**

4.30.1 Detailed Description

template<class _Operation1, class _Operation2, class _Operation3>class __gnu_cxx::binary_compose< _Operation1, _Operation2, _Operation3 >

An SGI extension .

Definition at line 150 of file ext/functional.

4.30.2 Member Typedef Documentation

4.30.2.1 template<typename _Arg, typename _Result> typedef _Arg std::unary_function< _Arg, _Result >::argument_type [inherited]

`argument_type` is the type of the argument

Definition at line 104 of file stl_function.h.

4.30.2.2 template<typename _Arg, typename _Result> typedef _Result std::unary_function< _Arg, _Result >::result_type [inherited]

`result_type` is the return type

Definition at line 107 of file stl_function.h.

The documentation for this class was generated from the following file:

- ext/functional

4.31 __gnu_cxx::bitmap_allocator< _Tp > Class Template Reference

Inheritance diagram for __gnu_cxx::bitmap_allocator< _Tp >:

- void _M_insert (size_t ∗__addr) throw ()

4.31.1 Detailed Description

template<typename _Tp>class __gnu_cxx::bitmap_allocator< _Tp >

Bitmap Allocator, primary template.

Definition at line 687 of file bitmap_allocator.h.

4.31.2 Member Function Documentation

4.31.2.1 template<typename _Tp > pointer __gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object ( ) throw (std::bad_alloc) [inline]

Allocates memory for a single object of size sizeof(_Tp).

Exceptions

std::bad_alloc.	If memory can not be allocated.

Complexity: Worst case complexity is O(N), but that is hardly ever hit. If and when this particular case is encountered, the next few cases are guaranteed to have a worst case complexity of O(1)! That's why this function performs very well on average. You can consider this function to have a complexity referred to commonly as: Amortized Constant time.

Definition at line 827 of file bitmap_allocator.h.

References __gnu_cxx::__detail::__bit_allocate(), __gnu_cxx::__detail::__num_bitmaps(), and __gnu_cxx::_Bit_scan_forward().

4.31.2.2 template<typename _Tp > void __gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object (pointer *__p*) throw () [inline]

Deallocates memory that belongs to a single object of size sizeof(_Tp).

Complexity: O(lg(N)), but the worst case is not hit often! This is because containers usually deallocate memory close to each other and this case is handled in O(1) time by the deallocate function.

Definition at line 917 of file bitmap_allocator.h.

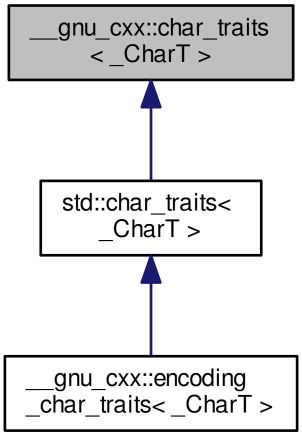
References __gnu_cxx::__detail::__bit_free(), __gnu_cxx::__detail::__num_bitmaps(), std::__rotate(), and __gnu_cxx::free_list::_M_insert().

The documentation for this class was generated from the following file:

- bitmap_allocator.h

4.32 __gnu_cxx::char_traits< _CharT > Struct Template Reference

Inheritance diagram for __gnu_cxx::char_traits< _CharT >:



Public Types

- static constexpr int_type **to_int_type** (const char_type &__c)

4.32.1 Detailed Description

template<typename _CharT>struct __gnu_cxx::char_traits< _CharT >

Base class used to implement std::char_traits.

Note

> For any given actual character type, this definition is probably wrong. (Most of the member functions are likely to be right, but the int_type and state_type typedefs, and the eof() member function, are likely to be wrong.) The reason this class exists is so users can specialize it. Classes in namespace std may not be specialized for fundamental types, but classes in namespace __gnu_cxx may be.

See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt05ch13s03.html` for advice on how to make use of this class for *unusual* character types. Also, check out include/ext/pod_char_traits.h.

Definition at line 83 of file char_traits.h.

The documentation for this struct was generated from the following file:

- char_traits.h

4.33 __gnu_cxx::character< V, I, S > Struct Template Reference

Public Types

- typedef character< V, I, S > **char_type**
- typedef I **int_type**
- typedef S **state_type**
- typedef V **value_type**

Static Public Member Functions

- template<typename V2 >
  static char_type **from** (const V2 &v)
- template<typename V2 >
  static V2 **to** (const char_type &c)

Public Attributes

- value_type **value**

4.33.1 Detailed Description

template<typename V, typename I, typename S = std::mbstate_t>struct __gnu_cxx::character< V, I, S >

A POD class that serves as a character abstraction class.

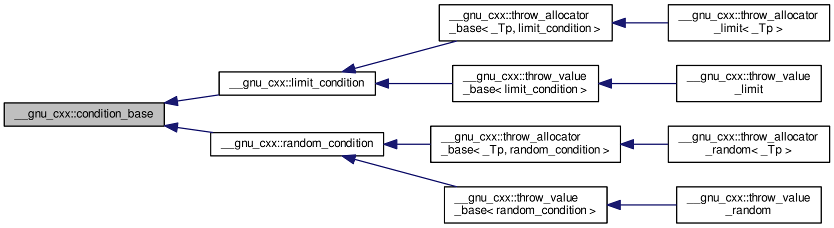
Definition at line 49 of file pod_char_traits.h.

The documentation for this struct was generated from the following file:

- pod_char_traits.h

4.34 __gnu_cxx::condition_base Struct Reference

Inheritance diagram for __gnu_cxx::condition_base:



4.34.1 Detailed Description

Base struct for condition policy.

Requires a public member function with the signature void throw_conditionally()

Definition at line 247 of file throw_allocator.h.

The documentation for this struct was generated from the following file:

- throw_allocator.h

4.35 __gnu_cxx::constant_binary_fun< _Result, _Arg1, _Arg2 > Struct Template Reference

Inherits __gnu_cxx::_Constant_binary_fun< _Result, _Arg1, _Arg2 >.

Public Types

- typedef _Arg1 **first_argument_type**
- typedef _Result **result_type**
- typedef _Arg2 **second_argument_type**

Public Member Functions

- **constant_binary_fun** (const _Result &__v)
- const result_type & **operator()** (const _Arg1 &, const _Arg2 &) const

Public Attributes

- _Result **_M_val**

4.35.1 Detailed Description

template<class _Result, class _Arg1 = _Result, class _Arg2 = _Arg1>struct __gnu_cxx::constant_binary_fun< _Result, _Arg1, _Arg2 >

An SGI extension .

Definition at line 320 of file ext/functional.

The documentation for this struct was generated from the following file:

- ext/functional

4.36 __gnu_cxx::constant_unary_fun< _Result, _Argument > Struct Template Reference

Inherits __gnu_cxx::_Constant_unary_fun< _Result, _Argument >.

Public Types

- typedef _Argument **argument_type**
- typedef _Result **result_type**

Public Member Functions

- **constant_unary_fun** (const _Result &__v)
- const result_type & **operator()** (const _Argument &) const

Public Attributes

- result_type **_M_val**

4.36.1 Detailed Description

template<class _Result, class _Argument = _Result>struct __gnu_cxx::constant_unary_fun< _Result, _Argument >

An SGI extension .

Definition at line 312 of file ext/functional.

The documentation for this struct was generated from the following file:

- ext/functional

4.37 __gnu_cxx::constant_void_fun< _Result > Struct Template Reference

Inherits __gnu_cxx::_Constant_void_fun< _Result >.

Public Types

4.39.1 Detailed Description

template<typename _CharT>class __gnu_cxx::enc_filebuf< _CharT >

class enc_filebuf.

Definition at line 42 of file enc_filebuf.h.

4.39.2 Member Function Documentation

4.39.2.1 void std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_create_pback ( ) [inline], [protected], [inherited]

Initializes pback buffers, and moves normal buffers to safety. Assumptions: _M_in_cur has already been moved back

Definition at line 177 of file fstream.

4.39.2.2 void std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_destroy_pback ( ) throw () [inline], [protected], [inherited]

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Definition at line 194 of file fstream.

4.39.2.3 void std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_set_buffer (streamsize *__off*) [inline], [protected], [inherited]

This function sets the pointers of the internal buffer, both get and put areas. Typically:

__off == egptr() - eback() upon underflow/uflow (**read** mode); __off == 0 upon overflow (**write** mode); __off == -1 upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: epptr() - pbase() == _M_buf_size - 1, since _M_buf_size reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 395 of file fstream.

4.39.2.4 __filebuf_type* std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::close ( ) [inherited]

Closes the currently associated file.

Returns

`this` on success, NULL on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

4.39.2.5 char_type* std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::eback ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 482 of file streambuf.

4.39.2.6 char_type* std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::egptr ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 488 of file streambuf.

4.39.2.7 char_type∗ std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::epptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 535 of file streambuf.

4.39.2.8 void std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::gbump (int __n) [inline], [protected], [inherited]

Moving the read position.

Parameters

__n	The delta by which to move.

This just advances the read position without returning any data.

Definition at line 498 of file streambuf.

4.39.2.9 locale std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::getloc ( ) const [inline], [inherited]

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 226 of file streambuf.

4.39.2.10 char_type∗ std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::gptr ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 485 of file streambuf.

4.39.2.11 virtual void **std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >**::imbue (const locale & *__loc*) `[protected]`, `[virtual]`, `[inherited]`

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented from std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >.

4.39.2.12 streamsize **std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >**::in_avail ( ) `[inline]`, `[inherited]`

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 284 of file streambuf.

4.39.2.13 bool **std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >**::is_open ( ) const throw () `[inline]`, `[inherited]`

Returns true if the external file is open.

Definition at line 227 of file fstream.

4.39.2.14 **__filebuf_type*** **std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >**::open (const char * *__s*, ios_base::openmode *__mode*) `[inherited]`

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Returns

`this` on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named *__s* using the flags given in *__mode*.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent fopen() flags. (NB: lines app, in|out|app, in|app, binary|app, binary|in|out|app, and binary|in|app per DR 596) +————————————+ | ios_base Flag combination stdio equivalent | |binary in out trunc app | +————————————+ | + w | | + + a | | + a | | + + w | | + r | | + + r+ | | + + + w+ | | + + + a+ | | + + a+ | +————————————+ | + + wb | | + + + ab | | + + ab | | + + + wb | | + + rb | | + + + r+b | | + + + + w+b | | + + + + a+b | | + + + a+b | +————————————+

4.39.2.15 __filebuf_type∗ std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::open (const std::string & __s, ios_base::openmode __mode) [inline], [inherited]

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Returns

`this` on success, NULL on failure

Definition at line 280 of file fstream.

4.39.2.16 virtual int_type std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::overflow (int_type __c = _Traits::eof()) [protected], [virtual], [inherited]

Consumes data from the buffer; writes to the controlled sequence.

Parameters

__c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually *__c*, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *__c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >.

4.39.2.17 virtual int_type std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::pbackfail (int_type __c = _Traits::eof()) [protected], [virtual], [inherited]

Tries to back up the input sequence.

Parameters

__c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >.

4.39.2.18 char_type* **std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::pbase** ( ) const `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 529 of file streambuf.

4.39.2.19 void **std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::pbump** (int *__n*) `[inline]`, `[protected]`, `[inherited]`

Moving the write position.

Parameters

__n	The delta by which to move.

This just advances the write position without returning any data.

Definition at line 545 of file streambuf.

4.39.2.20 char_type* **std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::pptr** ( ) const `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence

- epptr() returns the end pointer for the output sequence

Definition at line 532 of file streambuf.

4.39.2.21 locale std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::pubimbue (const locale & *__loc*) `[inline]`, `[inherited]`

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).

Definition at line 209 of file streambuf.

4.39.2.22 pos_type std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::pubseekoff (off_type *__off*, ios_base::seekdir *__way*, ios_base::openmode *__mode* = `ios_base::in | ios_base::out`) `[inline]`, `[inherited]`

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.

Definition at line 251 of file streambuf.

4.39.2.23 pos_type std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::pubseekpos (pos_type *__sp*, ios_base::openmode *__mode* = `ios_base::in | ios_base::out`) `[inline]`, `[inherited]`

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.

Definition at line 263 of file streambuf.

4.39.2.24 basic_streambuf* std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::pubsetbuf (char_type * *__s*, streamsize *__n*) `[inline]`, `[inherited]`

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 239 of file streambuf.

4.39.2.25 int std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::pubsync ( ) `[inline]`, `[inherited]`

Calls virtual sync function.

Definition at line 271 of file streambuf.

4.39.2.26 int_type std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::sbumpc ( ) `[inline]`, `[inherited]`

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 316 of file streambuf.

4.39.2.27 virtual pos_type std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::seekoff (off_type , ios_base::seekdir , ios_base::openmode = `ios_base::in | ios_base::out`) `[protected]`, `[virtual]`, `[inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >.

4.39.2.28 virtual pos_type std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::seekpos (pos_type , ios_base::openmode = `ios_base::in | ios_base::out`) `[protected]`, `[virtual]`, `[inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >.

4.39.2.29 virtual __streambuf_type* std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::setbuf (char_type * *__s*, streamsize *__n*) `[protected]`, `[virtual]`, `[inherited]`

Manipulates the buffer.

Parameters

__s	Pointer to a buffer area.
__n	Size of *__s*.

Returns

`this`

If no file has been opened, and both *__s* and *__n* are zero, then the stream becomes unbuffered. Otherwise, `__s` is used as a buffer; see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html` for more.

Reimplemented from std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >.

4.39.2.30 void **std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::setg (char_type ∗ *__gbeg*, char_type ∗ *__gnext*, char_type ∗ *__gend*)** `[inline]`, `[protected]`, `[inherited]`

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Definition at line 509 of file streambuf.

4.39.2.31 void **std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::setp (char_type ∗ *__pbeg*, char_type ∗ *__pend*)** `[inline]`, `[protected]`, `[inherited]`

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Definition at line 555 of file streambuf.

4.39.2.32 int_type **std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::sgetc ( )** `[inline]`, `[inherited]`

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 338 of file streambuf.

4.39.2.33 streamsize std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::sgetn (char_type * __s, streamsize __n) [inline], [inherited]

Entry point for xsgetn.

Parameters

__s	A buffer area.
__n	A count.

Returns xsgetn(__s,__n). The effect is to fill __*s*[0] through __*s*[__n-1] with characters from the input sequence, if possible.

Definition at line 357 of file streambuf.

4.39.2.34 virtual streamsize std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::showmanyc ( ) [protected], [virtual], [inherited]

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.
The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return `eof()` but that they will return immediately.*
The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >.

4.39.2.35 int_type std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::snextc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 298 of file streambuf.

4.39.2.36 int_type std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::sputbackc (char_type __c) [inline], [inherited]

Pushing characters back into the input stream.

Parameters

__c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but *__c* is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be *__c*.

Definition at line 372 of file streambuf.

4.39.2.37 int_type std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::sputc (char_type __c) [inline], [inherited]

Entry point for all single-character output functions.

Parameters

__c	A character to output.

Returns

__c, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *__c* in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Definition at line 424 of file streambuf.

4.39.2.38 streamsize std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::sputn (const char_type * __s, streamsize __n) [inline], [inherited]

Entry point for all single-character output functions.

Parameters

__s	A buffer read area.
__n	A count.

One of two public output functions.

Returns xsputn(__s,__n). The effect is to write *__s*[0] through *__s*[__n-1] to the output sequence, if possible.

Definition at line 450 of file streambuf.

4.39.2.39 int_type std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::sungetc ( ) `[inline]`, `[inherited]`

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.

Definition at line 397 of file streambuf.

4.39.2.40 virtual int std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::sync (void) `[protected]`, `[virtual]`, `[inherited]`

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >.

4.39.2.41 virtual int_type std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::uflow ( ) `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Definition at line 700 of file streambuf.

4.39.2.42 virtual int_type std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::underflow ( ) `[protected]`, `[virtual]`, `[inherited]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html`

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >.

4.39.2.43 virtual streamsize std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::xsgetn (char_type * __s, streamsize __n) `[protected]`, `[virtual]`, `[inherited]`

Multiple character extraction.

Parameters

__s	A buffer area.
__n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills __*s*[0] through __*s*[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either __*n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >.

4.39.2.44 virtual streamsize std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::xsputn (const char_type * __s, streamsize __n) `[protected]`, `[virtual]`, `[inherited]`

Multiple character insertion.

Parameters

__s	A buffer area.
__n	Maximum number of characters to write.

Returns

The number of characters written.

Writes __*s*[0] through __*s*[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >.

4.39.3 Member Data Documentation

4.39.3.1 char_type∗ std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_buf [protected], [inherited]

Pointer to the beginning of internal buffer.

Definition at line 114 of file fstream.

4.39.3.2 locale std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::_M_buf_locale [protected], [inherited]

Current locale setting.

Definition at line 192 of file streambuf.

4.39.3.3 size_t std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_buf_size [protected], [inherited]

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 121 of file fstream.

4.39.3.4 char∗ std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_ext_buf [protected], [inherited]

Buffer for external characters. Used for input when codecvt::always_noconv() == false. When valid, this corresponds to eback().

Definition at line 156 of file fstream.

4.39.3.5 streamsize std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_ext_buf_size [protected], [inherited]

Size of buffer held by _M_ext_buf.

Definition at line 161 of file fstream.

4.39.3.6 const char∗ std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_ext_next [protected], [inherited]

Pointers into the buffer held by _M_ext_buf that delimit a subsequence of bytes that have been read but not yet converted. When valid, _M_ext_next corresponds to egptr().

Definition at line 168 of file fstream.

4.39.3.7 char_type∗ std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::_M_in_beg [protected], [inherited]

Start of get area.

Definition at line 184 of file streambuf.

4.39.3.8 char_type∗ std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::_M_in_cur [protected], [inherited]

Current read area.

Definition at line 185 of file streambuf.

4.39.3.9 char_type* std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::_M_in_end [protected], [inherited]

End of get area.

Definition at line 186 of file streambuf.

4.39.3.10 ios_base::openmode std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_mode [protected], [inherited]

Place to stash in || out || in | out settings for current filebuf.

Definition at line 99 of file fstream.

4.39.3.11 char_type* std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::_M_out_beg [protected], [inherited]

Start of put area.

Definition at line 187 of file streambuf.

4.39.3.12 char_type* std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::_M_out_cur [protected], [inherited]

Current put area.

Definition at line 188 of file streambuf.

4.39.3.13 char_type* std::basic_streambuf< _CharT, encoding_char_traits< _CharT > >::_M_out_end [protected], [inherited]

End of put area.

Definition at line 189 of file streambuf.

4.39.3.14 char_type std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_pback [protected], [inherited]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 142 of file fstream.

4.39.3.15 char_type* std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_pback_cur_save [protected], [inherited]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 143 of file fstream.

4.39.3.16 char_type* std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_pback_end_save [protected], [inherited]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 144 of file fstream.

4.39.3.17 bool std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_pback_init `[protected]`, `[inherited]`

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 145 of file fstream.

4.39.3.18 bool std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_reading `[protected]`, `[inherited]`

_M_reading == false && _M_writing == false for **uncommitted** mode; _M_reading == true for **read** mode; _M_writing == true for **write** mode;

NB: _M_reading == true && _M_writing == true is unused.

Definition at line 133 of file fstream.

4.41.1 Detailed Description

Extension to use iconv for dealing with character encodings.

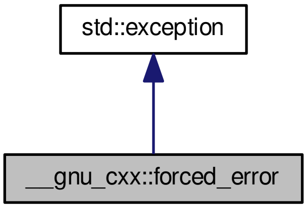
Definition at line 50 of file codecvt_specializations.h.

The documentation for this class was generated from the following file:

- codecvt_specializations.h

4.42 __gnu_cxx::forced_error Struct Reference

Inheritance diagram for __gnu_cxx::forced_error:



Public Member Functions

- virtual const char ∗ what () const noexcept

4.42.1 Detailed Description

Thown by exception safety machinery.

Definition at line 74 of file throw_allocator.h.

4.42.2 Member Function Documentation

4.42.2.1 virtual const char∗ std::exception::what ( ) const [virtual], [noexcept], [inherited]

Returns a C-style character string describing the general cause of the current error.

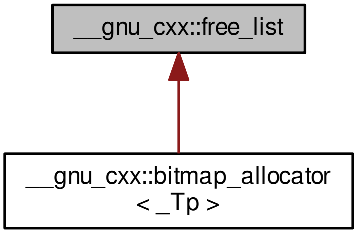
Reimplemented in std::bad_function_call, std::ios_base::failure, std::bad_typeid, std::bad_cast, std::runtime_error, std::future_error, std::bad_exception, std::logic_error, std::bad_weak_ptr, and std::bad_alloc.

The documentation for this struct was generated from the following file:

- throw_allocator.h

4.43 __gnu_cxx::free_list Class Reference

Inheritance diagram for __gnu_cxx::free_list:



Public Types

- typedef __mutex **__mutex_type**
- typedef vector_type::iterator **iterator**
- typedef size_t ∗ **value_type**
- typedef __detail::__mini_vector < value_type > **vector_type**

Public Member Functions

- void _M_clear ()
- size_t ∗ _M_get (size_t __sz) throw (std::bad_alloc)
- void _M_insert (size_t ∗__addr) throw ()

4.43.1 Detailed Description

The free list class for managing chunks of memory to be given to and returned by the bitmap_allocator.

Definition at line 521 of file bitmap_allocator.h.

4.43.2 Member Function Documentation

4.43.2.1 void __gnu_cxx::free_list::_M_clear ( )

This function just clears the internal Free List, and gives back all the memory to the OS.

4.43.2.2 size_t∗ __gnu_cxx::free_list::_M_get (size_t *__sz*) throw (std::bad_alloc)

This function gets a block of memory of the specified size from the free list.

Parameters

__sz	The size in bytes of the memory required.

Returns

A pointer to the new memory block of size at least equal to that requested.

4.43.2.3 void __gnu_cxx::free_list::_M_insert (size_t ∗ *__addr*) throw () [inline]

This function returns the block of memory to the internal free list.

Parameters

__addr	The pointer to the memory block that was given by a call to the _M_get function.

Definition at line 631 of file bitmap_allocator.h.

Referenced by __gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object().

The documentation for this class was generated from the following file:

- bitmap_allocator.h

4.60.1 Detailed Description

template<class _Key, class _Value, class _KeyOfValue, class _Compare, class _Alloc = allocator<_Value>>struct __gnu_cxx::rb_tree< _Key, _Value, _KeyOfValue, _Compare, _Alloc >

This is an SGI extension.

Todo Needs documentation! See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html`

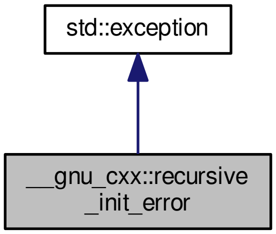
Definition at line 80 of file rb_tree.

The documentation for this struct was generated from the following file:

- rb_tree

4.61 __gnu_cxx::recursive_init_error Class Reference

Inheritance diagram for __gnu_cxx::recursive_init_error:



Public Member Functions

- virtual const char $*$ what () const noexcept

4.61.1 Detailed Description

Exception thrown by __cxa_guard_acquire.

6.7[stmt.dcl]/4: If control re-enters the declaration (recursively) while the object is being initialized, the behavior is undefined.

Since we already have a library function to handle locking, we might as well check for this situation and throw an exception. We use the second byte of the guard variable to remember that we're in the middle of an initialization.

Definition at line 689 of file cxxabi.h.

4.61.2 Member Function Documentation

4.61.2.1 virtual const char$*$ std::exception::what ( ) const [virtual], [noexcept], [inherited]

Returns a C-style character string describing the general cause of the current error.

Reimplemented in std::bad_function_call, std::ios_base::failure, std::bad_typeid, std::bad_cast, std::runtime_error, std::future_error, std::bad_exception, std::logic_error, std::bad_weak_ptr, and std::bad_alloc.

The documentation for this class was generated from the following file:

- cxxabi.h

4.66.1 Detailed Description

template<typename _CharT, typename _Traits = std::char_traits<_CharT>>class __gnu_cxx::stdio_filebuf< _CharT, _Traits >

Provides a layer of compatibility for C/POSIX.

This GNU extension provides extensions for working with standard C FILE∗'s and POSIX file descriptors. It must be instantiated by the user with the type of character used in the file stream, e.g., stdio_filebuf<char>.

Definition at line 50 of file stdio_filebuf.h.

4.66.2 Constructor & Destructor Documentation

4.66.2.1 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf ( ) `[inline]`

deferred initialization

Definition at line 65 of file stdio_filebuf.h.

4.66.2.2 template<typename _CharT , typename _Traits > __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf (int *__fd*, std::ios_base::openmode *__mode*, size_t *__size* = `static_cast<size_t>(BUFSIZ)`)

Parameters

__fd	An open file descriptor.
__mode	Same meaning as in a standard filebuf.
__size	Optimal or preferred size of internal buffer, in chars.

This constructor associates a file stream buffer with an open POSIX file descriptor. The file descriptor will be automatically closed when the stdio_filebuf is closed/destroyed.

Definition at line 128 of file stdio_filebuf.h.

4.66.2.3 template<typename _CharT , typename _Traits > __gnu_cxx::stdio_filebuf< _CharT, _Traits >::stdio_filebuf (std::__c_file ∗ *__f*, std::ios_base::openmode *__mode*, size_t *__size* = `static_cast<size_t>(BUFSIZ)`)

Parameters

__f	An open `FILE∗`.
__mode	Same meaning as in a standard filebuf.
__size	Optimal or preferred size of internal buffer, in chars. Defaults to system's `BUFSIZ`.

This constructor associates a file stream buffer with an open C `FILE∗`. The `FILE∗` will not be automatically closed when the stdio_filebuf is closed/destroyed.

Definition at line 144 of file stdio_filebuf.h.

4.66.2.4 template<typename _CharT , typename _Traits > **__gnu_cxx::stdio_filebuf**< _CharT, _Traits >::~**stdio_filebuf** ( ) `[virtual]`

Closes the external data stream if the file descriptor constructor was used.

Definition at line 123 of file stdio_filebuf.h.

4.66.3 Member Function Documentation

4.66.3.1 template<typename _CharT, typename _Traits> void **std::basic_filebuf**< _CharT, _Traits >::_M_create_pback ( ) `[inline]`, `[protected]`, `[inherited]`

Initializes pback buffers, and moves normal buffers to safety. Assumptions: _M_in_cur has already been moved back

Definition at line 177 of file fstream.

4.66.3.2 template<typename _CharT, typename _Traits> void **std::basic_filebuf**< _CharT, _Traits >::_M_destroy_pback ( ) throw () `[inline]`, `[protected]`, `[inherited]`

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

Definition at line 194 of file fstream.

4.66.3.3 template<typename _CharT, typename _Traits> void **std::basic_filebuf**< _CharT, _Traits >::_M_set_buffer (**streamsize** *__off*) `[inline]`, `[protected]`, `[inherited]`

This function sets the pointers of the internal buffer, both get and put areas. Typically:

__off == egptr() - eback() upon underflow/uflow (**read** mode); __off == 0 upon overflow (**write** mode); __off == -1 upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: epptr() - pbase() == _M_buf_size - 1, since _M_buf_size reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Definition at line 395 of file fstream.

4.66.3.4 template<typename _CharT , typename _Traits > **basic_filebuf**< _CharT, _Traits >::**__filebuf_type** ∗ **std::basic_filebuf**< _CharT, _Traits >::close ( ) `[inherited]`

Closes the currently associated file.

Returns

`this` on success, NULL on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

Definition at line 128 of file fstream.tcc.

Referenced by std::basic_ifstream< _CharT, _Traits >::close(), std::basic_ofstream< _CharT, _Traits >::close(), std::basic_fstream< _CharT, _Traits >::close(), and std::basic_filebuf< char_type, traits_type >::~basic_filebuf().

4.66.3.5 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 482 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< char_type, traits_type >::sputbackc(), and std::basic_streambuf< char_type, traits_type >::sungetc().

4.66.3.6 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 488 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_streambuf< char_type, traits_type >::in_avail(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.66.3.7 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 535 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc().

4.66.3.8 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> int __gnu_cxx::stdio_filebuf< _CharT, _Traits >::fd ( ) [inline]

Returns

The underlying file descriptor.

Once associated with an external data stream, this function can be used to access the underlying POSIX file descriptor. Note that there is no way for the library to track what you do with the descriptor, so be careful.

Definition at line 109 of file stdio_filebuf.h.

4.66.3.9 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> std::__c_file* __gnu_cxx::stdio_filebuf< _CharT, _Traits >::file ( ) `[inline]`

Returns

The underlying FILE*.

This function can be used to access the underlying "C" file pointer. Note that there is no way for the library to track what you do with the file, so be careful.

Definition at line 119 of file stdio_filebuf.h.

4.66.3.10 template<typename _CharT, typename _Traits> void std::basic_streambuf< _CharT, _Traits >::gbump (int __n) `[inline]`, `[protected]`, `[inherited]`

Moving the read position.

Parameters

__n	The delta by which to move.

This just advances the read position without returning any data.

Definition at line 498 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), and std::basic_streambuf< char_type, traits_type >::uflow().

4.66.3.11 template<typename _CharT, typename _Traits> locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const `[inline]`, `[inherited]`

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 226 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubimbue().

4.66.3.12 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::gptr ( ) const `[inline]`, `[protected]`, `[inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 485 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< char_type, traits_type >::in_avail(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), and std::basic_streambuf< char_type, traits_type >::uflow().

4.66.3.13 template<typename _CharT , typename _Traits > void **std::basic_filebuf**< _CharT, _Traits >::imbue (const **locale** & *__loc*) `[protected]`, `[virtual]`, `[inherited]`

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 910 of file fstream.tcc.

References std::ios_base::cur.

4.66.3.14 template<typename _CharT, typename _Traits> streamsize **std::basic_streambuf**< _CharT, _Traits >::in_avail ( ) `[inline]`, `[inherited]`

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 284 of file streambuf.

4.66.3.15 template<typename _CharT, typename _Traits> bool **std::basic_filebuf**< _CharT, _Traits >::is_open ( ) const throw () `[inline]`, `[inherited]`

Returns true if the external file is open.

Definition at line 227 of file fstream.

Referenced by std::basic_ifstream< _CharT, _Traits >::is_open(), std::basic_ofstream< _CharT, _Traits >::is_open(), and std::basic_fstream< _CharT, _Traits >::is_open().

4.66.3.16 template<typename _CharT , typename _Traits > **basic_filebuf**< _CharT, _Traits >::**__filebuf_type** ∗ **std::basic_filebuf**< _CharT, _Traits >::open (const char ∗ *__s*, **ios_base::openmode** *__mode*) `[inherited]`

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Returns

`this` on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named *__s* using the flags given in *__mode*.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent fopen() flags. (NB: lines app, in|out|app, in|app, binary|app, binary|in|out|app, and binary|in|app per DR 596) +——————————————————+ | ios_base Flag combination stdio equivalent | |binary in out trunc app | +——————————————————+ | + w | | + + a | | + a | | + + w | | + r | | + + r+ | | + + + w+ | | + + + a+ | | + + a+ | +——————————————————————+ | + + wb | | + + + ab | | + + ab | | + + + wb | | + + rb | | + + + r+b | | + + + + w+b | | + + + + a+b | | + + + a+b | +————————————————+

Definition at line 94 of file fstream.tcc.

References std::ios_base::ate, std::ios_base::end, and std::basic_filebuf< _CharT, _Traits >::open().

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), std::basic_ifstream< _CharT, _Traits >::open(), std::basic_ofstream< _CharT, _Traits >::open(), and std::basic_fstream< _CharT, _Traits >::open().

4.66.3.17 template<typename _CharT, typename _Traits> **__filebuf_type**∗ **std::basic_filebuf**< _CharT, _Traits >::open (const **std::string** & *__s*, **ios_base::openmode** *__mode*) `[inline]`, `[inherited]`

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Returns

`this` on success, NULL on failure

Definition at line 280 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::open().

4.66.3.18 template<typename _CharT , typename _Traits > **basic_filebuf**< _CharT, _Traits >::int_type **std::basic_filebuf**< _CharT, _Traits >::overflow (int_type *__c* = `_Traits::eof()`) `[protected]`, `[virtual]`, `[inherited]`

Consumes data from the buffer; writes to the controlled sequence.

Parameters

__c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually *__c*, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *__c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 422 of file fstream.tcc.

References std::ios_base::cur, and std::ios_base::out.

4.66.3.19 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::pbackfail (int_type *__c* = `_Traits::eof()`) `[protected], [virtual], [inherited]`

Tries to back up the input sequence.

Parameters

__c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 363 of file fstream.tcc.

References std::ios_base::cur, and std::ios_base::in.

4.66.3.20 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::pbase ( ) const `[inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 529 of file streambuf.

Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.66.3.21 template<typename _CharT, typename _Traits> void **std::basic_streambuf**< _CharT, _Traits >::pbump (int *__n*) [inline], [protected], [inherited]

Moving the write position.

Parameters

__n	The delta by which to move.

This just advances the write position without returning any data.

Definition at line 545 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc().

4.66.3.22 template<typename _CharT, typename _Traits> char_type* **std::basic_streambuf**< _CharT, _Traits >::pptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 532 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.66.3.23 template<typename _CharT, typename _Traits> locale **std::basic_streambuf**< _CharT, _Traits >::pubimbue (const locale & *__loc*) [inline], [inherited]

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).

Definition at line 209 of file streambuf.

4.66.3.24 template<typename _CharT, typename _Traits> pos_type **std::basic_streambuf**< _CharT, _Traits >::pubseekoff (**off_type** *__off,* **ios_base::seekdir** *__way,* **ios_base::openmode** *__mode* = **ios_base::in** \| **ios_base::out**) `[inline], [inherited]`

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.

Definition at line 251 of file streambuf.

4.66.3.25 template<typename _CharT, typename _Traits> pos_type **std::basic_streambuf**< _CharT, _Traits >::pubseekpos (**pos_type** *__sp,* **ios_base::openmode** *__mode* = **ios_base::in** \| **ios_base::out**) `[inline], [inherited]`

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.

Definition at line 263 of file streambuf.

4.66.3.26 template<typename _CharT, typename _Traits> **basic_streambuf**∗ **std::basic_streambuf**< _CharT, _Traits >::pubsetbuf (**char_type** ∗ *__s,* **streamsize** *__n*) `[inline], [inherited]`

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 239 of file streambuf.

4.66.3.27 template<typename _CharT, typename _Traits> int **std::basic_streambuf**< _CharT, _Traits >::pubsync ( ) `[inline], [inherited]`

Calls virtual sync function.

Definition at line 271 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::sync().

4.66.3.28 template<typename _CharT, typename _Traits> int_type **std::basic_streambuf**< _CharT, _Traits >::sbumpc ( ) `[inline], [inherited]`

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 316 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::istreambuf_iterator< _CharT, _Traits >::operator++(), and std::basic_streambuf< char_type, traits_type >::snextc().

4.66.3.29 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekoff (off_type , ios_base::seekdir , ios_base::openmode = ios_base::in | ios_base::out) `[protected]`, `[virtual]`, `[inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 713 of file fstream.tcc.

References std::ios_base::cur.

4.66.3.30 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekpos (pos_type , ios_base::openmode = ios_base::in | ios_base::out) `[protected]`, `[virtual]`, `[inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 773 of file fstream.tcc.

References std::ios_base::beg.

4.66.3.31 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::__streambuf_type * std::basic_filebuf< _CharT, _Traits >::setbuf (char_type * __s, streamsize __n) `[protected]`, `[virtual]`, `[inherited]`

Manipulates the buffer.

Parameters

__s	Pointer to a buffer area.
__n	Size of *__s*.

Returns

`this`

If no file has been opened, and both *__s* and *__n* are zero, then the stream becomes unbuffered. Otherwise, `__s` is used as a buffer; see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html` for more.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 684 of file fstream.tcc.

4.66.3.32 template<typename _CharT, typename _Traits> void **std::basic_streambuf**< _CharT, _Traits >::setg (**char_type** * *__gbeg,* **char_type** * *__gnext,* **char_type** * *__gend*) `[inline]`, `[protected]`, `[inherited]`

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Definition at line 509 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), and std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.66.3.33 template<typename _CharT, typename _Traits> void **std::basic_streambuf**< _CharT, _Traits >::setp (**char_type** * *__pbeg,* **char_type** * *__pend*) `[inline]`, `[protected]`, `[inherited]`

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Definition at line 555 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.66.3.34 template<typename _CharT, typename _Traits> int_type **std::basic_streambuf**< _CharT, _Traits >::sgetc ( ) `[inline]`, `[inherited]`

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 338 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::basic_streambuf< char_type, traits_type >::snextc().

4.66.3.35 template<typename _CharT, typename _Traits> streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (char_type * __s, streamsize __n) `[inline]`, `[inherited]`

Entry point for xsgetn.

Parameters

__s	A buffer area.
__n	A count.

Returns xsgetn(__s,__n). The effect is to fill __*s*[0] through __*s*[__n-1] with characters from the input sequence, if possible.

Definition at line 357 of file streambuf.

4.66.3.36 template<typename _CharT , typename _Traits > streamsize std::basic_filebuf< _CharT, _Traits >::showmanyc ( ) `[protected]`, `[virtual]`, `[inherited]`

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.
The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*
The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 178 of file fstream.tcc.

References std::ios_base::binary, and std::ios_base::in.

4.66.3.37 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::snextc ( ) `[inline]`, `[inherited]`

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 298 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.66.3.38 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (char_type __c) `[inline]`, `[inherited]`

Pushing characters back into the input stream.

Parameters

__c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but *__c* is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be *__c*.

Definition at line 372 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::putback().

4.66.3.39 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sputc (char_type __c) `[inline]`, `[inherited]`

Entry point for all single-character output functions.

Parameters

__c	A character to output.

Returns

__c, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *__c* in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Definition at line 424 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), and std::ostreambuf_iterator< _CharT, _Traits >::operator=().

4.66.3.40 template<typename _CharT, typename _Traits> streamsize std::basic_streambuf< _CharT, _Traits >::sputn (const char_type * __s, streamsize __n) `[inline]`, `[inherited]`

Entry point for all single-character output functions.

Parameters

__s	A buffer read area.
__n	A count.

One of two public output functions.

Returns xsputn(__s,__n). The effect is to write __*s*[0] through __*s*[__n-1] to the output sequence, if possible.

Definition at line 450 of file streambuf.

4.66.3.41 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sungetc ( ) `[inline]`, `[inherited]`

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.

Definition at line 397 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::unget().

4.66.3.42 template<typename _CharT , typename _Traits > int std::basic_filebuf< _CharT, _Traits >::sync ( ) `[protected]`, `[virtual]`, `[inherited]`

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 893 of file fstream.tcc.

4.66.3.43 template<typename _CharT, typename _Traits> virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( ) `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.

Definition at line 700 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sbumpc().

4.66.3.44 template<typename _CharT , typename _Traits > basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::underflow ( ) [protected], [virtual], [inherited]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html`

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 204 of file fstream.tcc.

References std::ios_base::in, and std::min().

4.66.3.45 template<typename _CharT , typename _Traits > streamsize std::basic_filebuf< _CharT, _Traits >::xsgetn (char_type * __s, streamsize __n) [protected], [virtual], [inherited]

Multiple character extraction.

Parameters

__s	A buffer area.
__n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills *__s*[0] through *__s*[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either *__n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 549 of file fstream.tcc.

References std::ios_base::in.

4.66.3.46 template<typename _CharT , typename _Traits > streamsize std::basic_filebuf< _CharT, _Traits >::xsputn (const char_type * __s, streamsize __n) [protected], [virtual], [inherited]

Multiple character insertion.

Parameters

__s	A buffer area.
__n	Maximum number of characters to write.

Returns

The number of characters written.

Writes __*s*[0] through __*s*[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 637 of file fstream.tcc.

References std::min(), and std::ios_base::out.

4.66.4 Member Data Documentation

4.66.4.1 template<typename _CharT, typename _Traits> char_type* std::basic_filebuf< _CharT, _Traits >::_M_buf `[protected]`, `[inherited]`

Pointer to the beginning of internal buffer.

Definition at line 114 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), and std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.66.4.2 template<typename _CharT, typename _Traits> locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale `[protected]`, `[inherited]`

Current locale setting.

Definition at line 192 of file streambuf.

Referenced by std::basic_filebuf< _CharT, _Traits >::basic_filebuf(), std::basic_streambuf< char_type, traits_type >::getloc(), and std::basic_streambuf< char_type, traits_type >::pubimbue().

4.66.4.3 template<typename _CharT, typename _Traits> size_t std::basic_filebuf< _CharT, _Traits >::_M_buf_size `[protected]`, `[inherited]`

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

Definition at line 121 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.66.4.4 template<typename _CharT, typename _Traits> char* std::basic_filebuf< _CharT, _Traits >::_M_ext_buf `[protected]`, `[inherited]`

Buffer for external characters. Used for input when codecvt::always_noconv() == false. When valid, this corresponds to eback().

Definition at line 156 of file fstream.

4.66.4.5 template<typename _CharT, typename _Traits> streamsize std::basic_filebuf< _CharT, _Traits >::_M_ext_buf_size [protected], [inherited]

Size of buffer held by _M_ext_buf.

Definition at line 161 of file fstream.

4.66.4.6 template<typename _CharT, typename _Traits> const char∗ std::basic_filebuf< _CharT, _Traits >::_M_ext_next [protected], [inherited]

Pointers into the buffer held by _M_ext_buf that delimit a subsequence of bytes that have been read but not yet converted. When valid, _M_ext_next corresponds to egptr().

Definition at line 168 of file fstream.

4.66.4.7 template<typename _CharT, typename _Traits> char_type∗ std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected], [inherited]

Start of get area.

Definition at line 184 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::eback(), and std::basic_streambuf< char_type, traits_type >::setg().

4.66.4.8 template<typename _CharT, typename _Traits> char_type∗ std::basic_streambuf< _CharT, _Traits >::_M_in_cur [protected], [inherited]

Current read area.

Definition at line 185 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::gbump(), std::basic_streambuf< char_type, traits_type >::gptr(), and std::basic_streambuf< char_type, traits_type >::setg().

4.66.4.9 template<typename _CharT, typename _Traits> char_type∗ std::basic_streambuf< _CharT, _Traits >::_M_in_end [protected], [inherited]

End of get area.

Definition at line 186 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::egptr(), and std::basic_streambuf< char_type, traits_type >::setg().

4.66.4.10 template<typename _CharT, typename _Traits> ios_base::openmode std::basic_filebuf< _CharT, _Traits >::_M_mode [protected], [inherited]

Place to stash in || out || in | out settings for current filebuf.

Definition at line 99 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.66.4.11 template<typename _CharT, typename _Traits> char_type∗ std::basic_streambuf< _CharT, _Traits >::_M_out_beg [protected], [inherited]

Start of put area.

Definition at line 187 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pbase(), and std::basic_streambuf< char_type, traits_-

type >::setp().

4.66.4.12 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_cur [protected], [inherited]

Current put area.

Definition at line 188 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pbump(), std::basic_streambuf< char_type, traits_type >::pptr(), and std::basic_streambuf< char_type, traits_type >::setp().

4.66.4.13 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_end [protected], [inherited]

End of put area.

Definition at line 189 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::epptr(), and std::basic_streambuf< char_type, traits_type >::setp().

4.66.4.14 template<typename _CharT, typename _Traits> char_type std::basic_filebuf< _CharT, _Traits >::_M_pback [protected], [inherited]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 142 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback().

4.66.4.15 template<typename _CharT, typename _Traits> char_type* std::basic_filebuf< _CharT, _Traits >::_M_pback_cur_save [protected], [inherited]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 143 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), and std::basic_filebuf< char_type, traits_type >::_M_destroy_pback().

4.66.4.16 template<typename _CharT, typename _Traits> char_type* std::basic_filebuf< _CharT, _Traits >::_M_pback_end_save [protected], [inherited]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 144 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), and std::basic_filebuf< char_type, traits_type >::_M_destroy_pback().

4.66.4.17 template<typename _CharT, typename _Traits> bool std::basic_filebuf< _CharT, _Traits >::_M_pback_init [protected], [inherited]

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 145 of file fstream.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), and std::basic_filebuf< char_type, traits_type >::_M_destroy_pback().

4.66.4.18 template<typename _CharT, typename _Traits> bool std::basic_filebuf< _CharT, _Traits >::_M_reading [protected], [inherited]

_M_reading == false && _M_writing == false for **uncommitted** mode; _M_reading == true for **read** mode; _M_writing == true for **write** mode;

NB: _M_reading == true && _M_writing == true is unused.

Definition at line 133 of file fstream.

4.67.1 Detailed Description

template<typename _CharT, typename _Traits = std::char_traits<_CharT>>class __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >

Provides a layer of compatibility for C.

This GNU extension provides extensions for working with standard C FILE∗'s. It must be instantiated by the user with the type of character used in the file stream, e.g., stdio_filebuf<char>.

Definition at line 56 of file stdio_sync_filebuf.h.

4.67.2 Member Typedef Documentation

4.67.2.1 template<typename _CharT, typename _Traits> typedef basic_streambuf<char_type, traits_type> std::basic_streambuf< _CharT, _Traits >::__streambuf_type [inherited]

This is a non-standard type.

Definition at line 138 of file streambuf.

4.67.3 Member Function Documentation

4.67.3.1 template<typename _CharT, typename _Traits> char_type∗ std::basic_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 482 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< char_type, traits_type >::sputbackc(), and std::basic_streambuf< char_type, traits_type >::sungetc().

4.67.3.2 template<typename _CharT, typename _Traits> char_type∗ std::basic_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 488 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_streambuf< char_type, traits_type >::in_avail(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.67.3.3 template<typename _CharT, typename _Traits> char_type* std::basic_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 535 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc().

4.67.3.4 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> std::__c_file* const __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::file ( ) [inline]

Returns

The underlying FILE*.

This function can be used to access the underlying C file pointer. Note that there is no way for the library to track what you do with the file, so be careful.

Definition at line 88 of file stdio_sync_filebuf.h.

4.67.3.5 template<typename _CharT, typename _Traits> void std::basic_streambuf< _CharT, _Traits >::gbump (int __n) [inline], [protected], [inherited]

Moving the read position.

Parameters

__n	The delta by which to move.

This just advances the read position without returning any data.

Definition at line 498 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), and std::basic_streambuf< char_type, traits_type >::uflow().

4.67.3.6 template<typename _CharT, typename _Traits> locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline], [inherited]

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 226 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubimbue().

4.67.3.7 template<typename _CharT, typename _Traits> char_type∗ std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected], [inherited]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 485 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), std::basic_streambuf< char_type, traits_type >::in_avail(), std::basic_streambuf< char_type, traits_type >::sbumpc(), std::basic_streambuf< char_type, traits_type >::sgetc(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc(), std::basic_streambuf< char_type, traits_type >::sputbackc(), std::basic_streambuf< char_type, traits_type >::sungetc(), and std::basic_streambuf< char_type, traits_type >::uflow().

4.67.3.8 template<typename _CharT, typename _Traits> virtual void std::basic_streambuf< _CharT, _Traits >::imbue (const locale & __loc) [inline], [protected], [virtual], [inherited]

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.

Definition at line 576 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubimbue().

4.67.3.9 template<typename _CharT, typename _Traits> streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( ) [inline], [inherited]

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 284 of file streambuf.

4.67.3.10 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> virtual **int_type** __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::overflow (**int_type** *__c* = `traits_type::eof()`) `[inline]`, `[protected]`, `[virtual]`

Consumes data from the buffer; writes to the controlled sequence.

Parameters

__c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually *__c*, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *__c* is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 141 of file stdio_sync_filebuf.h.

4.67.3.11 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> virtual **int_type** __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::pbackfail (**int_type** *__c* = `traits_type::eof()`) `[inline]`, `[protected]`, `[virtual]`

Tries to back up the input sequence.

Parameters

__c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 116 of file stdio_sync_filebuf.h.

4.67.3.12 template<typename _CharT, typename _Traits> char_type∗ std::basic_streambuf< _CharT, _Traits >::pbase ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 529 of file streambuf.

Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.67.3.13 template<typename _CharT, typename _Traits> void std::basic_streambuf< _CharT, _Traits >::pbump (int __n) [inline], [protected], [inherited]

Moving the write position.

Parameters

__n	The delta by which to move.

This just advances the write position without returning any data.

Definition at line 545 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc().

4.67.3.14 template<typename _CharT, typename _Traits> char_type∗ std::basic_streambuf< _CharT, _Traits >::pptr ( ) const [inline], [protected], [inherited]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 532 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::sputc(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::str().

4.67.3.15 template<typename _CharT, typename _Traits> locale std::basic_streambuf< _CharT, _Traits >::pubimbue (const locale & __loc) [inline], [inherited]

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).

Definition at line 209 of file streambuf.

4.67.3.16 template<typename _CharT, typename _Traits> pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (off_type *__off,* ios_base::seekdir *__way,* ios_base::openmode *__mode =* ios_base::in | ios_base::out) `[inline]`, `[inherited]`

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.

Definition at line 251 of file streambuf.

4.67.3.17 template<typename _CharT, typename _Traits> pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (pos_type *__sp,* ios_base::openmode *__mode =* ios_base::in | ios_base::out) `[inline]`, `[inherited]`

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.

Definition at line 263 of file streambuf.

4.67.3.18 template<typename _CharT, typename _Traits> basic_streambuf* std::basic_streambuf< _CharT, _Traits >::pubsetbuf (char_type * *__s,* streamsize *__n*) `[inline]`, `[inherited]`

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 239 of file streambuf.

4.67.3.19 template<typename _CharT, typename _Traits> int std::basic_streambuf< _CharT, _Traits >::pubsync ( ) `[inline]`, `[inherited]`

Calls virtual sync function.

Definition at line 271 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::sync().

4.67.3.20 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( ) `[inline]`, `[inherited]`

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 316 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::istreambuf_iterator< _CharT, _Traits >::operator++(), and std::basic_streambuf< char_type, traits_type >::snextc().

4.67.3.21 template<typename _CharT, typename _Traits> virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekoff (off_type, ios_base::seekdir, ios_base::openmode = ios_base::in | ios_base::out) `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and std::basic_stringbuf< _CharT, _Traits, _Alloc >.

Definition at line 602 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubseekoff().

4.67.3.22 template<typename _CharT, typename _Traits> virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekpos (pos_type, ios_base::openmode = ios_base::in | ios_base::out) `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and std::basic_stringbuf< _CharT, _Traits, _Alloc >.

Definition at line 614 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubseekpos().

4.67.3.23 template<typename _CharT, typename _Traits> virtual basic_streambuf<char_type,_Traits>* std::basic_streambuf< _CharT, _Traits >::setbuf (char_type *, streamsize) `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25s02.html` for more on this function.

Note

Base class version does nothing, returns `this`.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and std::basic_stringbuf< _CharT, _Traits, _Alloc >.

Definition at line 591 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::pubsetbuf().

4.67.3.24 template<typename _CharT, typename _Traits> void std::basic_streambuf< _CharT, _Traits >::setg (char_type ∗ *__gbeg*, char_type ∗ *__gnext*, char_type ∗ *__gend*) `[inline]`, `[protected]`, `[inherited]`

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Definition at line 509 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_create_pback(), std::basic_filebuf< char_type, traits_type >::_M_destroy_pback(), and std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.67.3.25 template<typename _CharT, typename _Traits> void std::basic_streambuf< _CharT, _Traits >::setp (char_type ∗ *__pbeg*, char_type ∗ *__pend*) `[inline]`, `[protected]`, `[inherited]`

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Definition at line 555 of file streambuf.

Referenced by std::basic_filebuf< char_type, traits_type >::_M_set_buffer().

4.67.3.26 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sgetc ( ) `[inline]`, `[inherited]`

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 338 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::sentry::sentry(), and std::basic_streambuf< char_type, traits_type >::snextc().

4.67.3.27 template<typename _CharT, typename _Traits> streamsize **std::basic_streambuf**< _CharT, _Traits >::sgetn (**char_type** ∗ ***__s*, streamsize *__n***) `[inline]`, `[inherited]`

Entry point for xsgetn.

Parameters

__s	A buffer area.
__n	A count.

Returns xsgetn(__s,__n). The effect is to fill __*s*[0] through __*s*[__n-1] with characters from the input sequence, if possible.

Definition at line 357 of file streambuf.

4.67.3.28 template<typename _CharT, typename _Traits> virtual streamsize **std::basic_streambuf**< _CharT, _Traits >::showmanyc ( ) `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.
The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*
The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, and std::basic_stringbuf< _CharT, _Traits, _Alloc >.

Definition at line 649 of file streambuf.

Referenced by std::basic_streambuf< char_type, traits_type >::in_avail().

4.67.3.29 template<typename _CharT, typename _Traits> int_type **std::basic_streambuf**< _CharT, _Traits >::snextc ( ) `[inline]`, `[inherited]`

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 298 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), and std::basic_istream< _CharT, _Traits >::sentry::sentry().

4.67.3.30 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (char_type __c) `[inline]`, `[inherited]`

Pushing characters back into the input stream.

Parameters

__c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but *__c* is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be *__c*.

Definition at line 372 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::putback().

4.67.3.31 template<typename _CharT, typename _Traits> int_type std::basic_streambuf< _CharT, _Traits >::sputc (char_type __c) `[inline]`, `[inherited]`

Entry point for all single-character output functions.

Parameters

__c	A character to output.

Returns

__c, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores *__c* in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Definition at line 424 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::get(), and std::ostreambuf_iterator< _CharT, _Traits >::operator=().

4.67.3.32 template<typename _CharT, typename _Traits> streamsize std::basic_streambuf< _CharT, _Traits >::sputn (const char_type * __s, streamsize __n) `[inline]`, `[inherited]`

Entry point for all single-character output functions.

Parameters

__s	A buffer read area.
__n	A count.

One of two public output functions.

Returns xsputn(__s,__n). The effect is to write __*s*[0] through __*s*[__n-1] to the output sequence, if possible.

Definition at line 450 of file streambuf.

4.67.3.33 template<typename _CharT, typename _Traits> **int_type std::basic_streambuf**< _CharT, _Traits >::sungetc ( ) `[inline]`, `[inherited]`

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.

Definition at line 397 of file streambuf.

Referenced by std::basic_istream< _CharT, _Traits >::unget().

4.67.3.34 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> virtual int **__gnu_cxx::stdio_sync_filebuf**< _CharT, _Traits >::sync (void) `[inline]`, `[protected]`, `[virtual]`

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 160 of file stdio_sync_filebuf.h.

4.67.3.35 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> virtual **int_type __gnu_cxx::stdio_sync_filebuf**< _CharT, _Traits >::uflow ( ) `[inline]`, `[protected]`, `[virtual]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 108 of file stdio_sync_filebuf.h.

4.67.3.36 template<typename _CharT , typename _Traits = std::char_traits<_CharT>> virtual int_type __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::underflow ( ) [inline], [protected], [virtual]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt11ch25.html`

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 101 of file stdio_sync_filebuf.h.

4.67.3.37 template<typename _CharT , typename _Traits > streamsize basic_streambuf< _CharT, _Traits >::xsgetn (char_type ∗ __s, streamsize __n) [protected], [virtual], [inherited]

Multiple character extraction.

Parameters

__s	A buffer area.
__n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills __*s*[0] through __*s*[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either __*n* characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.

Definition at line 46 of file streambuf.tcc.

References std::min().

Referenced by std::basic_streambuf< char_type, traits_type >::sgetn().

4.67.3.38 template<typename _CharT , typename _Traits > streamsize basic_streambuf< _CharT, _Traits >::xsputn (const char_type ∗ __s, streamsize __n) [protected], [virtual], [inherited]

Multiple character insertion.

Parameters

__s	A buffer area.
__n	Maximum number of characters to write.

Returns

The number of characters written.

Writes __*s*[0] through __*s*[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.

Definition at line 80 of file streambuf.tcc.

References std::min().

Referenced by std::basic_streambuf< char_type, traits_type >::sputn().

4.67.4 Member Data Documentation

4.67.4.1 template<typename _CharT, typename _Traits> locale **std::basic_streambuf**< _CharT, _Traits >::_M_buf_locale `[protected]`, `[inherited]`

Current locale setting.

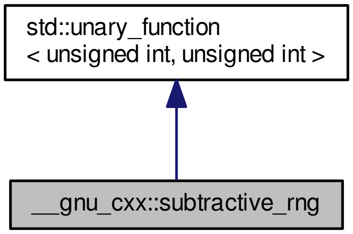
4.68 __gnu_cxx::subtractive_rng Class Reference

Inheritance diagram for __gnu_cxx::subtractive_rng:



Public Types

- typedef _Arg argument_type
- typedef _Result result_type

Public Member Functions

- subtractive_rng (unsigned int __seed)
- subtractive_rng ()
- void **_M_initialize** (unsigned int __seed)
- unsigned int operator() (unsigned int __limit)

4.68.1 Detailed Description

The `subtractive_rng` class is documented on `SGI's site`. Note that this code assumes that `int` is 32 bits.

Definition at line 352 of file ext/functional.

4.68.2 Member Typedef Documentation

4.68.2.1 template<typename _Arg, typename _Result> typedef _Arg std::unary_function< _Arg, _Result >::argument_type `[inherited]`

`argument_type` is the type of the argument

Definition at line 104 of file stl_function.h.

4.68.2.2 template<typename _Arg, typename _Result> typedef _Result std::unary_function< _Arg, _Result >::result_type `[inherited]`

`result_type` is the return type

Definition at line 107 of file stl_function.h.

4.68.3 Constructor & Destructor Documentation

4.68.3.1 __gnu_cxx::subtractive_rng::subtractive_rng (unsigned int *__seed*) `[inline]`

Ctor allowing you to initialize the seed.

Definition at line 394 of file ext/functional.

4.68.3.2 __gnu_cxx::subtractive_rng::subtractive_rng ( ) `[inline]`

Default ctor; initializes its state with some number you don't see.

Definition at line 398 of file ext/functional.

4.68.4 Member Function Documentation

4.68.4.1 unsigned int __gnu_cxx::subtractive_rng::operator() (unsigned int *__limit*) `[inline]`

Returns a number less than the argument.

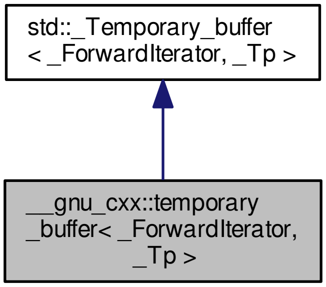
Definition at line 363 of file ext/functional.

The documentation for this class was generated from the following file:

- ext/functional

4.69 __gnu_cxx::temporary_buffer< _ForwardIterator, _Tp > Struct Template Reference

Inheritance diagram for __gnu_cxx::temporary_buffer< _ForwardIterator, _Tp >:



Public Types

- typedef pointer **iterator**
- typedef value_type ∗ **pointer**
- typedef ptrdiff_t **size_type**
- typedef _Tp **value_type**

Public Member Functions

- temporary_buffer (_ForwardIterator __first, _ForwardIterator __last)
- ∼temporary_buffer ()
- iterator begin ()
- iterator end ()
- size_type requested_size () const
- size_type size () const

Protected Attributes

- pointer **_M_buffer**
- size_type **_M_len**
- size_type **_M_original_len**

4.69.1 Detailed Description

template<class _ForwardIterator, class _Tp = typename std::iterator_traits<_ForwardIterator>::value_type>struct __gnu_cxx::temporary_buffer< _ForwardIterator, _Tp >

This class provides similar behavior and semantics of the standard functions get_temporary_buffer() and return_temporary_buffer(), but encapsulated in a type vaguely resembling a standard container.

By default, a temporary_buffer<Iter> stores space for objects of whatever type the Iter iterator points to. It is constructed from a typical [first,last) range, and provides the begin(), end(), size() functions, as well as requested_size(). For non-trivial types, copies of ∗first will be used to initialize the storage.

`malloc` is used to obtain underlying storage.

Like get_temporary_buffer(), not all the requested memory may be available. Ideally, the created buffer will be large enough to hold a copy of [first,last), but if size() is less than requested_size(), then this didn't happen.

Definition at line 183 of file ext/memory.

4.69.2 Constructor & Destructor Documentation

4.69.2.1 template<class _ForwardIterator , class _Tp = typename std::iterator_traits<_ForwardIterator>::value_type> __gnu_cxx::temporary_buffer< _ForwardIterator, _Tp >::temporary_buffer (_ForwardIterator *__first*, _ForwardIterator *__last*) `[inline]`

Requests storage large enough to hold a copy of [first,last).

Definition at line 186 of file ext/memory.

4.69.2.2 template<class _ForwardIterator , class _Tp = typename std::iterator_traits<_ForwardIterator>::value_type> __gnu_cxx::temporary_buffer< _ForwardIterator, _Tp >::∼temporary_buffer ( ) `[inline]`

Destroys objects and frees storage.

Definition at line 190 of file ext/memory.

4.69.3 Member Function Documentation

4.69.3.1 template<typename _ForwardIterator, typename _Tp> iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::begin ( ) `[inline]`, `[inherited]`

As per Table mumble.

Definition at line 151 of file stl_tempbuf.h.

Referenced by std::inplace_merge(), std::stable_partition(), and std::stable_sort().

4.69.3.2 template<typename _ForwardIterator, typename _Tp> iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::end ( ) `[inline]`, `[inherited]`

As per Table mumble.

Definition at line 156 of file stl_tempbuf.h.

4.69.3.3 template<typename _ForwardIterator, typename _Tp> size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::requested_size ( ) const `[inline]`, `[inherited]`

Returns the size requested by the constructor; may be >size().

Definition at line 146 of file stl_tempbuf.h.

Referenced by std::stable_partition().

4.69.3.4 template<typename _ForwardIterator, typename _Tp> size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::size ( ) const [inline], [inherited]

As per Table mumble.

Definition at line 141 of file stl_tempbuf.h.

Referenced by std::inplace_merge(), std::stable_partition(), and std::stable_sort().

The documentation for this struct was generated from the following file:

4.81.1 Detailed Description

template<typename _Iterator, typename _Sequence>class __gnu_debug::_Safe_iterator< _Iterator, _Sequence >

Safe iterator wrapper.

The class template _Safe_iterator is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In additional to the basic iterator operations (which are validated, and then passed to the underlying iterator), _Safe_iterator has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.

Definition at line 116 of file safe_iterator.h.

4.81.2 Constructor & Destructor Documentation

4.81.2.1 template<typename _Iterator, typename _Sequence> __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_Safe_iterator ( ) `[inline]`

Postcondition

the iterator is singular and unattached

Definition at line 142 of file safe_iterator.h.

4.81.2.2 template<typename _Iterator, typename _Sequence> __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_Safe_iterator (const _Iterator & *__i*, const _Sequence ∗ *__seq*) `[inline]`

Safe iterator construction from an unsafe iterator and its sequence.

Precondition

`seq` is not NULL

Postcondition

this is not singular

Definition at line 151 of file safe_iterator.h.

References __gnu_debug::_Safe_iterator_base::_M_singular().

4.81.2.3 template<typename _Iterator, typename _Sequence> **__gnu_debug::_Safe_iterator**< _Iterator, _Sequence >::**_Safe_iterator** (const **_Safe_iterator**< _Iterator, _Sequence > & *__x*) `[inline]`

Copy construction.

Definition at line 162 of file safe_iterator.h.

References __gnu_debug::_Safe_iterator_base::_M_singular().

4.81.2.4 template<typename _Iterator, typename _Sequence> **__gnu_debug::_Safe_iterator**< _Iterator, _Sequence >::**_Safe_iterator** (**_Safe_iterator**< _Iterator, _Sequence > && *__x*) `[inline]`

Move construction.

Postcondition

__x is singular and unattached

Definition at line 179 of file safe_iterator.h.

References __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_attach().

4.81.2.5 template<typename _Iterator, typename _Sequence> template<typename _MutableIterator > **__gnu_debug::_Safe_iterator**< _Iterator, _Sequence >::**_Safe_iterator** (const **_Safe_iterator**< _MutableIterator, typename __gnu_cxx::__enable_if<(std::__are_same< _MutableIterator, typename _Sequence::iterator::iterator_type >::__value), _Sequence >::__type > & *__x*) `[inline]`

Converting constructor from a mutable iterator to a constant iterator.

Definition at line 197 of file safe_iterator.h.

4.81.3 Member Function Documentation

4.81.3.1 void __gnu_debug::_Safe_iterator_base::_M_attach (**_Safe_sequence_base** ∗ *__seq,* bool *__constant*) `[inherited]`

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach(), __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_attach(), and __gnu_debug::_Safe_iterator_base::_Safe_iterator_base().

4.81.3.2 template<typename _Iterator, typename _Sequence> void **__gnu_debug::_Safe_iterator**< _Iterator, _Sequence >::_M_attach (**_Safe_sequence_base** ∗ *__seq*) `[inline]`

Attach iterator to the given sequence.

Definition at line 406 of file safe_iterator.h.

References __gnu_debug::_Safe_iterator_base::_M_attach().

Referenced by __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_Safe_iterator(), and __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::operator=().

4.82.1 Detailed Description

Basic functionality for a *safe* iterator.

The _Safe_iterator_base base class implements the functionality of a safe iterator that is not specific to a particular iterator type. It contains a pointer back to the sequence it references along with iterator version information and pointers to form a doubly-linked list of iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

Definition at line 50 of file safe_base.h.

4.82.2 Constructor & Destructor Documentation

4.82.2.1 __gnu_debug::_Safe_iterator_base::_Safe_iterator_base ( ) `[inline]`, `[protected]`

Initializes the iterator and makes it singular.

Definition at line 76 of file safe_base.h.

4.82.2.2 __gnu_debug::_Safe_iterator_base::_Safe_iterator_base (const **_Safe_sequence_base** ∗ *__seq,* bool *__constant*) `[inline]`, `[protected]`

Initialize the iterator to reference the sequence pointed to by `__seq`. `__constant` is true when we are initializing a constant iterator, and false if it is a mutable iterator. Note that `__seq` may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference `__seq` and be nonsingular.

Definition at line 87 of file safe_base.h.

References _M_attach().

4.82.2.3 __gnu_debug::_Safe_iterator_base::_Safe_iterator_base (const **_Safe_iterator_base** & *__x,* bool *__constant*) `[inline]`, `[protected]`

Initializes the iterator to reference the same sequence that `__x` does. `__constant` is true if this is a constant iterator, and false if it is mutable.

Definition at line 94 of file safe_base.h.

References _M_attach(), and _M_sequence.

4.82.3 Member Function Documentation

4.82.3.1 void __gnu_debug::_Safe_iterator_base::_M_attach (_Safe_sequence_base ∗ __seq, bool __constant)

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach(), __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_attach(), and _Safe_iterator_base().

4.82.3.2 void __gnu_debug::_Safe_iterator_base::_M_attach_single (_Safe_sequence_base ∗ __seq, bool __constant) throw ()

Likewise, but not thread-safe.

Referenced by __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach_single(), and __gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_attach_single().

4.82.3.3 bool __gnu_debug::_Safe_iterator_base::_M_attached_to (const _Safe_sequence_base ∗ __seq) const [inline]

Determines if we are attached to the given sequence.

Definition at line 129 of file safe_base.h.

References _M_sequence.

4.82.3.4 bool __gnu_debug::_Safe_iterator_base::_M_can_compare (const _Safe_iterator_base & __x) const throw ()

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

4.82.3.5 void __gnu_debug::_Safe_iterator_base::_M_detach ( )

Detach the iterator for whatever sequence it is attached to, if any.

4.82.3.6 void __gnu_debug::_Safe_iterator_base::_M_detach_single ( ) throw ()

Likewise, but not thread-safe.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.83.1 Detailed Description

template<typename _Iterator, typename _Sequence>class __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >

Safe iterator wrapper.

The class template _Safe_local_iterator is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In additional to the basic iterator operations (which are validated, and then passed to the underlying iterator), _Safe_local_iterator has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.

Definition at line 52 of file safe_local_iterator.h.

4.83.2 Constructor & Destructor Documentation

4.83.2.1 template<typename _Iterator, typename _Sequence> **__gnu_debug::_Safe_local_iterator**< _Iterator, _Sequence >::**_Safe_local_iterator** ( ) `[inline]`

Postcondition

the iterator is singular and unattached

Definition at line 82 of file safe_local_iterator.h.

4.83.2.2 template<typename _Iterator, typename _Sequence> **__gnu_debug::_Safe_local_iterator**< _Iterator, _Sequence >::**_Safe_local_iterator** (const _Iterator & *__i,* size_type *__bucket,* const _Sequence * *__seq*) `[inline]`

Safe iterator construction from an unsafe iterator and its sequence.

Precondition

`seq` is not NULL

Postcondition

this is not singular

Definition at line 91 of file safe_local_iterator.h.

References __gnu_debug::_Safe_iterator_base::_M_singular().

4.84.1 Detailed Description

Basic functionality for a *safe* iterator.

The _Safe_local_iterator_base base class implements the functionality of a safe local iterator that is not specific to a particular iterator type. It contains a pointer back to the container it references along with iterator version information and pointers to form a doubly-linked list of local iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

Definition at line 50 of file safe_unordered_base.h.

4.84.2 Constructor & Destructor Documentation

4.84.2.1 __gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base ( ) `[inline]`, `[protected]`

Initializes the iterator and makes it singular.

Definition at line 54 of file safe_unordered_base.h.

4.84.2.2 __gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base (const **_Safe_sequence_base** ∗ *__seq*, bool *__constant*) `[inline]`, `[protected]`

Initialize the iterator to reference the container pointed to by `__seq`. `__constant` is true when we are initializing a constant local iterator, and false if it is a mutable local iterator. Note that `__seq` may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference `__seq` and be nonsingular.

Definition at line 64 of file safe_unordered_base.h.

References _M_attach().

4.84.2.3 __gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base (const **_Safe_local_iterator_base** & *__x*, bool *__constant*) `[inline]`, `[protected]`

Initializes the iterator to reference the same container that `__x` does. `__constant` is true if this is a constant iterator, and false if it is mutable.

Definition at line 70 of file safe_unordered_base.h.

4.85.1 Detailed Description

template<typename _Sequence>class __gnu_debug::_Safe_sequence< _Sequence >

Base class for constructing a *safe* sequence type that tracks iterators that reference it.

The class template _Safe_sequence simplifies the construction of *safe* sequences that track the iterators that reference the sequence, so that the iterators are notified of changes in the sequence that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and `const_iterator` types that are instantiations of class template _Safe_iterator for this sequence. Iterators will then be tracked automatically.

Definition at line 111 of file safe_sequence.h.

4.85.2 Member Function Documentation

4.85.2.1 void __gnu_debug::_Safe_sequence_base::_M_attach (_Safe_iterator_base * __it, bool __constant) `[inherited]`

Attach an iterator to this sequence.

4.85.2.2 void __gnu_debug::_Safe_sequence_base::_M_attach_single (_Safe_iterator_base * __it, bool __constant) throw () `[inherited]`

Likewise but not thread safe.

4.85.2.3 void __gnu_debug::_Safe_sequence_base::_M_detach (_Safe_iterator_base * __it) `[inherited]`

Detach an iterator from this sequence

4.85.2.4 void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) `[protected]`, `[inherited]`

Detach all iterators, leaving them singular.

Referenced by __gnu_debug::_Safe_sequence_base::∼_Safe_sequence_base().

4.85.2.5 void __gnu_debug::_Safe_sequence_base::_M_detach_single (_Safe_iterator_base * __it) throw () `[inherited]`

Likewise but not thread safe.

4.85.2.6 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) `[protected]`, `[inherited]`

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.85.2.7 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw () `[protected]`, `[inherited]`

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.85.2.8 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const `[inline]`, `[inherited]`

Invalidates all iterators.

Definition at line 233 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.85.2.9 template<typename _Sequence > template<typename _Predicate > void _Safe_sequence< _Sequence >::_M_invalidate_if (_Predicate __pred)

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 38 of file safe_sequence.tcc.

4.85.2.10 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) `[protected]`, `[inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.85.2.11 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) `[protected]`, `[inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.85.2.12 template<typename _Sequence > template<typename _Predicate > void _Safe_sequence< _Sequence >::_M_transfer_from_if (_Safe_sequence< _Sequence > & __from, _Predicate __pred)

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 69 of file safe_sequence.tcc.

4.86.1 Detailed Description

Base class that supports tracking of iterators that reference a sequence.

The _Safe_sequence_base class provides basic support for tracking iterators into a sequence. Sequences that track iterators must derived from _Safe_sequence_base publicly, so that safe iterators (which inherit _Safe_iterator_base) can attach to them. This class contains two linked lists of iterators, one for constant iterators and one for mutable iterators, and a version number that allows very fast invalidation of all iterators that reference the container.

This class must ensure that no operation on it may throw an exception, otherwise *safe* sequences may fail to provide the exception-safety guarantees required by the C++ standard.

Definition at line 177 of file safe_base.h.

4.86.2 Constructor & Destructor Documentation

4.86.2.1 __gnu_debug::_Safe_sequence_base::∼_Safe_sequence_base ( ) [inline], [protected]

Notify all iterators that reference this sequence that the sequence is being destroyed.

Definition at line 197 of file safe_base.h.

References _M_detach_all().

4.86.3 Member Function Documentation

4.86.3.1 void __gnu_debug::_Safe_sequence_base::_M_attach (_Safe_iterator_base ∗ *__it,* bool *__constant*)

Attach an iterator to this sequence.

4.87.1 Detailed Description

template<typename _Container>class __gnu_debug::_Safe_unordered_container< _Container >

Base class for constructing a *safe* unordered container type that tracks iterators that reference it.

The class template _Safe_unordered_container simplifies the construction of *safe* unordered containers that track the iterators that reference the container, so that the iterators are notified of changes in the container that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and `const_iterator` types that are instantiations of class template _Safe_iterator for this container and `local_iterator` and `const_local_iterator` types that are instantiations of class template _Safe_local_iterator for this container. Iterators will then be tracked automatically.

Definition at line 58 of file safe_unordered_container.h.

4.87.2 Member Function Documentation

4.87.2.1 void __gnu_debug::_Safe_sequence_base::_M_attach (**_Safe_iterator_base** * *__it,* bool *__constant*) `[inherited]`

Attach an iterator to this sequence.

4.87.2.2 void __gnu_debug::_Safe_unordered_container_base::_M_attach_local (**_Safe_iterator_base** * *__it,* bool *__constant*) `[inherited]`

Attach an iterator to this container.

4.87.2.3 void __gnu_debug::_Safe_unordered_container_base::_M_attach_local_single (**_Safe_iterator_base** * *__it,* bool *__constant*) throw () `[inherited]`

Likewise but not thread safe.

4.87.2.4 void __gnu_debug::_Safe_sequence_base::_M_attach_single (**_Safe_iterator_base** * *__it,* bool *__constant*) throw () `[inherited]`

Likewise but not thread safe.

4.87.2.5 void __gnu_debug::_Safe_sequence_base::_M_detach (**_Safe_iterator_base** * *__it*) `[inherited]`

Detach an iterator from this sequence

4.87.2.6 void __gnu_debug::_Safe_unordered_container_base::_M_detach_all ( ) `[protected]`, `[inherited]`

Detach all iterators, leaving them singular.

4.87.2.7 void __gnu_debug::_Safe_unordered_container_base::_M_detach_local (**_Safe_iterator_base** * *__it*) `[inherited]`

Detach an iterator from this container

4.87.2.8 void __gnu_debug::_Safe_unordered_container_base::_M_detach_local_single (**_Safe_iterator_base** * *__it*) throw () `[inherited]`

Likewise but not thread safe.

4.87.2.9 void __gnu_debug::_Safe_sequence_base::_M_detach_single (_Safe_iterator_base ∗ __it) throw () [inherited]

Likewise but not thread safe.

4.87.2.10 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.87.2.11 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw () [protected], [inherited]

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.87.2.12 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [inherited]

Invalidates all iterators.

Definition at line 233 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.87.2.13 template<typename _Container > template<typename _Predicate > void __gnu_debug::_Safe_unordered_container< _Container >::_M_invalidate_if (_Predicate __pred)

Invalidates all iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 38 of file safe_unordered_container.tcc.

4.87.2.14 template<typename _Container > template<typename _Predicate > void __gnu_debug::_Safe_unordered_container< _Container >::_M_invalidate_local_if (_Predicate __pred)

Invalidates all local iterators `x` that reference this container, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal ilocal iterators nested in the safe ones.

Definition at line 70 of file safe_unordered_container.tcc.

4.87.2.15 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.87.2.16 void __gnu_debug::_Safe_unordered_container_base::_M_swap (_Safe_unordered_container_base & __x) [protected], [inherited]

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.87.2.17 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.88.1 Detailed Description

Base class that supports tracking of local iterators that reference an unordered container.

The _Safe_unordered_container_base class provides basic support for tracking iterators into an unordered container. Containers that track iterators must derived from _Safe_unordered_container_base publicly, so that safe iterators (which inherit _Safe_iterator_base) can attach to them. This class contains four linked lists of iterators, one for constant iterators, one for mutable iterators, one for constant local iterators, one for mutable local iterators and a version number that allows very fast invalidation of all iterators that reference the container.

This class must ensure that no operation on it may throw an exception, otherwise *safe* containers may fail to provide the exception-safety guarantees required by the C++ standard.

Definition at line 123 of file safe_unordered_base.h.

4.88.2 Constructor & Destructor Documentation

4.88.2.1 __gnu_debug::_Safe_unordered_container_base::∼_Safe_unordered_container_base ( ) `[inline]`, `[protected]`

Notify all iterators that reference this container that the container is being destroyed.

Definition at line 141 of file safe_unordered_base.h.

4.88.3 Member Function Documentation

4.88.3.1 void __gnu_debug::_Safe_sequence_base::_M_attach (**_Safe_iterator_base** ∗ *__it,* bool *__constant*) `[inherited]`

Attach an iterator to this sequence.

4.88.3.2 void __gnu_debug::_Safe_unordered_container_base::_M_attach_local (**_Safe_iterator_base** ∗ *__it,* bool *__constant*)

Attach an iterator to this container.

4.88.3.3 void __gnu_debug::_Safe_unordered_container_base::_M_attach_local_single (**_Safe_iterator_base** ∗ *__it,* bool *__constant*) throw ()

Likewise but not thread safe.

4.88.3.4 void __gnu_debug::_Safe_sequence_base::_M_attach_single (**_Safe_iterator_base** ∗ *__it,* bool *__constant*) throw () `[inherited]`

Likewise but not thread safe.

4.88.3.5 void __gnu_debug::_Safe_sequence_base::_M_detach (**_Safe_iterator_base** ∗ *__it*) `[inherited]`

Detach an iterator from this sequence

4.88.3.6 void __gnu_debug::_Safe_unordered_container_base::_M_detach_all ( ) `[protected]`

Detach all iterators, leaving them singular.

4.88.3.7 void __gnu_debug::_Safe_unordered_container_base::_M_detach_local (**_Safe_iterator_base** ∗ *__it*)

Detach an iterator from this container

4.88.3.8 void __gnu_debug::_Safe_unordered_container_base::_M_detach_local_single (**_Safe_iterator_base** ∗ *__it*) throw ()

Likewise but not thread safe.

4.88.3.9 void __gnu_debug::_Safe_sequence_base::_M_detach_single (**_Safe_iterator_base** ∗ *__it*) throw () `[inherited]`

Likewise but not thread safe.

4.88.3.10 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) `[protected]`, `[inherited]`

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.88.3.11 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw () `[protected]`, `[inherited]`

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.88.3.12 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const `[inline]`, `[inherited]`

Invalidates all iterators.

Definition at line 233 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.88.3.13 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) `[protected]`, `[inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.88.3.14 void __gnu_debug::_Safe_unordered_container_base::_M_swap (**_Safe_unordered_container_base** & *__x*) `[protected]`

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.88.3.15 void __gnu_debug::_Safe_sequence_base::_M_swap (**_Safe_sequence_base** & *__x*) `[protected]`, `[inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.89.1 Detailed Description

template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>class __gnu_debug::basic_string< _CharT, _Traits, _Allocator >

Class std::basic_string with safety/checking/debug instrumentation.

Definition at line 41 of file debug/string.

4.89.2 Member Function Documentation

4.89.2.1 void __gnu_debug::_Safe_sequence_base::_M_attach (_Safe_iterator_base * __it, bool __constant) [inherited]

Attach an iterator to this sequence.

4.89.2.2 void __gnu_debug::_Safe_sequence_base::_M_attach_single (_Safe_iterator_base * __it, bool __constant) throw () [inherited]

Likewise but not thread safe.

4.89.2.3 void __gnu_debug::_Safe_sequence_base::_M_detach (_Safe_iterator_base * __it) [inherited]

Detach an iterator from this sequence

4.89.2.4 void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by __gnu_debug::_Safe_sequence_base::∼_Safe_sequence_base().

4.89.2.5 void __gnu_debug::_Safe_sequence_base::_M_detach_single (_Safe_iterator_base * __it) throw () [inherited]

Likewise but not thread safe.

4.89.2.6 void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.89.2.7 __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw () `[protected]`, `[inherited]`

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.89.2.8 void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const `[inline]`, `[inherited]`

Invalidates all iterators.

Definition at line 233 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.89.2.9 void __gnu_debug::_Safe_sequence< basic_string< _CharT, _Traits, _Allocator > >::_M_invalidate_if (_Predicate __pred) `[inherited]`

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.89.2.10 void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) `[protected]`, `[inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.89.2.11 void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) `[protected]`, `[inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.89.2.12 void __gnu_debug::_Safe_sequence< basic_string< _CharT, _Traits, _Allocator > >::_M_transfer_from_if (_Safe_sequence< basic_string< _CharT, _Traits, _Allocator > > & __from, _Predicate __pred) `[inherited]`

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

4.89.2.13 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::append (const basic_string< _CharT, _Traits, _Allocator > & __str) `[inherited]`

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

4.89.2.14 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::append (const basic_string< _CharT, _Traits, _Allocator > & __str, size_type __pos, size_type __n) `[inherited]`

Append a substring.

Parameters

__str	The string to append.
__pos	Index of the first character of str to append.
__n	The number of characters to append.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *__pos* is not a valid index.

This function appends *__n* characters from *__str* starting at *__pos* to this string. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is appended.

4.89.2.15 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::append (initializer_list< _CharT > __l) [inline], [inherited]

Append an initializer_list of characters.

Parameters

__l	The initializer_list of characters to append.

Returns

Reference to this string.

Definition at line 1030 of file basic_string.h.

4.89.2.16 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::assign (const basic_string< _CharT, _Traits, _Allocator > & __str) [inherited]

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

4.89.2.17 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::assign (basic_string< _CharT, _Traits, _Allocator > && __str) [inline], [inherited]

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

This function sets this string to the exact contents of *__str*. *__str* is a valid, but unspecified string.

Definition at line 1079 of file basic_string.h.

4.89.2.18 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::assign (const basic_string< _CharT, _Traits, _Allocator > & *__str,* size_type *__pos,* size_type *__n*) [inline], [inherited]

Set value to a substring of a string.

Parameters

__str	The string to use.
__pos	Index of the first character of str.
__n	Number of characters to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *pos* is not a valid index.

This function sets this string to the substring of *__str* consisting of *__n* characters at *__pos*. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is used.

Definition at line 1100 of file basic_string.h.

4.89.2.19 const_reference std::basic_string< _CharT, _Traits, _Allocator >::at (size_type *__n*) const [inline], [inherited]

Provides access to the data contained in the string.

Parameters

__n	The index of the character to access.

Returns

Read-only (const) reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.

Definition at line 864 of file basic_string.h.

4.89.2.20 reference std::basic_string< _CharT, _Traits, _Allocator >::at (size_type __n) [inline], [inherited]

Provides access to the data contained in the string.

Parameters

__n	The index of the character to access.

Returns

Read/write reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails. Success results in unsharing the string.

Definition at line 883 of file basic_string.h.

4.89.2.21 reference std::basic_string< _CharT, _Traits, _Allocator >::back ( ) [inline], [inherited]

Returns a read/write reference to the data at the last element of the string.

Definition at line 913 of file basic_string.h.

4.89.2.22 const_reference std::basic_string< _CharT, _Traits, _Allocator >::back ( ) const [inline], [inherited]

Returns a read-only (constant) reference to the data at the last element of the string.

Definition at line 921 of file basic_string.h.

4.89.2.23 size_type std::basic_string< _CharT, _Traits, _Allocator >::capacity ( ) const [inline], [noexcept], [inherited]

Returns the total number of characters that the string can hold before needing to allocate more memory.

Definition at line 776 of file basic_string.h.

4.89.2.24 int std::basic_string< _CharT, _Traits, _Allocator >::compare (const basic_string< _CharT, _Traits, _Allocator > & __str) const [inline], [inherited]

Compare to a string.

Parameters

__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *__str*, 0 if their values are equivalent, or > 0 if this string is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of size() and str.size(). The function then compares the two strings by calling traits::compare(data(), str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

Definition at line 2225 of file basic_string.h.

4.89.2.25 int std::basic_string< _CharT, _Traits, _Allocator >::compare (size_type *__pos,* size_type *__n,* const basic_string< _CharT, _Traits, _Allocator > & *__str*) const `[inherited]`

Compare substring to a string.

Parameters

__pos	Index of first character of substring.
__n	Number of characters in substring.
__str	String to compare against.

Returns

Integer $<$ 0, 0, or $>$ 0.

Form the substring of this string from the *__n* characters starting at *__pos*. Returns an integer $<$ 0 if the substring is ordered before *__str*, 0 if their values are equivalent, or $>$ 0 if the substring is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__str.size()*. The function then compares the two strings by calling traits::compare(substring.data(),str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

4.89.2.26 int std::basic_string< _CharT, _Traits, _Allocator >::compare (size_type *__pos1,* size_type *__n1,* const basic_string< _CharT, _Traits, _Allocator > & *__str,* size_type *__pos2,* size_type *__n2*) const `[inherited]`

Compare substring to a substring.

Parameters

__pos1	Index of first character of substring.
__n1	Number of characters in substring.
__str	String to compare against.
__pos2	Index of first character of substring of str.
__n2	Number of characters in substring of str.

Returns

Integer $<$ 0, 0, or $>$ 0.

Form the substring of this string from the *__n1* characters starting at *__pos1*. Form the substring of *__str* from the *__n2* characters starting at *__pos2*. Returns an integer $<$ 0 if this substring is ordered before the substring of *__str*, 0 if their values are equivalent, or $>$ 0 if this substring is ordered after the substring of *__str*. Determines the effective length rlen of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

4.89.2.27 bool std::basic_string< _CharT, _Traits, _Allocator >::empty ( ) const `[inline]`, `[noexcept]`, `[inherited]`

Returns true if the string is empty. Equivalent to `*this == ""`.

Definition at line 811 of file basic_string.h.

4.89.2.28 iterator std::basic_string< _CharT, _Traits, _Allocator >::erase (iterator *__position*) [inline], [inherited]

Remove one character.

Parameters

__position	Iterator referencing the character to remove.

Returns

iterator referencing same location after removal.

Removes the character at *__position* from this string. The value of the string doesn't change if an error is thrown.

Definition at line 1378 of file basic_string.h.

4.89.2.29 iterator std::basic_string< _CharT, _Traits, _Allocator >::erase (iterator *__first,* iterator *__last*) [inherited]

Remove a range of characters.

Parameters

__first	Iterator referencing the first character to remove.
__last	Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

4.89.2.30 size_type std::basic_string< _CharT, _Traits, _Allocator >::find (const basic_string< _CharT, _Traits, _Allocator > & *__str,* size_type *__pos* = 0) const [inline], [noexcept], [inherited]

Find position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.

Definition at line 1846 of file basic_string.h.

4.89.2.31 size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_not_of (const basic_string< _CharT, _Traits, _Allocator > & *__str,* size_type *__pos* = 0) const [inline], [noexcept], [inherited]

Find position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

Definition at line 2079 of file basic_string.h.

4.89.2.32 size_type std::basic_string< _CharT, _Traits, _Allocator >::find_first_of (const basic_string< _CharT, _Traits, _Allocator > & *__str*, size_type *__pos* = 0) const [inline], [noexcept], [inherited]

Find position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

Definition at line 1952 of file basic_string.h.

4.89.2.33 size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_not_of (const basic_string< _CharT, _Traits, _Allocator > & *__str*, size_type *__pos* = npos) const [inline], [noexcept], [inherited]

Find last position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

Definition at line 2142 of file basic_string.h.

4.89.2.34 size_type std::basic_string< _CharT, _Traits, _Allocator >::find_last_of (const basic_string< _CharT, _Traits, _Allocator > & *__str*, size_type *__pos* = npos) const [inline], [noexcept], [inherited]

Find last position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.

Definition at line 2016 of file basic_string.h.

4.89.2.35 reference std::basic_string< _CharT, _Traits, _Allocator >::front ( ) [inline], [inherited]

Returns a read/write reference to the data at the first element of the string.

Definition at line 897 of file basic_string.h.

4.89.2.36 const_reference std::basic_string< _CharT, _Traits, _Allocator >::front ( ) const [inline], [inherited]

Returns a read-only (constant) reference to the data at the first element of the string.

Definition at line 905 of file basic_string.h.

4.89.2.37 allocator_type std::basic_string< _CharT, _Traits, _Allocator >::get_allocator ( ) const [inline], [noexcept], [inherited]

Return copy of allocator used to construct this string.

Definition at line 1817 of file basic_string.h.

4.89.2.38 void std::basic_string< _CharT, _Traits, _Allocator >::insert (iterator *__p*, size_type *__n*, _CharT *__c*) [inline], [inherited]

Insert multiple characters.

Parameters

__p	Iterator referencing location in string to insert at.
__n	Number of characters to insert
__c	The character to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts *__n* copies of character *__c* starting at the position referenced by iterator *__p*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1185 of file basic_string.h.

4.89.2.39 void std::basic_string< _CharT, _Traits, _Allocator >::insert (iterator *__p*, _InputIterator *__beg*, _InputIterator *__end*) [inline], [inherited]

Insert a range of characters.

Parameters

__p	Iterator referencing location in string to insert at.
__beg	Start of range.
__end	End of range.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts characters in range [__beg,__end). If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1202 of file basic_string.h.

4.89.2.40 void **std::basic_string**< _CharT, _Traits, _Allocator >::insert (iterator *__p*, **initializer_list**< _CharT > *__l*) `[inline]`, `[inherited]`

Insert an initializer_list of characters.

Parameters

__p	Iterator referencing location in string to insert at.
__l	The initializer_list of characters to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Definition at line 1213 of file basic_string.h.

4.89.2.41 **basic_string**& **std::basic_string**< _CharT, _Traits, _Allocator >::insert (size_type *__pos1*, const **basic_string**< _CharT, _Traits, _Allocator > & *__str*) `[inline]`, `[inherited]`

Insert value of a string.

Parameters

__pos1	Iterator referencing location in string to insert at.
__str	The string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts value of *__str* starting at *__pos1*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1233 of file basic_string.h.

4.89.2.42 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::insert (size_type __pos1, const basic_string< _CharT, _Traits, _Allocator > & __str, size_type __pos2, size_type __n) `[inline]`, `[inherited]`

Insert a substring.

Parameters

__pos1	Iterator referencing location in string to insert at.
__str	The string to insert.
__pos2	Start of characters in str to insert.
__n	Number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *pos1* > size() or *__pos2* > *str.size()*.

Starting at *pos1*, insert *__n* character of *__str* beginning with *__pos2*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos1* is beyond the end of this string or *__pos2* is beyond the end of *__str*, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1255 of file basic_string.h.

4.89.2.43 iterator std::basic_string< _CharT, _Traits, _Allocator >::insert (iterator __p, _CharT __c) `[inline]`, `[inherited]`

Insert one character.

Parameters

__p	Iterator referencing position in string to insert at.
__c	The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts character *__c* at position referenced by *__p*. If adding character causes the length to exceed max_size(), length_error is thrown. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1337 of file basic_string.h.

4.89.2.44 size_type std::basic_string< _CharT, _Traits, _Allocator >::length ( ) const `[inline]`, `[noexcept]`, `[inherited]`

Returns the number of characters in the string, not including any null-termination.

Definition at line 721 of file basic_string.h.

4.89.2.45 size_type std::basic_string< _CharT, _Traits, _Allocator >::max_size ( ) const [inline], [noexcept], [inherited]

Returns the size() of the largest possible string.

Definition at line 726 of file basic_string.h.

4.89.2.46 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::operator+= (const basic_string< _CharT, _Traits, _Allocator > & __str) [inline], [inherited]

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

Definition at line 932 of file basic_string.h.

4.89.2.47 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::replace (size_type __pos, size_type __n, const basic_string< _CharT, _Traits, _Allocator > & __str) [inline], [inherited]

Replace characters with value from another string.

Parameters

__pos	Index of first character to replace.
__n	Number of characters to be replaced.
__str	String to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* is beyond the end of this string.
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos+__n) from this string. In place, the value of *__str* is inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1429 of file basic_string.h.

4.89.2.48 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::replace (size_type __pos1, size_type __n1, const basic_string< _CharT, _Traits, _Allocator > & __str, size_type __pos2, size_type __n2) [inline], [inherited]

Replace characters with value from another string.

Parameters

__pos1	Index of first character to replace.
__n1	Number of characters to be replaced.
__str	String to insert.
__pos2	Index of first character of str to use.
__n2	Number of characters from str to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos1* > size() or *__pos2* > __str.size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos1,__pos1 + n) from this string. In place, the value of *__str* is inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1451 of file basic_string.h.

4.89.2.49 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::replace (iterator *__i1*, iterator *__i2*, const basic_string< _CharT, _Traits, _Allocator > & *__str*) [inline], [inherited]

Replace range of characters with string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__str	String value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the value of *__str* is inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1538 of file basic_string.h.

4.89.2.50 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::replace (iterator *__i1*, iterator *__i2*, const _CharT * *__s*, size_type *__n*) [inline], [inherited]

Replace range of characters with C substring.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__s	C string value to insert.
__n	Number of characters from s to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the first *__n* characters of *__s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1557 of file basic_string.h.

4.89.2.51 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::replace (iterator *__i1*, iterator *__i2*, const _CharT * *__s*) [inline], [inherited]

Replace range of characters with C string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__s	C string value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the characters of *__s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1578 of file basic_string.h.

4.89.2.52 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::replace (iterator *__i1*, iterator *__i2*, size_type *__n*, _CharT *__c*) [inline], [inherited]

Replace range of characters with multiple characters.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__n	Number of characters to insert.
__c	Character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, *__n* copies of *__c* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1599 of file basic_string.h.

4.89.2.53 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::replace (iterator *__i1,* iterator *__i2,* _InputIterator *__k1,* _InputIterator *__k2*) `[inline]`, `[inherited]`

Replace range of characters with range.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__k1	Iterator referencing start of range to insert.
__k2	Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1623 of file basic_string.h.

4.89.2.54 basic_string& std::basic_string< _CharT, _Traits, _Allocator >::replace (iterator *__i1,* iterator *__i2,* initializer_list< _CharT > *__l*) `[inline]`, `[inherited]`

Replace range of characters with initializer_list.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__l	The initializer_list of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1692 of file basic_string.h.

4.89.2.55 void **std::basic_string**< _CharT, _Traits, _Allocator >::reserve (size_type *__res_arg* = `0`) `[inherited]`

Attempt to preallocate enough memory for specified number of characters.

Parameters

__res_arg	Number of characters required.

Exceptions

std::length_error	If *__res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than max_size(), length_error is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

4.89.2.56 size_type **std::basic_string**< _CharT, _Traits, _Allocator >::rfind (const **basic_string**< _CharT, _Traits, _Allocator > & *__str*, size_type *__pos* = `npos`) const `[inline]`, `[noexcept]`, `[inherited]`

Find last position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.

Definition at line 1891 of file basic_string.h.

4.89.2.57 size_type **std::basic_string**< _CharT, _Traits, _Allocator >::size ( ) const `[inline]`, `[noexcept]`, `[inherited]`

Returns the number of characters in the string, not including any null-termination.

Definition at line 715 of file basic_string.h.

4.89.2.58 void **std::basic_string**< _CharT, _Traits, _Allocator >::swap (**basic_string**< _CharT, _Traits, _Allocator > & *__s*) `[inherited]`

Swap contents with another string.

Parameters

__s	String to swap with.

Exchanges the contents of this string with that of *__s* in constant time.

4.89.3 Member Data Documentation

4.89.3.1 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 184 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.89.3.2 _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 181 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.89.3.3 unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 187 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all(), and __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.89.3.4 const size_type std::basic_string< _CharT, _Traits, _Allocator >::npos [static], [inherited]

Value returned by various member functions when they fail.

Definition at line 285 of file basic_string.h.

The documentation for this class was generated from the following file:

- debug/string

4.90 __gnu_parallel::__accumulate_binop_reduct< _BinOp > Struct Template Reference

Public Member Functions

- **__accumulate_binop_reduct** (_BinOp &__b)
- template<typename _Result , typename _Addend >
  _Result **operator()** (const _Result &__x, const _Addend &__y)

Public Attributes

- _BinOp & **__binop**

4.90.1 Detailed Description

template<typename _BinOp>struct __gnu_parallel::__accumulate_binop_reduct< _BinOp >

General reduction, using a binary operator.

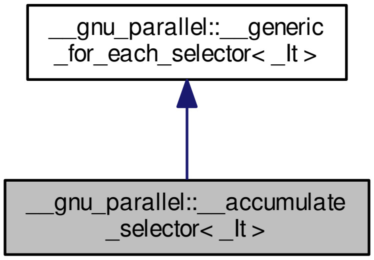
Definition at line 335 of file for_each_selectors.h.

The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.91 __gnu_parallel::__accumulate_selector< _It > Struct Template Reference

Inheritance diagram for __gnu_parallel::__accumulate_selector< _It >:



Public Member Functions

- template<typename _Op >
  std::iterator_traits< _It >
  ::value_type operator() (_Op __o, _It __i)

Public Attributes

- _It _M_finish_iterator

4.91.1 Detailed Description

template<typename _It>struct __gnu_parallel::__accumulate_selector< _It >

std::accumulate() selector.

Definition at line 208 of file for_each_selectors.h.

4.91.2 Member Function Documentation

4.91.2.1 template<typename _It> template<typename _Op > std::iterator_traits<_It>::value_type __gnu_parallel::__accumulate_selector< _It >::operator() (_Op *__o*, _It *__i*) [inline]

Functor execution.

Parameters

__o	Operator (unused).
__i	iterator referencing object.

Returns

The current value.

Definition at line 216 of file for_each_selectors.h.

4.91.3 Member Data Documentation

4.91.3.1 template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).

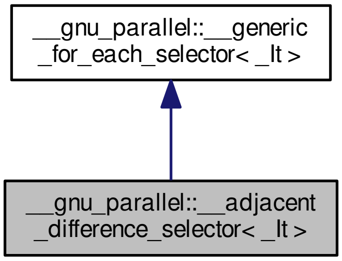
Definition at line 47 of file for_each_selectors.h.

The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.92 __gnu_parallel::__adjacent_difference_selector< _It > Struct Template Reference

Inheritance diagram for __gnu_parallel::__adjacent_difference_selector< _It >:



Public Member Functions

- template<typename _Op >
  bool **operator()** (_Op &__o, _It __i)

Public Attributes

- _It _M_finish_iterator

4.92.1 Detailed Description

template<typename _It>struct __gnu_parallel::__adjacent_difference_selector< _It >

Selector that returns the difference between two adjacent __elements.

Definition at line 269 of file for_each_selectors.h.

4.92.2 Member Data Documentation

4.92.2.1 template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).

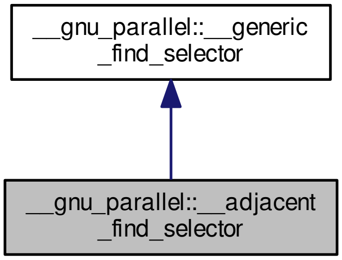
Definition at line 47 of file for_each_selectors.h.

The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.93 __gnu_parallel::__adjacent_find_selector Struct Reference

Inheritance diagram for __gnu_parallel::__adjacent_find_selector:



Public Member Functions

- template<typename _RAIter1 , typename _RAIter2 , typename _Pred >
  std::pair< _RAIter1, _RAIter2 > _M_sequential_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)
- template<typename _RAIter1 , typename _RAIter2 , typename _Pred >
  bool operator() (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)

4.93.1 Detailed Description

Test predicate on two adjacent elements.

Definition at line 80 of file find_selectors.h.

4.93.2 Member Function Documentation

4.93.2.1 template<typename _RAIter1 , typename _RAIter2 , typename _Pred > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__adjacent_find_selector::_M_sequential_algorithm (_RAIter1 *__begin1,* _RAIter1 *__end1,* _RAIter2 *__begin2,* _Pred *__pred*) [inline]

Corresponding sequential algorithm on a sequence.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__pred	Find predicate.

Definition at line 105 of file find_selectors.h.

References std::make_pair().

4.93.2.2 template<typename _RAIter1 , typename _RAIter2 , typename _Pred > bool __gnu_parallel::__adjacent_find_selector::operator() (_RAIter1 *__i1,* _RAIter2 *__i2,* _Pred *__pred*) [inline]

Test on one position.

Parameters

__i1	_Iterator on first sequence.
__i2	_Iterator on second sequence (unused).
__pred	Find predicate.

Definition at line 90 of file find_selectors.h.

The documentation for this struct was generated from the following file:

template<typename _It>struct __gnu_parallel::__generate_selector< _It >

std::generate() selector.

Definition at line 68 of file for_each_selectors.h.

4.102.2 Member Function Documentation

4.102.2.1 template<typename _It> template<typename _Op > bool __gnu_parallel::__generate_selector< _It >::operator() (_Op & __o, _It __i) `[inline]`

Functor execution.

Parameters

__o	Operator.
__i	iterator referencing object.

Definition at line 75 of file for_each_selectors.h.

4.102.3 Member Data Documentation

4.102.3.1 template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).

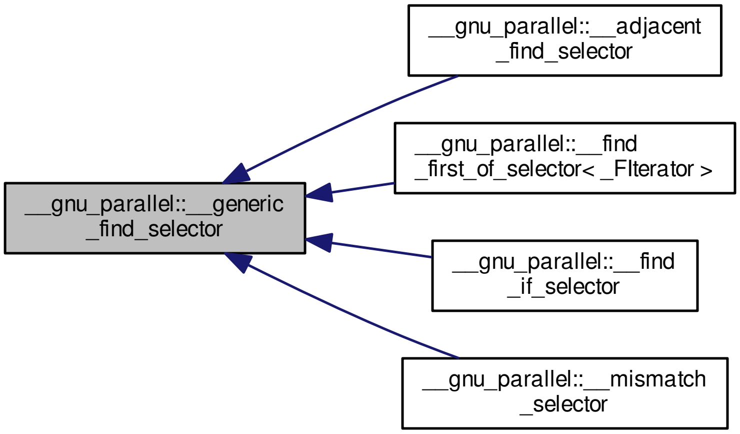
Definition at line 47 of file for_each_selectors.h.

The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.103 __gnu_parallel::__generic_find_selector Struct Reference

Inheritance diagram for __gnu_parallel::__generic_find_selector:



4.103.1 Detailed Description

Base class of all __gnu_parallel::__find_template selectors.

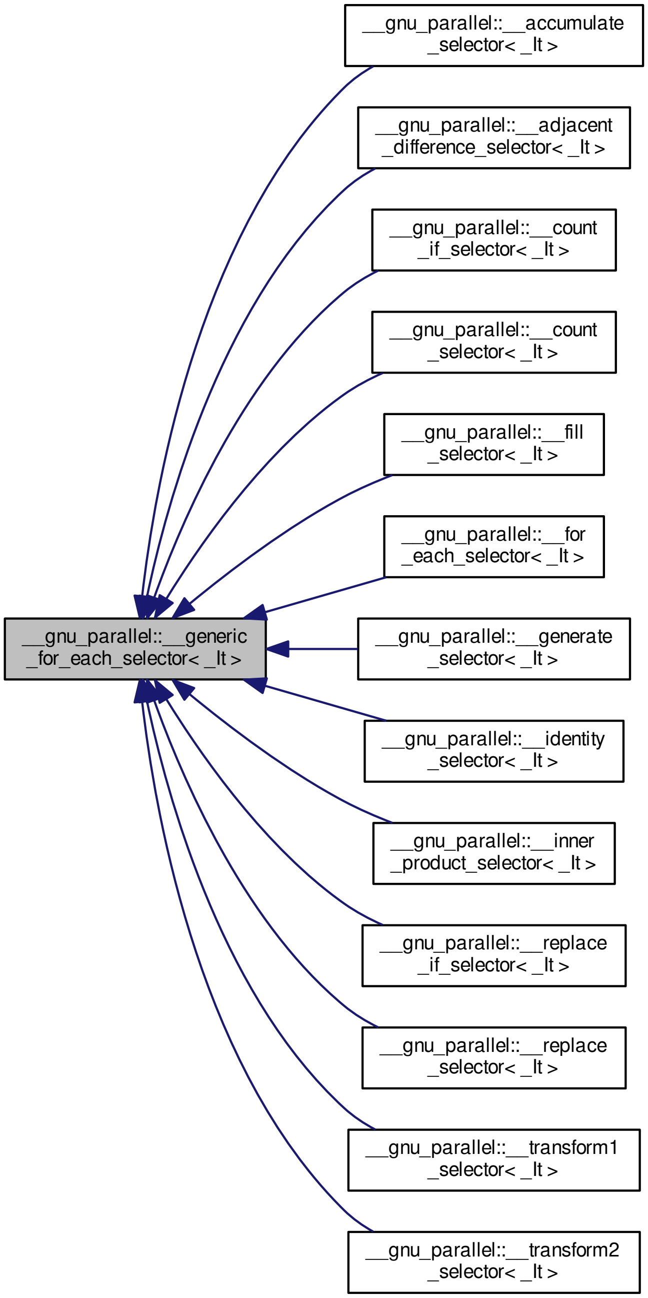
Definition at line 43 of file find_selectors.h.

The documentation for this struct was generated from the following file:

- find_selectors.h

4.104 __gnu_parallel::__generic_for_each_selector< _It > Struct Template Reference

Inheritance diagram for __gnu_parallel::__generic_for_each_selector< _It >:



Public Attributes

- _It _M_finish_iterator

4.104.1 Detailed Description

template<typename _It>struct __gnu_parallel::__generic_for_each_selector< _It >

Generic __selector for embarrassingly parallel functions.

Definition at line 42 of file for_each_selectors.h.

4.104.2 Member Data Documentation

4.104.2.1 template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).

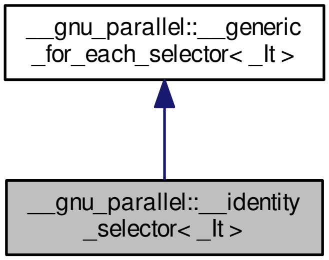
Definition at line 47 of file for_each_selectors.h.

The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.105 __gnu_parallel::__identity_selector< _It > Struct Template Reference

Inheritance diagram for __gnu_parallel::__identity_selector< _It >:



Public Member Functions

- template<typename _Op >
  _It operator() (_Op __o, _It __i)

Public Attributes

- _It _M_finish_iterator

4.105.1 Detailed Description

template<typename _It>struct __gnu_parallel::__identity_selector< _It >

Selector that just returns the passed iterator.

Definition at line 253 of file for_each_selectors.h.

4.105.2 Member Function Documentation

4.105.2.1 template<typename _It> template<typename _Op > _It __gnu_parallel::__identity_selector< _It >::operator() (_Op __o, _It __i) [inline]

Functor execution.

Parameters

__o	Operator (unused).
__i	iterator referencing object.

Returns

Passed iterator.

Definition at line 261 of file for_each_selectors.h.

4.105.3 Member Data Documentation

4.105.3.1 template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).

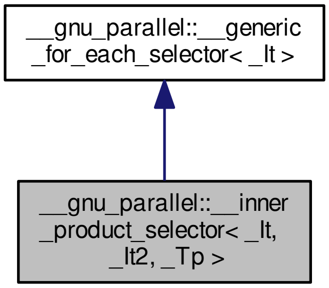
Definition at line 47 of file for_each_selectors.h.

The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.106 __gnu_parallel::__inner_product_selector< _It, _It2, _Tp > Struct Template Reference

Inheritance diagram for __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >:



Public Member Functions

- __inner_product_selector (_It __b1, _It2 __b2)
- template<typename _Op >
  _Tp operator() (_Op __mult, _It __current)

Public Attributes

- _It __begin1_iterator
- _It2 __begin2_iterator
- _It _M_finish_iterator

4.106.1 Detailed Description

template<typename _It, typename _It2, typename _Tp>struct __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >

std::inner_product() selector.

Definition at line 222 of file for_each_selectors.h.

4.106.2 Constructor & Destructor Documentation

4.106.2.1 template<typename _It , typename _It2 , typename _Tp > __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::__inner_product_selector (_It *__b1,* _It2 *__b2*) [inline], [explicit]

Constructor.

Parameters

__b1	Begin iterator of first sequence.
__b2	Begin iterator of second sequence.

Definition at line 234 of file for_each_selectors.h.

4.106.3 Member Function Documentation

4.106.3.1 template<typename _It , typename _It2 , typename _Tp > template<typename _Op > _Tp **__gnu_parallel::__inner_product_selector**< _It, _It2, _Tp >::operator() (_Op *__mult*, _It *__current*) [inline]

Functor execution.

Parameters

__mult	Multiplication functor.
__current	iterator referencing object.

Returns

Inner product elemental __result.

Definition at line 243 of file for_each_selectors.h.

References __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::__begin1_iterator, and __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::__begin2_iterator.

4.106.4 Member Data Documentation

4.106.4.1 template<typename _It , typename _It2 , typename _Tp > _It **__gnu_parallel::__inner_product_selector**< _It, _It2, _Tp >::__begin1_iterator

Begin iterator of first sequence.

Definition at line 225 of file for_each_selectors.h.

Referenced by __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::operator()().

4.106.4.2 template<typename _It , typename _It2 , typename _Tp > _It2 **__gnu_parallel::__inner_product_selector**< _It, _It2, _Tp >::__begin2_iterator

Begin iterator of second sequence.

Definition at line 228 of file for_each_selectors.h.

Referenced by __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::operator()().

4.106.4.3 template<typename _It > _It **__gnu_parallel::__generic_for_each_selector**< _It >::_M_finish_iterator [inherited]

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).

Definition at line 47 of file for_each_selectors.h.

The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.107 __gnu_parallel::__max_element_reduct< _Compare, _It > Struct Template Reference

Public Member Functions

- **__max_element_reduct** (_Compare &__c)
- _It **operator()** (_It __x, _It __y)

Public Attributes

- _Compare & **__comp**

4.107.1 Detailed Description

template<typename _Compare, typename _It>struct __gnu_parallel::__max_element_reduct< _Compare, _It >

Reduction for finding the maximum element, using a comparator.

Definition at line 321 of file for_each_selectors.h.

The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.108 __gnu_parallel::__min_element_reduct< _Compare, _It > Struct Template Reference

Public Member Functions

- **__min_element_reduct** (_Compare &__c)
- _It **operator()** (_It __x, _It __y)

Public Attributes

- _Compare & **__comp**

4.108.1 Detailed Description

template<typename _Compare, typename _It>struct __gnu_parallel::__min_element_reduct< _Compare, _It >

Reduction for finding the maximum element, using a comparator.

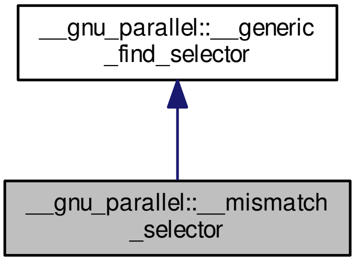
Definition at line 307 of file for_each_selectors.h.

The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.109 __gnu_parallel::__mismatch_selector Struct Reference

Inheritance diagram for __gnu_parallel::__mismatch_selector:



Public Member Functions

- template<typename _RAIter1 , typename _RAIter2 , typename _Pred >
  std::pair< _RAIter1, _RAIter2 > _M_sequential_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)
- template<typename _RAIter1 , typename _RAIter2 , typename _Pred >
  bool operator() (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)

4.109.1 Detailed Description

Test inverted predicate on a single element.

Definition at line 119 of file find_selectors.h.

4.109.2 Member Function Documentation

4.109.2.1 template<typename _RAIter1 , typename _RAIter2 , typename _Pred > std::pair<_RAIter1, _RAIter2> __gnu_parallel::__mismatch_selector::_M_sequential_algorithm (_RAIter1 *__begin1,* _RAIter1 *__end1,* _RAIter2 *__begin2,* _Pred *__pred*) [inline]

Corresponding sequential algorithm on a sequence.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__pred	Find predicate.

Definition at line 143 of file find_selectors.h.

4.109.2.2 template<typename _RAIter1 , typename _RAIter2 , typename _Pred > bool __gnu_parallel::__mismatch_selector::operator() (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred) [inline]

Test on one position.

Parameters

__i1	_Iterator on first sequence.
__i2	_Iterator on second sequence (unused).
__pred	Find predicate.

Definition at line 130 of file find_selectors.h.

The documentation for this struct was generated from the following file:

- find_selectors.h

4.110 __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< __sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct Template Reference

Public Member Functions

- _RAIter3 **operator()** (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp)

4.110.1 Detailed Description

template<bool __sentinels, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>struct __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< __sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >

Switch for 3-way merging with __sentinels turned off.

Note that 3-way merging is always stable!

Definition at line 752 of file multiway_merge.h.

The documentation for this struct was generated from the following file:

- multiway_merge.h

4.111 __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct Template Reference

Public Member Functions

- _RAIter3 **operator()** (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp)

4.111.1 Detailed Description

template<typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>struct __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >

Switch for 3-way merging with __sentinels turned on.

Note that 3-way merging is always stable!

Definition at line 772 of file multiway_merge.h.

The documentation for this struct was generated from the following file:

- multiway_merge.h

4.112 __gnu_parallel::__multiway_merge_4_variant_sentinel_switch< __sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct Template Reference

Public Member Functions

- _RAIter3 **operator()** (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp)

4.112.1 Detailed Description

template<bool __sentinels, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>struct __gnu_parallel::__multiway_merge_4_variant_sentinel_switch< __sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >

Switch for 4-way merging with __sentinels turned off.

Note that 4-way merging is always stable!

Definition at line 795 of file multiway_merge.h.

The documentation for this struct was generated from the following file:

- multiway_merge.h

4.113 __gnu_parallel::__multiway_merge_4_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct Template Reference

Public Member Functions

- _RAIter3 **operator()** (_RAIterIterator __seqs_begin, _RAIterIterator __seqs_end, _RAIter3 __target, _DifferenceTp __length, _Compare __comp)

4.113.1 Detailed Description

template<typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>struct __gnu_parallel::__multiway_merge_4_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >

Switch for 4-way merging with __sentinels turned on.

Note that 4-way merging is always stable!

Definition at line 815 of file multiway_merge.h.

The documentation for this struct was generated from the following file:

- multiway_merge.h

4.114 __gnu_parallel::__multiway_merge_k_variant_sentinel_switch< __sentinels, __stable, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare > Struct Template Reference

Public Member Functions

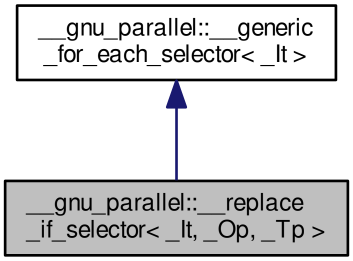
4.116 __gnu_parallel::__replace_if_selector< _It, _Op, _Tp > Struct Template Reference

Inheritance diagram for __gnu_parallel::__replace_if_selector< _It, _Op, _Tp >:



Public Member Functions

- __replace_if_selector (const _Tp &__new_val)
- bool operator() (_Op &__o, _It __i)

Public Attributes

- const _Tp & __new_val
- _It _M_finish_iterator

4.116.1 Detailed Description

template<typename _It, typename _Op, typename _Tp>struct __gnu_parallel::__replace_if_selector< _It, _Op, _Tp >

std::replace() selector.

Definition at line 156 of file for_each_selectors.h.

4.116.2 Constructor & Destructor Documentation

4.116.2.1 template<typename _It , typename _Op , typename _Tp > __gnu_parallel::__replace_if_selector< _It, _Op, _Tp >::__replace_if_selector (const _Tp & *__new_val*) [inline], [explicit]

Constructor.

Parameters

__new_val	Value to replace with.

Definition at line 164 of file for_each_selectors.h.

4.116.3 Member Function Documentation

4.116.3.1 template<typename _It , typename _Op , typename _Tp > bool __gnu_parallel::__replace_if_selector< _It, _Op, _Tp >::operator() (_Op & __o, _It __i) [inline]

Functor execution.

Parameters

__o	Operator.
__i	iterator referencing object.

Definition at line 170 of file for_each_selectors.h.

References __gnu_parallel::__replace_if_selector< _It, _Op, _Tp >::__new_val.

4.116.4 Member Data Documentation

4.116.4.1 template<typename _It , typename _Op , typename _Tp > const _Tp& __gnu_parallel::__replace_if_selector< _It, _Op, _Tp >::__new_val

Value to replace with.

Definition at line 159 of file for_each_selectors.h.

Referenced by __gnu_parallel::__replace_if_selector< _It, _Op, _Tp >::operator()().

4.116.4.2 template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).

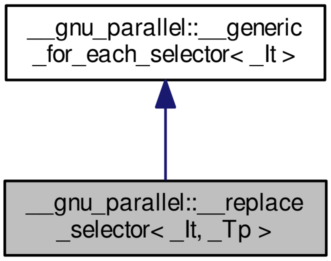
Definition at line 47 of file for_each_selectors.h.

The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.117 __gnu_parallel::__replace_selector< _It, _Tp > Struct Template Reference

Inheritance diagram for __gnu_parallel::__replace_selector< _It, _Tp >:



Public Member Functions

- __replace_selector (const _Tp &__new_val)
- bool operator() (_Tp &__v, _It __i)

Public Attributes

- const _Tp & __new_val
- _It _M_finish_iterator

4.117.1 Detailed Description

template<typename _It, typename _Tp>struct __gnu_parallel::__replace_selector< _It, _Tp >

std::replace() selector.

Definition at line 132 of file for_each_selectors.h.

4.117.2 Constructor & Destructor Documentation

4.117.2.1 template<typename _It , typename _Tp > __gnu_parallel::__replace_selector< _It, _Tp >::__replace_selector (const _Tp & *__new_val*) [inline], [explicit]

Constructor.

Parameters

__new_val	Value to replace with.

Definition at line 140 of file for_each_selectors.h.

4.117.3 Member Function Documentation

4.117.3.1 template<typename _It , typename _Tp > bool __gnu_parallel::__replace_selector< _It, _Tp >::operator() (_Tp & __v, _It __i) [inline]

Functor execution.

Parameters

__v	Current value.
__i	iterator referencing object.

Definition at line 146 of file for_each_selectors.h.

References __gnu_parallel::__replace_selector< _It, _Tp >::__new_val.

4.117.4 Member Data Documentation

4.117.4.1 template<typename _It , typename _Tp > const _Tp& __gnu_parallel::__replace_selector< _It, _Tp >::__new_val

Value to replace with.

Definition at line 135 of file for_each_selectors.h.

Referenced by __gnu_parallel::__replace_selector< _It, _Tp >::operator()().

4.117.4.2 template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]

Public Attributes

- _It _M_finish_iterator

4.119.1 Detailed Description

template<typename _It>struct __gnu_parallel::__transform2_selector< _It >

std::transform() __selector, two input sequences variant.

Definition at line 116 of file for_each_selectors.h.

4.119.2 Member Function Documentation

4.119.2.1 template<typename _It> template<typename _Op > bool __gnu_parallel::__transform2_selector< _It >::operator() (_Op & *__o*, _It *__i*) `[inline]`

Functor execution.

Parameters

__o	Operator.
__i	iterator referencing object.

Definition at line 123 of file for_each_selectors.h.

4.119.3 Member Data Documentation

4.119.3.1 template<typename _It > _It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator `[inherited]`

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).

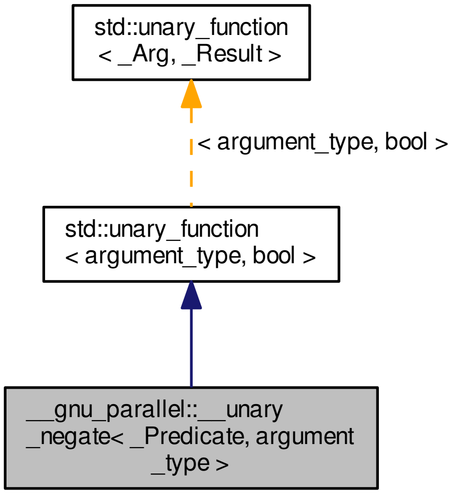
Definition at line 47 of file for_each_selectors.h.

The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.120 __gnu_parallel::__unary_negate< _Predicate, argument_type > Class Template Reference

Inheritance diagram for __gnu_parallel::__unary_negate< _Predicate, argument_type >:



Public Types

- typedef argument_type argument_type
- typedef bool result_type

Public Member Functions

- **__unary_negate** (const _Predicate &__x)
- bool **operator()** (const argument_type &__x)

Protected Attributes

- _Predicate **_M_pred**

4.120.1 Detailed Description

template<typename _Predicate, typename argument_type>class __gnu_parallel::__unary_negate< _Predicate, argument_type >

Similar to std::unary_negate, but giving the argument types explicitly.

Definition at line 173 of file parallel/base.h.

4.120.2 Member Typedef Documentation

4.120.2.1 typedef **argument_type std::unary_function< argument_type , bool >::argument_type** `[inherited]`

`argument_type` is the type of the argument

Definition at line 104 of file stl_function.h.

4.120.2.2 typedef bool **std::unary_function< argument_type , bool >::result_type** `[inherited]`

`result_type` is the return type

Definition at line 107 of file stl_function.h.

The documentation for this class was generated from the following file:

- parallel/base.h

4.121 __gnu_parallel::_DRandomShufflingGlobalData< _RAIter > Struct Template Reference

Public Types

- typedef _TraitsType::difference_type **_DifferenceType**
- typedef std::iterator_traits < _RAIter > **_TraitsType**
- typedef _TraitsType::value_type **_ValueType**

Public Member Functions

- _DRandomShufflingGlobalData (_RAIter &__source)

Public Attributes

- _ThreadIndex ∗ _M_bin_proc
- _DifferenceType ∗∗ _M_dist
- int _M_num_bins
- int _M_num_bits
- _RAIter & _M_source
- _DifferenceType ∗ _M_starts
- _ValueType ∗∗ _M_temporaries

4.121.1 Detailed Description

template<typename _RAIter>struct __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >

Data known to every thread participating in __gnu_parallel::__parallel_random_shuffle().

Definition at line 52 of file random_shuffle.h.

4.121.2 Constructor & Destructor Documentation

4.121.2.1 template<typename _RAIter> __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_DRandomShufflingGlobalData (_RAIter & *__source*) [inline]

Constructor.

Definition at line 83 of file random_shuffle.h.

4.121.3 Member Data Documentation

4.121.3.1 template<typename _RAIter> _ThreadIndex* __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_bin_proc

Number of the thread that will further process the corresponding bin.

Definition at line 74 of file random_shuffle.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs().

4.121.3.2 template<typename _RAIter> _DifferenceType** __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_dist

Two-dimensional array to hold the thread-bin distribution.

Dimensions (_M_num_threads + 1) __x (_M_num_bins + 1).

Definition at line 67 of file random_shuffle.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

4.121.3.3 template<typename _RAIter> int __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bins

Number of bins to distribute to.

Definition at line 77 of file random_shuffle.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

4.121.3.4 template<typename _RAIter> int __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bits

Number of bits needed to address the bins.

Definition at line 80 of file random_shuffle.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

4.121.3.5 template<typename _RAIter> _RAIter& __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_source

Begin iterator of the __source.

Definition at line 59 of file random_shuffle.h.

4.121.3.6 template<typename _RAIter> _DifferenceType∗ __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_starts

Start indexes of the threads' __chunks.

Definition at line 70 of file random_shuffle.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

4.121.3.7 template<typename _RAIter> _ValueType∗∗ __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_temporaries

Temporary arrays for each thread.

Definition at line 62 of file random_shuffle.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs().

The documentation for this struct was generated from the following file:

- random_shuffle.h

4.122 __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator > Struct Template Reference

Public Attributes

- _BinIndex __bins_end
- _BinIndex _M_bins_begin
- int _M_num_threads
- _DRandomShufflingGlobalData
  < _RAIter > ∗ _M_sd
- uint32_t _M_seed

4.122.1 Detailed Description

template<typename _RAIter, typename _RandomNumberGenerator>struct __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >

Local data for a thread participating in __gnu_parallel::__parallel_random_shuffle().

Definition at line 91 of file random_shuffle.h.

4.122.2 Member Data Documentation

4.122.2.1 template<typename _RAIter, typename _RandomNumberGenerator> _BinIndex __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::__bins_end

End index for bins taken care of by this thread.

Definition at line 100 of file random_shuffle.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs().

4.122.2.2 template<typename _RAIter, typename _RandomNumberGenerator> **_BinIndex __gnu_parallel::_DRSSorterPU**< _RAIter, _RandomNumberGenerator >::_M_bins_begin

Begin index for bins taken care of by this thread.

Definition at line 97 of file random_shuffle.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs().

4.122.2.3 template<typename _RAIter, typename _RandomNumberGenerator> int **__gnu_parallel::_DRSSorterPU**< _RAIter, _RandomNumberGenerator >::_M_num_threads

Number of threads participating in total.

Definition at line 94 of file random_shuffle.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

4.122.2.4 template<typename _RAIter, typename _RandomNumberGenerator> **_DRandomShufflingGlobalData**<_RAIter>* **__gnu_parallel::_DRSSorterPU**< _RAIter, _RandomNumberGenerator >::_M_sd

Pointer to global data.

Definition at line 106 of file random_shuffle.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

4.122.2.5 template<typename _RAIter, typename _RandomNumberGenerator> uint32_t **__gnu_parallel::_DRSSorterPU**< _RAIter, _RandomNumberGenerator >::_M_seed

Random _M_seed for this thread.

Definition at line 103 of file random_shuffle.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

The documentation for this struct was generated from the following file:

- random_shuffle.h

4.123 __gnu_parallel::_DummyReduct Struct Reference

Public Member Functions

- bool **operator()** (bool, bool) const

4.123.1 Detailed Description

Reduction function doing nothing.

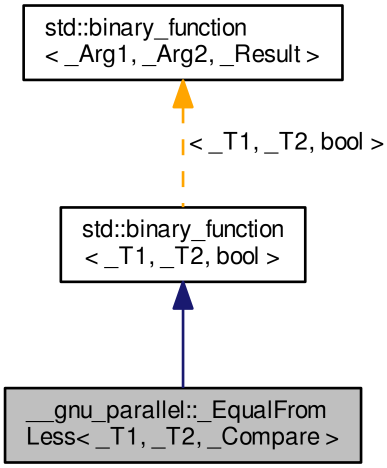
Definition at line 298 of file for_each_selectors.h.

The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.124 __gnu_parallel::_EqualFromLess< _T1, _T2, _Compare > Class Template Reference

Inheritance diagram for __gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >:



Public Types

- typedef _T1 first_argument_type
- typedef bool result_type
- typedef _T2 second_argument_type

Public Member Functions

- **_EqualFromLess** (_Compare &__comp)
- bool **operator()** (const _T1 &__a, const _T2 &__b)

4.124.1 Detailed Description

template<typename _T1, typename _T2, typename _Compare>class __gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >

Constructs predicate for equality from strict weak ordering predicate.

Definition at line 157 of file parallel/base.h.

4.124.2 Member Typedef Documentation

4.124.2.1 typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]

`first_argument_type` is the type of the first argument

Definition at line 117 of file stl_function.h.

4.124.2.2 typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]

`result_type` is the return type

Definition at line 123 of file stl_function.h.

4.124.2.3 typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]

`second_argument_type` is the type of the second argument

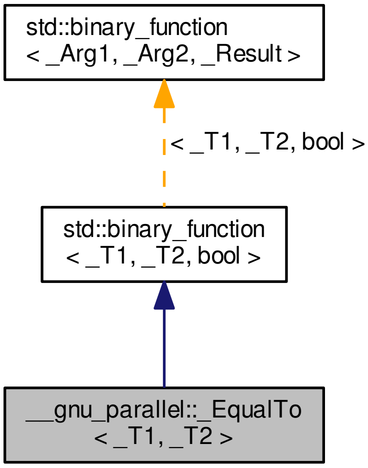
Definition at line 120 of file stl_function.h.

The documentation for this class was generated from the following file:

- parallel/base.h

4.125 __gnu_parallel::_EqualTo< _T1, _T2 > Struct Template Reference

Inheritance diagram for __gnu_parallel::_EqualTo< _T1, _T2 >:



Public Types

- typedef _T1 first_argument_type
- typedef bool result_type
- typedef _T2 second_argument_type

Public Member Functions

- bool **operator()** (const _T1 &__t1, const _T2 &__t2) const

4.125.1 Detailed Description

template<typename _T1, typename _T2>struct __gnu_parallel::_EqualTo< _T1, _T2 >

Similar to std::equal_to, but allows two different types.

Definition at line 244 of file parallel/base.h.

4.125.2 Member Typedef Documentation

4.125.2.1 typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]

`first_argument_type` is the type of the first argument

Definition at line 117 of file stl_function.h.

4.125.2.2 typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]

`result_type` is the return type

Definition at line 123 of file stl_function.h.

4.125.2.3 typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]

`second_argument_type` is the type of the second argument

Definition at line 120 of file stl_function.h.

The documentation for this struct was generated from the following file:

- parallel/base.h

4.126 __gnu_parallel::_GuardedIterator< _RAIter, _Compare > Class Template Reference

Public Member Functions

- _GuardedIterator (_RAIter __begin, _RAIter __end, _Compare &__comp)
- operator _RAIter ()
- std::iterator_traits< _RAIter >::value_type & operator* ()
- _GuardedIterator< _RAIter, _Compare > & operator++ ()

Friends

- bool operator< (_GuardedIterator< _RAIter, _Compare > &__bi1, _GuardedIterator< _RAIter, _Compare > &__bi2)
- bool operator<= (_GuardedIterator< _RAIter, _Compare > &__bi1, _GuardedIterator< _RAIter, _Compare > &__bi2)

4.126.1 Detailed Description

template<typename _RAIter, typename _Compare>class __gnu_parallel::_GuardedIterator< _RAIter, _Compare >

_Iterator wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons.

The implicit supremum comes with a performance cost.

Deriving from _RAIter is not possible since _RAIter need not be a class.

Definition at line 73 of file multiway_merge.h.

4.126.2 Constructor & Destructor Documentation

4.126.2.1 template<typename _RAIter , typename _Compare > __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::_GuardedIterator (_RAIter *__begin*, _RAIter *__end*, _Compare & *__comp*) [inline]

Constructor. Sets iterator to beginning of sequence.

Parameters

__begin	Begin iterator of sequence.
__end	End iterator of sequence.
__comp	Comparator provided for associated overloaded compare operators.

Definition at line 91 of file multiway_merge.h.

4.126.3 Member Function Documentation

4.126.3.1 template<typename _RAIter , typename _Compare > __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator _RAIter ( ) [inline]

Convert to wrapped iterator.

Returns

Wrapped iterator.

Definition at line 112 of file multiway_merge.h.

4.126.3.2 template<typename _RAIter , typename _Compare > std::iterator_traits<_RAIter>::value_type& __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator* ( ) [inline]

Dereference operator.

Returns

Referenced element.

Definition at line 107 of file multiway_merge.h.

4.126.3.3 template<typename _RAIter , typename _Compare > _GuardedIterator<_RAIter, _Compare>& __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator++ ( ) [inline]

Pre-increment operator.

Returns

This.

Definition at line 98 of file multiway_merge.h.

4.126.4 Friends And Related Function Documentation

4.126.4.1 template<typename _RAIter , typename _Compare > bool operator< (**_GuardedIterator**< _RAIter, _Compare > & *__bi1,* **_GuardedIterator**< _RAIter, _Compare > & *__bi2*) `[friend]`

Compare two elements referenced by guarded iterators.

Parameters

__bi1	First iterator.
__bi2	Second iterator.

Returns

`true` if less.

Definition at line 120 of file multiway_merge.h.

4.126.4.2 template<typename _RAIter , typename _Compare > bool operator<= (**_GuardedIterator**< _RAIter, _Compare > & *__bi1,* **_GuardedIterator**< _RAIter, _Compare > & *__bi2*) `[friend]`

Compare two elements referenced by guarded iterators.

Parameters

__bi1	First iterator.
__bi2	Second iterator.

Returns

`True` if less equal.

Definition at line 135 of file multiway_merge.h.

The documentation for this class was generated from the following file:

- multiway_merge.h

4.127 __gnu_parallel::_IteratorPair< _Iterator1, _Iterator2, _IteratorCategory > Class Template Reference

Public Attributes

- _Iterator1 **_M_first**
- _Iterator2 **_M_second**
- _Iterator3 **_M_third**

4.128.1 Detailed Description

template<typename _Iterator1, typename _Iterator2, typename _Iterator3, typename _IteratorCategory>class __gnu_parallel::_IteratorTriple< _Iterator1, _Iterator2, _Iterator3, _IteratorCategory >

A triple of iterators. The usual iterator operations are applied to all three child iterators.

Definition at line 120 of file iterator.h.

The documentation for this class was generated from the following file:

- iterator.h

4.129 __gnu_parallel::_Job< _DifferenceTp > Struct Template Reference

Public Types

- typedef _DifferenceTp **_DifferenceType**

Public Attributes

- volatile _DifferenceType _M_first
- volatile _DifferenceType _M_last
- volatile _DifferenceType _M_load

4.129.1 Detailed Description

template<typename _DifferenceTp>struct __gnu_parallel::_Job< _DifferenceTp >

One __job for a certain thread.

Definition at line 54 of file workstealing.h.

4.129.2 Member Data Documentation

4.129.2.1 template<typename _DifferenceTp> volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_first

First element.

Changed by owning and stealing thread. By stealing thread, always incremented.

Definition at line 62 of file workstealing.h.

Referenced by __gnu_parallel::__for_each_template_random_access_workstealing().

4.129.2.2 template<typename _DifferenceTp> volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_last

Last element.

Changed by owning thread only.

Definition at line 67 of file workstealing.h.

Referenced by __gnu_parallel::__for_each_template_random_access_workstealing().

4.129.2.3 template<typename _DifferenceTp> volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_load

Number of elements, i.e. `_M_last-_M_first+1`.

Changed by owning thread only.

Definition at line 72 of file workstealing.h.

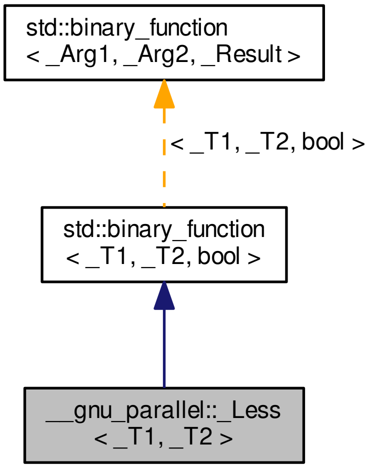
Referenced by __gnu_parallel::__for_each_template_random_access_workstealing().

The documentation for this struct was generated from the following file:

- workstealing.h

4.130 __gnu_parallel::_Less< _T1, _T2 > Struct Template Reference

Inheritance diagram for __gnu_parallel::_Less< _T1, _T2 >:



Public Types

- typedef _T1 first_argument_type
- typedef bool result_type
- typedef _T2 second_argument_type

Public Member Functions

- bool **operator()** (const _T1 &__t1, const _T2 &__t2) const
- bool **operator()** (const _T2 &__t2, const _T1 &__t1) const

4.130.1 Detailed Description

template<typename _T1, typename _T2>struct __gnu_parallel::_Less< _T1, _T2 >

Similar to std::less, but allows two different types.

Definition at line 252 of file parallel/base.h.

4.130.2 Member Typedef Documentation

4.130.2.1 typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]

`first_argument_type` is the type of the first argument

Definition at line 117 of file stl_function.h.

4.130.2.2 typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]

`result_type` is the return type

Definition at line 123 of file stl_function.h.

4.130.2.3 typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]

`second_argument_type` is the type of the second argument

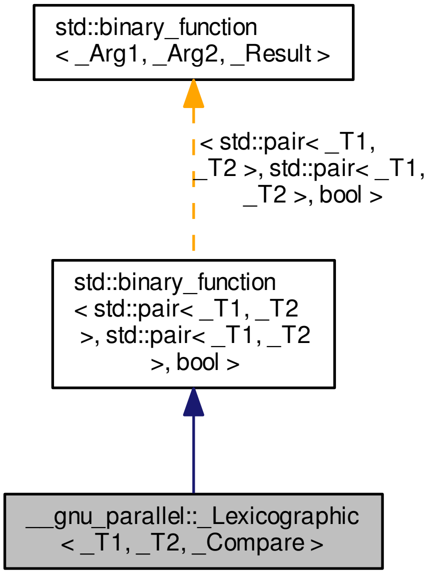
Definition at line 120 of file stl_function.h.

The documentation for this struct was generated from the following file:

- parallel/base.h

4.131 __gnu_parallel::_Lexicographic< _T1, _T2, _Compare > Class Template Reference

Inheritance diagram for __gnu_parallel::_Lexicographic< _T1, _T2, _Compare >:



Public Types

- typedef std::pair< _T1, _T2 > first_argument_type

- typedef std::pair< _T1, _T2 > second_argument_type

Public Member Functions

- **_Lexicographic** (_Compare &__comp)
- bool **operator()** (const std::pair< _T1, _T2 > &__p1, const std::pair< _T1, _T2 > &__p2) const

4.131.1 Detailed Description

template<typename _T1, typename _T2, typename _Compare>class __gnu_parallel::_Lexicographic< _T1, _T2, _Compare >

Compare __a pair of types lexicographically, ascending.

Definition at line 53 of file multiseq_selection.h.

4.131.2 Member Typedef Documentation

4.131.2.1 typedef std::pair< _T1, _T2 > std::binary_function< std::pair< _T1, _T2 > , std::pair< _T1, _T2 > , bool >::first_argument_type [inherited]

`first_argument_type` is the type of the first argument

Definition at line 117 of file stl_function.h.

4.131.2.2 typedef bool std::binary_function< std::pair< _T1, _T2 > , std::pair< _T1, _T2 > , bool >::result_type [inherited]

`result_type` is the return type

Definition at line 123 of file stl_function.h.

4.131.2.3 typedef std::pair< _T1, _T2 > std::binary_function< std::pair< _T1, _T2 > , std::pair< _T1, _T2 > , bool >::second_argument_type [inherited]

`second_argument_type` is the type of the second argument

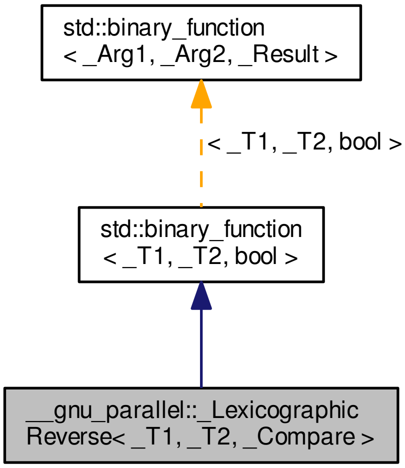
Definition at line 120 of file stl_function.h.

The documentation for this class was generated from the following file:

- multiseq_selection.h

4.132 __gnu_parallel::_LexicographicReverse< _T1, _T2, _Compare > Class Template Reference

Inheritance diagram for __gnu_parallel::_LexicographicReverse< _T1, _T2, _Compare >:



Public Types

- typedef _T1 first_argument_type
- typedef bool result_type
- typedef _T2 second_argument_type

Public Member Functions

- **_LexicographicReverse** (_Compare &__comp)
- bool **operator()** (const std::pair< _T1, _T2 > &__p1, const std::pair< _T1, _T2 > &__p2) const

4.132.1 Detailed Description

template<typename _T1, typename _T2, typename _Compare>class __gnu_parallel::_LexicographicReverse< _T1, _T2, _Compare >

Compare __a pair of types lexicographically, descending.

Definition at line 80 of file multiseq_selection.h.

4.132.2 Member Typedef Documentation

4.132.2.1 typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]

`first_argument_type` is the type of the first argument

Definition at line 117 of file stl_function.h.

4.132.2.2 typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]

`result_type` is the return type

Definition at line 123 of file stl_function.h.

4.132.2.3 typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]

`second_argument_type` is the type of the second argument

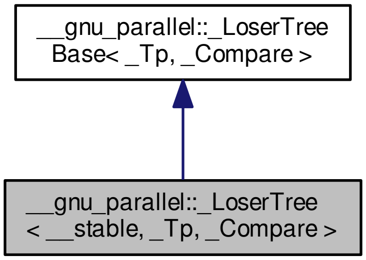
Definition at line 120 of file stl_function.h.

The documentation for this class was generated from the following file:

- multiseq_selection.h

4.133 __gnu_parallel::_LoserTree< __stable, _Tp, _Compare > Class Template Reference

Inheritance diagram for __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >:



Public Member Functions

- **_LoserTree** (unsigned int __k, _Compare __comp)
- void __delete_min_insert (_Tp __key, bool __sup)
- int __get_min_source ()
- void **__init** ()
- unsigned int **__init_winner** (unsigned int __root)
- void __insert_start (const _Tp &__key, int __source, bool __sup)

Protected Attributes

- bool _M_first_insert
- unsigned int **_M_ik**
- unsigned int **_M_k**
- unsigned int _M_log_k
- _Loser $*$ _M_losers
- unsigned int **_M_offset**

4.133.1 Detailed Description

template<bool __stable, typename _Tp, typename _Compare>class __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >

Stable _LoserTree variant.

Provides the stable implementations of insert_start, __init_winner, __init and __delete_min_insert.

Unstable variant is done using partial specialisation below.

Definition at line 169 of file losertree.h.

4.133.2 Member Function Documentation

4.133.2.1 template<bool __stable, typename _Tp , typename _Compare > void __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >::__delete_min_insert (_Tp *__key*, bool *__sup*) `[inline]`

Delete the smallest element and insert a new element from the previously smallest element's sequence.

This implementation is stable.

Definition at line 222 of file losertree.h.

4.133.2.2 template<typename _Tp , typename _Compare > int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source ( ) `[inline]`, `[inherited]`

Returns

the index of the sequence with the smallest element.

Definition at line 155 of file losertree.h.

References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source.

4.133.2.3 template<typename _Tp , typename _Compare > void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (const _Tp & *__key*, int *__source*, bool *__sup*) `[inline]`, `[inherited]`

Initializes the sequence "_M_source" with the element "__key".

Parameters

__key	the element to insert
__source	__index of the __source __sequence
__sup	flag that determines whether the value to insert is an explicit __supremum.

Definition at line 134 of file losertree.h.

References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup.

4.133.3 Member Data Documentation

4.133.3.1 template<typename _Tp , typename _Compare > _Compare __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_comp [protected], [inherited]

_Compare to use.

Definition at line 78 of file losertree.h.

4.133.3.2 template<typename _Tp , typename _Compare > bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert [protected], [inherited]

State flag that determines whether the _LoserTree is empty.

Only used for building the _LoserTree.

Definition at line 85 of file losertree.h.

Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start(), and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase().

4.133.3.3 template<typename _Tp , typename _Compare > unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k [protected], [inherited]

log_2{_M_k}

Definition at line 72 of file losertree.h.

Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase().

4.133.3.4 template<typename _Tp , typename _Compare > _Loser* __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers [protected], [inherited]

_LoserTree __elements.

Definition at line 75 of file losertree.h.

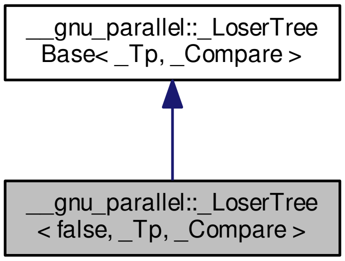
Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source(), __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start(), __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase(), and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::∼_LoserTreeBase().

The documentation for this class was generated from the following file:

- losertree.h

4.134 __gnu_parallel::_LoserTree< false, _Tp, _Compare > Class Template Reference

Inheritance diagram for __gnu_parallel::_LoserTree< false, _Tp, _Compare >:



Public Member Functions

- **_LoserTree** (unsigned int __k, _Compare __comp)
- void __delete_min_insert (_Tp __key, bool __sup)
- int __get_min_source ()
- void **__init** ()
- unsigned int __init_winner (unsigned int __root)
- void __insert_start (const _Tp &__key, int __source, bool __sup)

Protected Attributes

- _Compare _M_comp
- bool _M_first_insert
- unsigned int **_M_ik**
- unsigned int **_M_k**
- unsigned int _M_log_k
- _Loser ∗ _M_losers
- unsigned int **_M_offset**

4.134.1 Detailed Description

template<typename _Tp, typename _Compare>class __gnu_parallel::_LoserTree< false, _Tp, _Compare >

Unstable _LoserTree variant.

Stability (non-stable here) is selected with partial specialization.

Definition at line 261 of file losertree.h.

4.134.2 Member Function Documentation

4.134.2.1 template<typename _Tp , typename _Compare > void **__gnu_parallel::_LoserTree**< false, _Tp, _Compare >::__delete_min_insert (_Tp *__key,* bool *__sup*) [inline]

Delete the _M_key smallest element and insert the element __key instead.

Parameters

__key	the _M_key to insert
__sup	true iff __key is an explicitly marked supremum

Definition at line 324 of file losertree.h.

4.134.2.2 template<typename _Tp , typename _Compare > int **__gnu_parallel::_LoserTreeBase**< _Tp, _Compare >::__get_min_source ( ) [inline], [inherited]

Returns

the index of the sequence with the smallest element.

Definition at line 155 of file losertree.h.

References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source.

4.134.2.3 template<typename _Tp , typename _Compare > unsigned int **__gnu_parallel::_LoserTree**< false, _Tp, _Compare >::__init_winner (unsigned int *__root*) [inline]

Computes the winner of the competition at position "__root".

Called recursively (starting at 0) to build the initial tree.

Parameters

__root	__index of the "game" to start.

Definition at line 284 of file losertree.h.

4.134.2.4 template<typename _Tp , typename _Compare > void **__gnu_parallel::_LoserTreeBase**< _Tp, _Compare >::__insert_start (const _Tp & *__key,* int *__source,* bool *__sup*) [inline], [inherited]

Initializes the sequence "_M_source" with the element "__key".

Parameters

__key	the element to insert
__source	__index of the __source __sequence
__sup	flag that determines whether the value to insert is an explicit __supremum.

Definition at line 134 of file losertree.h.

References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup.

4.134.3 Member Data Documentation

4.134.3.1 template<typename _Tp , typename _Compare > _Compare __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_comp [protected], [inherited]

_Compare to use.

Definition at line 78 of file losertree.h.

4.134.3.2 template<typename _Tp , typename _Compare > bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert [protected], [inherited]

State flag that determines whether the _LoserTree is empty.

Only used for building the _LoserTree.

Definition at line 85 of file losertree.h.

Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start(), and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase().

4.134.3.3 template<typename _Tp , typename _Compare > unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k [protected], [inherited]

log_2{_M_k}

Definition at line 72 of file losertree.h.

Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase().

4.134.3.4 template<typename _Tp , typename _Compare > _Loser* __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers [protected], [inherited]

_LoserTree __elements.

Definition at line 75 of file losertree.h.

Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source(), __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start(), __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase(), and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::~_LoserTreeBase().

- unsigned int **_M_k**
- unsigned int _M_log_k
- _Loser ∗ _M_losers
- unsigned int **_M_offset**

4.135.1 Detailed Description

template<typename _Tp, typename _Compare>class __gnu_parallel::_LoserTreeBase< _Tp, _Compare >

Guarded loser/tournament tree.

The smallest element is at the top.

Guarding is done explicitly through one flag _M_sup per element, inf is not needed due to a better initialization routine. This is a well-performing variant.

Parameters

_Tp	the element type
_Compare	the comparator to use, defaults to std::less<_Tp>

Definition at line 55 of file losertree.h.

4.135.2 Constructor & Destructor Documentation

4.135.2.1 template<typename _Tp , typename _Compare > __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase (unsigned int *__k,* _Compare *__comp*) [inline]

The constructor.

Parameters

__k	The number of sequences to merge.
__comp	The comparator to use.

Definition at line 94 of file losertree.h.

References __gnu_parallel::__rd_log2(), __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers.

4.135.2.2 template<typename _Tp , typename _Compare > __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::∼_LoserTreeBase ( ) [inline]

The destructor.

Definition at line 118 of file losertree.h.

References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers.

4.135.3 Member Function Documentation

4.135.3.1 template<typename _Tp , typename _Compare > int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source ( ) [inline]

Returns

the index of the sequence with the smallest element.

Definition at line 155 of file losertree.h.

References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source.

4.135.3.2 template<typename _Tp , typename _Compare > void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (const _Tp & *__key,* int *__source,* bool *__sup*) [inline]

Initializes the sequence "_M_source" with the element "__key".

Parameters

__key	the element to insert
__source	__index of the __source __sequence
__sup	flag that determines whether the value to insert is an explicit __supremum.

Definition at line 134 of file losertree.h.

References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup.

4.135.4 Member Data Documentation

4.135.4.1 template<typename _Tp , typename _Compare > _Compare __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_comp `[protected]`

_Compare to use.

Definition at line 78 of file losertree.h.

4.135.4.2 template<typename _Tp , typename _Compare > bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert `[protected]`

State flag that determines whether the _LoserTree is empty.

Only used for building the _LoserTree.

Definition at line 85 of file losertree.h.

Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start(), and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase().

4.135.4.3 template<typename _Tp , typename _Compare > unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k `[protected]`

log_2{_M_k}

Definition at line 72 of file losertree.h.

Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase().

4.135.4.4 template<typename _Tp , typename _Compare > _Loser∗ __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers `[protected]`

_LoserTree __elements.

Definition at line 75 of file losertree.h.

Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source(), __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start(), __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase(), and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::∼_LoserTreeBase().

The documentation for this class was generated from the following file:

- losertree.h

4.136 __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser Struct Reference

Public Attributes

- _Tp _M_key
- int _M_source
- bool _M_sup

4.136.1 Detailed Description

template<typename _Tp, typename _Compare>struct __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser

Internal representation of a _LoserTree element.

Definition at line 59 of file losertree.h.

4.136.2 Member Data Documentation

4.136.2.1 template<typename _Tp , typename _Compare > _Tp __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key

_M_key of the element in the _LoserTree.

Definition at line 66 of file losertree.h.

Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start().

4.136.2.2 template<typename _Tp , typename _Compare > int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source

__index of the __source __sequence.

Definition at line 64 of file losertree.h.

Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source(), and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start().

4.136.2.3 template<typename _Tp , typename _Compare > bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup

flag, true iff this is a "maximum" __sentinel.

Definition at line 62 of file losertree.h.

Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start().

The documentation for this struct was generated from the following file:

- losertree.h

4.137 __gnu_parallel::_LoserTreePointer< __stable, _Tp, _Compare > Class Template Reference

- unsigned int **_M_offset**

4.143.1 Detailed Description

template<typename _Tp, typename _Compare>class __gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >

Unguarded loser tree, keeping only pointers to the elements in the tree structure.

No guarding is done, therefore not a single input sequence must run empty. This is a very fast variant.

Definition at line 828 of file losertree.h.

The documentation for this class was generated from the following file:

- losertree.h

4.144 __gnu_parallel::_LoserTreeTraits< _Tp > Struct Template Reference

Static Public Attributes

- static const bool _M_use_pointer

4.144.1 Detailed Description

template<typename _Tp>struct __gnu_parallel::_LoserTreeTraits< _Tp >

Traits for determining whether the loser tree should use pointers or copies.

The field "_M_use_pointer" is used to determine whether to use pointers in he loser trees or whether to copy the values into the loser tree.

The default behavior is to use pointers if the data type is 4 times as big as the pointer to it.

Specialize for your data type to customize the behavior.

Example:

template<> struct _LoserTreeTraits<int> { static const bool _M_use_pointer = false; };

template<> struct _LoserTreeTraits<heavyweight_type> { static const bool _M_use_pointer = true; };

Parameters

_Tp	type to give the loser tree traits for.

Definition at line 731 of file multiway_merge.h.

4.144.2 Member Data Documentation

4.144.2.1 template<typename _Tp > const bool __gnu_parallel::_LoserTreeTraits< _Tp >::_M_use_pointer [static]

True iff to use pointers instead of values in loser trees.

The default behavior is to use pointers if the data type is four times as big as the pointer to it.

Definition at line 739 of file multiway_merge.h.

The documentation for this struct was generated from the following file:

- multiway_merge.h

Samples.

Definition at line 80 of file multiway_mergesort.h.

Referenced by __gnu_parallel::__determine_samples(), and __gnu_parallel::parallel_sort_mwms().

4.152.2.5 template<typename _RAIter> _RAIter __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_source

Input __begin.

Definition at line 71 of file multiway_mergesort.h.

Referenced by __gnu_parallel::__determine_samples(), __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

4.152.2.6 template<typename _RAIter> _DifferenceType* __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_starts

Start indices, per thread.

Definition at line 74 of file multiway_mergesort.h.

Referenced by __gnu_parallel::__determine_samples(), __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

4.152.2.7 template<typename _RAIter> _ValueType** __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_temporary

Storage in which to sort.

Definition at line 77 of file multiway_mergesort.h.

Referenced by __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

The documentation for this struct was generated from the following file:

- multiway_mergesort.h

4.153 __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp > Class Template Reference

Public Types

- typedef _DifferenceTp **_DifferenceType**
- typedef
  _PseudoSequenceIterator< _Tp,
  uint64_t > **iterator**

Public Member Functions

- _PseudoSequence (const _Tp &__val, _DifferenceType __count)
- iterator begin () const
- iterator end () const

4.153.1 Detailed Description

template<typename _Tp, typename _DifferenceTp>class __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

Parameters

_Tp	Sequence _M_value type.
_DifferenceTp	Sequence difference type.

Definition at line 359 of file parallel/base.h.

4.153.2 Constructor & Destructor Documentation

4.153.2.1 template<typename _Tp, typename _DifferenceTp> __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::_PseudoSequence (const _Tp & *__val,* _DifferenceType *__count*) [inline]

Constructor.

Parameters

__val	Element of the sequence.
__count	Number of (virtual) copies.

Definition at line 371 of file parallel/base.h.

4.153.3 Member Function Documentation

4.153.3.1 template<typename _Tp, typename _DifferenceTp> iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::begin ( ) const [inline]

Begin iterator.

Definition at line 376 of file parallel/base.h.

4.153.3.2 template<typename _Tp, typename _DifferenceTp> iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::end ( ) const [inline]

End iterator.

Definition at line 381 of file parallel/base.h.

The documentation for this class was generated from the following file:

- parallel/base.h

4.154 __gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp > Class Template Reference

Public Types

- typedef _DifferenceTp **_DifferenceType**

Public Member Functions

- **_PseudoSequenceIterator** (const _Tp &__val, _DifferenceType __pos)
- bool **operator!=** (const _PseudoSequenceIterator &__i2)
- const _Tp & **operator*** () const
- _PseudoSequenceIterator & **operator++** ()
- _PseudoSequenceIterator **operator++** (int)
- _DifferenceType **operator-** (const _PseudoSequenceIterator &__i2)
- bool **operator==** (const _PseudoSequenceIterator &__i2)
- const _Tp & **operator[ ]** (_DifferenceType) const

4.154.1 Detailed Description

template<typename _Tp, typename _DifferenceTp>class __gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp >

_Iterator associated with __gnu_parallel::_PseudoSequence. If features the usual random-access iterator functionality.

Parameters

_Tp	Sequence _M_value type.
_DifferenceTp	Sequence difference type.

Definition at line 306 of file parallel/base.h.

The documentation for this class was generated from the following file:

- parallel/base.h

4.155 __gnu_parallel::_QSBThreadLocal< _RAIter > Struct Template Reference

Public Types

- typedef
  _TraitsType::difference_type **_DifferenceType**
- typedef std::pair< _RAIter,
  _RAIter > _Piece

- typedef std::iterator_traits
  < _RAIter > **_TraitsType**

Public Member Functions

- _QSBThreadLocal (int __queue_size)

Public Attributes

- volatile _DifferenceType ∗ _M_elements_leftover
- _Piece _M_global
- _Piece _M_initial
- _RestrictedBoundedConcurrentQueue
  < _Piece > _M_leftover_parts
- _ThreadIndex _M_num_threads

4.155.1 Detailed Description

template<typename _RAIter>struct __gnu_parallel::_QSBThreadLocal< _RAIter >

Information local to one thread in the parallel quicksort run.

Definition at line 62 of file balanced_quicksort.h.

4.155.2 Member Typedef Documentation

4.155.2.1 template<typename _RAIter> typedef std::pair<_RAIter, _RAIter> __gnu_parallel::_QSBThreadLocal< _RAIter >::_Piece

Continuous part of the sequence, described by an iterator pair.

Definition at line 69 of file balanced_quicksort.h.

4.155.3 Constructor & Destructor Documentation

4.155.3.1 template<typename _RAIter> __gnu_parallel::_QSBThreadLocal< _RAIter >::_QSBThreadLocal (int *__queue_size*) [inline]

Constructor.

Parameters

__queue_size	size of the work-stealing queue.

Definition at line 88 of file balanced_quicksort.h.

4.155.4 Member Data Documentation

4.155.4.1 template<typename _RAIter> volatile _DifferenceType∗ __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_elements_leftover

Pointer to a counter of elements left over to sort.

Definition at line 81 of file balanced_quicksort.h.

Referenced by __gnu_parallel::__parallel_sort_qsb(), __gnu_parallel::__qsb_conquer(), and __gnu_parallel::__qsb_local_sort_with_helping().

4.155.4.2 template<typename _RAIter> _Piece __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_global

The complete sequence to sort.

Definition at line 84 of file balanced_quicksort.h.

4.155.4.3 template<typename _RAIter> _Piece __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_initial

Initial piece to work on.

Definition at line 72 of file balanced_quicksort.h.

Referenced by __gnu_parallel::__qsb_conquer(), and __gnu_parallel::__qsb_local_sort_with_helping().

4.155.4.4 template<typename _RAIter> _RestrictedBoundedConcurrentQueue<_Piece> __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_leftover_parts

Work-stealing queue.

Definition at line 75 of file balanced_quicksort.h.

Referenced by __gnu_parallel::__qsb_local_sort_with_helping().

4.155.4.5 template<typename _RAIter> _ThreadIndex __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_num_threads

Number of threads involved in this algorithm.

Definition at line 78 of file balanced_quicksort.h.

Referenced by __gnu_parallel::__qsb_local_sort_with_helping().

The documentation for this struct was generated from the following file:

- balanced_quicksort.h

4.156 __gnu_parallel::_RandomNumber Class Reference

Public Member Functions

- _RandomNumber ()
- _RandomNumber (uint32_t __seed, uint64_t _M_supremum=0x100000000ULL)
- unsigned long __genrand_bits (int __bits)
- uint32_t operator() ()
- uint32_t operator() (uint64_t local_supremum)

4.156.1 Detailed Description

Random number generator, based on the Mersenne twister.

Definition at line 42 of file random_number.h.

4.156.2 Constructor & Destructor Documentation

4.156.2.1 __gnu_parallel::_RandomNumber::_RandomNumber ( ) [inline]

Default constructor. Seed with 0.

Definition at line 74 of file random_number.h.

4.156.2.2 __gnu_parallel::_RandomNumber::_RandomNumber (uint32_t *__seed*, uint64_t *_M_supremum* = 0x100000000ULL) [inline]

Constructor.

Parameters

__seed	Random __seed.
_M_supremum	Generate integer random numbers in the interval [0,_M_supremum).

Definition at line 85 of file random_number.h.

4.156.3 Member Function Documentation

4.156.3.1 unsigned long __gnu_parallel::_RandomNumber::__genrand_bits (int *__bits*) [inline]

Generate a number of random bits, run-time parameter.

Parameters

__bits	Number of bits to generate.

Definition at line 109 of file random_number.h.

4.156.3.2 uint32_t __gnu_parallel::_RandomNumber::operator() ( ) [inline]

Generate unsigned random 32-bit integer.

Definition at line 94 of file random_number.h.

4.156.3.3 uint32_t __gnu_parallel::_RandomNumber::operator() (uint64_t *local_supremum*) [inline]

Generate unsigned random 32-bit integer in the interval [0,local_supremum).

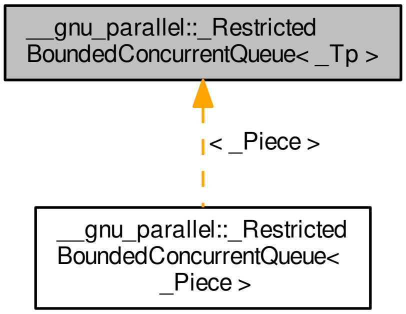
Definition at line 100 of file random_number.h.

The documentation for this class was generated from the following file:

- random_number.h

4.157 __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp > Class Template Reference

Inheritance diagram for __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >:



Public Member Functions

- _RestrictedBoundedConcurrentQueue (_SequenceIndex __max_size)
- ∼_RestrictedBoundedConcurrentQueue ()
- bool pop_back (_Tp &__t)
- bool pop_front (_Tp &__t)
- void push_front (const _Tp &__t)

4.157.1 Detailed Description

template<typename _Tp>class __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >

Double-ended queue of bounded size, allowing lock-free atomic access. push_front() and pop_front() must not be called concurrently to each other, while pop_back() can be called concurrently at all times. `empty()`, `size()`, and `top()` are intentionally not provided. Calling them would not make sense in a concurrent setting.

Parameters

_Tp	Contained element type.

Definition at line 52 of file queue.h.

4.157.2 Constructor & Destructor Documentation

4.157.2.1 template<typename _Tp> __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::_RestrictedBoundedConcurrentQueue (_SequenceIndex *__max_size*) `[inline]`

Constructor. Not to be called concurrent, of course.

Parameters

__max_size	Maximal number of elements to be contained.

Definition at line 68 of file queue.h.

4.157.2.2 template<typename _Tp> __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::~_RestrictedBoundedConcurrentQueue ( ) [inline]

Destructor. Not to be called concurrent, of course.

Definition at line 77 of file queue.h.

4.157.3 Member Function Documentation

4.157.3.1 template<typename _Tp> bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_back (_Tp & __t) [inline]

Pops one element from the queue at the front end. Must not be called concurrently with pop_front().

Definition at line 127 of file queue.h.

4.157.3.2 template<typename _Tp> bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_front (_Tp & __t) [inline]

Pops one element from the queue at the front end. Must not be called concurrently with pop_front().

Definition at line 100 of file queue.h.

Referenced by __gnu_parallel::__qsb_local_sort_with_helping().

4.157.3.3 template<typename _Tp> void __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::push_front (const _Tp & __t) [inline]

Pushes one element into the queue at the front end. Must not be called concurrently with pop_front().

Definition at line 83 of file queue.h.

Referenced by __gnu_parallel::__qsb_local_sort_with_helping().

The documentation for this class was generated from the following file:

- queue.h

4.158 __gnu_parallel::_SamplingSorter< __stable, _RAIter, _StrictWeakOrdering > Struct Template Reference

Public Member Functions

- void **operator()** (_RAIter __first, _RAIter __last, _StrictWeakOrdering __comp)

4.158.1 Detailed Description

template<bool __stable, class _RAIter, class _StrictWeakOrdering>struct __gnu_parallel::_SamplingSorter< __stable, _RAIter, _StrictWeakOrdering >

Stable sorting functor.

Used to reduce code instanciation in multiway_merge_sampling_splitting.

Definition at line 1007 of file multiway_merge.h.

The documentation for this struct was generated from the following file:

- multiway_merge.h

4.159 __gnu_parallel::_SamplingSorter< false, _RAIter, _StrictWeakOrdering > Struct Template Reference

Public Member Functions

- void **operator()** (_RAIter __first, _RAIter __last, _StrictWeakOrdering __comp)

4.159.1 Detailed Description

template<class _RAIter, class _StrictWeakOrdering>struct __gnu_parallel::_SamplingSorter< false, _RAIter, _StrictWeakOrdering >

Non-__stable sorting functor.

Used to reduce code instantiation in multiway_merge_sampling_splitting.

Definition at line 1020 of file multiway_merge.h.

The documentation for this struct was generated from the following file:

- multiway_merge.h

4.160.1 Detailed Description

class _Settings Run-time settings for the parallel mode including all tunable parameters.

Definition at line 123 of file settings.h.

4.160.2 Member Function Documentation

4.160.2.1 static const _Settings& __gnu_parallel::_Settings::get ( ) throw () [static]

Get the global settings.

Referenced by __gnu_parallel::__find_template(), __gnu_parallel::__for_each_template_random_access_workstealing(), __gnu_parallel::__parallel_nth_element(), __gnu_parallel::__parallel_partial_sum(), __gnu_parallel::__parallel_partial_sum_linear(), __gnu_parallel::__parallel_partition(), __gnu_parallel::__parallel_random_shuffle_drs(), __gnu_parallel::__parallel_sort(), __gnu_parallel::__parallel_sort_qs_conquer(), __gnu_parallel::__qsb_local_sort_with_helping(), __gnu_parallel::__sequential_random_shuffle(), __gnu_parallel::multiway_merge_sampling_splitting(), __gnu_parallel::parallel_multiway_merge(), __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

4.160.2.2 static void __gnu_parallel::_Settings::set (_Settings &) throw () [static]

Set the global settings.

4.160.3 Member Data Documentation

4.160.3.1 _SequenceIndex __gnu_parallel::_Settings::accumulate_minimal_n

Minimal input size for accumulate.

Definition at line 139 of file settings.h.

4.160.3.2 unsigned int __gnu_parallel::_Settings::adjacent_difference_minimal_n

Minimal input size for adjacent_difference.

Definition at line 142 of file settings.h.

4.160.3.3 unsigned int __gnu_parallel::_Settings::cache_line_size

Overestimation of cache line size. Used to avoid false sharing, i.e. elements of different threads are at least this amount apart.

Definition at line 265 of file settings.h.

Referenced by __gnu_parallel::__for_each_template_random_access_workstealing().

4.160.3.4 _SequenceIndex __gnu_parallel::_Settings::count_minimal_n

Minimal input size for count and count_if.

Definition at line 145 of file settings.h.

4.160.3.5 _SequenceIndex __gnu_parallel::_Settings::fill_minimal_n

Minimal input size for fill.

Definition at line 148 of file settings.h.

4.160.3.6 double __gnu_parallel::_Settings::find_increasing_factor

Block size increase factor for find.

Definition at line 151 of file settings.h.

4.160.3.7 _SequenceIndex __gnu_parallel::_Settings::find_initial_block_size

Initial block size for find.

Definition at line 154 of file settings.h.

Referenced by __gnu_parallel::__find_template().

4.160.3.8 _SequenceIndex __gnu_parallel::_Settings::find_maximum_block_size

Maximal block size for find.

Definition at line 157 of file settings.h.

4.160.3.9 float __gnu_parallel::_Settings::find_scale_factor

Block size scale-down factor with respect to current position.

Definition at line 276 of file settings.h.

Referenced by __gnu_parallel::__find_template().

4.160.3.10 _SequenceIndex __gnu_parallel::_Settings::find_sequential_search_size

Start with looking for this many elements sequentially, for find.

Definition at line 160 of file settings.h.

Referenced by __gnu_parallel::__find_template().

4.160.3.11 _SequenceIndex __gnu_parallel::_Settings::for_each_minimal_n

Minimal input size for for_each.

Definition at line 163 of file settings.h.

4.160.3.12 _SequenceIndex __gnu_parallel::_Settings::generate_minimal_n

Minimal input size for generate.

Definition at line 166 of file settings.h.

4.160.3.13 unsigned long long __gnu_parallel::_Settings::L1_cache_size

size of the L1 cache in bytes (underestimation).

Definition at line 254 of file settings.h.

4.160.3.14 unsigned long long __gnu_parallel::_Settings::L2_cache_size

size of the L2 cache in bytes (underestimation).

Definition at line 257 of file settings.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__sequential_random_shuffle().

4.160.3.15 _SequenceIndex __gnu_parallel::_Settings::max_element_minimal_n

Minimal input size for max_element.

Definition at line 169 of file settings.h.

4.160.3.16 _SequenceIndex __gnu_parallel::_Settings::merge_minimal_n

Minimal input size for merge.

Definition at line 172 of file settings.h.

4.160.3.17 unsigned int __gnu_parallel::_Settings::merge_oversampling

Oversampling factor for merge.

Definition at line 175 of file settings.h.

Referenced by __gnu_parallel::multiway_merge_sampling_splitting(), and __gnu_parallel::parallel_multiway_merge().

4.160.3.18 _SequenceIndex __gnu_parallel::_Settings::min_element_minimal_n

Minimal input size for min_element.

Definition at line 178 of file settings.h.

4.160.3.19 int __gnu_parallel::_Settings::multiway_merge_minimal_k

Oversampling factor for multiway_merge.

Definition at line 184 of file settings.h.

4.160.3.20 _SequenceIndex __gnu_parallel::_Settings::multiway_merge_minimal_n

Minimal input size for multiway_merge.

Definition at line 181 of file settings.h.

4.160.3.21 unsigned int __gnu_parallel::_Settings::multiway_merge_oversampling

Oversampling factor for multiway_merge.

Definition at line 187 of file settings.h.

4.160.3.22 _SequenceIndex __gnu_parallel::_Settings::nth_element_minimal_n

Minimal input size for nth_element.

Definition at line 190 of file settings.h.

Referenced by __gnu_parallel::__parallel_nth_element().

4.160.3.23 _SequenceIndex __gnu_parallel::_Settings::partial_sort_minimal_n

Minimal input size for partial_sort.

Definition at line 203 of file settings.h.

4.160.3.24 float __gnu_parallel::_Settings::partial_sum_dilation

Ratio for partial_sum. Assume "sum and write result" to be this factor slower than just "sum".

Definition at line 207 of file settings.h.

Referenced by __gnu_parallel::__parallel_partial_sum_linear().

4.160.3.25 unsigned int __gnu_parallel::_Settings::partial_sum_minimal_n

Minimal input size for partial_sum.

Definition at line 210 of file settings.h.

4.160.3.26 double __gnu_parallel::_Settings::partition_chunk_share

Chunk size for partition, relative to input size. If > 0.0, this value overrides partition_chunk_size.

Definition at line 197 of file settings.h.

Referenced by __gnu_parallel::__parallel_partition().

4.160.3.27 _SequenceIndex __gnu_parallel::_Settings::partition_chunk_size

Chunk size for partition.

Definition at line 193 of file settings.h.

Referenced by __gnu_parallel::__parallel_partition().

4.160.3.28 _SequenceIndex __gnu_parallel::_Settings::partition_minimal_n

Minimal input size for partition.

Definition at line 200 of file settings.h.

Referenced by __gnu_parallel::__parallel_nth_element().

4.160.3.29 _SequenceIndex __gnu_parallel::_Settings::qsb_steals

The number of stolen ranges in load-balanced quicksort.

Definition at line 270 of file settings.h.

4.160.3.30 unsigned int __gnu_parallel::_Settings::random_shuffle_minimal_n

Minimal input size for random_shuffle.

Definition at line 213 of file settings.h.

4.160.3.31 _SequenceIndex __gnu_parallel::_Settings::replace_minimal_n

Minimal input size for replace and replace_if.

Definition at line 216 of file settings.h.

4.160.3.32 _SequenceIndex __gnu_parallel::_Settings::search_minimal_n

Minimal input size for search and search_n.

Definition at line 273 of file settings.h.

4.160.3.33 _SequenceIndex __gnu_parallel::_Settings::set_difference_minimal_n

Minimal input size for set_difference.

Definition at line 219 of file settings.h.

4.160.3.34 _SequenceIndex __gnu_parallel::_Settings::set_intersection_minimal_n

Minimal input size for set_intersection.

Definition at line 222 of file settings.h.

4.160.3.35 _SequenceIndex __gnu_parallel::_Settings::set_symmetric_difference_minimal_n

Minimal input size for set_symmetric_difference.

Definition at line 225 of file settings.h.

4.160.3.36 _SequenceIndex __gnu_parallel::_Settings::set_union_minimal_n

Minimal input size for set_union.

Definition at line 228 of file settings.h.

4.160.3.37 _SequenceIndex __gnu_parallel::_Settings::sort_minimal_n

Minimal input size for parallel sorting.

Definition at line 231 of file settings.h.

4.160.3.38 unsigned int __gnu_parallel::_Settings::sort_mwms_oversampling

Oversampling factor for parallel std::sort (MWMS).

Definition at line 234 of file settings.h.

Referenced by __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

4.160.3.39 unsigned int __gnu_parallel::_Settings::sort_qs_num_samples_preset

Such many samples to take to find a good pivot (quicksort).

Definition at line 237 of file settings.h.

4.160.3.40 _SequenceIndex __gnu_parallel::_Settings::sort_qsb_base_case_maximal_n

Maximal subsequence __length to switch to unbalanced __base case. Applies to std::sort with dynamically load-balanced quicksort.

Definition at line 241 of file settings.h.

Referenced by __gnu_parallel::__qsb_local_sort_with_helping().

4.160.3.41 unsigned int __gnu_parallel::_Settings::TLB_size

size of the Translation Lookaside Buffer (underestimation).

Definition at line 260 of file settings.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__sequential_random_shuffle().

4.160.3.42 _SequenceIndex __gnu_parallel::_Settings::transform_minimal_n

Minimal input size for parallel std::transform.

Definition at line 244 of file settings.h.

4.160.3.43 _SequenceIndex __gnu_parallel::_Settings::unique_copy_minimal_n

Minimal input size for unique_copy.

Definition at line 247 of file settings.h.

template<typename _RAIter, typename _Compare, typename _SortingPlacesIterator>struct __gnu_parallel::_SplitConsistently< true, _RAIter, _Compare, _SortingPlacesIterator >

Split by exact splitting.

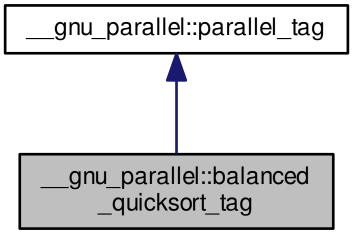
Definition at line 128 of file multiway_mergesort.h.

The documentation for this struct was generated from the following file:

- multiway_mergesort.h

4.164 __gnu_parallel::balanced_quicksort_tag Struct Reference

Inheritance diagram for __gnu_parallel::balanced_quicksort_tag:



Public Member Functions

- **balanced_quicksort_tag** (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.164.1 Detailed Description

Forces parallel sorting using balanced quicksort at compile time.

Definition at line 164 of file tags.h.

4.164.2 Member Function Documentation

4.164.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.164.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

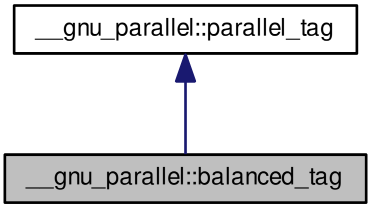
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.165 __gnu_parallel::balanced_tag Struct Reference

Inheritance diagram for __gnu_parallel::balanced_tag:



Public Member Functions

- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.165.1 Detailed Description

Recommends parallel execution using dynamic load-balancing at compile time.

Definition at line 88 of file tags.h.

4.165.2 Member Function Documentation

4.165.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.165.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

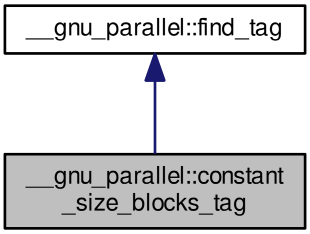
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.166 __gnu_parallel::constant_size_blocks_tag Struct Reference

Inheritance diagram for __gnu_parallel::constant_size_blocks_tag:



4.166.1 Detailed Description

Selects the constant block size variant for std::find().

See Also

_GLIBCXX_FIND_CONSTANT_SIZE_BLOCKS

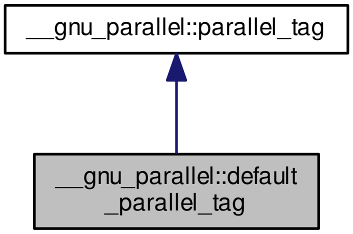
Definition at line 178 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.167 __gnu_parallel::default_parallel_tag Struct Reference

Inheritance diagram for __gnu_parallel::default_parallel_tag:



Public Member Functions

- **default_parallel_tag** (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.167.1 Detailed Description

Recommends parallel execution using the default parallel algorithm.

Definition at line 79 of file tags.h.

4.167.2 Member Function Documentation

4.167.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) `[inline]`, `[inherited]`

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.167.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex __num_threads) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

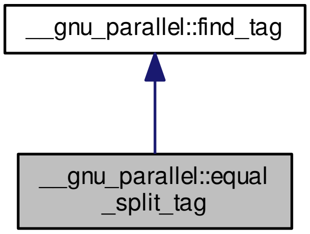
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.168 __gnu_parallel::equal_split_tag Struct Reference

Inheritance diagram for __gnu_parallel::equal_split_tag:



4.168.1 Detailed Description

Selects the equal splitting variant for std::find().

See Also

_GLIBCXX_FIND_EQUAL_SPLIT

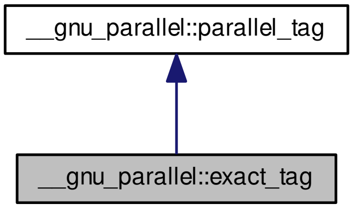
Definition at line 182 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.169 __gnu_parallel::exact_tag Struct Reference

Inheritance diagram for __gnu_parallel::exact_tag:



Public Member Functions

- **exact_tag** (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.169.1 Detailed Description

Forces parallel merging with exact splitting, at compile time.

Definition at line 109 of file tags.h.

4.169.2 Member Function Documentation

4.169.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.169.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

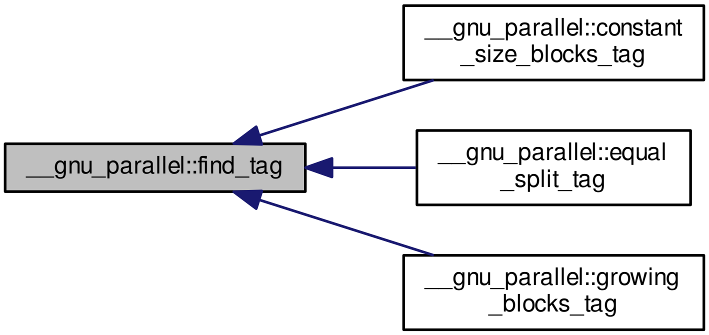
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.170 __gnu_parallel::find_tag Struct Reference

Inheritance diagram for __gnu_parallel::find_tag:



4.170.1 Detailed Description

Base class for for std::find() variants.

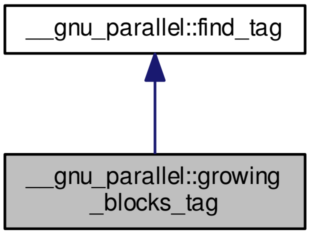
Definition at line 104 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.171 __gnu_parallel::growing_blocks_tag Struct Reference

Inheritance diagram for __gnu_parallel::growing_blocks_tag:



4.171.1 Detailed Description

Selects the growing block size variant for std::find().

See Also

_GLIBCXX_FIND_GROWING_BLOCKS

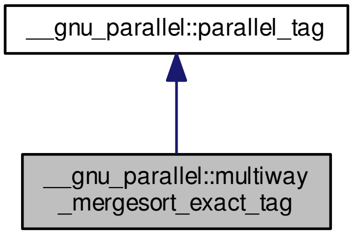
Definition at line 174 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.172 __gnu_parallel::multiway_mergesort_exact_tag Struct Reference

Inheritance diagram for __gnu_parallel::multiway_mergesort_exact_tag:



Public Member Functions

- **multiway_mergesort_exact_tag** (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.172.1 Detailed Description

Forces parallel sorting using multiway mergesort with exact splitting at compile time.

Definition at line 137 of file tags.h.

4.172.2 Member Function Documentation

4.172.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.172.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

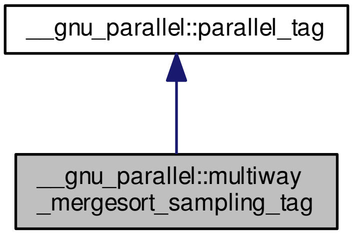
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.173 __gnu_parallel::multiway_mergesort_sampling_tag Struct Reference

Inheritance diagram for __gnu_parallel::multiway_mergesort_sampling_tag:



Public Member Functions

- **multiway_mergesort_sampling_tag** (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.173.1 Detailed Description

Forces parallel sorting using multiway mergesort with splitting by sampling at compile time.

Definition at line 146 of file tags.h.

4.173.2 Member Function Documentation

4.173.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.173.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

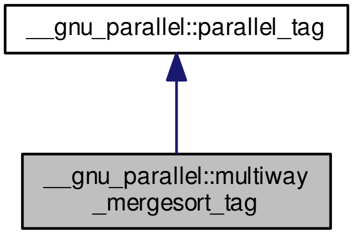
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.174 __gnu_parallel::multiway_mergesort_tag Struct Reference

Inheritance diagram for __gnu_parallel::multiway_mergesort_tag:



Public Member Functions

- **multiway_mergesort_tag** (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.174.1 Detailed Description

Forces parallel sorting using multiway mergesort at compile time.

Definition at line 128 of file tags.h.

4.174.2 Member Function Documentation

4.174.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.174.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

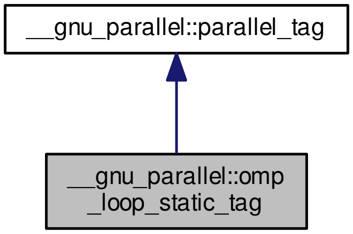
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.175 __gnu_parallel::omp_loop_static_tag Struct Reference

Inheritance diagram for __gnu_parallel::omp_loop_static_tag:



Public Member Functions

- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.175.1 Detailed Description

Recommends parallel execution using OpenMP static load-balancing at compile time.

Definition at line 100 of file tags.h.

4.175.2 Member Function Documentation

4.175.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.175.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

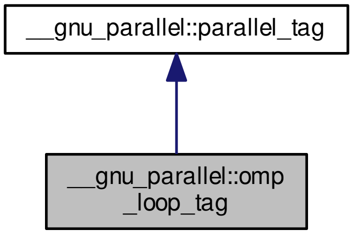
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.176 __gnu_parallel::omp_loop_tag Struct Reference

Inheritance diagram for __gnu_parallel::omp_loop_tag:



Public Member Functions

- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.176.1 Detailed Description

Recommends parallel execution using OpenMP dynamic load-balancing at compile time.

Definition at line 96 of file tags.h.

4.176.2 Member Function Documentation

4.176.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.176.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

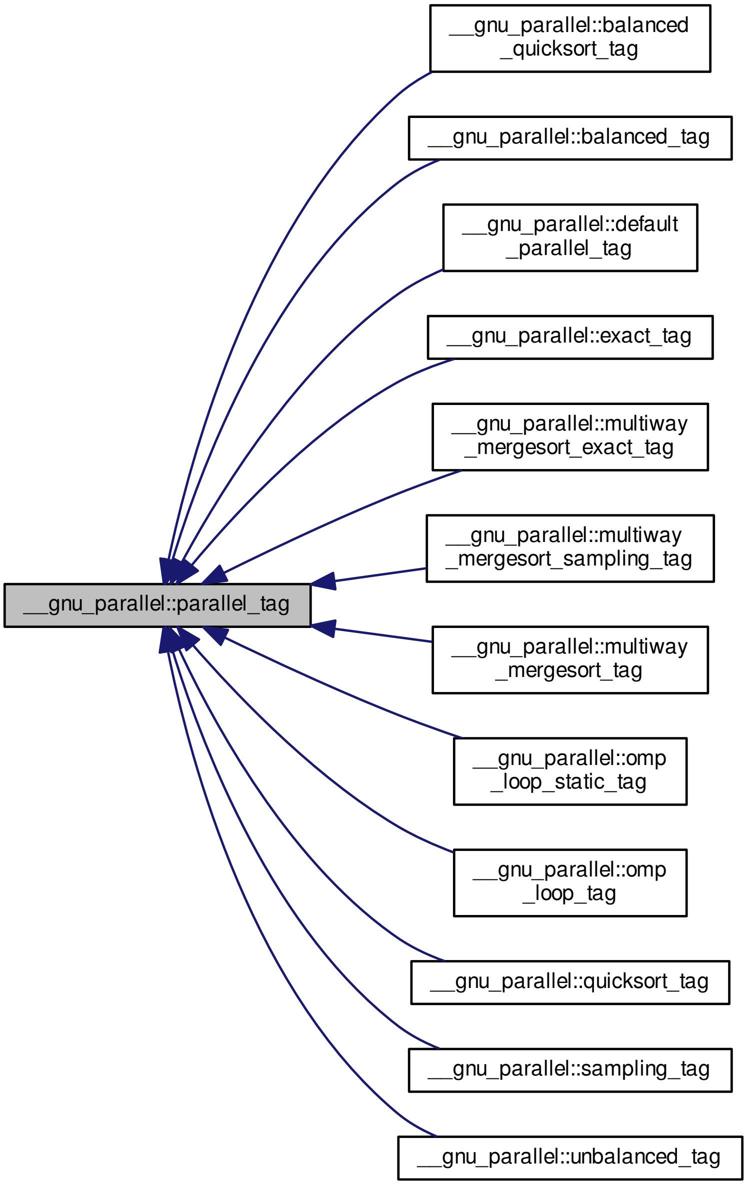
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.177 __gnu_parallel::parallel_tag Struct Reference

Inheritance diagram for __gnu_parallel::parallel_tag:



Public Member Functions

- parallel_tag ()
- parallel_tag (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()

- void set_num_threads (_ThreadIndex __num_threads)

4.177.1 Detailed Description

Recommends parallel execution at compile time, optionally using a user-specified number of threads.

Definition at line 46 of file tags.h.

4.177.2 Constructor & Destructor Documentation

4.177.2.1 __gnu_parallel::parallel_tag::parallel_tag ( ) [inline]

Default constructor. Use default number of threads.

Definition at line 53 of file tags.h.

4.177.2.2 __gnu_parallel::parallel_tag::parallel_tag (_ThreadIndex *__num_threads*) [inline]

Default constructor. Recommend number of threads to use.

Parameters

__num_threads	Desired number of threads.

Definition at line 58 of file tags.h.

4.177.3 Member Function Documentation

4.177.3.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.177.3.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

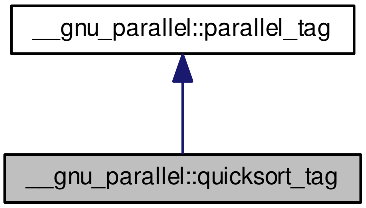
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.178 __gnu_parallel::quicksort_tag Struct Reference

Inheritance diagram for __gnu_parallel::quicksort_tag:



Public Member Functions

- **quicksort_tag** (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.178.1 Detailed Description

Forces parallel sorting using unbalanced quicksort at compile time.

Definition at line 155 of file tags.h.

4.178.2 Member Function Documentation

4.178.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.178.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

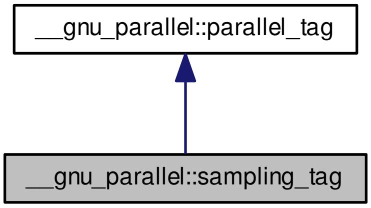
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.179 __gnu_parallel::sampling_tag Struct Reference

Inheritance diagram for __gnu_parallel::sampling_tag:



Public Member Functions

- **sampling_tag** (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.179.1 Detailed Description

Forces parallel merging with exact splitting, at compile time.

Definition at line 118 of file tags.h.

4.179.2 Member Function Documentation

4.179.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.179.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.180 __gnu_parallel::sequential_tag Struct Reference

4.180.1 Detailed Description

Forces sequential execution at compile time.

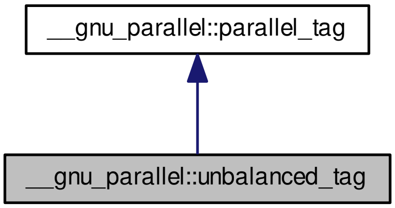
Definition at line 42 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.181 __gnu_parallel::unbalanced_tag Struct Reference

Inheritance diagram for __gnu_parallel::unbalanced_tag:



Public Member Functions

- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.181.1 Detailed Description

Recommends parallel execution using static load-balancing at compile time.

Definition at line 92 of file tags.h.

4.181.2 Member Function Documentation

4.181.2.1 _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.

Referenced by __gnu_parallel::__parallel_sort().

4.181.2.2 void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

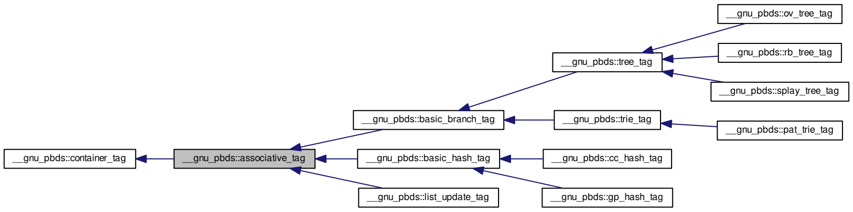
Definition at line 73 of file tags.h.

The documentation for this struct was generated from the following file:

- tags.h

4.182 __gnu_pbds::associative_tag Struct Reference

Inheritance diagram for __gnu_pbds::associative_tag:



4.182.1 Detailed Description

Basic associative-container.

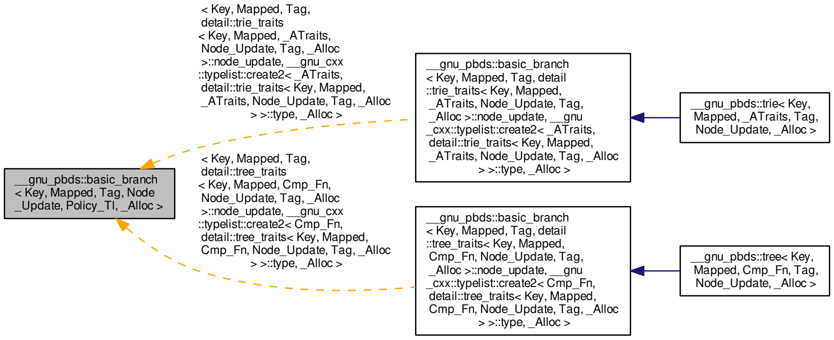
Definition at line 135 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.183 __gnu_pbds::basic_branch< Key, Mapped, Tag, Node_Update, Policy_Tl, _Alloc > Class Template Reference

Inheritance diagram for __gnu_pbds::basic_branch< Key, Mapped, Tag, Node_Update, Policy_Tl, _Alloc >:



Public Types

- typedef Node_Update **node_update**

Protected Member Functions

- **basic_branch** (const basic_branch &other)
- template< typename T0 >
  basic_branch (T0 t0)
- template< typename T0 , typename T1 >
  basic_branch (T0 t0, T1 t1)
- template< typename T0 , typename T1 , typename T2 >
  basic_branch (T0 t0, T1 t1, T2 t2)
- template< typename T0 , typename T1 , typename T2 , typename T3 >
  basic_branch (T0 t0, T1 t1, T2 t2, T3 t3)
- template< typename T0 , typename T1 , typename T2 , typename T3 , typename T4 >
  basic_branch (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4)
- template< typename T0 , typename T1 , typename T2 , typename T3 , typename T4 , typename T5 >
  basic_branch (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5)
- template< typename T0 , typename T1 , typename T2 , typename T3 , typename T4 , typename T5 , typename T6 >
  basic_branch (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6)

4.183.1 Detailed Description

template< typename Key, typename Mapped, typename Tag, typename Node_Update, typename Policy_Tl, typename _Alloc> class __gnu_pbds::basic_branch< Key, Mapped, Tag, Node_Update, Policy_Tl, _Alloc >

A branched, tree-like (tree, trie) container abstraction.

Template Parameters

Key	Key type.
Mapped	Map type.
Tag	Instantiating data structure type, see container_tag.
Node_Update	Updates nodes, restores invariants.
Policy_TL	Policy typelist.
_Alloc	Allocator type.

Base is dispatched at compile time via Tag, from the following choices: tree_tag, trie_tag, and their descendants.

Base choices are: detail::ov_tree_map, detail::rb_tree_map, detail::splay_tree_map, and detail::pat_trie_map.

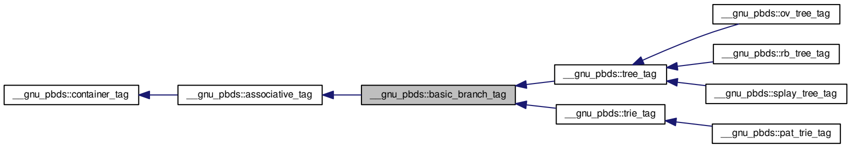
Definition at line 555 of file assoc_container.hpp.

The documentation for this class was generated from the following file:

- assoc_container.hpp

4.184 __gnu_pbds::basic_branch_tag Struct Reference

Inheritance diagram for __gnu_pbds::basic_branch_tag:



4.184.1 Detailed Description

Basic branch structure.

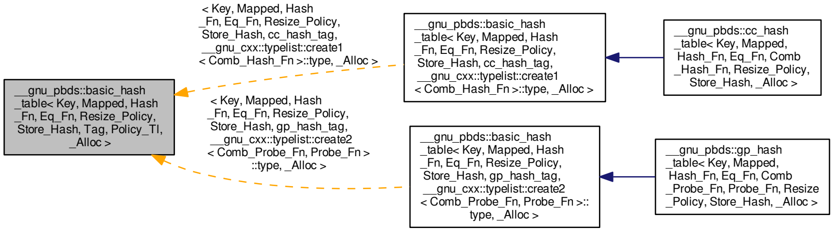
Definition at line 147 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.185 __gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_Tl, _Alloc > Class Template Reference

Inheritance diagram for __gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_Tl, _Alloc >:



Protected Member Functions

- **basic_hash_table** (const basic_hash_table &other)
- template< typename T0 >
  basic_hash_table (T0 t0)
- template< typename T0 , typename T1 >
  basic_hash_table (T0 t0, T1 t1)
- template< typename T0 , typename T1 , typename T2 >
  basic_hash_table (T0 t0, T1 t1, T2 t2)
- template< typename T0 , typename T1 , typename T2 , typename T3 >
  basic_hash_table (T0 t0, T1 t1, T2 t2, T3 t3)
- template< typename T0 , typename T1 , typename T2 , typename T3 , typename T4 >
  basic_hash_table (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4)
- template< typename T0 , typename T1 , typename T2 , typename T3 , typename T4 , typename T5 >
  basic_hash_table (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5)
- template< typename T0 , typename T1 , typename T2 , typename T3 , typename T4 , typename T5 , typename T6 >
  basic_hash_table (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6)
- template< typename T0 , typename T1 , typename T2 , typename T3 , typename T4 , typename T5 , typename T6 , typename T7 >
  basic_hash_table (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6, T7 t7)
- template< typename T0 , typename T1 , typename T2 , typename T3 , typename T4 , typename T5 , typename T6 , typename T7 , typename T8 >
  basic_hash_table (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6, T7 t7, T8 t8)

4.185.1 Detailed Description

template< typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename Resize_Policy, bool Store_Hash, typename Tag, typename Policy_Tl, typename _Alloc >class __gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_Tl, _Alloc >

A hashed container abstraction.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor.
Eq_Fn	Equal functor.
Resize_Policy	Resizes hash.
Store_Hash	Indicates whether the hash value will be stored along with each key.
Tag	Instantiating data structure type, see container_tag.
Policy_TL	Policy typelist.
_Alloc	Allocator type.

Base is dispatched at compile time via Tag, from the following choices: cc_hash_tag, gp_hash_tag, and descendants of basic_hash_tag.

Base choices are: detail::cc_ht_map, detail::gp_ht_map

Definition at line 104 of file assoc_container.hpp.

The documentation for this class was generated from the following file:

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.190 __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type > Class Template Reference

Public Types

- enum { external_load_access }
- typedef Size_Type **size_type**

Public Member Functions

- cc_hash_max_collision_check_resize_trigger (float load=0.5)
- float get_load () const
- void set_load (float load)
- void **swap** (cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type > &other)

Protected Member Functions

- bool is_grow_needed (size_type size, size_type num_entries) const
- bool is_resize_needed () const
- void notify_cleared ()
- void notify_erase_search_collision ()
- void notify_erase_search_end ()
- void notify_erase_search_start ()
- void notify_erased (size_type num_entries)
- void notify_externally_resized (size_type new_size)
- void notify_find_search_collision ()
- void notify_find_search_end ()
- void notify_find_search_start ()
- void notify_insert_search_collision ()
- void notify_insert_search_end ()
- void notify_insert_search_start ()
- void notify_inserted (size_type num_entries)
- void notify_resized (size_type new_size)

4.190.1 Detailed Description

template<bool External_Load_Access = false, typename Size_Type = std::size_t>class __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >

A resize trigger policy based on collision checks. It keeps the simulated load factor lower than some given load factor.

Definition at line 293 of file hash_policy.hpp.

4.190.2 Member Enumeration Documentation

4.190.2.1 template<bool External_Load_Access = false, typename Size_Type = std::size_t> anonymous enum

Enumerator:

external_load_access Specifies whether the load factor can be accessed externally. The two options have different trade-offs in terms of flexibility, genericity, and encapsulation.

Definition at line 298 of file hash_policy.hpp.

4.190.3 Constructor & Destructor Documentation

4.190.3.1 template<bool External_Load_Access, typename Size_Type > __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::cc_hash_max_collision_check_resize_trigger (float *load* = `0.5`)

Default constructor, or constructor taking load, a __load factor which it will attempt to maintain.

Definition at line 44 of file hash_policy.hpp.

4.190.4 Member Function Documentation

4.190.4.1 template<bool External_Load_Access, typename Size_Type > float __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::get_load ( ) const [inline]

Returns the current load.

Definition at line 190 of file hash_policy.hpp.

4.190.4.2 template<bool External_Load_Access, typename Size_Type > bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::is_grow_needed (size_type *size*, size_type *num_entries*) const [inline], [protected]

Queries whether a grow is needed. This method is called only if this object indicated is needed.

Definition at line 133 of file hash_policy.hpp.

4.190.4.3 template<bool External_Load_Access, typename Size_Type > bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::is_resize_needed ( ) const [inline], [protected]

Queries whether a resize is needed.

Definition at line 127 of file hash_policy.hpp.

4.190.4.4 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_cleared ( ) [protected]

Notifies the table was cleared.

Definition at line 121 of file hash_policy.hpp.

4.190.4.5 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_erase_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

Definition at line 97 of file hash_policy.hpp.

4.190.4.6 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_erase_search_end ( ) [inline], [protected]

Notifies a search ended.

Definition at line 103 of file hash_policy.hpp.

4.190.4.7 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_erase_search_start ( ) [inline], [protected]

Notifies an erase search started.

Definition at line 91 of file hash_policy.hpp.

4.190.4.8 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_erased (size_type *num_entries*) [inline], [protected]

Notifies an element was erased.

Definition at line 115 of file hash_policy.hpp.

4.190.4.9 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_externally_resized (size_type *new_size*) [protected]

Notifies the table was resized externally.

Definition at line 172 of file hash_policy.hpp.

4.190.4.10 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_find_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

Definition at line 61 of file hash_policy.hpp.

4.190.4.11 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_find_search_end ( ) [inline], [protected]

Notifies a search ended.

Definition at line 67 of file hash_policy.hpp.

4.190.4.12 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_find_search_start ( ) [inline], [protected]

Notifies a find search started.

Definition at line 55 of file hash_policy.hpp.

4.190.4.13 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_insert_search_collision ( ) [inline], [protected]

Notifies a search encountered a collision.

Definition at line 79 of file hash_policy.hpp.

4.190.4.14 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_insert_search_end ( ) [inline], [protected]

Notifies a search ended.

Definition at line 85 of file hash_policy.hpp.

4.190.4.15 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_insert_search_start ( ) [inline], [protected]

Notifies an insert search started.

Definition at line 73 of file hash_policy.hpp.

4.190.4.16 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_inserted (size_type *num_entries*) [inline], [protected]

Notifies an element was inserted.

Definition at line 109 of file hash_policy.hpp.

4.190.4.17 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_resized (size_type *new_size*) [protected]

Notifies the table was resized as a result of this object's signifying that a resize is needed.

Definition at line 139 of file hash_policy.hpp.

4.190.4.18 template<bool External_Load_Access, typename Size_Type > void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::set_load (float *load*)

Sets the load; does not resize the container.

Definition at line 205 of file hash_policy.hpp.

The documentation for this class was generated from the following files:

- hash_policy.hpp
- cc_hash_max_collision_check_resize_trigger_imp.hpp

4.191.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>class __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >

A collision-chaining hash-based associative container.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor.
Eq_Fn	Equal functor.
Comb_Hash_Fn	Combining hash functor. If Hash_Fn is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.)
Resize_Policy	Resizes hash.
Store_Hash	Indicates whether the hash value will be stored along with each key. If Hash_Fn is null_type, then the container will not compile if this value is true
_Alloc	Allocator type.

Base tag choices are: cc_hash_tag.

Base is basic_hash_table.

Definition at line 204 of file assoc_container.hpp.

4.191.2 Constructor & Destructor Documentation

4.191.2.1 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table ( ) [inline]

Default constructor.

Definition at line 217 of file assoc_container.hpp.

4.191.2.2 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (const hash_fn & *h*) [inline]

Constructor taking some policy objects. r_hash_fn will be copied by the Hash_Fn object of the container object.

Definition at line 221 of file assoc_container.hpp.

4.191.2.3 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (const hash_fn & *h*, const eq_fn & *e*) [inline]

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, and r_eq_fn will be copied by the eq_fn object of the container object.

Definition at line 228 of file assoc_container.hpp.

4.191.2.4 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (const hash_fn & *h*, const eq_fn & *e*, const comb_hash_fn & *ch*) [inline]

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, and r_comb_hash_fn will be copied by the comb_hash_fn object of the container object.

Definition at line 236 of file assoc_container.hpp.

4.191.2.5 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (const hash_fn & *h*, const eq_fn & *e*, const comb_hash_fn & *ch*, const resize_policy & *rp*) `[inline]`

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, r_comb_hash_fn will be copied by the comb_hash_fn object of the container object, and r_resize_policy will be copied by the resize_policy object of the container object.

Definition at line 245 of file assoc_container.hpp.

4.191.2.6 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (It *first*, It *last*) `[inline]`

Constructor taking __iterators to a range of value_types. The value_types between first_it and last_it will be inserted into the container object.

Definition at line 253 of file assoc_container.hpp.

4.191.2.7 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (It *first*, It *last*, const hash_fn & *h*) `[inline]`

Constructor taking __iterators to a range of value_types and some policy objects. The value_types between first_it and last_it will be inserted into the container object.

Definition at line 260 of file assoc_container.hpp.

4.191.2.8 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (It *first*, It *last*, const hash_fn & *h*, const eq_fn & *e*) `[inline]`

Constructor taking __iterators to a range of value_types and some policy objects The value_types between first_it and last_it will be inserted into the container object. r_hash_fn will be copied by the hash_fn object of the container object, and r_eq_fn will be copied by the eq_fn object of the container object.

Definition at line 271 of file assoc_container.hpp.

4.191.2.9 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (It *first,* It *last,* const hash_fn & *h,* const eq_fn & *e,* const comb_hash_fn & *ch*) [inline]

Constructor taking __iterators to a range of value_types and some policy objects The value_types between first_it and last_it will be inserted into the container object. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, and r_comb_hash_fn will be copied by the comb_hash_fn object of the container object.

Definition at line 283 of file assoc_container.hpp.

4.191.2.10 template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>> template<typename It > __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (It *first,* It *last,* const hash_fn & *h,* const eq_fn & *e,* const comb_hash_fn & *ch,* const resize_policy & *rp*) [inline]

Constructor taking __iterators to a range of value_types and some policy objects The value_types between first_it and last_it will be inserted into the container object. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, r_comb_hash_fn will be copied by the comb_hash_fn object of the container object, and r_resize_policy will be copied by the resize_policy object of the container object.

4.195.1 Detailed Description

template<typename Cntnr>struct __gnu_pbds::container_traits< Cntnr >

Container traits.

Definition at line 418 of file tag_and_trait.hpp.

4.195.2 Member Enumeration Documentation

4.195.2.1 template<typename Cntnr > anonymous enum

Enumerator:

order_preserving True only if Cntnr objects guarantee storing keys by order.

erase_can_throw True only if erasing a key can throw.

split_join_can_throw True only if split or join operations can throw.

reverse_iteration True only reverse iterators are supported.

Definition at line 426 of file tag_and_trait.hpp.

  point_invalidation_guarantee **invalidation_guarantee**

4.207.1 Detailed Description

template<>struct __gnu_pbds::container_traits_base< thin_heap_tag >

Specialization, thin heap.

Definition at line 352 of file tag_and_trait.hpp.

The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.208 __gnu_pbds::detail::bin_search_tree_const_it_< Node_Pointer, Value_Type, Pointer, Const_Pointer, Reference, Const_Reference, Is_Forward_Iterator, _Alloc > Class Template Reference

4.209.1 Detailed Description

template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>class __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >

Const node iterator.

Definition at line 58 of file bin_search_tree_/node_iterators.hpp.

4.209.2 Member Typedef Documentation

4.209.2.1 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::const_reference

Iterator's __const reference type.

Definition at line 80 of file bin_search_tree_/node_iterators.hpp.

4.209.2.2 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef trivial_iterator_difference_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::difference_type

Difference type.

Definition at line 71 of file bin_search_tree_/node_iterators.hpp.

4.209.2.3 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef trivial_iterator_tag __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::iterator_category

Category.

Definition at line 68 of file bin_search_tree_/node_iterators.hpp.

4.209.2.4 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef _Alloc::template rebind<metadata_type>::other::const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference

Const metadata reference type.

Definition at line 88 of file bin_search_tree_/node_iterators.hpp.

4.209.2.5 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Node::metadata_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::metadata_type

Metadata type.

Definition at line 83 of file bin_search_tree_/node_iterators.hpp.

4.209.2.6 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::reference

Iterator's reference type.

Definition at line 77 of file bin_search_tree_/node_iterators.hpp.

4.209.2.7 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::value_type

Iterator's value type.

Definition at line 74 of file bin_search_tree_/node_iterators.hpp.

4.209.3 Member Function Documentation

4.209.3.1 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bin_search_tree_const_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_l_child ( ) const [inline]

Returns the __const node iterator associated with the left node.

Definition at line 107 of file bin_search_tree_/node_iterators.hpp.

4.209.3.2 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > metadata_const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_metadata ( ) const [inline]

Metadata access.

Definition at line 102 of file bin_search_tree_/node_iterators.hpp.

4.209.3.3 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bin_search_tree_const_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_r_child ( ) const [inline]

Returns the __const node iterator associated with the right node.

Definition at line 112 of file bin_search_tree_/node_iterators.hpp.

4.209.3.4 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator!= (const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > & *other*) const [inline]

Compares (negatively) to a different iterator object.

Definition at line 122 of file bin_search_tree_/node_iterators.hpp.

4.209.3.5 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator* ( ) const [inline]

Access.

Definition at line 97 of file bin_search_tree_/node_iterators.hpp.

4.209.3.6 template<typename Node , class Const_Iterator , class Iterator , typename _Alloc > bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator== (const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > & *other*) const [inline]

Compares to a different iterator object.

Definition at line 117 of file bin_search_tree_/node_iterators.hpp.

The documentation for this class was generated from the following file:

- bin_search_tree_/node_iterators.hpp

4.210 __gnu_pbds::detail::bin_search_tree_it_< Node_Pointer, Value_Type, Pointer, Const_Pointer, Reference, Const_Reference, Is_Forward_Iterator, _Alloc > Class Template Reference
